portraits or other illustrations.

# STEAM RAILWAY DEPARTMENT AND GENERAL MATTER.

## A

Air compressor cooler	x139
Air compressor laundry, A railway	x424
Air sand blast machine	x279
Alaska railways	146, 390, 438
Alberta & Great Waterways Ry.	12, 186, 240, 285, 488
Alberta-Hudson Bay Ry.	57, 186
Algoma Central & Hudson Bay Ry.—	
Appointments	553
Development	285
Finance, etc.	196
Algoma Eastern Ry.	295
Alma & Jonquiere Ry.	57
American Express Co.	203
American Railway Engineering Association.	108, 188, 201
American Railway Express Co.	419, 467
Anglo-American Telegraph Co.	524
Appointments, Transportation	21, 65,
108, 157, 197, 249, 295, 345, 388, 448, 496, 553	
Arch tube straightener	x382

## B

Battley, E. R., Locomotive maintenance and repairs	135
Beckingham, G., Railway operating difficulties in winter	382
Bench clamp	x139
Birthdays of transportation men	2, 56,
93, 140, 185, 233, 281, 332, 381, 435, 473, 526	
Board of Railway Commissioners	
Appointments	552
Automatic train stops	380
Commodity rates on refined sugar in car-loads	425
Contagious diseases on trains	411
Flagging signals on double track	184
Interswitching freight traffic, Rules for	282, 578
Locomotive headlight regulations	242
Maintenance of way flagging rules for impassable track	433, 477, 511
Orders by, Summaries of	53,
96, 112, 194, 237, 290, 330, 384, 436, 484, 540	
Preventable accidents to railway employees	251
Protection of railway employees	279
Railway crossing signals	395
Rate increases, Report recommending	370
Rate increases, Toronto Board of Trade protest dismissed	374
Regulations re railway accidents	381
Rules for testing eyesight	344
Rules for inspection and testing of locomotive boilers	106
Rules for wires along and across railways	285, 297
Safety appliances for freight cars	279
Standard clearances	61
Trackmen's eyesight and hearing	551
Traffic orders	29, 68, 107,
118, 196, 216, 300, 342, 396, 446, 498, 550	
Warning signs for grade crossings	53
Wedge tanks for switching locomotives refused	295
Boston & Albany Rd.	345
Boston & Maine Rd.	295, 545
Box Car, The business	532
Brake maintenance on freight trains	230
British Columbia's railway liabilities	147
British Columbia Telephone Co.	44
Britt, T., Fuel situation in war time	95
Necessity for fuel conservation	291
Buffalo, Rochester & Pittsburg Ry.	65
Burrard Inlet Tunnel & Bridge Co.	
Development	12, 285
Finance, etc.	440

## C

Calgary & Coal Range Ry.	57
Calgary & Southwestern Ry.	38, 146, 186
Canada Atlantic Transit Co.	418
Canada Central Ry.	186
Canadian Express Co.	44, 124, 203, 268, 419, 467, 488, 523, 576
Canadian Express Co., Withdrawal from United States business	367, 523
Canadian Government Railways	
Appointments	24,
65, 108, 157, 197, 249, 295, 345, 388, 448, 496	
Box cars	87
Coal supply	281
Consolidation	549
Development	116, 394, 437, 493
Halifax explosion, Damage and restoration.	x14, x54
Halifax ocean terminals	251
Operating results	250
Patronage on	296
Rolling stock	11, 64,
97, 144, 199, 242, 295, 340, 391, 437, 499, 541	
Canadian Niagara Bridge Co.	146, 186, 285
Canadian Northern Express Co.	44, 134, 249, 523
Canadian Northern Ry.—Appointments	24,
65, 108, 157, 197, 295, 345, 388, 448, 496, 552	

## Consolidation with Canadian Government

Railways	549
Construction, etc.	12, 57,
102, 143, 196, 241, 293, 335, 383, 440, 485, 548	
Earnings	22, 65, 107, 158, 201, 246, 337, 395, 444, 498
Finance, etc.	29, 67, 346
Government aid	13, 149
Inspection	499a
Line into Nitinat country	449
Montreal passenger station	x430
Montreal terminal buildings	x19
Montreal-Toronto service	493
Presidency	445
Reorganization	443
Report and meeting	529
Rolling lift bridge at Victoria	x190
Rolling stock	64, 144, 199, 242, 297, 340, 391, 437, 499, 542
St. Maurice river bridge	x434
Stock value arbitration	61, 248
Vancouver station suit	2
Vancouver terminals, Sea wall at	499a
Vancouver train sheds	x62
Canadian Pacific Ry.—Air sand blast machine	x279
Appointments	24, 65,
108, 157, 197, 249, 295, 345, 388, 448, 496, 551	
Connaught tunnel suit.	8
Development	102, 149, 239, 300, 344, 390, 438, 488, 541
Double tracking at Toronto	x17
Earnings	22, 65, 107, 158, 201, 246, 337, 395, 444, 498
Finance, etc.	391, 542
Honor roll	56, 92, 137, 185, 236, 294, 332, 383, 480
Honoring locomotive men	x473
Inspection	437
Irrigation development	394
Jig for trailer truck brasses	x433
Management changes	486
Meritorious services of employees	13, 59, 145
Passenger car cleaning	432
Report	143
Rolling stock	11, 64,
97, 144, 199, 242, 297, 340, 391, 437, 499, 541	
Scholarships at McGill University	480
Second track Leaside to North Toronto	x378
Special taxation	147
Telegraphs	134, 368
Telegraphs Motor generator and switch arrangement	x276
Telegraphers' (commercial) wages	477
Tracklaying prize competition	7
Trainmen's wages	92
Umbrella roofs at Montreal and Quebec stations	x3
Vancouver, Pier D extension	x89
Victory loan float	x11, 57
Canadian Railway Association for National Defence	25, 63, 103, 153, 283
(See also Canadian Railway War Board)	
Canadian Railway Club	244, 499
Canadian Railway War Board	238, 288, 341, 394, 441, 488, 552
Canadian Railway War Board's Board of Adjustment No. 1	x369, 387
Canadian Railway War Board's executive committee	x525
Canadian Society of Civil Engineers	62, 67, 106, 154
Canadian Ticket Agents Association	136, 444, 526
Capilano Timber Co.	98, 240
Carague & Gulf Shore Ry.	65
Car demurrage rules, Temporary suspension.	550
Cars, Freight, Ordered by United States railways	255
Cavalier County Ry.	12
Central Canada Ry.	12, 98, 146, 285, 390, 488
Central Ry. of Canada	93
Central Vermont Ry.—Appointments	65, 295, 388
Development	146
Finance, etc.	29, 542
Report	534
Chicago, Milwaukee & St. Paul Ry.	65
Chippewa-Queenston power canal and construction railway	x530
Coal shipments from Sydney, N.S.	482
Coal, Value of different sizes for locomotives	190
Compensation for Government employees killed or injured	236
Curve resistance, A study of the mechanics of	x469

## D

Daylight saving on railways	195
Delaware & Hudson Co.—	
Appointments	108, 157, 295, 345, 388, 418
Report	252
Detroit, Grand Haven & Milwaukee Ry. earnings	22, 65, 107, 158, 201, 246, 337, 395, 444, 498
Dominion Atlantic Ry.	390, 488, 541
Dominion Express Co.	44, 134, 196, 203, 298, 419, 467, 523, 576

Dominion Government telegraphs	260
Dominion Telegraph Co.	368
Dominion Transportation Co.	444
Draft gears on railway rolling stock	69
Draw bar pull questions	141
Duluth, South Shore & Atlantic Ry.	388, 448
Duluth, Winnipeg & Pacific Ry.	346
Dyer, A. F.—Oxy acetylene and electric welding and cutting processes in locomotive shops	1

## E

Earnings, expenses, etc., Railway	22, 65, 107, 158, 201, 246, 337, 395, 444, 498
Eastern Canadian Passenger Association	67, 487, 551
Eastern Maine Rd.	146
Edmonton & Southwestern Ry.	186, 337, 390
Edmonton, Dunvegan & British Columbia Ry.	98, 146, 186, 240, 285, 488, 541
Electric welding in the war	472
Eley, E.—Passenger car cleaning on the C.P.R.	432
Engineers' splendid work on the western front in the war	535
Erie Rd.	197
Esquimalt & Nanaimo Ry.	240
Essex Terminal Ry.—Development	12, 390
Rolling stock	11, 97
Explosives, Carriage on passenger trains	67
Exports control committee in the U.S.	383
Express Traffic Association of Canada	260, 576
Express Companies, Among the	44, 134, 203, 260, 368, 419, 467, 523, 576
Express rates increased in the U.S.	576
Eyegight testing, Amendment of rules	344

## F

Farmer, F. B.—Freight brake maintenance	229
Feed valve holding jig	x141
Finance, meetings, etc., Railway	29, 147, 196, 242, 299, 346, 391, 440, 542
Flagging rules for impassable track	99, 433, 477
Flagging signals on double track	185, 544
Fluework in a railway shop	x234
Freight and passenger traffic notes	29, 61, 99, 154, 244, 294, 340, 391, 487, 542
Freight, Marking and addressing of	482
Freight rates increased—See Rates.	
Fuel from a transportation standpoint	191
Fuel conservation, Necessity for	291
Fuel consumption on railways	297
Fuel situation in war time	95

## G

Graham, H. N.—Laying out railway curves from long chords	x382
Grain inspection at western points	391, 437, 492
Grain transportation and storage	6
Grain in store at terminal elevators	9, 385, 435, 485
Grand Lake Ry. & Transportation Co.	240
Grand Trunk Pacific Ry.—Appointments	24, 65, 108, 158, 197, 295, 346, 449, 497, 554
Construction	12, 57,
98, 147, 186, 240, 297, 334, 390, 438, 488, 541	
Earnings, etc.	22, 65, 107, 158, 201, 246, 337, 395, 444, 498
Government aid	149
Rolling stock	97, 199, 340, 437
Grand Trunk Pacific Telegraph Co.	44, 203
Grand Trunk Ry.—Annual inspection	22
Acquisition proposed	440
Appointments	65,
108, 157, 197, 249, 295, 346, 388, 448, 497, 554	
Development	12, 57, 146, 186, 337, 390, 541
Earnings, etc.	22, 65, 107, 158, 201, 246, 337, 395, 444, 498
Extension to Providence, R.I.	377
Finance, etc.	29, 149, 391, 440, 542
First aid work	92
Port Huron car shops	x18, x94
Report and meeting	244
Rolling stock	11, 97, 144, 242, 297, 340, 499, 541
Grand Trunk Ry. Lines in New England (U.S. R.A.)	449, 498
Grand Trunk Western Ry. earnings	22, 65, 107, 158, 201, 246, 337, 395, 444, 498
Greater Winnipeg Water District railway	12, 98, 147
Great Northern Ry.—Appointments	24, 108, 346, 389
Development	57, 98, 146
Report	344
Great North Western Telegraph Co.	44, 134,
178, 203, 252, 260, 368, 419, 467, 488, 524, 555	
Guelph Junction Ry.	299, 440, 542

## H

Hamilton, Ont., Railway Situation at	17
Hand brake ratchets, Die for forging	x383
Hudson Bay Ry.—Appointments	295

Development .....	12, 98, 186, 240, 438
Kettle Rapids bridge erection .....	X138
Hulatt, H.—Survival of the fittest .....	96

## I

Intercolonial Ry.—Development .....	12, 98, 186, 240, 285, 337
(See also Canadian Government Railways.)	
International Bridge & Tunnel Co. ....	146, 285
Interswitching freight traffic, Rules for ..	282, 538

## J

Jig for holding trailer truck brasses .....	X133
---	------

## K

Kaslo & Slocan Ry. ....	542
Kettle Valley Ry.—Appointments .....	198
Development, 57, 98, 146, 186, 240, 285, 390, 438	

## L

Lacombe & Blindman Valley Electric Ry.	147, 186
Locomotive boiler inspection and testing, Amendments to rules .....	106
Locomotive building and repairing .....	181
Locomotive headlight regulations .....	242
Locomotive maintenance and repairs .....	175
Locomotive standardization for U.S. railways ..	235
Locomotive construction in the U.S. ....	537
Locomotive fittings, Repairing of .....	X527
Locomotives ordered for U.S. railways .....	235
Locomotives, Terminal handling of .....	X421
Logging railway at Dean Inlet .....	187

## M

Magdalen River Ry. ....	12, 98, 240
Mails, Compensation for carriage of .....	15, 249
Maine Central Rd. ....	346
Mainly About Railway People .....	21, 58,
100, 152, 202, 243, 292, 338, 392, 447, 489, 545	
Marconi Wireless Telegraph Co. ....	524
Maritime Coal, Ry. & Power Co. ....	212
Maritime Telegraph & Telephone Co. ....	178
Mechanical Department.—Co-ordination of the various branches .....	X474
Michigan Central Rd., Appointments .....	295, 389, 498, 554
Development .....	57, 390, 438, 488
Minneapolis, St. Paul & Sault Ste. Marie Ry.—Appointments .....	65, 449, 498
Finance, etc. ....	299
Moncton & Buctouche Ry. ....	512
Montreal, Joliette & Transcontinental Jct. Ry. ....	146, 285
Murphy, John.—Railway electrification .....	193

## N

Naas & Skeena River Ry. ....	187
Nakusp & Slocan Ry. ....	242, 438
National Despatch-Great Eastern Line .....	295
National Transcontinental Ry.—Development .....	12, 241
Quebec terminal facilities .....	94
(See also Canadian Government Railways.)	
Neal, W. M.—Fuel from a transportation standpoint .....	191
Nelson & Fort Sheppard Ry. land grant .....	241
New Brunswick & Prince Edward Island Ry. ....	212
Newmarch, I. C.—Progress in locomotive building and repairing .....	181
New York Central Rd.—Appointments .....	108, 295, 346, 449, 498
Finance, etc. ....	242, 410
Report .....	296
New York, New Haven & Hartford Rd. ....	346
Niagara Frontier Summer Rate Committee .....	155
North Shore Ry. ....	438, 488
Northern Express Co. ....	41, 115
Northern Pacific Ry. ....	21, 197, 389

## P

Pacific Cable Board .....	124
Pacific Great Eastern Ry.—Appointments .....	389
Development .....	57, 98, 187, 241, 337, 390, 438, 488, 541
Finance, etc. ....	346
Passenger service .....	482
Rolling stock .....	391, 437
Settlement in British Columbia .....	156, 251
Palmer, W. C.—Tree planting for railway snow fences .....	X179
Passenger car cleaning .....	432
Passenger rates increase—see Rates.	
Passenger train service in U.S. reduced .....	249
Pennsylvania Rd. appointments .....	65

## A

Alberta motor vehicles act amended .....	398
American Electric Railway Association's action on electric railway industry .....	559
American Institute of Electrical Engineers ..	453

Pere Marquette Ry.—Appointments .....	295, 389, 449, 555
Track price awards .....	59
Pickard, H. C. Terminal handling of locomotives .....	X421
Poles bought in Canada .....	X487
Port Canada Docks Ry. Co. ....	146, 285
Prince Edward Island Ry. ....	146, 187, 241, 394
Rolling stock .....	437, 499
Standardization .....	495
(See also Canadian Government Railways.)	

## Q

Quebec & Saguenay Ry. ....	12, 158,
187, 232, 297, 241, 298, 337, 390, 438, 488, 537	
Quebec Bridge .....	12, 57, 64, 201, 241, 391, 449
Quebec Central Ry.—Appointments .....	65
Report .....	524
Quebec, Montreal & Southern Ry. Appointments .....	346
Development .....	337
Quebec Public Utilities Act amended .....	181
Quebec Southern Ry. ....	542

## R

Railway accidents, Regulations for reporting ..	381
Railway betterments, etc., to proceed .....	555
Railway building, Co-operative, in Alberta ..	158
Railway station, clerical, etc., employees' wages .....	478, 495
Railway crossing signals .....	395
Railway crossings in London, Ont., Appropriation of cost .....	23
Railway crossings with concrete base .....	X383
Railway curves, Laying out with long chords ..	X382
Railway development .....	12, 57,
98, 116, 187, 240, 285, 337, 390, 438, 488, 541	
Railway electrification .....	193
Railway employees, Preventable accidents to ..	251
Railway employees, Regulations for protection of .....	279
Railway employees and Victory loan .....	68
Railway employees voting at municipal elections .....	282
Railway equipment for U.S. naval guns at the front .....	535
Railway gateways between Canada and the U.S. ....	269
Railway lands patented .....	5, 61,
108, 141, 196, 260, 281, 337, 394, 438, 477, 539	
Railway lockouts and strikes prohibited .....	X496
Railway maintenance cost increased by fast trains .....	X296
Railway maintenance of way employees' wages .....	472, 536
Railway men, Sound advice to .....	533
Railway minor officials' rates of pay .....	X496
Railway operating difficulties in winter .....	382
Railway policy, Dominion Government .....	109, 247
Railway service department recommended ..	183
Railway wages and rates raised in the U.S. ....	252
Railways Department.—Appointments .....	65, 108
Estimates .....	192
Report .....	281
Railways, Light, Along the British front .....	X523
Railways in Maritime Provinces acquired by Dominion Government .....	250, 280
Railways in U.S., Cost of Government control .....	457
Rates, Commodity, on refined sugar .....	425
Rates, Freight, All rail, Increases from eastern to western points .....	1
Rates, Freight, Advances compared with advances in goods .....	381
Rates, Freight, Increased in U.S. ....	149, 277
Rates, Freight and passenger, Advances authorized .....	20, 45, 147, 332, 369
Rates on grain milled in transit .....	184
Rates, Minimum carload weights for commodities .....	377
Red Deer Valley Coal Co. ....	57
Registration of persons over 16. Penalties ..	231
Reid Newfoundland Co.—Appointments .....	24, 66, 108, 498
Management changes .....	66
Resources department .....	385
Roberval-Saguenay Ry. ....	13, 241, 488
Rolling stock orders and deliveries .....	11, 64,
96, X141, 199, 242, 297, 340, 391, 437, 499, 511	
Rolling stock, Regulations for care of .....	526
Rouge River Ry. ....	98, 241
Rutland Rd. ....	295

## S

St. John & Quebec Ry. Arbitration .....	233
---	-----

Development .....	13, 147, 285, 337, 389, 438, 488, 541
Finance, etc. ....	296, 391
Safety katie dog .....	X187
Salisbury & Albert Ry. ....	59
Self centering chuck for centering ties .....	X187
Snowdrifts on a railway, Widening cuts with a spreader .....	X298
Spring heating furnace .....	X140
Stand for engineering instruments .....	X102
Statistics, Railway .....	287, 289, 300, 329, 376
Steel rail deliveries .....	151, 432, 499, 539
Stone, C. E. Transportation features of the coal situation in the Prairie Provinces ..	481
Sullivan, J. G. A study of the mechanics of curve resistance .....	X169
Superheater damper, Operation of .....	137
Survival of the fittest .....	96
Sydney & Louisburg Ry. ....	488

## T

Taxation, Railway, in Montreal .....	438
Telegraph, telephone and cable matters .....	341
...131, 178, 203, 269, 368, 419, 467, 524, 555	
Telegraph and telephone lines estimates .....	276
Temiscouata Ry. ....	171, 389
Ticket office consolidation in the U.S. ....	251
Ticket sellers, Training women as .....	531
Ties bought in Canada .....	X429
Ties, Treatment of .....	182
Timiskaming & Northern Ontario Ry. ....	147, 158, 187, 511
Earnings, etc. ....	59, 147, 196, 242, 299, 346, 391, 440, 542
Report .....	232
Rolling stock .....	97, 144, 242
Tie supplies .....	233
Wages .....	548
Tomlin, R. K., Jr., Light railways along the British front .....	X323
Toronto, Hamilton & Buffalo Ry. ....	389
Appointments .....	23
Bridgeway yard .....	23
Development .....	57, 98, 241, 337, 438, 541
Finance, etc. ....	299
Report .....	543
Rolling stock .....	297
Toronto Union Station .....	252, 285
Track laid in 1917 .....	23
Track ballasting by contract disapproved ..	236
Track work on a new basis .....	476
Trackmen's eyesight and hearing .....	551
Trade and supply notes .....	44, 276, 368, 419, 468, 524
Transportation Club of Toronto .....	28
Transportation features of the coal situation in the Prairie Provinces .....	481
Transportation of fuel oil tanks in British Columbia .....	X189
Transportation men, engineers, etc., in the war .....	10, X60, 106, X151,
X200, 245, X286, 336, X386, X439, 491, X543	
Travelling Engineers Association's convention ..	296
Tree planting for railway snow fences .....	X179
Troops moved by French railways .....	380

## U

United States railway offices, Closing of .....	195
United States railway ticket offices consolidated .....	251
United States railways, Re-employment of soldiers and sailors on .....	537
United States & Canada Ry. ....	242
United States Railroad Administration's work .....	428, 498

## V

Valuation of materials for Dominion taxation purposes .....	544
Van Buren bridge, Traffic arrangements .....	248, 285
Vancouver Transportation Club .....	99

## W

Wedge tanks for switching locomotives refused ..	395

## Oxy-Acetylene and Electric Welding and Cutting Processes in Locomotive Shops.

By A. F. Dyer, General Foreman, Welding Department, Grand Trunk Railway, Montreal.

With the present prices of material, scarcity of labor, and difficulty of obtaining steel and iron, welding and cutting by both the above mentioned processes have proved a great boon and an almost indispensable factor in railway repair shops. Seven years ago we employed one man as an acetylene welder, and owing to failures, through his lack of experience, the process was nearly condemned, but as we gathered experience, both gas and electric welding developed, so that now instead of one man we employ 18 and have often to work them overtime.

The low pressure acetylene gas system is used, and the whole shops are piped for the acetylene, every other repair pit has a drop connection, in locomotive houses we use Prest-O-Lite dissolved acetylene in cylinders, which saves the expenses of a generator and piping where the process is only in use occasionally. There is a great difference in opinion as to the relative merits of high or positive pressure and low pressure gas, the manufacturers of pressure outfits contending that you save oxygen by using their type of generators and that you cannot get so near to a neutral flame with the low pressure gas as you can with the high. The makers of the low pressure outfits claim that by the use of an injector embodied in the torch or welding head, a neutral flame can easily be obtained. We find we can obtain a flame as nearly neutral as can be obtained, with the outfit we use, although with pressure gas you can obtain a much larger flame for the same sized head than with the low pressure. The principal factor, however, that made us decide on the low pressure outfit was the fact that our main supply pipes are carried overhead throughout the shops, and as nearly all, if not all, oil, steam and water pipes are overhead, we had to consider a very well known motto, viz., safety first, for if a man was working overhead and by mistake broke a joint of the gas pipe, his torch or candle might cause an explosion which might wreck the shop. Though we have been using acetylene gas for eight years, we have never had an explosion of any sort. Our low pressure generator went through a big fire two years ago, and we were enabled to repair it and use it for several weeks, till we received our new outfit.

There are many kinds of electric welding outfits on the market, and, of course, each one is claimed to be the best by its respective makers; each has its advantages and, whisper it, its disadvantages, and the old prejudice very often exists among operators that the machine they are using and are familiar with is the best, and they will stick to that opinion until they become accustomed to a new machine. A new equipment, using alternating current instead of the direct current, is now being put on the market, and only weighs 150 lb., and gives from 20 to 200 amperes, and is about 50% cheaper than any d.c. machine on the market. The electric welding outfit consists of two generators, each operating four welding circuits; the shops are wired and at convenient places

connection boxes are placed, and only need a lead and ground wire connected to them and the work on which the welder is engaged. The outfit used has panel controls, which allow each man to control his amperes independent of the other welders.

The processes have proved themselves fit to be ranked amongst the greatest time and labor savers, and also we may safely say money savers, introduced for a long period. For instance, in the not very distant past, a locomotive with a broken frame had to stay several days in the shops before the men could strip down one side and remove the frame to the smith's shop, weld it and perhaps have it machined and then replaced. Now we drop the pair of wheels which may cover the break, cut out the crack with the cutting torch, to the shape of a double V, at an angle of 90°, clean off the oxide caused by cutting, and weld up with the metal electrode, using soft steel or Swedish iron, a frame 4 x 5 in. being cut and welded in under 14 hours, and it can be done in less time by having two operators on the frame at once, but the men do not like facing each other's axes, as when they are changing their filling rods their eyes get sore.

Frames, when worn by brake gear and stays, are built up, and worn holes are plugged and welded, instead of reaming them out to a larger size and thereby weakening the frame. In rebuilding and superheating engines, the same boilers are seldom used on their original frames, and as in very few cases do the various holes in angle irons, furnace bearers, etc., come into alignment with frames or boilers, the holes are welded up and redrilled.

The present price of tool steel demands that none shall be wasted, therefore we use it down to the last inch, by welding it to tire steel. Twist drills, taps, and reamers, when broken near the socket end, are welded and put into use again. For this purpose we use either the electrode or gas, but in both cases we use vanadium steel filling rods, as we find this gives the best results. Spokes of driving wheels are welded, and flat spots on tires have been successfully welded up when it was necessary to do so.

We have not had much success on cast iron, with the iron electrode, although with the carbon you can make a fair job, but the gas is unquestionably the best for any of this material. We have successfully welded with the gas, steam shovel engine frames, slides and cylinders, by welding in patches of cast iron where worn or broken. When our contract for shells was completed and the lathes that were used for this purpose were being overhauled, it was found that most of the V slide beds were worn down by the tool carriers; these were built up with the gas, which saved machining these beds down in many cases  $\frac{3}{8}$  in.

Most of the boiler welding is done with the iron electrode, using a mild steel or Swedish iron as a filler. It is found that the electric process localizes the heat more than the gas does though it is the writer's opinion that gas makes a closer

and neater weld, as all welds made by the electrode are more or less porous, unless hammered up. It pays better, whenever possible, to do so, to put quarter or half sides, in order to get out of the fire line, in preference to putting in a patch, for, as a rule, however well the patch is welded it generally gives out in from 12 to 18 months service, and the same applies to cracks, whereas the half or quarter side should last as long as the firebox.

When a nest of small cracks is found round the staybolts, the bolts are removed and the holes countersunk and welded up. This method has been found to be very successful. Corner patches are welded in by running the patch into the tube or back sheets, as the case may be, at the same time removing the flanges. If it is decided to do away with a number of tubes, plugs are welded in the holes, first countersinking the holes and having the plugs punched by a countersunk die which gives the proper bevel for welding.

A great deal of trouble was experienced in welding in the superheater flues and tubes when it was first started, but after a little experience much better success was arrived at. Some operators prefer the tubes belled, and others prefer them beaded; some prefer the water in the boiler and others do not. The operators I am connected with like the belled methods best and with the water in the boiler. This keeps the tube sheet from heating, especially round the smaller tubes. Tubes are set in with copper ferrules set back 1 32 in. and the flues are belled out 3 16 in. to 7 32 in. and the small tubes 3 16 in. The sheet is roughened all round the tubes and flues, and the oil is then burnt off with the oxy-acetylene flame and tubes, and flues welded in with electrode, using  $\frac{1}{8}$  in. mild steel or Swedish iron; the latter is preferred if caulking is needed.

A sample of an average day's work is as follows, for a gang of 12 men: 14 rivet holes in smokebox and 4 peg holes in foundation ring; 10 tube holes in upper portion of firebox tube sheet; 2 air pipes which were worn through. In the tool room: 1 ratchet for jack (2 teeth replaced); 1 gear spindle built up; 1 chuck screw, key end built up; 1 boring shaft built up from 2  $\frac{1}{2}$  to 2  $\frac{7}{8}$  in.; 2 tool holders, rebuilt; 1 air hammer handle repaired; 6 teeth in lathe gear, built in; 1 cone, small end filled up solid; 2  $\frac{1}{4}$  in. holes in top rail of frame filled up; 4 cracks 18 in. long in right side sheet welded; 14 bottom tube holes built up for re-tapping in round head; cut out frame for welding and started welding same; welded bushes in pony truck stays; cut out 3 sets of boiler tubes; cut out one set of superheater flues; build up caulking edge of fire hole; heated corners of tube sheet for closing; welded broken superheater damper bracket; built up reversing lever where worn; built up 2 side rods where worn; cut out 48 flexible staybolts in firebox; welded 2 cracks in throat sheet. Air brake department: 1 broken flange of air brake cylinder. In addition to this list two men are engaged con-

## Oxy-Acetylene and Electric Welding and Cutting Processes in Locomotive Shops.

By A. F. Dyer, General Foreman, Welding Department, Grand Trunk Railway, Montreal.

With the present prices of material, scarcity of labor, and difficulty of obtaining steel and iron, welding and cutting by both the above mentioned processes have proved a great boon and an almost indispensable factor in railway repair shops. Seven years ago we employed one man as an acetylene welder, and owing to failures, through his lack of experience, the process was nearly condemned, but as we gathered experience, both gas and electric welding developed, so that now instead of one man we employ 18 and have often to work them overtime.

The low pressure acetylene gas system is used, and the whole shops are piped for the acetylene, every other repair pit has a drop connection, in locomotive houses we use Prest-O-Lite dissolved acetylene in cylinders, which saves the expenses of a generator and piping where the process is only in use occasionally. There is a great difference in opinion as to the relative merits of high or positive pressure and low pressure gas, the manufacturers of pressure outfits contending that you save oxygen by using their type of generators and that you cannot get so near to a neutral flame with the low pressure gas as you can with the high. The makers of the low pressure outfits claim that by the use of an injector embodied in the torch or welding head, a neutral flame can easily be obtained. We find we can obtain a flame as nearly neutral as can be obtained, with the outfit we use, although with pressure gas you can obtain a much larger flame for the same sized head than with the low pressure. The principal factor, however, that made us decide on the low pressure outfit was the fact that our main supply pipes are carried overhead throughout the shops, and as nearly all, if not all, oil, steam and water pipes are overhead, we had to consider a very well known motto, viz., safety first, for if a man was working overhead and by mistake broke a joint of the gas pipe, his torch or candle might cause an explosion which might wreck the shop. Though we have been using acetylene gas for eight years, we have never had an explosion of any sort. Our low pressure generator went through a big fire two years ago, and we were enabled to repair it and use it for several weeks, till we received our new outfit.

There are many kinds of electric welding outfits on the market, and, of course, each one is claimed to be the best by its respective makers; each has its advantages and, whisper it, its disadvantages, and the old prejudice very often exists among operators that the machine they are using and are familiar with is the best, and they will stick to that opinion until they become accustomed to a new machine. A new equipment, using alternating current instead of the direct current, is now being put on the market, and only weighs 150 lb., and gives from 20 to 200 amperes, and is about 50% cheaper than any d.c. machine on the market. The electric welding outfit consists of two generators, each operating four welding circuits; the shops are wired and at convenient places

connection boxes are placed, and only need a lead and ground wire connected to them and the work on which the welder is engaged. The outfit used has panel controls, which allow each man to control his amperes independent of the other welders.

The processes have proved themselves fit to be ranked amongst the greatest time and labor savers, and also we may safely say money savers, introduced for a long period. For instance, in the not very distant past, a locomotive with a broken frame had to stay several days in the shops before the men could strip down one side and remove the frame to the smith's shop, weld it and perhaps have it machined and then replaced. Now we drop the pair of wheels which may cover the break, cut out the crack with the cutting torch, to the shape of a double V, at an angle of 90°, clean off the oxide caused by cutting, and weld up with the metal electrode, using soft steel or Swedish iron, a frame 4 x 5 in. being cut and welded in under 14 hours, and it can be done in less time by having two operators on the frame at once, but the men do not like facing each other's arcs, as when they are changing their filling rods their eyes get sore.

Frames, when worn by brake gear and stays, are built up, and worn holes are plugged and welded, instead of reaming them out to a larger size and thereby weakening the frame. In rebuilding and superheating engines, the same boilers are seldom used on their original frames, and as in very few cases do the various holes in angle irons, furnace bearers, etc., come into alignment with frames or boilers, the holes are welded up and redrilled.

The present price of tool steel demands that none shall be wasted, therefore we use it down to the last inch, by welding it to tire steel. Twist drills, taps, and reamers, when broken near the socket end, are welded and put into use again. For this purpose we use either the electrode or gas, but in both cases we use vanadium steel filling rods, as we find this gives the best results. Spokes of driving wheels are welded, and flat spots on tires have been successfully welded up when it was necessary to do so.

We have not had much success on cast iron, with the iron electrode, although with the carbon you can make a fair job, but the gas is unquestionably the best for any of this material. We have successfully welded with the gas, steam shovel engine frames, slides and cylinders, by welding in patches of cast iron where worn or broken. When our contract for shells was completed and the lathes that were used for this purpose were being overhauled, it was found that most of the V slide beds were worn down by the tool carriers; these were built up with the gas, which saved machining these beds down in many cases  $\frac{3}{8}$  in.

Most of the boiler welding is done with the iron electrode, using a mild steel or Swedish iron as a filler. It is found that the electric process localizes the heat more than the gas does though it is the writer's opinion that gas makes a closer

and neater weld, as all welds made by the electrode are more or less porous, unless hammered up. It pays better, whenever possible, to do so, to put quarter or half sides, in order to get out of the fire line, in preference to putting in a patch, for, as a rule, however well the patch is welded it generally gives out in from 12 to 18 months service, and the same applies to cracks, whereas the half or quarter side should last as long as the firebox.

When a nest of small cracks is found round the staybolts, the bolts are removed and the holes countersunk and welded up. This method has been found to be very successful. Corner patches are welded in by running the patch into the tube or back sheets, as the case may be, at the same time removing the flanges. If it is decided to do away with a number of tubes, plugs are welded in the holes, first countersinking the holes and having the plugs punched by a countersunk die which gives the proper bevel for welding.

A great deal of trouble was experienced in welding in the superheater flues and tubes when it was first started, but after a little experience much better success was arrived at. Some operators prefer the tubes belled, and others prefer them beaded; some prefer the water in the boiler and others do not. The operators I am connected with like the belled methods best and with the water in the boiler. This keeps the tube sheet from heating, especially round the smaller tubes. Tubes are set in with copper ferrules set back 1 32 in. and the flues are belled out 3/16 in. to 7 32 in. and the small tubes 3 16 in. The sheet is roughened all round the tubes and flues, and the oil is then burnt off with the oxy-acetylene flame and tubes, and flues welded in with electrode, using  $\frac{1}{8}$  in. mild steel or Swedish iron; the latter is preferred if caulking is needed.

A sample of an average day's work is as follows, for a gang of 12 men: 14 rivet holes in smokebox and 4 peg holes in foundation ring; 10 tube holes in upper portion of firebox tube sheet; 2 air pipes which were worn through. In the tool room: 1 ratchet for jack (2 teeth replaced); 1 gear spindle built up; 1 chuck screw, key end built up; 1 boring shaft built up from 2 1/2 to 2 7/8 in.; 2 tool holders, rebuilt; 1 air hammer handle repaired; 6 teeth in lathe gear, built in; 1 cone, small end filled up solid; 2 1/4 in. holes in top rail of frame filled up; 4 cracks 18 in. long in right side sheet welded; 14 bottom tube holes built up for re-tapping in round head; cut out frame for welding and started welding same; welded bushes in pony truck stays; cut out 3 sets of boiler tubes; cut out one set of superheater flues; build up caulking edge of fire hole; heated corners of tube sheet for closing; welded broken superheater damper bracket; built up reversing lever where worn; built up 2 side rods where worn; cut out 48 flexible staybolts in firebox; welded 2 cracks in throat sheet. Air brake department: 1 broken flange of air brake cylinder. In addition to this list two men are engaged con-

tinuously on cutting around the shops.

For cutting steel and wrought iron, the oxy-acetylene process has practically no competitor, it being impossible with the carbon point to cut as fast, or as fine and neatly, as the gas torch, although for scrapping fireboxes and frames, the carbon point is cheaper, if time is no object and labor cheap.

The foregoing examples only enumerate a very small fraction of the uses to which the two methods of welding and cutting are being put in locomotive repairing and machine shops and fresh uses are being found for it every day. No locomotive house should be without an oxy-acetylene outfit, both for repair work and as a part of the wrecking outfit, many days are lost by locomotives being tied up through parts having to be sent to the nearest big shops for repair, which could be repaired on the spot with a welding and cutting outfit. All large locomotive houses should have both processes, as they would pay for themselves over and over again. Though there are many different opinions as to which is the best

process, no shop is complete unless it has both equipments, although the gas has really the widest range, but, on the other hand, a heavy piece of steel or iron needs no preheating with the electrode but welding can be commenced as soon as your arc is drawn. Ninety-five per cent. of the failures which occur instead of being laid on the process should be placed on the shoulders of the operators.

Welding should not be treated as a side line of the machinists' or boilermakers' business, but as a trade in itself, as it really is, for it needs the entire concentration of a man's mind, careful study, plenty of practice and a conscientious man to make a welder. Wherever possible a separate building or suitable space should be provided for bench work, and should be equipped with a suitable furnace for heating and annealing castings, and also have plenty of floor room, to allow of charcoal fires being built for preheating cast iron jobs for welding.

The foregoing paper was read before the Canadian Railway Club in Montreal recently.

### Strength of Oxy-Acetylene Welded Joints.

The Illinois University's Engineering Experiment Station has completed a series of tests of the strength of oxy-acetylene welded joints in mild steel plates. The tests were made in the laboratories at Urbana under three conditions of loading: (1) static load in tension, (in a testing machine); (2) repeated load (bending), and (3) impact in tension (in a drop testing machine).

For joints made with no subsequent treatment after welding, the joint efficiency for static tension was found to be about 100% for plates  $\frac{1}{2}$  in. thick or less, and to decrease for thicker plates. For static tension tests, the efficiency of the material in the joints welded with no subsequent treatment was found to be not greater than 75%. The joints were strengthened by working the metal after welding and were weakened by annealing at 800 degrees C. For static tests and for repeated stress tests, the joint efficiency sometimes reaches 100%; the efficiency of the material in the joint is always less. This indicates the necessity of building up the weld to a thickness greater than that of the plate. The impact tests show that oxy-acetylene welded joints are decidedly weaker under shock than is the original material; for joints welded with no subsequent treatment, the strength under impact seems to be about half that of the material. In general, the test results tend to increase confidence in the static strength and in the strength under repeated stress of carefully made oxy-acetylene welded joints in mild steel plates.

The results of the tests have been published by the Engineering Experiment Station as Bulletin 98, copies of which may be obtained free by addressing C. R. Richards, Director, Urbana, Ill.

**Canadian Northern Ry. Vancouver Station Suit.**—Gibb & Co. have secured a verdict for \$4,000 against Canadian Northern Construction Co. and Carter, Hall, Aldinger Co., for breach of contract. The plaintiffs were to supply certain stone for the building of the C.N.P.R. station at False Creek, Vancouver, for which work the other companies were the contractors. The question at issue was whether or not a contract, as contemplated by the Sales of Goods Act, existed. There was a verbal contract, and a document to which was appended the printed name of one of the defendant companies, with the rubber stamped name of the other, and these two names were connected by the written word "and," which the jury found had been written in by the secretary-treasurer of one of the defendant companies before it was handed to the plaintiffs. Justice Murphy, upon the motion to enter judgment for the \$4,000, declined to give a decision upon the sufficiency of the document as a contract. This matter will be taken to a higher court.

## Birthdays of Transportation Men in January.

Many happy returns of the day to:—  
J. Abrams, Wharf Freight Agent, C.P.R., Vancouver, B.C., born at Manchester, Eng., Jan. 24, 1870.

W. U. Appleton, General Master Mechanic, Canadian Government Railways, Moncton, N.B., born there, Jan. 29, 1878.

R. Armstrong, Superintendent, Souris Division, Manitoba District, C.P.R., Souris, born at Kingston, Ont., Jan. 27, 1865.

L. E. Ayer, General Agent, Canadian Northern Ry., St. Louis, Mo., born at Henderson, Ia., Jan. 11, 1877.

F. X. Belanger, General Freight and Passenger Agent, Temiscouata Ry., Rivière du Loup, Que., born at Chlorydormes, Que., Jan. 20, 1876.

G. McL. Brown, European Manager, C.P.R., London, Eng., born at Hamilton, Ont., Jan. 20, 1866.

F. J. Buller, Cashier and Paymaster, Eastern Lines, Canadian Northern Ry., born at Lindsay, Ont., Jan. 30, 1874.

W. A. Cowan, A.M.Can.Soc.C.E., General Superintendent, Western Lines, Canadian Government Railways, Cochrane, Ont., born at Galt, Ont., Jan. 22, 1877.

J. E. Dalrymple, Vice President, G.T.R., G.T.P.R., and Central Vermont Ry., Montreal, born there Jan. 1, 1869.

A. Davidson, Commercial Agent, Grand Trunk Pacific Ry., and G.T.P. Coast Steamship Co., Vancouver, B.C., born at St. Henri, Montreal, Jan. 29, 1885.

G. J. Desbarats, C.M.G., Deputy Minister of Naval Service, Ottawa, Ont., born at Quebec, Que., Jan. 27, 1861.

J. E. Everell, Superintendent, Montmorency Division, Quebec Ry., Light and Power Co., Quebec, Que., born at Cap Rouge, Que., Jan. 1, 1863.

J. E. Giles, Locomotive Foreman, Canadian Northern Ry., Lucerne, B.C., born at Toronto, Jan. 18, 1882.

Gordon Grant, Chief Engineer, Quebec and Saguenay Ry., Ottawa, born at Dufftown, Scotland, Jan. 2, 1861.

G. F. Hichborn, formerly Agent, Great Eastern Fast Freight Line, New York, born at Boston, Mass., Jan. 13, 1875.

C. Hood, Local Freight Agent, C.P.R., Saskatoon, Sask., born at Edinburgh, Scotland, Jan. 20, 1864.

D. W. Houston, Superintendent, Regina Municipal Ry., Regina, Sask., born at Bathurst, N.B., Jan. 3, 1879.

Carl Howe, Traffic Manager, Michigan Central Rd., Chicago, Ill., born at Berrien Springs, Mich., Jan. 11, 1870.

H. J. Humphrey, Superintendent, Brownville Division, Quebec District, C.P.R., Brownville Jct., Me., born at Berrys Mills, N.B., Jan. 26, 1879.

W. C. Hunter, ex-Manager New Brunswick Coal and Ry. Co., now of Montreal, born at St. John, N.B., Jan. 4, 1865.

H. G. Kelley, President, G.T.R. and G.T.P.R., Montreal, born at Philadelphia, Pa., Jan. 12, 1858.

W. J. Lynch, General Manager, Quebec Ry., Light, Heat and Power Co., Quebec, Que., born there, Jan. 17, 1882.

C. R. Mackenzie, General Manager's Assistant, Western Lines, Canadian Government Railways, Winnipeg, born at Toronto, Jan. 10, 1883.

John Macrae, Locomotive Foreman, C.P.R., Swift Current, Sask., born at Springburn, Glasgow, Scotland, Jan. 30, 1879.

P. A. Macdonald, Manitoba Public Utilities Commissioner, Winnipeg, born at Gananoque, Ont., Jan. 6, 1857.

William Phillips, Canadian Representative, Cunard Steamship Co., Montreal, born at Toronto, Jan. 31, 1870.

W. Pratt, General Superintendent, Sleeping and Dining Cars and Hotels, Canadian Northern Ry., Winnipeg, born at Sibbertoft, Northamptonshire, Eng., Jan. 18, 1870.

John Pullen, President, Canadian Express Co., Montreal, born at Shepton Mallet, Eng., Jan. 23, 1863.

Ralph M. Reade, Superintendent, City and Quebec County Railways, Quebec Railway, Light & Power Co., Quebec, born at Llanelly, Wales, Jan. 1, 1868.

L. J. Rouleau, Commercial Agent, G.T.R., Quebec, Que., born at Montreal, Jan. 6, 1879.

C. Senay, Assistant Superintendent, Laurentian Division, Quebec District, C.P.R., Montreal, born at St. Césaire, Que., Jan. 31, 1873.

A. F. Stewart, M.Can.Soc.C.E., Chief Engineer, Eastern Lines, Canadian Northern Ry., Toronto, born at West Bay, N.S., Jan. 1864.

J. G. Sullivan, M.Can.Soc.C.E., Chief Engineer, Western Lines, C.P.R., Winnipeg, born at Bushnells Basin, N.Y., Jan.

## Umbrella Roofs at C.P.R. Stations at Montreal and Quebec.

The C.P.R. has completed recently umbrella roofs over four of its passenger platforms at Place Viger Station, Montreal, three being each 496 ft. long and one 403 ft. long. The baggage platforms which occur between each passenger platform are not covered. The umbrella roofs consist of reinforced concrete throughout. The posts are symmetrical 2-armed units.

face and gives a very pleasing effect from below.

Where down pipes occur in the roof, the Siegwart beams were made of shorter length and trap castings were cast into a small section of solid concrete poured on the work. The rain water pipes are of Toncan metal and are located at every second panel, 62 ft. c. to c., and connect

was done immediately the forms were taken off, by rubbing down with sand and wooden floats. The structural steel hangers were manufactured previously in a structural shop, and after erection they were painted to match the general color of the concrete.

The wiring for the whole structure is laid in standard conduit work, with the necessary outlet boxes. The conduits pass through pre-cast holes in the posts, and two lights per panel are attached to fixtures on the lower side of the centre purlins. This gives ample light at night, and the fact that the outer edges of the roof slabs are 18 in. above the top of cars, provides ample light during the day, even when both tracks adjacent to a platform are occupied by trains.

Similar work was carried out at the Union Station, Quebec, in substantially the same manner as described above for Place Viger, with a few exceptions, one of which was that a few of the posts were poured on their sides, and were lifted up later and grouted into the pockets already referred to in the pedestals. Generally, however, the posts were cast in a vertical position, after the reinforcement had been put together and stood up in its final vertical position. This method was found more convenient, from the point of view of maintenance of traffic on platforms. The roof slabs are of mill construction, 3 in. thick timber instead of Siegwart beams as at Place Viger.

The accompanying illustrations show the general appearance of the finished work, including the connection of the new platform covers with the existing midway space at Place Viger station. This consists of 1½ in. mortar work, floated on expanded metal reinforcement attached to the existing structural steel work, which gives a pleasing appearance, as can be seen from the illustrations, from both inside and outside of the midway.

Umbrella Roofs, Place Viger Station, Canadian Pacific Railway, Montreal.

on which are supported reinforced concrete purlins, which in turn support the reinforced concrete roof slabs, which are waterproofed with the usual membrane and asphalt covering. This unit system of construction, constitutes a very interesting, and what is believed to be, an original method of construction.

The actual method of construction was as follows: The pedestals were first built in their proper locations, an oblong pocket 1 ft. x 1 ft. 10 in. being left in them for the reception of the posts, which were intended to be manufactured as units, and later to be inserted and grouted into the pockets. It was found, however, in some cases, more economical to erect the reinforcement as units in the pockets, clamp the forms around them, and then, when all adjustments had been made, to pour the concrete from a travelling crane platform. After the forms had been removed, the structural steel slings were put in place. In the meantime the purlins had been cast as units in the yard and they were erected from the same traveller. This having been accomplished, the reinforced concrete roof slabs were laid as if they were ordinary mill construction wood work. All reinforcement of the posts and purlins consisted of rails, bent where necessary, and securely attached to one another. This construction lent itself readily to a systematic and speedy erection. It allowed the work to be proceeded with without interfering with passenger traffic on the platforms, or with train operation on the tracks.

When the skeleton was erected the roof slabs were lifted up into place from the deck of a flat car by a light travelling crane. These roof slabs are of special construction known as Siegwart beams, a Belgian design. They are 4 x 12½ in. wide. They were specially manufactured with one end closed and all lower edges had a ½ in. chamfer, which gives the impression of a series of V joints 12½ in. apart. This served to break up the sur-

with the existing drainage system in the yard.

The roof covering consists of a membrane, composed of 5 ply roofing felt, laid in pitch, with a continuous galvanized iron reinforcing piece along the edge of the roof; the function of this reinforcing piece being to keep the membrane in contact with the end of the roof slab and prevent a tendency to curl up. In addition to

Umbrella Roofs, Place Viger Station, Canadian Pacific Railway, Montreal.

this it provides a uniform drip edge which extends ¾ ins. below the lower surface of the slab. Details of the manner in which the first layer of roofing material was folded back and attached to the upper side of the membrane are clearly shown on the plans. The upper surface of the membrane is protected against abrasion by snow shovelling, by a layer of asphalt. The surface finish of the whole work

The work at both Montreal and Quebec was executed under the supervision of J. M. R. Fairbairn, Assistant Chief Engineer, the designs being made by P. B. Motley, Engineer of Bridges, and the work was carried out by J. E. Beatty, District Engineer. The Atlas Construction Co. were the contractors for the Montreal work, and the Byers Construction for the Quebec work.

# Increased All Rail Freight Rates from Eastern Points to Port Arthur and the West.

Canadian Railway and Marine World for July published general order 210, passed by the Board of Railway Commissioners, dismissing complaints of Winnipeg, Calgary, Regina, and Saskatoon Boards of Trade and the Canadian Manufacturers Association, against Tariffs C.R.C. 3 and 4, effective Sept. 1, 1917, filed on behalf of the railway companies by the Canadian Freight Association's Manager, providing increased all rail freight rates from Eastern Canada to points west of and including Port Arthur. Following is the full text of the judgment, given by Commissioner McLean, and concurred in by the Assistant Chief Commissioner, D'Arcy Scott.

Judgment was given by the board on March 29, 1917, finding that certain increases proposed on local lake and rail rates from stations in Canada to Fort William and other lake ports were reasonable, and said rates were allowed to become effective April 2, 1917. The relation of the lake and rail rates, which were thus allowed to become effective, to the water rates are set out in the judgment as follows: "The new lake and rail rates will so far as is known be the following number of cents per 100 lb. over the maximum all water rates for the season of 1917 in the classes mentioned: 1st class, 5c; 2nd class, 4c; 3rd class, 4c; 4th class, 3c; 5th to 10th classes, inclusive, 2c. And the proposed rates will be under the present all-rail rates to Fort William, 45c per 100 lb. first class, and 12c per 100 lb. 5th class from Toronto; and 35c first class and 7c fifth class from Montreal."

Thereafter tariffs were filed by the Canadian Freight Association providing for increases in rail, lake and rail rates from points in Eastern Canada to points in Western Canada, to become effective April 23. The scope of these rates was set out in the Assistant Chief Commissioner's judgment of April 7, 1917. As explained in this judgment, the situation was as follows: "In framing the new tariffs, the railways have not increased the proportion of the rate covering the rail haul from the head of the lakes to destination. Therefore, the advances that are proposed in the new tariffs are the same to all points west of Fort William. As an example, the proposed class rate to Winnipeg and to Vancouver both show the same advance in each class. The class rates advances to all points west of Fort William are for 100 lb. 1st class, 6c; and, 3rd and 4th classes, 3c; 5th class, 2c; 6th to 10th classes, 1c. Advances ranging from 1c to 6c per 100 lb. in rates on different commodities are proposed in the commodity tariff."

Protests were received from the boards of trade of the western cities and the Canadian Manufacturers' Association's Prairie Provinces' Branch, asking the Board to suspend lake and rail furtherance rates until the railway companies had justified the proposed increases. The position taken by the railway companies was that the increases were concerned with a water competitive situation. The board was of opinion that the action in the local rail and lakes rates case above referred to should not be taken by the companies as a necessary justification for the increase in rail, lake and rail rates to western points; and the opinion was expressed that there might be principles applicable to the proposed western rates, or

circumstances and conditions to be considered which had no application to the local rates to Fort William. The matter was suspended so that further representations of the parties interested could be hearing in the west. Sittings were held in different western cities; and thereafter general order 197 was issued permitting the tariffs as filed to become effective, with the exception of rates on sugar to Port Arthur, Fort William and Westfort for furtherance, said excepted rates being limited by the proviso that the existing rail and water rates on sugar to Port Arthur, Fort William and Westfort were to be continued in effect until further order by the board.

The subject matter of the present complaint relates itself to what has been above set out. Effective Sept. 1, 1917, tariffs were filed advancing all rail, class and commodity rates to points west of Fort William and Port Arthur. The history of the class rates involved is set out in detail later on. There are three sets of routes and rates involved in connection with a movement for furtherance beyond Fort William; first of all, there is the lake route and rate; then comes the lake and rail route, with a rate exceeding the lake rate by a given difference; and then there is the all rail route and rate, which rate exceeds the lake and rail rate by a given difference; this for a period of years, as later explained, having been 25c. What is involved in the rates which are the subject matter of the present complaint is that the lake and rail rate for furtherance having been increased by 6c on 1st class, the all rail rate is increased by the hitherto existing differences between the lake and rail and all rail rates; i.e., the first class rate would become 81c instead of 75c as hitherto. The other classes scale in proportion. The rate to a point beyond Fort William from the east is made up of the addition of the all rail proportional, as referred to, to the rate from Fort William west. Increases are also set out in the case of commodity rates. In the case of iron ore, brick, charcoal, salt cake, the rates have been advanced 1c per 100 lb., 10th class. Other articles which are moving under commodity rates have also been advanced 1c, which is the advance proposed in the 7th class. Fifth class commodities have advanced 2c, which is the advance proposed in the 5th class rate. Where the same commodity is shown in both tariffs 3 and 5, 3 being the lake and rail and 5 the all rail, the same advance is made in the all rail rate as in the lake and rail, with the exception of bog iron ore, where no advance was made in the lake and rail rate, as last season's lake and rail rates were on the all rail basis. The list of commodities carried in the all rail tariff is more extensive than that contained in the lake and rail tariff. The general relation may be summarized. When a commodity is common to both tariffs, the increase in the all-rail does not exceed the lake and rail. When the all-rail tariff carries a commodity not contained in the lake and rail tariff, the increase, if any, has as its maximum the increase in the class in which the commodity is rated in the classification.

An application for suspension was made. The provisions of the board's regulations as to suspension of tariffs having in the board's opinion, not been met, it was decided that a prima facie case for

suspension had not been made out. As to the procedure that the board has adopted in regard to suspension, reference may be made to the complaint against the proposed rate on canned goods and hardware consigned to points on the Pacific coast, also to the Regina Board of Trade's complaint against proposed tariffs increasing minimums and rates on carload traffic from West Coast to Regina, Sask.; and complaint of H. G. Smith, Limited, Regina, Sask., against C.P.R. tariffs or supplements to existing tariffs, advancing freight rates on dried fruits and canned salmon from Pacific Coast points to Regina. The matter was set down for hearing at Ottawa to be spoken to, and it was also spoken to at Calgary, Edmonton, Saskatoon, Regina, Winnipeg and Fort William.

The matter was spoken to by the railways' representatives at the different points. The general position taken by them was that the situation was a water competitive one. It was set out that the all rail rates had been reduced from a higher basis to a lower basis because of water competition; and it was contended that rates having been reduced to meet water competition, the companies were within their rights, under the Railway Act, in increasing the rates when the water competition was less active.

The position taken by the boards of trade was, in substance, that the increases proposed should be justified both from a cost and from a necessity basis. To the plea that a water competitive condition created a special set of circumstances, the boards of trade in general rejoined that the same conditions as to justification arose here as in regard to rates where water competition was not pleaded. The Edmonton and Fort William boards stated they had no protest to make. At Regina, it was stated on behalf of the Moose Jaw Board of Trade that the increases were so slight that no objection would be made by it. At the hearing at Winnipeg, the Manitoba Government was represented; and its counsel stated, in substance, that the plea as to competitive conditions on the lakes was untenable and that the rates charged had been so adjusted that there was no competition in effect.

The board has recognized the effect of water competition. In the decision in the Western Rates Case, 17 Can. Ry. Cas., 123, the board used the following language: "So far as water competition is concerned, it has been recognized over and over again that the extent to which water competition shall be met is in the discretion of the railway. The board has also held that it is the privilege of a railway in its own interest to meet water competition, and, further, that it is not the privilege of the shipper to demand less than normal rates because of such competition, unless the railway in its own interest chooses to meet it. The principle of water competition has been again recognized practically by all rate regulating commissions. Reference, however, may be made to the board's judgment in Canadian Oil Cos. v. G.T., C.P. and C.N.R. Cos., 12 C.R.C., 351, and the Blind River Board of Trade Case, 15 C.R.C. 146."

In the board's decision in the matter of lake and rail rates from stations in Eastern Canada to Fort William and other lake ports, above referred to, the following language was used: "The justi-

fication of the proposed increases submitted by the railway companies was that the rates sought to be increased were exceptionally low rates put in to meet water competition, which the companies had the right to cancel or increase at any time they decided to disregard the water competition, and that conditions had so changed that the railway companies did not desire any longer to meet water competition. \* \* \* The board has no jurisdiction over the rates charged or the division of lake and rail rates demanded by the different steamship companies operating boats on the St. Lawrence or the Great Lakes, other than the rates on steamers operated by the C.P.R. I understand the steamship companies desire to charge higher rates during the coming season than they have been charging in the past. The extraordinary demand for ocean tonnage, due to the war, has caused the Canada Steamship Lines, the corporation which operates the largest number of boats on the lakes, to remove its largest and best lake boats and put them into ocean service. Doubtless other lake boat owners have done the same thing. The result is a scarcity of tonnage on the lakes. With increased water rates and a scarcity of lake tonnage, it is only natural that the railway companies should decide that the present was an opportune time to cancel their old water compelled rates. \* \* \* As already indicated, the railway companies may in their discretion meet water competition if they see fit to do so, and may also determine the extent to which they shall meet it; and, therefore, the board cannot interfere with the tariffs filed."

The board's decision in the Western Rates Case recognized the pervasive spread of water competition east of Port Arthur and Fort William. It said: "In the matter of water competition, there can be no doubt at all as to the efficiency of the waterways spread through Eastern Canada, from its easterly coast, and terminating with the western limit of the most westerly division of the east—at Port Arthur and Fort William."

Again, it dealt in the same judgment with water competition in extenso, to which reference may be made. One sentence may be taken as indicative of what was set out: "There can be no doubt whatever, as I have already pointed out, of the fact that, generally speaking, water competition in the east is effective."

The board has thus recognized water competition as having a determinative effect in connection with rates east of Fort William. The position has been taken that competitive conditions as between rail and water carriers do not exist, and that this is evidenced by the fact that certain differences between the scales of rates concerned have since 1908 existed without change; and it was argued that even in normal times there was no effective water competition on the Great Lakes.

In the sittings of the House of Commons committee on the Railway Bill, evidence was given during May, 1917, regarding a proposition to give the board control over lake carriers, in addition to those which are at present subject to the board's jurisdiction, on the ground that they are owned, chartered, maintained, used or worked by railway companies. The position that there should be such control put in the board's hands was favored by various fruit and vegetable growers' associations in Ontario and British Columbia, and was also supported by the Grain Growers' Grain Co., the United Farmers of Alberta, and the Manitoba

Grain Growers' Association. The measure was opposed by a considerable number of boards of trade, shippers' organizations and individual shippers. The Toronto Board of Trade opposed the proposition, on the ground that it wanted water competition to be as free and untrammelled as it was in the absence of the proposed legislation. The Chatham Board of Trade, in opposing the legislation, said it favored "free and unmolested traffic on inland waters." The Mayor of Chatham said that most of the shippers were opposed, since they thought the present elasticity was preferable. The Border Chamber of Commerce, representing the Ford, Walkerville, Windsor, Sandwich, and Ojibway Boards of Trade in submitting their opposition said the freedom of trade and competition on the waterways should remain free to every one. Opposition to the proposal was submitted by the Sarnia Board of Trade, which said the legislation would "cause undue and undesirable restrictions on the freedom of trade and competition on the waterways." The Hamilton Board of Trade, while not expressing a final opinion, as it had not had time to compile sufficient data, said it felt it would be "a mistake to hamper the present steamship arrangements." The Quebec Board of Trade, in opposing the proposal, said the result would be that "our shippers would lose the advantage of competition during the season of navigation." The Montreal Board of Trade, said that "the jurisdiction of the Board of Railway Commissioners would tend to limit competition between the water carriers themselves, which in turn would tend to decrease the competition between water carriers and railways;" and it also said that it did not believe that in respect of water borne traffic there should be any controlled rates. Mr. McMaster of the Steel Co. of Canada, who appeared as spokesman for the Montreal Board of Trade, was queried by the Minister of Railways as to the existing situation in which rates had increased because of scarcity of ships, and in reply, said: "That question would take care of itself. These waters are free; it only needs the investment in one, two or three steamers to enable a man to take part in that traffic, and if the rates are so promising and remunerative men will be willing to invest their capital in that enterprise; the traffic is open to anybody to take part in it." Mr. Tilton, who appeared for the Montreal Corn Exchange, expressed the opinion that "there was not the slightest doubt that the waterways do compete with the railways and influence the railway rates." The Kingston Board of Trade's marine committee expressed the opinion that competition on the lakes was necessary in the best interests of the Dominion. The Winnipeg Board of Trade, in protesting against the proposed control, telegraphed: "Proposed legislation place all water carriers plying between Canadian ports under jurisdiction of the Railway Commission in the matter of rates is measure so detrimental to interests of this country that Winnipeg Board of Trade desires to protest most emphatically against it. To us it looks as though parliament would say to shippers: 'There shall be no competition in rates for evermore.' Please have this bill killed at the earliest possible moment."

The position of the Canadian Manufacturers' Association, as presented at the hearing, was, in summary form, that the legislation as suggested would to a very large extent destroy competition. Mr. Walsh, on behalf of the association, said: "My argument has been against any in-

terference at all with the waterways. We say they have been made free to the people of Canada for the purpose of affording some kind of competition, and I think if you place these carriers under the control of the Board of Railway Commissioners you are going to kill initiative to a very considerable extent and wipe out the smaller carrier." In answer to Mr. Armstrong he said, in substance, that the manufacturers whom he represented had their primary interests in the westbound movement. Representations were made by different shippers. The Dominion Glass Co. protested against any legislation which would "in any way interfere with the freedom of these boats to name such rates and charges as they see fit. \* \* \* it would absolutely prevent the making of fair rates to such points as are most favorably located as far as water shipments are concerned." The Dominion Sugar Co., of Chatham, in opposing the legislation, said "So many varying conditions enter into water traffic that we believe waterways of Canada should be open and free to every one." The Western Salt Co., of Courtright, Ont., in opposing the legislation, said it would be detrimental to their interests and the interests of other shippers. The legislation was also opposed by the Thor Iron Works, of Toronto, and by the International Harvester Company. Protests against the legislation were made by various grain companies doing business in Winnipeg. Parrish & Heimbecker, while recognizing that there were very few boats left on the lakes, opposed the proposal to place the traffic under the commission, on the ground that it would restrict competition. The Canada Atlantic Grain Co. of Winnipeg said "Such an act would practically eliminate competition on the lakes in so far as the movement of grain between Canadian lake ports is concerned." What is said is of interest in showing the most recently recorded detailed opinion of shippers' interest in regard to the rate situation on the lakes and adjacent thereto as affected by water competition.

In dealing with a competitive rate situation, the board had before it in Dominion Millers' Association v. G.T.R. and C.P.R. Cos., 12 Can. Ry. Cas., 363, a condition where competitive joint rates and furtherance rates had been increased by the railways, the justification advanced for this increase being the lessening of competition; and it was recognized that it was within the discretion of the railways to vary their competitive joint rates or competitive joint furtherance rates within the limits fixed by the normal rates, subject, of course, to their meeting any attack made on any of the rates so changed on the ground that they are discriminatory.

Prior to 1908 and as far back as the board's records go, viz. to 1904, the spread between the lake and rail and all rail class rates to points west of Fort William was as follows:

	1	2	3	4	5	6	7	8	10	classes
From Toronto points . . .	40	33	22	11	10	5	10	10	10	cents
From Montreal points . . .	55	47	32	18	16	10	15	15	15	"

In 1908, the all rail rates were reduced and were made the same from Toronto and Montreal points, the spread being as follows:

	1	2	3	4	5	6	7	8	10	classes
	25	20	14	10	6	5	5	5	5	cents

This spread has been continued from 1908 into the present tariffs and that under review. The regular tariff from the head of the lakes west is common to both routes. The previous through lake and

rail rates were the sum of the Toronto-Fort William lake and rail rates and the current tariff from Fort William west, applied from both Toronto and Montreal points; in other words, the through rates were the combination of the locals on the Toronto basis. (The Fort William locals from Montreal were and are higher than Toronto, by 10c in the 1st class and 5c in the 5th.)

The new through lake and rail rates permitted to become effective by the Board's General Order 197 are not up to the full Toronto basis combination, so that, relatively speaking, they are lower than hitherto. The new Toronto-Fort William locals are

1	2	3	4	5
60	53	45	38	30c

while the through rates are based on—

1	2	3	4	5
58	47	41	34	27c

The through all rail rates, on the other hand, bear no relation to the all rail locals to Fort William; they are related to the lake and rail rates, the relationship being expressed by the spread above referred to. The all rail rates to Port Arthur and Fort William, for local deliveries, in force since 1908, and the proportionals to the same points on which the through rates are based, are shown below as "present," and those under review as "new"—

	1	2	3	4	5	6	7	8	10 classes
Present locals	105	85	70	50	42	36	26	35	35 cents
" proposals	75	64	52	41	31	30	25	25	25
New locals	111	89	73	53	44	37	37	36	36
" proposals	81	67	55	44	33	31	26	26	26

In order to determine whether the new local rates to Fort William are reasonable, compared with the rates allowed by the board in the Eastern Rates Case, predicated though they were on the lower so-called "town" or Schedule A scale, the longest single line haul available for the purpose is that from Windsor, Ont., to Megantic, Que., 726 miles. The most important, and the base, class is the 5th. The 5th class rate Windsor to Megantic is 38c. Tapering this rate in accordance with the approved Eastern Standard Mileage Tariff (the only one in true proportion) for the distance, Toronto to Fort William, viz., 814 miles, the result is 44c, which is the exact 5th class rate proposed from Toronto to Fort William. For the extreme distance from Montreal to Fort William, viz., 998 miles, the result would, of course, be greater, it would be 57c. Tapering the Fort William 5th class rate to the Toronto-Winnipeg distance of 1,233 miles, the result is 76c, while the proposed rate is 71c. In this instance, the result from Montreal would be the same, viz., 76c.

So far as the proportions west of Fort William are concerned, the rates west of Winnipeg to the Pacific Coast are in accordance with the scale prescribed by the board in the Western Rates Case. The board has more than once stated that comparisons with rates in United States territory are not conclusive of the reasonableness or otherwise of Canadian rates, unless the conditions are on all fours. Subject to this caution, reference to rates in similar U. S. territory, while not conclusive, may be informative. The 1st class lake and rail basing rate from Toronto to Fort William is 56c. This is the same as the all water rate from Buffalo to Duluth. The all rail rate from Buffalo to Duluth is not strictly comparable with the all rail rate from Toronto to Fort William, as in the former case the rate is made on Chicago, involving at least a two-line movement. Subject to this caution, it may be pointed out that the all rail rate from Buffalo to Duluth is \$1.12; the all rail local rate from Toronto to Fort William is \$1.11. The rate from

Buffalo to Chicago, through dense traffic territory, is 62c first class for 536 miles. If this rate is tapered on the eastern standard tariff for 814 miles, in the same way as above set out, the result would show a rate of \$1.04, as compared with 81c in the new tariff.

In dealing with the eastern rates situation as affected by water competition, it was said in the Western Rates Case, 17 Can. Ry. Cas., 159-160: "It should, however, be borne in mind that while water competition is urged as being a reason for a low rate standard in the east, the water rate with resultant low freight has probably played a greater part than any other factor in the prosperity of the West. The additions to water facilities which from time to time have been made are largely demanded by the necessities of providing the cheapest and quickest outlet for the ever-increasing productions of Western Canada. This affords but an additional instance of the fact that the interests of Eastern and Western Canada are closely interwoven, and that an enforced lower rate structure in the East is not as much productive of injury to the West as has been claimed."

In the Eastern Rates Case, the following language was used: "In general, a case for increase has been made out. Apart from the merits of the application, having regard to the situation in Eastern Canada alone, the general railway situation in Canada demands that eastern rates should be increased when the different industries can fairly and reasonably bear such increases. While, as has been set out at greater length in the Western Rates Case, differences of conditions do exist between Eastern and Western Canada, and while western freight rates have already been materially reduced, the general schedule there obtaining is still higher, notwithstanding the fact that certain western rates that may be instanced are lower. There is no doubt but what the act requires, and the general public interest of the country as a whole demands, that, if practicable, eastern rates should be advanced so that the different schedules may more nearly approach a parity. I am aware that an absolute parity is impracticable, but, as conditions become similar, a reasonable parity ought to be obtained."

While the class rates concerned are rates for a movement within the territory east of Fort William, they affect the west, because they are furtherance rates. The rates as charged are concerned with a movement through an area in which water competition exists, although because of altered conditions water competition is not so effective at present as it once was, and the difference in level of the rates as now before us is a measure of the difference in the efficiency of competition. As already pointed out, the board has laid down the position that a rate reduced to meet water competition may be brought up more closely to the normal level when the water competition becomes less effective. As tested by a tapering on the basis which the board has affirmatively approved as reasonable, the proposed rates meet the conditions of this basis. The rates may be permitted to continue.

**Railway Smoke.**—The Windsor, Ont., City Council instructed the city solicitor recently to take proceedings against the Grand Trunk Ry. in order to have the smoke nuisance from its locomotive house abated. It is claimed that the smoke has caused a depreciation of \$200,000 in the value of adjoining house property.

## Transportation and Storage of Grain.

A Dominion order in council passed in June and only promulgated recently, providing means whereby grain grown in Canada in excess of domestic requirements may be made available for purchase by the British and allied governments, and so that domestic requirements may be controlled in such a manner as to prevent any undue inflation or depreciation of values by hoarding supplies, or by other means. For this purpose the Board of Grain Supervisors of Canada, is established, consisting of not more than 12 members, who shall be paid travelling expenses while engaged on the board's duties, but shall receive no other remuneration.

The board shall make investigations from time to time to ascertain what supplies are, or will be, available, the location and ownership of such grain, the transportation and elevator facilities in connection therewith, as well as the conditions of marketing and the market price, and for such purposes shall have the powers of a commissioner under the Inquiries Act.

The board shall have power to fix the price at which grain stored in any elevator may be purchased, and the conditions and destination under which the grain may be moved, and also what grain may be sold to milling firms, what grain shall be sent to the United Kingdom and allied powers, and shall facilitate at all times the transportation and delivery of grain in excess of domestic requirements. Any prices fixed by the board are to be subject to the chairman's approval. The board may appoint an executive committee of not less than three, of whom the chairman shall be one, and may assign to the executive committee its duties and powers.

The board shall have power to receive offers for the purchase of grain from millers, and from the Wheat Export Co., Ltd., or from any other person or company referred to as "overseas purchasers," acting for the United Kingdom or the allied powers, and it shall fix the prices at which the grain shall be sold. It shall also have power to take possession of, and sell to millers or overseas purchasers, grain stored in any elevator, and to pay to the owners the proceeds of such sale after deducting the expenses of taking possession and of delivery, and as far as possible shall fix a uniform price throughout Canada for grain of the same quality, and grade.

Notwithstanding anything in the Grain Act, or the Railway Act, the Board of Railway Commissioners shall have power to order any railway to provide cars and other transportation facilities for grain handled by the Board of Grain Supervisors. The word elevator in the order, covers any terminal, country, private, public and hospital elevator, and any elevator licensed by the Board of Grain Commissioners.

Power is also given to appoint representatives, clerical staffs, etc., and to create a fund for defraying the cost of carrying wheat in store, where no other provision is made to meet the cost, or for any other purposes, and in order to raise the necessary money the board may require millers, exporters, etc., to pay such sums as it may prescribe, not exceeding 4c a bushel.

Railway time tables are being revised to eliminate unnecessary service.

Forty-Ton Box Cars for Canadian Government Railways.

Track Section Prize Competition on Eastern Lines, Canadian Pacific Railway.

The 5,000 forty-ton box cars which the Canadian Government Railways have ordered from Canadian Car and Foundry Co. during the past few weeks have the following general dimensions: Length inside, 36 ft.; width inside, 8 ft. 6½ in.; length inside, from pulling face of couplers, 40 ft. 1¼ in.; from centre to centre of truck, 26 ft. 10 in.; height from rail to top of running board, 13 ft. 4¾ in.

The cars are of the inside sheathed steel frame type, underframe consisting of two 15 in. channels and 8 in. side sill channels, having bolsters and crossbearers built up of pressed steel diaphragms, with top and bottom cover plates, together with Z bar floor supports, conveniently spaced; all of which in turn support Z bar stringers, running from end sill to end sill, forming support for wooden floor. The side framing is built up from structural shapes, securely riveted to side sill and side plate. The cars have an exceedingly strong end frame consisting of two 5 in. Z bars and two 3 in. Z bars, together with 5 x 5 in corner post; the Z bars being

For the past five years an annual track section prize competition has been carried out on the Eastern Lines, C.P.R., which has aroused a healthy spirit of rivalry and keen competition among the officers and section forces of the different divisions and districts. Sixty-two prizes are awarded in the competition, as follows:—A General Manager's prize to the foreman having done the best season's work on Eastern Lines. Four general superintendent's prizes, to the foreman on each district who has done the best season's work, exclusive of the winner of the General Manager's prize. Fourteen division superintendent's prizes, to the foreman on each division who has done the best season's work, exclusive of winners of higher prizes. Forty-three roadmaster's prizes, to the foreman on each roadmaster's territory who has done the best season's work, exclusive of winners of higher prizes.

Under this system no man can win

son is usually a criterion of the amount and quality of the work done thereon throughout the season. Where special conditions affect such work they are taken into consideration. Some idea of the care exercised in judging a foreman's work can be formed by following the work in connection with the selection of a prize section. Towards the end of the season, on each of the 43 roadmasters' territories, a section is picked out as the most deserving in point of work done during the season with the material and labor available. These are carefully inspected by the superintendent and resident engineer, who select the best one on each district for inspection by the general superintendent and division engineer. All divisions of a district are covered by these two officers, and the section selected which they consider eligible for the General Manager's prize. The judging for the General Manager's prize is done personally by the General Manager, the Engineer,

Forty-ton inside sheathed box cars for Canadian Government Railways.

riveted to the inside face of end sill and top of the pressed steel end plate. All of the cars are being equipped with one rail end door, located 2 ft. 1½ in. from top of floor, to centre of door, facilitating easy loading of rails, also door at top of car at ends for loading lumber.

Four thousand of the cars will have a special application of brakes. The truck bottom connection, instead of passing under spring plank, as in ordinary cases, is connected to the centre hole truck lever connection, passing through the truck directly above the truck bolster tension plate. By this arrangement all the truck brake rigging is located above the bottom of the spring plank. This arrangement also allows for an adjustment of brakes to take place at the fulcrum lever instead of the old system at the top of the dead lever, and instead of having two points for adjustment, it will be only necessary to take up any slack or make any adjustments to the brakes at one point.

**Oil Fuel on Indian Railways.**—The Indian Government has entered into a contract with the Anglo-Persian Oil Co., for a supply of fuel oil for locomotives on the Karachi section of the North Western Ry. Only a small percentage of the locomotives on this section have been converted into oil burners, but it is intended to convert all of them.

more than one prize, and all foremen have an equal chance, as the quality of the work done throughout the season is the deciding factor, and not the actual physical condition of the section at the end of the season. The basis on which the sections are judged is entirely efficiency, and careful consideration is given throughout the season to the condition of, and work done on, ditches, gauge, spiking, line, surface, bolts, rail wear, so far as it can be controlled by the section forces, switches, sidings, right of way and station grounds, track signs, cattle guards and fences. The amount of work done and the hours of labor put in, both by regular force and extra gang, are also carefully considered, and the foreman accomplishing the best work with the least amount of labor—the physical condition of the section, as to grades, alignment, drainage, and character of roadbed being taken into consideration—wins the first prize.

The number of hours of regular labor and the number of hours of extra labor on the section are figured against the number of ties renewed, tie plates installed or changed, rails changed over on curves and ditching done, etc. The amount of track handled, right of way, spikes and bolts is fairly uniform on all sections, so that the condition with respect to these items at the end of the sea-

Maintenance of Way, the Assistant Engineer, Maintenance of Way, and district officers.

The following are the successful section foremen for 1917: General Manager's prize, H. Hoyst, section 6, Havelock Subdivision, Ontario District. General Superintendents' prizes: New Brunswick District, Wm. Hunter, section 12, St. John Subdivision; Quebec District, T. Mattingly, section 3, Chalk River Subdivision; Ontario District, Geo. Muma, section 11, Galt Subdivision; Algoma District, J. Purich, section 6, White River Subdivision.

**Railway Lands Patented.**—Letters patent were issued during October, in respect of Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:

	Acre.
Calgary and Edmonton Ry. ....	2,560.00
Canadian Northern Ry. ....	178.00
Canadian Pacific Ry. grants ....	196.43
Canadian Pacific Ry roadbed and station grounds .....	3.03
Edmonton, Dunvegan and British Columbia Ry. ....	368.91
QuAppelle, Long Lake and Saskatchewan Rd. and Steamboat Co. ....	2,075.90
Total .....	5,682.30

The Board of Railway Commissioners has approved the Elgin and Havelock Ry. standard maximum freight mileage tariff C.R.C. 3, cancelling its C.R.C. 1.

## The Connaught Tunnel Construction Suit.

The British Columbia Court of Appeal gave judgment at Victoria Nov. 5, dismissing the appeal against Justice Clement's decision fixing the damages in the case of McIlwee & Sons vs. Foley, Welch & Stewart, at \$575,595.78 and costs. The action arose out of an alleged breach of contract in connection with the boring of the C.P.R. tunnel at Rogers Pass, B.C.

The C.P.R. in 1913 let a contract to Foley, Welch & Stewart for the construction of a tunnel about five miles long, with lines connecting it with the C.P.R. main line, in order to secure a better gradient through Rogers Pass. In 1914 the general contractors let a subcontract to McIlwee & Sons, of Denver, Col., for boring the pioneer and heading tunnels. In addition to a general contract price for this work, the subcontract contained provision for the payment of a bonus of \$1,000 a foot for every foot bored in excess of a stipulated amount per month, the limit being fixed at \$250,000.

In Sept., 1914, after McIlwee & Sons had been at work on their contract for four months, and had proceeded with such rapidity that they claimed that they had earned \$215,000 bonus, in addition to the profits of their contract, troubles arose between them and Foley, Welch & Stewart. The engineer for Foley, Welch & Stewart complained that the McIlwees were using too much compressed air for

their machines and fans and hindering the other workmen. After considerable trouble and counter charges by the McIlwees that the chief contractors were purposely holding back the work, the McIlwees were ordered to stop work on the ground of disobedience of instructions given by the chief contractors' engineer. Later, after some six weeks of negotiations, Foley, Welch & Stewart offered to allow McIlwees to resume work. Instead of resuming work the McIlwees entered suit, claiming the full amount of the bonus and profits on the contract. After a protracted trial the judge decided that the McIlwees should have returned to work on Nov. 9, 1914, when invited to do so, and that their failure to return to work prevented them from obtaining damages for breach of contract. He disallowed the claim for bonus, and gave judgment for \$32,000, which comprised damages at the rate of \$600 a day unearned profits for the period from the time of stoppage of work until Nov. 9.

Both the plaintiffs and defendants appealed from the judgment and the B.C. Court of Appeal on Aug. 10, 1915, allowed the McIlwee appeal in full with costs and dismissed defendants' appeal. A majority of the court found that McIlwee & Sons were entitled to the full amount of the bonus claimed and also to all the damages for loss of profits they could show on reference to the trial judge. Subsequently leave was granted to amend the statement of claim in accordance with this finding and this was done, the total

claimed for bonus and damages being put at over \$800,000. Foley, Welch & Stewart then appealed to the Judicial Committee of the Imperial Privy Council, which unanimously sustained the B.C. Court of Appeal's judgment. The Privy Council's judgment was given in Canadian Railway and Marine World for July, 1916, pg. 275.

The case subsequently came up again in a British Columbia court for the purpose of fixing the amount of the damages for which judgment was to be entered. After a lengthy hearing judgment was finally given in favor of plaintiffs for \$575,595.98 and costs. Notice of appeal against the judgment was at once given and as a condition of the consent the defendants were required to pay into court a marked cheque for \$600,000 as security for the payment of the judgment in case the appeal was not sustained. As an additional precaution, the plaintiffs served a garnishee on the C.P.R., attaching the funds due on the contract, which it was stated had not been paid out. This action on the part of the plaintiff was opposed, and the garnishee order was refused by Justice Morrison. The application was then taken to the Court of Appeal and the garnishee order made. So that in addition to a marked cheque for \$600,000, the plaintiffs had a garnishee on the C.P.R. as security for the payment of their judgment if they were finally successful.

Argument on the appeal was heard in Victoria lasting for 10 days. The final result was a unanimous judgment of the appeal court dismissing the appeal.

## Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

26747. Nov. 19.—Authorizing G.T.R. to build bridge across main track at milepost 3.38 from Harrisburg, Ont.

26748. Nov. 15.—Extending to Dec. 15, time within which G.T.R. shall build crossing on road allowance between Cons. 11 and 12, near Stevensville, Ont.

26749. Nov. 19.—Ordering Great Northern Ry. to provide a weekly train service to and from Clayton Spur, via Cloverdale, B.C.

26750. Nov. 20.—Authorizing Railways and Canals Department to divert, temporarily, Lake Shore Road, and built two crossings, at grade, over Niagara, St. Catharines and Toronto Ry. near Ten Mile Creek, Ont.

26751. Nov. 20.—Relieving G.T.R. from providing further protection at Victoria St., Thamesville, Ont.

26752. Nov. 20.—Authorizing G.T.R. to build siding and spur for Ontario Sewer Pipe Co., East Flamborough Tp.

26753. Nov. 19.—Approving agreement Oct. 10, between Bell Telephone Co. and Innerkip Rural Telephone Co., Oxford County, Ont.

26754. Nov. 16.—Authorizing C.P.R. to build siding 3,393 ft. long from Sec. 5, Tp. 1, Range 7, West of 1st Meridian, to International Boundary in same section, near Windygates, Man.

26755. Nov. 17.—Dismissing application of E. S. Newman Co., Winnipeg, Man., for joint rates between C.P.R., G.T.R., and C.N.R., and Edmonton, Dunvegan & British Columbia Ry.

26756. Nov. 19.—Rescinding order 26173, Aug. 26, 1913; and permitting G.T.R. to take up siding therein referred to, at Milton, Ont.

26757. Nov. 21.—Amending order 26615, Oct. 9, re handling of fish by express companies at St. Thomas, Ont.

26758. Nov. 22.—Further extending, for six months from date time during which Lake Erie & Northern Ry. pending installation of interlocking plant, may operate over crossing at Brantford, Ont.; crossing to be protected by L. E. & N. R. watchmen.

26759. Nov. 22.—Authorizing G.T.R. to build spur for David Christner, Kitchener, Ont.

26760. Nov. 21.—Authorizing C.P.R. to build spur for G. C. Goodfellow, Outremont, Que.

26761. Nov. 21.—Approving deviation of Essex Terminal Ry., as located but not built, at stake 582-95.16, Sandwich West Tp., Ont.

26762. Nov. 22.—Approving plan and specifications of train under G.T.R. and across Cedar Rapids Transmission Co.'s lands in Charlottetown Tp., Ont.

26763. Nov. 21.—Authorizing C.P.R. to build extension to spur from Rutley Lumber Co., Regina, Sask.

26764. Nov. 21.—Authorizing James Bay and Eastern Ry. (Canadian Northern) to open for traffic its line from Roberval to end of track at St. Felicien, Que., mileage 13.82 to 30.13.

26765. Nov. 23.—Exempting C.P.R. from submitting plan, profile and book of reference of revision in line of its Shuswap Subdivision, near mileage 29, and approving same.

26766. Nov. 23.—Amending order \$755, Nov. 25, 1909, re Canadian Northern Ontario Ry. crossing of, and connecting with G.T.R. at Brooklin, Ont.

26767. Nov. 23.—Amending order July 21, 1905, re crossing of G.T.R. by James Bay Ry. (C.N.R.) in East Gwillimbury Tp., Ont.

26768. Nov. 23.—Ordering Canadian Northern Ry. to maintain former schedule of trains 9 and 10, between Deseronto and Toronto, as directed by order 25427, Sept. 15, 1916.

26769. Nov. 24.—Approving Michigan Central Rd. standard freight mileage tariff, C.R.C. 2725, cancelling C.R.C. 848.

26770. Nov. 23.—Amending order Nov. 12, 1906, allowing Canadian Northern Ontario Ry. to cross G.T.R. spur at rail level to Edwards mill's premises at Rockland, Ont.

26771. Nov. 26.—Approving Elgin & Havelock Ry. standard maximum freight mileage tariff, C. R.C. 3, cancelling C.R.C. 1.

26772. Nov. 23.—Extending for 60 days from date time within which G.T.R. shall erect freight shed at Beauharnois, Que.

26773. Nov. 24.—Ordering G.T.R. to lower culvert under its tracks at South River, Ont., and deepen water course by May 31, 1918.

26774. Nov. 23.—Ordering Town of Virden, Man., to pay C.P.R. \$5,241.22, being half of progress estimate of subway required by order 25751, Nov. 29, 1916, and that security put up by the town be left undisturbed.

26775. Nov. 22.—Authorizing Hull Electric Co. to build spur for R. H. Wright, Aylmer, Que.

26776. Nov. 26.—Approving Northern Express Co. bylaw passed Oct. 13.

26777. Nov. 29.—Authorizing James Bay and Eastern Ry. to build Y at St. Felicien, Que.

26778. Nov. 29.—Amending order 903, Jan. 27, 1906, re crossing of G.T.R. by James Bay Ry. (C. N. R.) near Wishago or Rama Island, Ont.

26779. Nov. 29.—Rescinding order 22132, July 2, 1914, in so far as it restricts Canadian Northern Ry. trains to 22 miles an hour over Vegreville-Calgary line, between mileage 48 and 75.

26780. 26781. Nov. 29.—Authorizing Crows Nest Southern Ry. to build spurs for Adolph Lumber Co., near Mott and near Baynes, B.C.

26782. Nov. 30.—Authorizing C.P.R. to build spur for C. C. Robins, in Lot 6, Sec. 20, Tp. 23, Range 4, east principal meridian.

26783. Nov. 30.—Authorizing Niagara, St. Catharines and Toronto Ry. to open for traffic its temporary diversion in Stamford Tp., Ont., as approved by order 26710, Nov. 5.

26784. Nov. 29.—Extending, for six months from date time during which Lake Erie & Northern Ry. was authorized to operate over crossing in Brantford, Ont., pending installation of interlocking plant.

26785. Dec. 1.—Authorizing C.P.R. to remove station agent at Melville, Ont.

26786. Dec. 1.—Amending order 26722, Nov. 7, re C.P.R. spur for Hydro Electric Power Commission, Toronto.

26787. Nov. 30.—Authorizing C.P.R. to operate over G.T.R. sidings into Libby, McNeill and Luby and Pittsburg Des Moines Co.'s premises, Chatham, Ont.

26788. June 21.—Extending to Dec. 31, 1917, time within which G.T.R. shall complete spur for W. H. Banfield & Sons, Toronto.

26789. Dec. 1.—Approving clearances at siding serving Dominion Canners, Ltd., St. Catharines, Ont.

26790. Dec. 1.—Authorizing Canadian Northern Ontario Ry. to build spur for Laforest & Clemow, Caitha, Ont.

26791. Dec. 1.—Relieving G.T.R. from providing further protection at crossing near Paynes station, Ont.

26792. Dec. 1.—Approving agreement between Bell Telephone Co. and Dunnville Consolidated Telephone Co., Haldimand, Lincoln, Welland, and Brant Counties, Ont., Nov. 6.

26793. Dec. 3.—Authorizing G.T.R. to build spur for National Shipbuilding Co., Goderich, Ont.

26794. Dec. 3.—Rescinding order 26036, Apr. 17, 1917, respecting certain supplements to G.T.R. and C.P.R. tariffs.

26795. Nov. 8.—Relieving G.T.R. from providing further protection at crossing of Albert St., West Hawkesbury Tp. (Wassons), Ont., in so far as its southbound trains are concerned; trees on northwest angle to be trimmed so as not to obstruct view.

26796. Nov. 30.—Ordering C.P.R., G.T.R., Canadian Northern Ontario Ry. and Toronto Ry. to pay City of Toronto \$115,000, \$30,000, \$135,000, and \$80,000, respectively, in addition to any amounts heretofore paid by them, if any, on account of cost of and damages incidental to the elimination of level crossing at Queen St., Toronto, under order 7813; without prejudice to contentions in regard to correctness of accounts submitted, or any item therein.

26797. Dec. 4.—Authorizing C.P.R. to build highway diversion in s.w.  $\frac{1}{4}$  Sec. 14, Tp. 11, Range 10, west 3rd meridian, and close diverted portion of road allowance; and rescinding order 21880, May 26, 1914.

26798. Dec. 4.—Ordering that each of crossings of Devonshire Road by G.T.R. and Pere Marquette

Ry., in Walkerville, Ont., be protected by gates, operated by day and night watchmen; both sets to be operated from same tower, and apportioning cost.

26799. Dec. 5.—Relieving C.P.R. from providing further protection at Millers Crossing, near Smithfield, Ont.

26800. Dec. 6.—Authorizing C.P.R. to build floating raft on north pier of bridge over McKellar River, Fort William, Ont.

26801. Dec. 6.—Authorizing Canadian Northern Ry. to cross and divert north and south government road in Mistowasis Indian Reserve 103, Tp. 47, Range 6, west 3rd meridian, 26802. Dec. 6.—Ordering Kettle Valley Ry. to lay a culvert at least 12 in. diameter, on north side of road crossing in lot 104, Penticton, B.C.

26803. Dec. 6.—Authorizing Toronto, Hamilton and Buffalo Ry. to build spur, for National Abrasive Co., Hamilton, Ont.

26804. Dec. 6.—Authorizing Niagara, St. Catharines & Toronto Ry. to open for traffic its branch from Ontario and St. Paul Sts. to G.T.R. station, St. Catharines, Ont., 4,700 ft.

26805. Dec. 3.—Ordering that crossings of Walker Road, Walkerville, Ont., by G.T.R. and Pere Marquette Ry. be protected by gates, operated from a tower by day and night watchmen; and apportioning cost.

26806. Dec. 5.—Ordering Canadian Northern Ry. to install standard two-car pen at Rochester, Alta.; to be completed by July 1, 1918.

26807. Dec. 5.—Relieving G.T.R. from providing further protection at crossing between Lacolle and Henrysburg, Que.

26808. Dec. 5.—Authorizing C.P.R. to build spurs for Macdonald Crawford Co. and Kimball Lumber Co., Swift Current, Sask.

26809. Dec. 7.—Authorizing C.P.R. to build mining entries or ways under and adjacent to Canadian Northern Ry. right of way across Manitoba South Western Colonization Ry. Co.'s mining lands, in Sec. 19, Tp. 2, Range 6, west 2nd meridian, Sask.; plans to be first approved by Board's engineer.

26810. Dec. 6.—Authorizing C. P. R. to build spur for Coast Lumber Co., Moose Jaw, Sask.

26811. Dec. 7.—Extending to May 31, 1918, time within which G. T. R. shall complete sidings for Toronto Harbor Commissioners, in Toronto Harbor Industrial District, as authorized by order 25502, Oct. 5, 1916.

26812. Dec. 10.—Extending to June 30, 1918, time within which G.T. Ry. shall complete station at Lyster, Que.

26813. Dec. 4.—Authorizing Toronto, Hamilton & Buffalo Ry. to divert Phipps St., Thompson Rd., Bowen Rd., and read allowance between Cons. 3 and 4 in lots 8 and 9, Welland and Bertie Tps., Ont.; company to extend Thompson Road subway; and all companies concerned to divert their pole or pipe lines; and reserving apportionment of cost.

26814. Dec. 10.—Authorizing Quebec & Lake St. John Ry. to build bridge at crossing of St. Anne River at St. Raymond, Que.; and rescinding order 25155, July 13, 1916.

26815. Nov. 23.—Ordering C.P.R. forthwith to stop train 356 on alert at Terrebonne, Que., for passengers to points beyond L'Angele.

26816. Dec. 11.—Relieving G.T.R. from providing protection at Third Concession crossing in Ops Tp., Ont.

26817. Dec. 11.—Approving plan showing interchange track to be built in Sec. 4, Tp. 39, Range 19, west 4th meridian, Alta.; and ordering Canadian Northern to complete same by Jan. 21, 1918; main line switches to be wire locked with distant signals of interlocking plant, and derrails installed at each end of interchange track.

26818. Dec. 11.—Authorizing G.T.R. to rebuild bridge over track between Lots 5 and 6, Broken Front Concession, Nicol Tp., Ont.

26819. Dec. 13.—Exempting Vancouver, Victoria & Eastern Ry. & Navigation Co. and Northern Pacific Ry. from complying with conditions as to notice and consent of shareholders, and recommending to Governor in Council for sanction, agreement dated Aug. 11, 1913, granting N.P.R. right to use V. V. & E. Ry. & Nav. Co. tracks, between Sumas, Wash., and Vancouver, B.C., subject to condition that unless otherwise extended by Parliament, contract shall continue for not exceeding 21 years from Aug. 11, 1913, as limited by Sec. 364 of Railway Act.

26820. Dec. 12.—Authorizing Greater Winnipeg Water District to lay pipe line under C.P.R. at St. Boniface yards, Man.

26821. Dec. 13.—Approving agreement, Sept. 25, between Bell Telephone Co. and Laurenide Telephone Co., Ottawa, County, Que.

26822. Dec. 12.—Approving plans of McKenney drain, to be built under G.T.R. between Lots 25 and 26, Con. 8, Ma'ahide Tp., Ont.

26823. Dec. 12.—Authorizing Grand Trunk Pacific Ry. to build sidings for Edmonton Collieries, Ltd., North Alberta District, Alta.

26824. Dec. 12.—Authorizing C.P.R. to divert road allowance on east boundary of Sec. 26, Tp. 8, Range 18, west 3rd meridian, Sask.; and close diverted portion within right of way limits.

26825. Dec. 14.—Limiting speed of Canadian Northern Ry. trains to 10 miles an hour over Bridge St., Bancroft, Ont.

26826. Dec. 14.—Authorizing C.P.R. to remove station agent at Edrans, Man., caretaker to be appointed to see to express and local freight.

26827. Dec. 14.—Authorizing Town of Dunnville, Ont., to build crossings over G.T.R. at Centre and Helena Sts.

26828. Dec. 14.—Authorizing Crows Nest Southern Ry. to build spur for Adolphe Lumber Co., Dorr, B.C.

26829. Dec. 14.—Authorizing Canadian Northern Ry. to enter lands of J. E. Potvin, approximately between mileage 691.91 and 692.41, north side of Vermilion Subdivision, Alta., for building a fire guard, in accordance with board's regulations.

26830. Dec. 15.—Limiting speed of Pere Marquette Ry. trains to 10 miles an hour over Lansdowne Ave., Kingsville, Ont.

26831. Dec. 14.—Rescinding order 26008, Apr.

12, directing Canadian Northern Ry. to file tariff showing rates from Toronto, by lake and rail, to stations west of Port Arthur, not to exceed published rates from points east of Toronto same destinations, via rail to Toronto and lake and rail to destination.

26832. Dec. 14.—Authorizing G.T.R. and Toronto Ry. to operate over joint crossing overhead, south of Eastern Ave.; and over crossing of T.R. and Don Industrial spur across G.T.R. leading to Don Industrial district at grade; trains and cars to stop at grade crossing and proceed only when signal has been received from watchman in charge that way is clear; reserving question of interlocking protection to be provided until G.T.R. spurs are moved to permanent location to the north.

# Canadian Transportation Men, Engineers, Etc. in the War.

Canadian Railway and Marine World is desirous of publishing all the information possible about the war work of Canadian transportation men, engineers, etc., and invites its readers to send in information for use in this connection. No doubt a large number of our readers receive many letters from the front, etc., extracts from which would prove of interest in these columns. We would be glad to be favored in this respect.

Canadian Pacific Ry. Ontario employees have contributed \$500 to the Toronto and York County Patriotic Association, being their 24th contribution, and making the total paid to the fund \$21,225.

Canadian Pacific Ocean Services' Employees.—Up to Oct. 31, 1917, some 420 of the company's employees had joined the army or the navy. One, Lieut. R. N. Stuart of the s.s. Monmouth, has been awarded the V.C., the D.S.O., and a bar to the latter. The Distinguished Service Order has been conferred on Engineer-Commander J. Carmichael, chief officer of the s.s. Princess Margaret; Commander E. Outram of the s.s. Alsatian; Second Engineer J. Quine of the Pacific service; and Engineer-Commander R. Wilson of the s.s. Alsation. The Distinguished Service Cross has been awarded to Lieut. H. J. Ferguson, first officer of the s.s. Montford; and Commander J. Turnbull of the s.s. Empress of Britain has been mentioned in dispatches. Second Lieutenant Mearnes has been awarded the Military Cross, and Sergt.-Major R. M. McLachlan of the Liverpool staff has received the Distinguished Conduct Medal. A Russian decoration has been awarded to Engineer E. Gordon, of the Pacific service.

Canadian Railway Troops.—The importance of the work being done by troops in France is indicated by a brief report through the Militia Department on Dec. 21, which states that part of their work consists in extending light railway systems to enable ammunition to be carried up to new gun positions. When an advance of any distance is made, necessitating a change of gun positions, the railways have to be extended accordingly. These light railway lines are frequently broken by hostile shell fire and have to be repaired by the troops. In addition to work on standard gauge and light railways, the railway troops are sometimes employed in constructing dug-outs and gun positions, as well as sidings for hospitals, bakeries, garages and quarries. Work of very great importance has sometimes to be done under heavy German shell fire. The Director of Light Railways some time ago reported favorably on the work of the Canadian railway troops.

James Carruthers' Airplanes.—The British War Office is stated to have decided that the four battle planes presented by James Carruthers, President, Canada Steamship Lines, Ltd., Montreal, will be named Montreal, Toronto, Winnipeg, and Edmonton, respectively.

The Light Railways Company's Work. The Canadian Press Correspondent cabled from the Canadian front in Flanders, Dec. 24.—"Some day the full history will be written of the light tramways at the front, and figures will be given to show what they saved in animal power, in time, and in man power. German trucks of a 1916 pattern form not a little of the rolling stock. For the pre-

sent I will only give the briefest of summaries based on the war diary of the Tramway Company for April—the Vimy show. In the first week, preparing for the advance on one section alone, 793 trucks covered 2,260 miles and hauled a total tonnage of 4,154. Five petrol tractors and 400 mules were used, 4 and 5 on a train. It was a period of continuous construction, mules being employed over the new rail sections. Time and again the line was torn by shell fire and repaired. On the night of April 9, the first attack, the tramways were preparing to advance with the infantry. Advance they did, laying their new track behind our attack. In 16 days, 4,600 metres of new track was laid in one section. During the battle operations this section alone supplied 80% of the field ammunition for one division, delivered to the batteries at a maximum rate of 1,200 rounds a day. The same section supplied 95% of trench mortar bombs and grenades for the same division. The tramways altogether hauled 234 trucks of water in the month, 1,463 ammunition, 212 rations, 829 steel, 73 ballast, 67 salvage and 77 trucks other material, making the total tonnage for the 30 days, 11,308. During the fighting special trains of two 9-ton trucks, holding 13 stretcher cases evacuated wounded from advanced dressing stations. In 4 days, 1,250 stretcher and 510 sitting cases were handled, 50 special trains being employed. Every day of the whole month the Tramway Company suffered casualties, sometimes heavy ones. But the work never ceased. The spirit of all was the spirit of one of their number, a private. He put out a fire in a truck of ammunition by drawing up to a shell hole and throwing water on to the truck by means of his steel shrapnel helmet, as the heroic incident is recorded in the bald words of the war diary. Such in a sketchy form is the work of the tramways company, a fine service, the development of a decision reached by the Canadian Engineers in the salient in 1916, when it was decided to build tramways, and it was found that such an organization was necessary."

Recruiting for Railway Construction Corps, Engineers, etc.—A change has been made in the organization of the railway construction and forestry units for overseas service, which has resulted in these services coming under the direct control of the Royal Canadian Engineers, and officer administering the engineers Lt. Col. Clyde Caldwell, has taken over the administration of the railway construction, skilled railway employees and forestry units men are required as under:

For skilled railway employees, men who are proficient in their trades. They will receive military training in Canada, and special rates of pay are authorized for certain trades, viz.: blockmen, shunters, locomotive men, firemen, fitters, steam crane men, painters, stationary engineers, pipe fitters, car riveters, steel and wood car repairers, stationary firemen, blacksmiths helpers and helpers. Drafts will be sent overseas monthly.

For engineer drafts: Carpenters, bricklayers, plumbers, tinsmiths and tunnelers are required. Men who have worked on municipal works, sewer excavations, etc., would be enlisted as tunnellers.

For railway construction drafts, men can be enlisted in Category B, except unmarried men between the ages of 20 and 34.

For forestry: Millwrights, sawhammers, sawlers, sawyers, setters, boggers, dredgemen, and engineers.

No. 3 Section Skilled Railway Employees is now being recruited with headquarters at the Engineer Training Depot, St. Johns, Que. For the present the Railway Construction Depot is in Toronto, the Forestry Depot at Brockville, Ont., and the Engineers Depot at St. Johns, Que.

## PERSONAL NOTES.

II. H. Adams, formerly General Manager, Toronto, Hamilton & Buffalo Ry., Hamilton, Ont., is in France in command of a battalion of U. S. engineers. He was born at Detroit, Mich., Aug. 13, 1876, and entered railway service in July, 1899, as rodman and draftsman, Michigan Central Rd. After service in various capacities in the Engineering Department, he was appointed Assistant Chief Engineer, Mar. 1902; secretary to the General Superintendent, Nov. 1902; Assistant Superintendent, Canadian Division, Jan. 1904; General Superintendent, Toronto, Hamilton & Buffalo Ry., Oct. 1909; General Manager, same road, Oct., 1910, resigning May 6, 1912, to become President, Kansas City Terminal Ry., Kansas City, Mo.

Capt. W. H. D. Bennett, who was killed in action recently was, prior to enlistment as a private, a car checker on the C.P.R. He was granted a commission some time ago, and obtained promotion for distinguished ability on active service.

Capt. Michael Chapman, British Grenadiers, who has been reported wounded, was formerly of Chapman & Walker, contractors, etc., Toronto.

Capt. W. P. Hains, of the Canadian Pacific Ocean Services' s.s. Miniota, has been awarded the Distinguished Service Conduct medal for going to the assistance of a U. S. vessel which was under attack by a German submarine.

Lieut. C. S. Hall, of Montreal, nephew of Grant Hall, Vice President and General Manager, Western Lines, C.P.R., was reported in Canadian Railway and Marine World for December as wounded and missing. He should have been referred to as Lieut. Terence S. Hall. Another nephew, Lt. John S. Hall, of the Reinforcement Depot, Tank Corps, B.E.F., has been slightly wounded and is in hospital.

Capt. L. G. Johnson, who was awarded the Distinguished Service Order recently in recognition of services in connection with submarines in the Atlantic, was formerly in Canada Steamship Lines' service.

Major A. E. Lewis, formerly Secretary, Toronto Harbor Commission, now of the 216th Battalion, has returned to Toronto on leave, in consequence of having been wounded in the hip.

Lt. Col. D. S. MacInnes, of the Royal Engineers, who has received the C.M.G. and the French Legion of Honor this year, and who has been mentioned in Sir Douglas Haig's recent dispatches, is a son of the late Senator MacInnes, who was a C.N.R. director, and is a brother of W. R. MacInnes, Freight Traffic Manager, C.P.R.

Major Jas. McGregor, formerly Superintendent Engineer, Halifax Ocean Terminals, Halifax, N.S., is now Chief Engineer, 3rd Battalion, Canadian Railway Troops, B.E.F. In writing Canadian Railway and Marine World from France he

says: "Enclosed is cheque in payment of my subscription to your most interesting and highly appreciated paper for the coming year."

**Lt. Col. C. H. Mitchell, C.M.G., D.S.O., M.Can.Soc.C.E.**, of Toronto, who has won great distinction in the intelligence branch on the western front, has been appointed to the British Staff on the Italian front.

**Major-General Herbert C. Nanton, C.B., R.E.**, Chief Engineer attached to headquarters, who has been mentioned in Sir Douglas Haig's recent dispatches, is a brother of Sir Augustus Nanton, of Winnipeg, one of the C.P.R. directors and Vice President, Winnipeg Electric Ry.

**Sergt. W. L. Payne**, formerly of the C.P.R. publicity department, London, Eng., now in the B.E.F., writes that he has had some extraordinary meetings with friends in the various theatres of war—France, Salonika, and Egypt—in which he has been engaged since he joined up on the outbreak of hostilities. After two years of soldiering he ran into his young brother (who joined the C.E.F. in Calgary) in France, and had one hour to talk over their boyhood days. Then, in a dilapidated French village he one day spoke for a few seconds to Gough, who, previous to the war, had been in constant touch with him as chief clerk to a firm of printers and was then rushing around giving the fire alarm. In the wilds of Macedonia he came across the man who used to sell him a daily paper at the Dulwich tram terminals, and in the baths he met a long-lost cousin. From Salonika Payne went to Egypt, and one day, on the banks of the Suez Canal, he helped a derelict motor car and discovered in the car another relative.

**A. E. Philp**, chief engineer of the Canadian Pacific Ocean Services' s.s. *Empress of Britain*, has been awarded the fourth class order of the British Empire, for special services.

**Gunner C. W. Rand**, son of the late N. L. Rand, formerly Master Mechanic, Intercolonial Ry., Moncton, N.B., who has been on active service since Dec., 1916, has left a hospital after being in it for six weeks as the result of being wounded by an explosion.

**Lieut. R. S. Richardson**, of No. 13 Light Railway Operating Co., R.E., British Expeditionary Force, formerly Superintendent, Canadian Government Railways, Fort William, Ont., in writing from France on Nov. 28 to Acton Burrows, Managing Director, Canadian Railway and Marine World, said: "I visited your son's grave in Bapaume Post Military Cemetery on Nov. 25, exactly a year after he was killed. I was on my way to Amiens and travelled along the Bapaume-Albert road to Albert, where I obtained information as to the location of the cemetery and returned to it at once, about 1½ miles east of Albert on the Bapaume-Albert road. It is on high ground and quite close to the road. I had no trouble in locating the grave, which is no. 2 in the third row from the entrance. It is very nicely kept, the wooden cross and railing being white, as is, of course, also the chalk border around the grave. The lettering on the cross is very clear and fresh. I placed a waterproof wreath of green, with daisy trimmings, on the grave, to commemorate the first anniversary of his departure to another life."

**Lieut. J. K. L. Ross, R.N.R.**, who has been actively associated with naval patrol service undertaken by the Canadian Naval Service Department since the commencement of the war, has been promot-

ed to Commander. He is a director of the C.P.R.

**Lieut. R. H. Taylor**, who has reported as missing several months ago, and who is now announced as having been killed in action, enlisted early in the war, while a student at McGill University. He lived in Montreal, and was son of Capt. H. Taylor, formerly of Bowring and Co.'s s.s. *Cordelia*, and latterly engaged in steamship service in connection with the Hudson Bay Ry., and a nephew of E. W. Taylor, Traffic Manager, Reid Newfoundland Co., St. John's, Nfld.

**Major-General Twining**, formerly of the Canadian militia, and now Director of Light Railways on the western front, who was mentioned in Sir Douglas Haig's recent dispatches, was mentioned four times previously.

### Canadian Pacific Railway's Victory Loan Float.

The C.P.R. was represented in the Victory Loan parades in Montreal and Toronto, in November, by a large float, consisting of a reproduction of a full sized locomotive, which was built on two little

The Canadian Pacific Railway's Victory Loan Float.

giant trucks, to run on the streets in the same way as an ordinary motor truck. The float, an illustration of which is given on this page, was built at Angus shops, Montreal, in remarkably quick time. The request for it was received at the company's offices on a Thursday afternoon and the float was ready for the Montreal parade on the following Monday. The "locomotive" was manned by a locomotive man, fireman, and three women workers from the C.P.R. shops in overalls, and was accompanied in the parades by a number of C.P.R. police, mechanics and trainmen.

**United States Railways Canadian Offices.**—The Chicago, Milwaukee & St. Paul Ry. is closing its office in Toronto. C. E. Hilliker, who has been Canadian Freight and Passenger Agent, will return to his old position as Division Freight and Passenger Agent, at Des Moines, Iowa. The Minneapolis, St. Paul & Sault Ste. Marie Ry. is also closing its Toronto office and it is said that H. T. Duffy, who has been General Agent, will probably be appointed District Passenger Agent at Duluth. It is said that the Chicago & Northwestern Ry. does not intend to disorganize its forces, and that it will maintain its Toronto office in charge of B. H. Bennett, General Agent.

### Railway Rolling Stock Notes.

Canadian Government Railways have received 7 Mikado locomotives from Canadian Locomotive Co.

Canadian Government Railways have ordered one second hand sleeping car from Hotchkiss Blue & Co.

The C.P.R. is reported to have built over 10,000 box cars during 1917, in addition to many ordered outside.

The Eastern Car Co. has delivered 900 box cars, 1,200 poods capacity, to the Russian Government, leaving 1,800 to be supplied on an order for 3,000.

The Essex Terminal Ry. has ordered 50 Hart convertible cars of 40 tons capacity from Hart-Otis Car Co. These will be built by Canadian Car and Foundry Co.

The French Government has ordered 1,000 steel underframe flat cars, and 850 steel underframe gondola cars, 23½ in. gauge, from American Car and Foundry Co.

The G.T.R. has received 4 Mikado locomotives from Canadian Locomotive Co., completing an order for 10, as previously mentioned. It has also received 2 snow

ploughs from Russell Snow Plow Co., out of an order for 10.

Canadian Government Railways have received the following additions to rolling stock, since Nov. 16:—97 stock cars, 30 tons capacity; 20 steel frame box cars, 40 tons capacity, from Canadian Car & Foundry Co.; 7 mikado locomotives from Canadian Locomotive Co.; 24 mikado locomotives from American Locomotive Co.; 2 second hand baggage cars, from Hotchkiss Blue & Co.; 1 second hand 5-ton crane, 19 second hand coal cars, 35 tons capacity, 8 second hand coal cars, 30 tons capacity, and 9 second hand box cars, 30 tons capacity, from General Equipment Co.

**Sir William Van Horne's Will.**—Only some fragmentary information about the late Sir William Van Horne's will was available until early in December, when application was made to the surrogate court in Toronto, for ancillary probate, in connection with the portion of the estate in Ontario. The property schedules filed with the will show the total value of the estate as \$6,331,374.

The Canadian Society of Civil Engineers' annual meeting will be held at 176 Mansfield St., Montreal, on Jan. 21, 22 and 23.

# Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

**Alberta and Great Waterways Ry.**—We are officially advised that at Nov. 30 track was laid to mileage 275.4, about 18 miles from McMurray, the objective at mileage 293. It was expected to complete laying this mileage by Dec. 31.

The company has under construction a branch line easterly from Derver, mileage 101.4 from Carbondale Jct., the starting point of the line on the Edmonton, Dunvegan and British Columbia Ry. This line known as the Egg Lake Branch, and the section under construction is 30 miles long.

J. D. McArthur, Ltd., Winnipeg, are the general contractors, and W. R. Smith, Edmonton, Alta., is the Chief Engineer. (Dec., 1917, pg. 470.)

**Burrard Inlet Tunnel and Bridge Co.**—Application is being made to the Dominion Parliament for an extension of time within which the company may build its projected bridge, tunnel connecting railways and other projected works. The company has plans prepared for a bridge over the Second Narrows of Burrard Inlet, at North Vancouver, but did not succeed in financing the project. The company which comprises representatives of the City of Vancouver, North Vancouver, and other municipalities, is seeking a renewal of the charter in order to be in a position to realize something from a sale of the plans and rights to a construction company. The company has paid out \$150,000 or more for surveys, plans, etc. R. F. Archibald, North Vancouver, B.C., is acting Secretary of the company. (Dec. 1917, pg. 470.)

**Canadian Northern Ry.**—The James Bay & Eastern Ry. is a C.N.R. subsidiary and was originally projected to have its easterly terminus at Roberval, Que., one of the Quebec & Lake St. John Ry. Termini on Lake St. John. A contract was let to J. P. Mullarkey three or four years ago to grade 30 miles from Roberval westerly, which grading has been completed for some time. Track was laid to St. Felicien during 1917, and the line was passed for operation by the Board of Railway Commissioners at the end of November. A train service was placed in operation Dec. 3. The length of line authorized for traffic is 16.31 miles, to St. Felicien, on the Chamouchouin River. An order has also been made by the Board of Railway Commissioners for the installation of a Y at St. Felicien. The final objective of the railway is to reach James Bay, part of Hudson Bay, at the mouth of the Nottaway River.

Damage was done to the C.N.R. station at Port Arthur, Ont., Dec. 12, by fire to the extent of \$15,000, and records of considerable value were destroyed in the basement.

Track has been laid on the Elrose-Eston branch for a further distance of 16.28 miles to Glidden, Sask.

In Alberta, the company has completed tracklaying on the Oliver-St. Paul de Metis branch for 44.51 miles.

On the Canadian Northern Pacific Ry. the only new work done during 1917 was on Vancouver Island, where track has been laid for eight-tenths of a mile, from Victoria Harbor to Alpha St. station, Victoria, and 7.35 miles of track have been laid on the Victoria-Alberni line, from the junction to Glen Lake. (Dec., 1917, pg. 470.)

**Cavalier County Ry.**—Under the Board of Railway Commissioners order of Nov. 16, 1917, the Canadian Pacific Ry. was

authorized to construct, maintain and operate a siding from its line in Sec. 5, Tp. 1, Range 7 west of the 1st Meridian, to the International Boundary near Windygates, Man., in the same section, a distance of 3,395 ft., the siding to be built within six months. We are officially advised that the total length of the spur line will be about 1.5 miles, and that it will run southeasterly from the C. P. R., across the International Boundary at Windygates, to an elevator in North Dakota. The object in view in building the siding is that grain delivered to the elevator may be shipped in bond through Canada to Minneapolis and Detroit. As the C.P.R. could not build the line a separate company was formed by those interested with the title of the Cavalier County Ry. The company's offices are at Langdon, N.D., its capitalization is \$25,000, and its officers are: President, G. Grimson, Langdon; Treasurer, S. G. Erickson, Elkwood, N.D.; Secretary, R. Robertson, Stillwell, N.D.; General Manager, R. P. Shelp, Maiden, N.D. This company will build the spur line, and it will be operated by the C.P.R. in Canada under the order quoted above, and in the U.S. by agreement with the C. C. Ry. (Dec. 1917, pg. 470.)

**Central Canada Ry.**—We are officially advised that the company has under construction an extension of its line, 15 miles long, from Peace River crossing, mileage 49, to mileage 64, and has under survey a 36 mile extension from mileage 64. J. D. McArthur & Co., Ltd., Winnipeg, are the general contractors, and W. R. Smith, Edmonton, Alta., is Chief Engineer. (Dec. 1917, pg. 470.)

**Essex Terminal Ry.**—We are officially advised that construction of the extension from Ojibway to Amherstburg is being gone on with. Track will not be laid until early in the spring. (Nov., 1917, pg. 433.)

**Grand Trunk Ry.**—Brantford, Ont., ratepayers will vote on Jan 1 on a by-law to provide debentures for \$40,000 toward the cost of constructing a subway under the G.T.R. tracks at St. Paul Ave., there. This is part of the work agreed upon to be done in connection with the grade separation work which has been under discussion for nearly three years. (Dec., 1917, pg. 471.)

**The Grand Trunk Pacific Ry.** proposes provided that the Saskatchewan Government will consent, to incorporate a passenger station with its proposed hotel in Regina. The site of the station and hotel will be on the Wascana Park site, with freight terminals and sheds on the site of the present station. This proposal will necessitate the building of a tunnel under Albert St., to permit passenger trains to reach the station and hotel building. The province has guaranteed the bonds for the terminal buildings on the present site, and the proposal, if agreed to, will necessitate a rearrangement of the guarantee. (Dec. 1917, pg. 470.)

**Greater Winnipeg Water District Ry.**—We are officially advised that track has been laid on the extension from Deacon to St. Boniface, Man., 8.3 miles, and from a point on this line to Transcona, 1.5 miles. These pieces of line give this railway an independent line into St. Boniface, and a connection with the National Transcontinental Ry. at Transcona. (Nov. 1917, pg. 433.)

**Hudson Bay Ry.**—J. W. Porter, Chief Engineer, is reported to have stated in Winnipeg recently, that the bridge over the Nelson River at Kettle Rapids was expected to be completed by Dec. 31, that all the other grading was completed to Port Nelson, that track laying on this section of 92 miles will be started in the spring if the rails are on hand, that ballasting had been completed to the Kettle Rapids, and that the roadbed for 332 miles to that point is in good shape for any sort of traffic. (Nov., 1917, pg. 433.)

**Intercolonial Ry.**—Tenders are under consideration for the erection of a frame station at Belledune, N.B. (Dec., pg. 470.)

**Magdalen River Ry.**—The Quebec Legislature is being asked to extend the time to build this projected railway from its present authorized terminus near the Magdalen River beyond Little Falls, both southerly and easterly to connect with the Atlantic, Quebec and Western Ry., and the Canada and Gulf Terminal Ry. at Gaspé, or any other point on either or both railways, also the power if the railway is built to Gaspé, to build wharves, docks and other deep water terminals. F. Murphy, New Carlisle, Que., is Secretary of the company. (Mar. 1916, pg. 107.)

**National Transcontinental Ry.**—We are officially advised, in connection with the report referred in Canadian Railway and Marine World for Dec., 1917, on pg. 471, that the Quebec Ry., Light and Power Co. directors have discussed the advisability of entering into negotiations with the Dominion Government with reference to the electrification of the National Transcontinental Ry. between Champlain Market, Quebec, and Sillery Cove. It has been decided that in view of the abnormally high cost of railway construction material, and labor, that this matter be left in abeyance. (Dec., 1917, pg. 471.)

**Quebec and Saguenay Ry.**—We are officially advised that track has been laid from Cap Tourmente, the starting point of the line, for 15 miles easterly. Sufficient rails have been obtained to lay track as far as Baie St. Paul, a further distance of about 10 miles, and it is expected to lay these rails before work is suspended for the season. Grading is now sufficiently completed between Baie St. Paul and Murray Bay for track laying. Provided that rails can be obtained early in the spring the line should be in operation through to Murray Bay, 54.45 miles, during next summer. O'Brien and Doheeny are the contractors, and Gordon Grant is Chief Engineer in charge for the Department of Railways. (Dec. 1917, pg. 471.)

**Quebec Bridge.**—The new bridge over the St. Lawrence River near Quebec was opened for freight traffic, Dec. 3, when a train consisting of 16 freight cars, a caboose and an official car, having a weight of 1,245 tons, was hauled over the bridge from Levis by a Canadian Government Ry.'s locomotive weighing 241½ tons. There were present, either in the official car, on in the locomotive cab, the following officials:—F. B. Tapley, Assistant Engineer of Maintenance; J. E. Marazain, Superintendent; M. Brousseau, Resident Engineer; H. W. Sharpe, Master Mechanic; E. J. Desjardins, Assistant Superintendent; P. Javery, Roadmaster; W. G. Moore, together with C. N. Monsarratt, Chairman of the Quebec Bridge Commission; G. F. Porke, Construction

Engineer, and others of the bridge construction staff. The movement of the train over the bridge was carefully watched, and tests were made to determine its effect on the different parts of the structure. It was stated there was no strain, practically no vibration, and that the expansion on the suspension span was barely 5/6th of an inch. A second train of similar weight was taken across the bridge from the Quebec side during the same afternoon.

There has since been a daily service of through freight trains across the bridge, and passenger trains have been run since

Dec. 10. (Dec., 1917, pg. 484.)

**Roberval-Saguenay Ry.**—We are officially advised that the company has in contemplation the building of a line from Ha Ha Bay Jet, to St. Michael Mistassini, Que., approximately 63 miles. The surveys have not been completed. (April, 1916, pg. 139.)

**St. John and Quebec Ry.**—We are officially advised that surveys are in progress with the view of building an extension of the line from Centreville, the present northerly terminus, to Andover, N. B., 20 miles. C. O. Foss, Fredericton, is Chief Engineer. (Dec., 1917, pg. 471.)

## Dominion Government Payments on Canadian Northern Railway Account.

Sir Thomas White, Minister of Finance, issued the following statement on Dec. 9:—"Upon my return to my office this morning after a week's absence in the election campaign in Ontario, my attention was drawn to certain grossly inaccurate and misleading statements attributed by the press to Hartley Dewart, K.C., of Toronto, with reference to payments under the act of last session of Parliament, authorizing financial aid by the government to the Canadian Northern Ry. upon the acquisition of its common stock, as by the said legislation provided. With reference to these alleged statements I have the following observations to make:

"The statement that payment of \$6,000,000 has been made to Mackenzie & Mann is wholly without foundation. There is no vote of parliament authorizing such payment, and no order in council has passed or been considered respecting any such payment.

"The advances which have been made under the Canadian Northern legislation of last session of parliament have been upon the certificate of the Financial Controller of the Railways Department under the authority of an order in council passed Nov. 1, 1917. They have been made in the manner in which payments to railways of subsidies, loans or the proceeds of guaranteed securities have been made in the past, and in strict accordance with the statute which authorized them.

"The certificate of the Financial Controller of the Railways Department, dated Nov. 16, 1917, authorized advances in payment of principal and interest indebtedness upon equipment account of \$5,998,752.50, and for interest upon underlying securities of \$7,155,111.29, making a total of \$13,153,863.79. Against this certificate \$12,500,000 was advanced. The Financial Controller's next certificates were dated Nov. 28, 1917, and covered the principal of a loan amounting to \$1,670,453.95 maturing, due in New York, which could not be renewed there, also interest upon underlying securities and principal of equipment securities aggregating \$869,958.

"The above are all the advances which have been made to date under the legislation in question. Demand notes of the Canadian Northern Ry. Co. and its subsidiary companies bearing interest at 6% have been received by this department in respect to these advances, and mortgages upon all their assets have been executed by the Canadian Northern and its constituent companies to His Majesty to secure the said advances.

"The five-sixths of the 600,000 shares

of capital stock of the C.N.R. formerly held by private owners, have, as required by the statute, been vested in the Minister of Finance in trust for His Majesty, so that the Dominion Government is, under the legislation of last session, the sole proprietor of the C.N.R. system. It follows that any advances made by the government for interest upon underlying securities or principal or interest upon equipment bonds, or for the purpose of paying maturing obligations of the system, enures to the benefit of the government as proprietor and owner of the system. It was for this purpose and object that the legislation of last session was passed by parliament, and provision made by parliament for assistance in paying the indebtedness of the system.

"The suggestion that any part of the proceeds of the Victory Loan was required or used to make the payments herein mentioned is wholly without foundation."

## Meritorious Services by Canadian Pacific Railway Employees.

The educational bulletins issued by the general superintendents of the company's various districts record the following meritorious services performed by employees recently:—

A conductor on work train discovered broken flange on C. P. 367661 thereby averting a derailment.

A trainman, while examining his train at a station, discovered a piece broken out of a flange of wheel, and had the car set off.

While one of the transfers was passing an interlocking plant, the towerman noticed the brake rigging dragging. He immediately signalled the train crew, who stopped the train.

Trainman C. E. Towle when travelling as a passenger rendered commendable service in assisting to repair a broken drawbar on the mail car during a heavy downpour of rain.

Agent A. E. Hancox of Ste. Agathe, Que., while walking through yard noticed bolts on switch stand broken off. He immediately notified the sectionman who made necessary repairs. The close observation and promptness on the part of the agent prevented a possible accident.

Valuable service was recently rendered by conductor J. J. Maher and trainmen J. W. and M. D. Hogan, who, while running a mixed train, observed a tree which had blown down and lodged on the telegraph wires. Conductor Maher, with his two trainmen, held the train and with an

axe cut the tree down and cleared the wires.

Section foreman J. Jones, Bowmanville, Ont., noticed a broken flange on a car which was on the east way-freight. He endeavored to attract the crew's attention, but failed. He immediately got his hand car, went to the station and informed the operator. The train was stopped at Newcastle and on examination it was found the flange was badly broken.

A trainman discovered a broken wheel under a freight car, nearing a siding; he stopped the train and with the assistance of the crew succeeded in skidding the car into the siding. No doubt his vigilance and watchfulness prevented what might have been a serious accident. This emphasizes the importance of close inspection being made by trainmen at every opportunity for any apparent defects in the running gear of the train.

Locomotive man J. Hull in charge of locomotive on train 382 noticed water undermining the track at trestle mileage 25.4 St. Maurice Valley Subdivision, and on arrival at the next station made a special report, with result that the section foreman immediately went to the point in question and a washout occurred within a few minutes afterwards, tying up traffic. The locomotive man's vigilance in detecting this condition is highly praiseworthy.

Bert Avery, agent at Waskada, Man., showed interest in the company's welfare when he protected from frost shipments of perishable freight which arrived at his station without heater protection. A car containing grapes and onions arrived on a Saturday night and he, knowing that unless heater protection was supplied during the week end, the contents would be frozen, borrowed a sufficient number of lanterns, placed them in the car, lighted and took care of them and thus prevented contents from freezing.

When an elevator took fire at Maryfield, Sask., night operator Thos. Allen sounded an alarm promptly and before assistance arrived he and assistant agent Colin McKillop moved a car loaded with grain out of danger and extinguished fire, which had started on roof of car. Section foreman F. R. Ford saved the water tank by climbing up to the roof and extinguishing fire, which had started there. All three men acted promptly and worked diligently in protecting the tank and station and removing cars to safety. There was a terrific wind blowing at the time.

Locomotive man J. Simpson, on an extra west on Ignace Subdivision, Manitoba District, observed what looked like a broken rail in the eastbound track. He stopped the train and sent head end trainman back to advise conductor, while he protected eastbound track. Conductor C. R. Simpson, when informed, went back and examined the track, finding a piece broken out of one of the rails and track unsafe. He left trainmen to protect it, cut off his locomotive and ran to nearest telegraph office, notifying section foreman on way, and advised dispatcher. No. 2 was just about due, but sectionmen were able to repair track in time to avoid delay to that train. The situation was admirably taken care of.

While a train was standing at a station recently waiting for a passenger train to pass, the conductor and trainman while inspecting the train, discovered fish plates and a piece of rail on the main track, which in all probability would have resulted in a derailment. Trainmen and other employees can accomplish a great deal by their vigilance in preventing accidents.

# Damage to Canadian Government Railways Property by Halifax Explosion.

Canadian Railway and Marine World is greatly indebted to C. A. Hayes, General Manager, Eastern Lines, Canadian Government Railways, for the following information, which was prepared by F. B. Tapley, Assistant Engineer, Maintenance of Way. We are under deep obligations to them for it, prepared as it was during a time of great stress, when the officials were working day and night to restore the damage and succour the wounded and other survivors. When the full story is available, it will be seen that the general officers at Moncton and a large number of local officials at other points on the Intercolonial Ry., particularly those contiguous to Halifax, performed heroic work under most difficult and trying circumstances.

water front, appears to have been destroyed from the water level up, although a portion of the old cribs below water may yet remain. The divers were too busy examining the substructure of more important piers farther down the harbor to permit of a complete examination below water to date. Pier 6, a wooden pile pier, without shed, was completely blown away, and no trace of it remains to mark the spot where it stood.

Richmond yard station, the car repair building, and cattle pens, were blown completely to atoms, while the switchman's shanties scattered throughout the yard were so badly wrecked as to be unfit for repair. The housing under the bottom of the tank tub was partly blown down and the feed pipe broken off. A

heavy storm of Dec. 9, this portion of the roof collapsed. The power plant and power house adjoining the station were damaged to the extent of broken pipe connections and a wrecked roof, all doors and windows being blown off as well.

The damage at Deepwater was heavy, but fortunately did not put the facilities entirely out of business. Still working in a southerly direction, or down the harbor, we come to pier 5, which was abandoned for shipping purposes last summer, and was given over for sanitary conveniences for troops. The latrines erected late in the autumn were demolished. Pier 4 is a wooden pile pier, with 2 outside tracks and a wood shed of the single deck type. Repairs were under way when the explosion occurred. The

North Street Station, Canadian Government Railways, Halifax, N.S., which was badly damaged by the explosion on Dec. 6.

The collision of the steamships Imo and Mont Blanc in Halifax harbor on Dec. 6, which caused the cargo of the Mont Blanc to explode, wrecked a considerable portion of the railway facilities in the vicinity of Richmond yard and North St. station, and damaged other facilities along the water front at Deepwater, which is farther south. The evidences on the ground would lead one to believe that the Mont Blanc exploded in the vicinity of piers 6 and 8, the greatest damage being done there and extending northeasterly toward Willow Park Jct., and southwesterly to the North St. station. Beginning at pier 9, which is just north of pier 8, and working southwesterly from there, a brief description of the damage to the railway property follows:—

Pier 9, which is the most northerly railway pier along the Halifax water front, was damaged by having a wooden shed so badly shaken by the force of the explosion that it collapsed in a heap. The substructure of this pier, so far as we have been able to carry our examination, has not been greatly damaged, but with the large amount of wreckage piled on it, we cannot be sure of its condition at the present writing. Pier 8, next down the

piece of metal, supposedly from the Mont Blanc, was blown through a tub stove, emptying the tank.

North St. passenger station sustained very heavy damage. The front and back thirds of the train shed roof were blown up by the blast of the explosion, and then they collapsed and fell down inside the brick walls. Thirteen of the roof trusses in the centre of the shed, with the roof boarding, framing and sash on them, remained standing, but were later pulled down for safety. The glass was blown out of all the side windows, and the doors blown out of the casings, but being weighted and hung to the side walls, many could be operated after the explosion. In the head house of the station, which is a solid brick structure, heavy damage was sustained. Downstairs all the doors, windows and fixtures were blown off, but the main partitions stood up under the force of the explosion, as did the brick walls. On the second floor, all doors and windows were blown off, and the plaster partitions bulged and broken. The damage to the third floor was practically the same as on the second floor, and a portion of the roof on the monitor was blown upward. Later, in the

pier was unharmed, but the shed was completely wrecked. Pier 3 is a wooden pile pier, with single story wooden shed and 4 tracks, 2 outside and 2 inside the shed. The pier was not damaged; the roof trusses on the north half of the shed were all broken, and all the doors and windows blown off. The electric wiring fell down on to the floor. The south half of the shed frame is apparently in good condition. Old pier 2, an open wood pile pier with 2 tracks, was not damaged. New pier 2 is of reinforced concrete with double deck concrete shed; 4 tracks, 2 outside and 2 inside the shed. The shed and pier are practically undamaged. The doors were all blown off the north side of the pier, both upstairs and down, and over 70% of the glass was broken. South side was not so greatly damaged, although 8 of the large steel doors downstairs were completely blown off, and a number damaged. In the military hospital upstairs, the light wood partitions were badly damaged, and these in falling broke some of the radiators clear of the pipes, and carried down the temporary electric wiring which was fastened to them. The permanent electric wiring in iron conduit was practically undamaged.

The power plant was not damaged, although the building housing it was shaken up. The Deepwater local freight shed, a brick structure, was not greatly damaged, except for a short section of the roof next the office portion, which opened up along the ridge for 60 ft., and the loss of the glass in the office windows and transoms over the freight doors.

The 500,000 bushel grain elevator, which is of wood construction, had the roof over the bins so badly damaged that it will have to be renewed. All of the windows in the working house and shipping galleries were blown out, and a hole was blown in the northerly side of the house. The power plant was unharmed. Steam was put on in it the afternoon of Dec. 7. The grain handling machinery was not seriously damaged, the damage consisting of a bent main shaft and a broke tension idler on the main drive.

At Willow Park, where the locomotive cleaning and housing facilities are located, the doors and windows in the car shop, stores building, planing mill, oil house and locomotive house, were blown out. The roof of the locomotive house was badly damaged, and the greater portion of it collapsed. The power plant was out of business for a day or two, but was put in running order later. The power transmission line to North St. and Deepwater, which follows along the city's streets, was wrecked, and power is now obtained from the Nova Scotia Power Co.'s plant in the south end.

The telephone dispatching line between North St. station and Rockingham was put out of business, but was repaired and put in service again on Dec. 9. All automatic signals between North St. station and Willow Park Jct., a distance of 7,000 ft., were badly wrecked and were found to be not working. They will be restored as quickly as possible. Train movements are not being interfered with on this account.

No damage was done at the new ocean terminals at the south end, except for the loss of some glass and a few doors in the temporary sheds. Although the damage to the railway property was heavy, it was fortunate that the two main tracks leading to the North St. station were not put out of business. Auxiliary cranes were started clearing the wreckage as soon as they arrived on the scene, and by noon on Dec. 8 the main lines to North St. station were clear. The standing portion of the train shed roof was taken down on the evening of Dec. 8, and trains were run into North St. on the evening of Dec. 9. On Dec. 10 full train service was resumed. During the time North St. station was out of business, the trains were run into the ocean terminals. The first train to leave North St. station after the explosion was a Dominion Atlantic for Kentville, which got out on Dec. 8 at 6 p.m.

Gangs of men were put on immediately to carry out the reconstruction work on new pier 2, pier 3, North St. station, Willow Park and Richmond, and the work of rehabilitation is now underway, and being pushed to the utmost. Arrangements have been made to erect additional sheds on the completed docks at the ocean terminals, to replace those lost at Richmond, and it is expected that by the end of January all space lost will be replaced, with something over to carry on the additional business expected. New pier 2 will be in shape by Jan. 1, pier 3 about a week later, and during January Willow Park will have been repaired and two temporary sheds 600 x 90 ft. will be completed at the ocean terminals. The remainder of the work will be completed as soon afterward as

possible.

No close estimate of the monetary value of the loss sustained in the explosion can be given at present writing, as all surveys and examinations have not been completed. The loss to rolling stock was heavy, consisting of 97 sleeping, dining, commissary, hospital, tourist, first and second class and baggage cars. Repairs are now under way, and the cars will be back in service in from one to six

weeks from the date of the explosion. The damage to the freight cars was heavier, 374 G.T.R. and foreign cars being damaged and destroyed. Of this number 304 can be repaired or converted into other types, and put back into service, and 70 will be a total loss. Five locomotives which were standing in the vicinity of the North St. station at the time of the explosion, were slightly damaged but will be in service again shortly.

## Compensation for Carriage of Mails by Railways.

For years Canadian railway companies have contended that the rates paid for the transportation of mails have been altogether inadequate and have urged that the matter be investigated by the Board of Railway Commissioners. In Feb. 1917, the Postmaster General reported to the Privy Council that the different railways have carried mails since Feb. 1, 1913, at the following rates per mile:—

For full postal car .....	16c
For half postal car .....	9c
For baggage car service over 30 ft. space ..	16c
For baggage car service 15 to 30 ft. space ..	9c
For baggage car service, less than 15 ft. space ..	4c
Special mail train ordered by P.O. Dept .....	\$1.25
Special mail train, when other cars are attached by railway .....	\$1.00

The Postmaster General pointed out that it was claimed by the C.P.R. and G.T.R. that these rates are inadequate and he recommended that the question of remuneration to be paid the railways be referred to the Board of Railway Commissioners to determine as to the accuracy or inaccuracy of the claims made by the companies, and if it is found that the present rates are inadequate, to determine, as the result of evidence to be submitted by both parties, i.e., the P. O. Department and the different railways interested, what would be a fair rate of payment for the service. The Postmaster General's report was concurred in and the matter was referred to the Board.

On May 5, 1917, E. W. Beatty, Vice President and General Counsel, C.P.R., and W. H. Biggar, General Counsel, G.T.R., applied to the board at follows:—"The Canadian Pacific and Grand Trunk Railway Companies on behalf of themselves and all other railway companies carrying mails in Canada claim that the rates of remuneration established by order in council on Jan. 27, 1914, now in force, do not afford fair and reasonable compensation for the service rendered, and ask that fair and reasonable rates be determined by the Board pursuant to the reference contained in order in council of Mar. 7, 1917. They submit that the same principles that determine whether passenger rates or freight rates are fair and reasonable should be applied to the fixing of mail rates, that mails should not be carried at the expense of other traffic, but should bear their due proportion of the cost of railway operation, and the fair value of the capital employed therein, and that such due proportion should be determined by the nature of the traffic and the service rendered.

"The service rendered comprises:—The construction and maintenance of approved type of railway post office and apartment r.p.o. cars on high speed passenger trains; the haulage of 'storage' mail cars on high speed passenger trains; the carrying, waybilling and general handling of closed pouch mails and parcels post in baggage cars; the switching and spotting of r.p.o. apartment, r.p.o. and storage cars for convenient loading, unloading or transfer of mails and par-

cels post; the equipping of r.p.o. and apartment r.p.o. cars with bunks, mattresses, chairs, brooms, drinking tanks, stamp pads, cooking apparatus, and furnishing of gas for cooking; the lighting, cleaning and heating of r.p.o. and apartment r.p.o. cars; the carriage of from one to 10 or 11 mail clerks in r.p.o. and apartment r.p.o. cars; the providing, without charge, for the cars and storage of mails at junction points when such mails have to be held or stored for train connection, and are to be transferred from one train to another of the same company, the work of transferring mails being performed by the railway company, except in a few exceptional cases where the department has provided special staffs for the purpose; the furnishing, erection and maintenance of mail catching posts at stations where mail carrying trains do not stop; that mail shall be given preference over all other traffic, and the furnishing of space at the larger stations for mail sorting purposes or general handling. The department pays a small rental for such space, which rental the railways contend is not sufficiently compensatory.

Notwithstanding such special and preferential service, the present rates of remuneration for mail carriage are far below the authorized rates for express, passenger and freight traffic. The revenues from the carriage of mails upon any unit basis are far below the revenues upon any like basis derived from the carriage of other lines of traffic. The revenues from the carriage of mails are far below the cost of the service, calculated upon any of the conventional modes of dividing costs of operation. They are far below the rates paid by the United States Post Office Department for the same service. The applicants claim that just and reasonable rates are not less than double the rates established by the order in council now governing the same, and ask that an early date be appointed for hearing the evidence in support thereof, as provided by the order in council of reference."

The matter was set down for hearing at Ottawa on Nov. 6 and is still before the board.

**Cleveland Railway Advances Fares:—**Effective Jan. 1, the Cleveland, Ohio, Ry. will increase its fares to 4c cash, three tickets for 10c, and 1c for a transfer, with no rebate. The advance was made necessary by abnormal prices and wage charges. The Street Railway Commissioner's records show that since 1910 salaries of employes have advanced from 27c and 30c an hour to 32c and 35c, the present scale. A further increase of 5c an hour has been offered employes, but the men have rejected it. Records also show that prices for all materials have advanced far beyond quotations for the decade previous to the outbreak of hostilities.

# Double Tracking the Canadian Pacific Railway from Leaside to North Toronto.

Present and prospective large increase in traffic have made it necessary to complete the double tracking of the C.P.R.'s North Toronto line at once. The rapid expansion of the City of Toronto to the north, and the recent completion of a handsome, modern passenger station at North Toronto have greatly increased the passenger traffic of this line, which also handles the heavy freight traffic between the east and the Buffalo and Detroit gateways. The two miles of single track between the double track east of Leaside

concrete and is to be completed and ready for the heavy winter traffic which commences with the close of navigation on the Great Lakes.

The bridge over the Reservoir ravine is known as 1.8 North Toronto Subdivision, and consists of a 3-track structure, located, with its south track approximately on the site of the existing main line, which will be used as a new switching lead, the other two tracks being used for eastbound and westbound traffic. The structure is 386 ft. long and 88 ft. high,

same plane with the other, but at approximately the points of contraflexure; in this feature the structure is unusual.

The bents consist of four posts, of which the two outer ones are battered, and the interior ones are vertical. They are in turn supported on substantial piers which are continuous transversely across the bridge. The floor slabs, as above stated, are all pre-cast and are placed on the transverse caps of the towers by derricks. The deck will then be waterproofed in the usual manner, with a membrane

Reservoir Ravine Bridge, North Toronto, Canadian Pacific Railway.

Jet., and west of North Toronto is a very busy piece of line at present and the increased traffic in immediate prospect necessitates prompt relief.

No material changes in grade or alignment are being made, as the new work will run to 0.4% for the former, and 3° for the latter. The grading is comparatively light, and this, together with all track work is being handled by the company's forces. It has, however, been necessary to replace two single track steel viaducts, the one over the Toronto Belt Line by a 2-track, and the one over Reservoir Park ravine by a 3-track structure. This is being done in reinforced

supported on two abutments and five towers, which in turn support pre-cast T-beam floor spans of such design that when laid alongside one another, they form a complete deck to carry the ballast and track work. A narrow sidewalk for railway employees only is provided on each side, protected by a pipe hand-rail, attached to reinforced concrete posts.

The towers are of unusual design, in that no diagonal bracing is used; but instead thereof, a system of horizontal struts, to reduce the stresses in the columns from the longitudinal and transverse horizontal forces. The immediate eight struts of one system are not in the

and a protective layer of asphalt, after which the ballast and ordinary track ties will be laid.

In order to maintain traffic and build the new bridge on the correct line, it was found necessary to build a temporary trestle on the north side of the structure, and entirely remove the old steel work. This allowed the use of the most economical length of concrete spans and also ensured that the new concrete would not be disturbed by the vibrations due to traffic passing on the old bridge.

The nature of the reinforcement in the towers is not different from modern practice. It consists of vertical rods located

in the rectangular post sections. These rods are securely tied across to opposite rods, at close intervals, by units composed of rods previously bent to suitable shapes.

The towers were poured story by story and splices in reinforcing bars were located immediately above the horizontal struts. The length of the horizontal girder slabs was dictated by the size of the reinforcing bars, the maximum size of which was  $1\frac{5}{16}$  in. diam., bent up in the usual manner to take care of shear. All ends of the rods were bent in hook form to give mechanical bond. Each of the finished slabs weighs approximately 57 tons, and this, as well as the size of the rods, was the controlling feature in deciding span lengths.

The bridge over the Toronto Belt Line Ry. is known as 0.9 North Toronto Sub-

supervision of J. M. R. Fairbairn, Assistant Chief Engineer, the designs being made by P. B. Motley, Engineer of Bridges, and the work was carried out under J. H. Barber, Engineer in Charge. The contractors of bridge 1.8 were Wells and Gray, Ltd., and for bridge 0.9 the Dominion Construction Co.

### The Railway Situation in Hamilton.

The Hamilton, Ont., City Council on Sept. 12 approved of proposal C, in the report of W. F. Tye, M.Can.Soc.C.E., and J. E. N. Cauchon, A.M.Can.Soc.C.E., on the railway situation in that city, as published in Canadian Railway and Marine World, Sept., 1917, pg. 342, and transmitted it to the Board of Railway Commissions as representing the city's

pose, this having been confirmed by W. F. Tye, as the result of a special examination of the locality. The number of cars switched in Kinnear yard increased from 8,066 in 1906 to 17,764 in 1914, and to 34,363 in 1916, and it is evident the company's facilities there are inadequate. The board, therefore, had no alternative but to grant the application, unless an arrangement between the company and the city could be arrived at. The Chief Commissioner had suggested previously that, instead of an expropriation order being made, the city should allow the company to occupy the land for five years, without any provision for renewal, and at the end of that time the city and the railways might be in a position to finance the ultimate solution of the Hamilton railway problem in whatever form it might take. The city, however, did not

Bridge over Toronto Belt Line Railway Ravine, on double track work, Canadian Pacific Railway, between Leaside and North Toronto.

Bent No. 7 of C.P.R. bridge over Toronto Belt Line Railway Ravine, Toronto.

division, and is similar in general elevation to the Reservoir ravine bridge as well as in length and height. It has the same number of towers and abutments. It supports, however, only two tracks, instead of three. The bents consist of three posts, two outer-battered and one inner-vertical, and being a 2-track structure, the width is correspondingly narrower. There will be two narrow sidewalks for railway employees, protected by reinforced concrete posts and rail fence of same general character as other bridge.

Both works were executed under the

views, and petitioned the board to adopt the recommendations, and to permit no new railway entrance into the city, and no extensions, additions, or changes in existing railway works there, unless they were in accordance with proposal C, and that the railways be asked to adopt the measures recommended in it. The application was heard at Hamilton, Oct. 22, together with an application by the Toronto, Hamilton & Buffalo Ry., for authority to take over, without the city's consent, certain undeveloped city land, 120 ft. wide, immediately south of the railway, from Sherman St. on the west, to Gage St. on the east, to enable the company to enlarge its Kinnear yard, so as to provide additional tracks for freight traffic.

The Chief Commissioner, Sir Henry Drayton, in giving judgment, Dec. 12, pointed out that the Tye-Cauchon report proposes to remove the T. H. & B. R. from the south district of Hamilton, and place it with the G.T.R. in the north. The T. H. & B. R.'s location was originally in the north end, but was changed to the south as a result of civic action, a city bonus bylaw affirmed by the ratepayers definitely approving of the present location. The bylaw having been ratified by the Dominion Parliament, and the Ontario Legislature, the Supreme Court of Canada held that the board had no jurisdiction to order a diversion of the T. H. & B. R. from its present site, to the north. The Chief Commissioner therefore decided that the board had no jurisdiction whatever to make an order adopting and carrying into effect the Tye-Cauchon recommendations and that the city's application must be refused.

The Chief Commissioner also held that it had been established that the proposed enlargement of the T. H. & B. R.'s Kinnear yard was both feasible and convenient, and that the board's Chief Operating Officer had reported the land the company asked for as being necessary for its pur-

act on the suggestion.

The Chief Commissioner announced that the formal order granting the T. H. & B. R.'s application would be held for seven days, viz., to Dec. 19, to give the city an opportunity of saying whether it would lease the land to the company for 5 years or whether it would prefer an expropriation order to go. In conclusion the Chief Commissioner said: "Mr. Tye is a railway engineer of eminence and of national standing. Full, fair and complete consideration ought to be given to the railway solution that he has endorsed. Everybody admits the present situation to be bad; the railway's remedy is to raise its tracks; Mr. Tye's remedy is to remove them altogether; but the parties interested, that is the different railways and the city, should, as I see it, refer the whole question to their respective engineers, with its instructions to work one with the other in an honest attempt to arrive at the best solution of what admittedly is a serious and difficult question."

Subsequently, on the request of the chairman of the Hamilton City Council's railway committee, the issuing of the order was further delayed until the city council's meeting, which was fixed for Dec. 26, and of the result of which we have no advice at the time of writing.

**Railway Lands Patented.**—Letters patent were issued during November, in respect of Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	A. Res.
Calgary and Edmonton Ry.	1,191,177
Canadian Northern Ry.	1,207,147
Central Canada Ry.	1,171,181

Qu'Appelle, Long Lake and Saskatchewan Ry.	1,191,177
Rd. and Steamboat Co.	1,191,177
Total	1,218,350

# Grand Trunk Railway Car Shops at Port Huron.

The G.T.R. has practically completed the construction of a new plant at Port Huron, Mich., for the repairing of freight and passenger cars. The principal car repair plant for the lines west of the St. Clair and Detroit Rivers has been at Port Huron for many years, but was destroyed by fire in the winter of 1914-15. It was of limited capacity and was located at the terminus of the old line previous to the construction of the tunnel. After the fire, negotiations were carried on between the town and the company, resulting in the selection of the present site which is advantageously located near the new

The power plant will consist of three 200 b.h.p. and three 150 b.h.p. return tubular boilers, the boiler pressure being 150 lb. per sq. in. The boilers will be fitted with superheaters, giving 150 degrees superheat when coal is used, and 200 degrees when wood refuse is used, and they will be adapted for handfiring, this arrangement being considered best, on account of the large amount of refuse varied in character, which will be burned. Other units will include two air compressors of 2,500 cu. ft. combined capacity of the cross compound type, specially adapted for use with superheated

ger car shops, except that the buildings are divided by a party wall only, instead of the space occupied by the transfer table.

The cabinet shop is two stories, the general construction being similar to that of the car shops.

The blacksmith and machine shops are planned in a similar manner to the freight car shops, with a fire wall dividing them.

The woodmill, dry lumber store and less important buildings are of the usual type and contain no special features.

The stores building is constructed on

General Layout, Grand Trunk Railway Car Shops, Port Huron, Mich.

tunnel line and the locomotive house. The new plant will consist of:

Power plant Engine room .....	351½ x 70 ft.
Power plant Boiler room .....	55 x 98 ft.
Large passenger car shop—15 cars capacity .....	134½ x 303½ ft.
Small passenger car shop—12 cars capacity .....	134½ x 240 ft.
Steel freight car shop—28 cars capacity .....	78 x 360 ft.
Wood freight car shop—28 cars capacity .....	78 x 360 ft.
Cabinet shop 2 stories each ..	73 x 250 ft.
Blacksmith shop .....	74 x 299 ft.
Machine shop .....	74 x 299 ft.
Woodmill .....	90 x 210 ft.
Dry lumber stores .....	35 x 149 ft.
General stores .....	59 x 153 ft.
General offices .....	59 x 63 ft.
Paint store .....	25 x 50 ft.
Dry kiln, 2 compartment .....	25 x 50 ft.
Battery charging house .....	25 x 50 ft.
Repair track yard, with 200 car capacity .....	

The arrangement of buildings was given special attention with a view to distribution of power; the possibility of extending the plant and to ensure materials being handled by direct movement from the stores to the finished product. The offices are at the city end of the site, fronting to 28th St., and standing back about 50 ft., thus allowing of a good track, occupy an area of approximately 55 acres and the total cost is estimated at about \$700,000.

steam. The superheat of these air compressors may be controlled by proportioning their supply of wet steam. Boiler feed, vacuum and fire pumps and open type water heater will be installed. The boilers will be provided with brick stack 150 ft. high and 6½ ft. in diameter, connected with steel breeching. The heating requirements for the shops will be considerable, due to the large amount of special work, in the nature of painting and varnishing, and will be supplied by cast iron radiators of the wall type, and pipe coils distributed as required. Coal will be directly delivered to bunkers inside the power house, by hopper cars discharging through a steel trestle.

The passenger car shops are so planned that each car under construction or repair will occupy one bay of either building, with a liberal allowance all round for working. The two buildings are parallel to one another, with a space of 100 ft. between, which is occupied by a transfer table serving both. The roofs are designed with monitors, which run across the length of the building and so light and ventilate each individual bay.

The freight car shops are planned for the cars to enter at one end, and the construction is similar to that of the passen-

the same general lines as the car shops, and is provided with racks and shelves, designed specially for the very varied stores which have to be carried in stock. Office space for the storekeeper and his staff is provided at one end.

The paint store and battery charging room are of fireproof construction throughout.

The drying kiln is a specially designed building of 2 compartments, with doors at each end. This arrangement will permit of cars of lumber entering at one end and when dried being removed at the other, no delay or inconvenience being occasioned through having to remove one car to get at or remove another. Each compartment is separate from the other and capable of being used independently. The heat will be supplied by means of steam pipes located below rail level and a special system of air ducts will provide ample air changes, which will be capable of regulation, and provision is also made for the introduction of steam, as required, to check too rapid drying. The walls and roof will be insulated by air cavities, so that even temperature may be maintained.

The general offices are attached to one end of the stores building, with a brick

firewall dividing. The interior is divided by terra cotta hollow block walls and the exterior walls are furred with the same material, all surfaces of walls and ceilings being plastered and painted. Lavatories and lockers are provided in each building for a full complement of workmen. Ample storage spaces for steel, wheels, lumber, etc., have been al-

lowed for and the layout generally has been planned with special attention to economical working. The transfer table is 80 ft. long, designed to carry a 96 ton car. It will be operated by electricity. Electrical energy for lighting and operation of machines will be supplied by the Port Huron Electric Power Co. Provision has been made for fire protection

by the erection of a 100,000 gal. steel storage tank, 100 ft. above the ground line, with a complete system of piping and fire hydrants situated at convenient points. The buildings have been planned and erected under the direction of the company's Chief Engineer, H. R. Safford, Montreal.

# Canadian Northern Railway Terminal Buildings in Montreal.

The temporary station being built by the Canadian Northern Ry. at the corner of Lagauchetiere and St. Monique Street, Montreal, was fully described and illustrated in Canadian Railway and Marine World for July, 1917, and some additional information and plans were published in our November issue. The progress of the work on the temporary station is now

the vacuum principle and the waiting rooms and lavatories will be heated under thermostatic control. The work remaining to be completed is the plaster work of the walls and ceilings, the cement plaster of train level portion of building, baggage room and lavatories and the plaster finish of the waiting room, vestibule, etc. Then will

building being erected on Mansfield St. is also nearing completion, but owing to the retaining walls of the railway cutting not being ready, a portion of the rear of the building has to be left incomplete until the retaining walls are finished. The building proper has approximately 100 ft. frontage by 80 ft. depth, with boiler room and freight elevators adjoining in the

Rear Elevation, Canadian Northern Express Co.'s Building, Montreal.

so far forward that a fair idea of the completed work can be had. The whole of the brick, tile, concrete and steel work is finished, and the building is ready for the plasterers, the finished wood work, painting, etc. Following is a resume of what has been done and what is required to complete the structure: After excavating for the foundation and piers, which were carried down to a rock foundation, the reinforced concrete work was proceeded with. The whole of the structural parts, including the walls, floors and roof are formed of that material, making an absolutely fireproof building. The inside of the outer walls and dividing partitions are of fireproof tile, which are ready for the plaster finishing. The roughing for the plumbing and heating is completed, including all pipe mains, and all the conduits for electric wiring, etc. The heating will be on

follow the carpenter trim, and the fixtures, which will be of Georgia pine throughout, finished with a fumed oak flat finish. The marble work, plumbing fixtures and radiators will be proceeded with immediately after the plaster work is completed, and the wiring for power and light, and electric fixtures, etc., and finally the finishing by the decorators. Beside the finish of the wood work, the waiting room and vestibule walls will be painted with lead and oil paint, and the ceilings and walls of baggage room, lavatories and train space will be treated with cement paint in suitable and harmonious colorings. Provision is being made for telephone and telegraph, and a system of time clocks controlled by the Great North Western Telegraph Co. Express Building, Garage and Boiler Room. The Canadian Northern Express Co.'s

rear. The building is divided into three parts, viz., express room, garage and boiler room. Facing Mansfield St. the building shows as one story and a half and basement, but on the rear appears much higher, owing to the deep cutting, which is 46 ft. below the level of Mansfield St. The main floor will be occupied as the express room, with shipping doors on the northwest side and there will be offices for the agent, clerks, records and also lavatory accommodation. Underneath the express room the whole space will be utilized as a garage for delivery trucks and will be approached by a driveway from Mansfield St. Connecting both express room and garage to the railway tracks will be two freight elevators, run by electric power and capable of carrying 4,000 lb. each. Adjoining the entrance to the elevators on the track level will be a car siding.

The boiler room is on the level of the tracks, where coal trucks can run right alongside the coal bunkers and unload directly into them, and cinders can be loaded from boiler direct to cars. The boiler room will not only supply steam for heating the express building, but also for the terminal station, 300 ft. away, and will supply steam to car points for heat-

ing cars which will be disconnected from the steam locomotive at Cartierville and brought to the terminal by electric locomotives.

The building is being constructed of brick, with concrete foundations, reinforced concrete floor in express room and reinforced concrete ceiling of garage with flat timber roof. The exterior will be ce-

ment stucco plaster and have decorative flat pilasters and iron cornice. The shipping driveway will have an overhanging steel and corrugated iron roof.

The completion of the work may be looked for early in the new year. It is being carried out under the supervision of Geo. C. Briggs, Supervisor of Buildings, C.N.R.

## Railways Authorized to Advance Freight and Passenger Rates.

Sir Henry Drayton, Chief Railway Commissioner, delivered judgment Dec. 26, on the application of Canadian railways for a recommendation to the Governor in council, under the War Measures Act, for a general advance in freight and passenger rates. The judgment, which was concurred in by D'Arcy Scott, Assistant Chief Commissioner, Hon. W. B. Nan-

maximum of 2c per 100 lb.

The existing lumber rate basis in the west has been built up by agreement between the mills and the railways, the important matter being the extent of the rate differences between different groups of producers. A percentage arrangement would create disparities. From British Columbia mills to the different groups

the railway management. They are very largely represented in wage increases, which have had the approval of the public at large. Public bodies and public sympathy have been with the men in the increases which they have obtained. No objection whatever has been made by any contestant on the ground that the railways have improvidently increased

Mansfield St. Elevation, Canadian Northern Express Co.'s Building, Montreal.

tel, Deputy Chief Commissioner, and Commissioners McLean and Goodeve occupies 76 foolscap pages of typewritten matter. It is officially summarized as follows:

Subject to the limitations of the Crowsnest Pass agreement and to the specific limitations contained in the judgment, freight rates are permitted to be increased, in general, approximately 10% in the west and 15% in the east.

While the Grand Trunk Pacific and the Canadian Northern are not included in this agreement, they are to be treated as if included.

With a view to lessening the disturbances as between territories, now established, of western distributing centres, and having also in mind the increase in the all rail rate already allowed, a 15% increase west of Port Arthur, and a 10% increase on the eastern balance of the through rate is permitted, but again subject to the limitations worked by the Crowsnest agreement.

On coal, an increase of 15c a ton is allowed, it being considered that this will bear less harmfully on the consumer than a percentage increase. In the western hearings the evidence was that a flat increase was preferable to the percentage increase asked for by the railways.

An increase of 5c a ton is permitted on clay, gravel and crushed stone.

On grain to Lake Superior ports, an increase of 2c per 100 lb. is allowed; this is approximately 10%.

Grain and grain products, etc., in the west, other than for movement to Fort William, and also on the movement of these from Fort William east, are permitted an increase of 15% subject to a

increases of from 3 to 5c, according to distance, are allowed. From Northern Alberta and Saskatchewan spruce districts 15%, with a maximum of 3 to 4c, according to distance. From British Columbia to Eastern Canada, 10%. From Lake-of-the-Woods and Rainy River, 3 to 4c, according to distance. From Port Arthur west 3 to 5c, according to distance. Between points in Eastern Canada a 15% increase, which works out a maximum of 3c.

Transcontinental class rates may be increased 10%. No increase allowed in transcontinental commodity rates.

In British Columbia an increase of 10% on freight rates is allowed; no rates to be lower than the prairie rates, as increased.

Railway tolls incidental to transportation, switching, demurrage, reconsignment, sleeping or parlor car accommodation, weighing, refrigeration, heating, car diversion, or other special services, are not allowed any increase.

No increase in passenger rates is allowed in British Columbia. A 15% increase is allowed in the territory where the maximum rate is 3c. It is at the same time pointed out that in the public interest, with a view to conserving coal, railway facilities and man power, that passenger travel should be as light as possible, so as to facilitate efficient freight movement.

It is set out that no greater profits will be obtained by the railways under the new rate scheduled than in the past. The increased rates allowed will certainly not equal the increase in costs to which the railways are subject. These increased costs are not in any way attributable to

wages. The other items of cost increases are chiefly the result of today's prices of coal, steel material and railway supplies. The railways suffer in this regard in common with other users of these necessities. The increased cost can certainly not be said to be the railways' fault. While there was difference of opinion among trade organizations, a considerable number hold that reasonable increases, within the discretion of the board, were justifiable. As to the representations made regarding aid by loans, as well as change in ownership the board has no right to express an opinion, as its powers are concerned with rate matters.

Canadian Northern figures show a steadily declining net revenue. In Sept., 1917, the net revenue was 41% less than in 1916, October, with 6% increase in gross, shows 51% decrease in net. Maintenance charges have been cut down with a view to economy. As a result, efficiency has decreased and accumulated maintenance charges will have to be met later. At the same time, costs of labor, coal and materials, have been increasing. In September, the Canadian Pacific's net decreased 28.3%. In 10 months, ended Oct. 1917, the gross revenue of the Grand Trunk increased 11%, while expenses increased 22%. In October gross increased less than 2%, while net earnings decreased 49%.

It is found that there can be no question, in view of the actual results, that the railways require greater revenues, and must have them if proper efficiency is to be maintained, and the demands of the country for transportation at all adequately met.

# Mainly About Railway People Throughout Canada.

**Frank Scott**, Vice President and Treasurer, G.T.R., Montreal, has been elected a director of the Guarantee Co. of North America.

**R. P. Wilson**, Division Engineer, Hudson Bay Ry., Pas, Man., has been elected an associate member of the Canadian Society of Civil Engineers.

**S. P. Brown** M.Can.Soc.C.E., who resigned as Chief Engineer, Mount Royal Tunnel & Terminal Co., Montreal, recently, has been appointed Vice President and General Manager, Ford, Bacon & Davis, engineers, New York.

**L. Bonney**, who died at Winnipeg, Dec. 16, aged 59, was for some time in C.P.R. service, first as a lecturer in Scotland to induce emigration to Canada, and later in charge of an immigration office in Winnipeg. He was subsequently in charge of stores, at Whitewood and at Keewatin.

**William Walkden**, who was transferred from junior to associate member of the Canadian Society of Civil Engineers recently, has been in the office of Bridge Engineer, Western Lines, Canadian Northern Ry., Winnipeg, since 1912, and since the death of W. L. Mackenzie, on Feb. 6, 1917, has been in charge of that department.

**W. C. C. Mehan**, heretofore General Superintendent, Mountain Division, Grand Trunk Pacific Ry., Prince Rupert, B.C., who has been granted leave of absence, will spend some little time visiting relatives and friends in Ontario and Quebec, and in the central and southern United States, renewing friendships after an absence of ten years. His address for the present is St. Albans, Vt.

**A. H. Crawford**, who died at Toronto, Dec. 9, aged 78, was for some years in railway service, being secretary to the Freight Superintendent, G.T.R., when that position was held by the late P. S. Stevenson. He was later, G.T.R. Freight Agent at Kingston, Ont., and General Superintendent, Toronto Grey and Bruce Ry., and retired from railway service when that company was absorbed by the C.P.R.

**W. J. Mathison**, who has been appointed Assistant Superintendent, District 1, Intercolonial Division, Canadian Government Railways, Montreal, was born at Havelock, Ont., Dec. 12, 1877, and entered railway service with the C.P.R., subsequently transferring to the G.T.R., and in Nov., 1916, to the Canadian Government Railways, as Assistant Superintendent at Halifax, N.S., which position he held to Nov. 5, 1917, when he was transferred to Montreal.

**J. W. N. Johnstone**, General Passenger Agent, Reid Newfoundland Co., who has also been appointed Assistant to the President, St. John's, Nfld., was born at Campobello, N.B., Oct. 4, 1878, and entered transportation service in the General Freight Department, C.P.R., St. John, N.B., serving in various capacities in that department from junior clerk to assistant to the chief clerk until Feb., 1902, when he entered Reid Newfoundland Co.'s service as chief clerk to the General Freight Agent, St. John's, Nfld., and was appointed General Passenger Agent, Aug. 21, 1906.

**George Cobb**, who has been appointed Assistant to General Superintendent, Reid Newfoundland Co., St. John's, Nfld., was born at Coupar Angus, Scotland, Apr. 21, 1885, and entered Reid Newfoundland

Co.'s service, Nov. 14, 1901, since when he has been, to Sept. 27, 1903, telegraph operator; Sept. 27, 1903, to May 31, 1905, agent, Gambo, Nfld.; May 31, 1905, to

**J. A. Heaman, B.Sc., A.M.Can.Soc.C.E.**  
Who has been appointed Assistant Chief Engineer, Grand Trunk Pacific Railway, succeeding H. A. Woods, resigned.

**J. A. Vallerand**  
Superintendent and General Freight and Passenger Agent, Roberval-Saguenay Railway.

May 20, 1908, night dispatcher, St. John's; May 20, 1908, to Nov. 11, 1910, emergency dispatcher and agent, Bishops

Falls; Nov. 11, 1910, to Jan., 1913, Chief Dispatcher, St. John's; Jan., 1913, to Dec. 1917, Superintendent, St. John's.

**O. M. Lavoie**, whose appointment as acting Superintendent of Car Service Eastern Lines, C.P.R., Montreal, was announced in our last issue, was born at St. Cyrille de Wendover, Que., Oct. 16, 1884 and entered railway service Nov. 25, 1901 since when he has been, to Sept. 2, 1902 operator, Quebec, Montreal & Southern Ry., at various points; Sept. 2, 1902, to Apr. 25, 1910, operator, C.P.R., at various points on the Farnham Division; Apr. 25, 1910, to Jan. 6, 1915, dispatcher, C.P.R. Farnham, Que.; Jan. 6, 1915, to Mar. 27, 1917, Chief Dispatcher, C.P.R., Farnham, Que.; Mar. 27 to Nov. 23, 1917, Inspector of Transportation, Eastern Lines, C.P.R. Montreal.

**C. Price Green**, who, as announced in our last issue, has been appointed Industrial Commissioner, Canadian Northern Ry., at Toronto, on coming to Canada from England started work in the C.P.R.'s engineering department, was on location and construction for some years and was afterwards engaged in mining and meteorological work. He then went to the G.T.R., and after a short time in its operating department was transferred to its passenger department, remaining there until 1906, when he was appointed on the Canadian Northern Ry.'s passenger department staff at Toronto. For the past three years he has been General Agent on the Secretary's staff.

**J. Achille Vallerand**, whose appointment as Superintendent and General Freight and Passenger Agent, Roberval-Saguenay Ry., Chicoutimi, Que., was announced in our last issue, was born at Quebec, Que., Oct. 21, 1878, and entered railway service in June, 1895, since when he has been, to Dec., 1896, junior clerk, Quebec, Montmorency & Charlevoix Ry. Quebec; between Dec., 1896 and June, 1900, assistant agent, C.P.R., Garneau, Que., and Quebec & Lake St. John Ry., St. Tite, Que.; June, 1900, to May, 1904, station agent, Q. & L. St. J. R., Jonquiere, Que.; May, 1904, to July, 1908, station agent, same road, St. Anne de Beaupre, Que.; July, 1908, to June, 1910, clerk in Superintendent's office, Quebec Ry., Light & Power Co., Quebec; June, 1910, to Sept. 1917, Auditor, same road, and from Dec., 1912, also Freight Claim Agent, Quebec.

**George A. Hoag**, who has been appointed Superintendent, Superior District, Ontario Division, Canadian Northern Ry., was born at Walters Falls, May 31, 1866, and entered railway service June 8, 1884 since when he has been, to May, 1886, switchman, G.T.R.; May, 1886, to Jan., 1888, night operator, G.T.R.; Jan., 1888, to Jan., 1896, day operator, G.T.R., Lyn, Ont.; Jan., 1896, to Nov., 1899, agent, G.T.R., Lyn, Ont.; Nov., 1899, to Mar., 1901, agent, G.T.R., Trenton, Ont.; Mar., 1901, to Oct., 1905, Yardmaster, G.T.R., Belleville, Ont.; Oct., 1905, to June, 1908, Trainmaster, Central Ontario Ry., Trenton, Ont.; June, 1908, to June, 1914, Superintendent, C.O.R., Trenton, Ont.; June to Dec., 1914, Superintendent of Car Service, Canadian Northern Ry., Toronto; Dec., 1914, to Oct. 31, 1917, Assistant Superintendent, C.N.R., Toronto.

**George N. Goad**, who has been appointed Assistant Superintendent, Toronto District, Ontario Division, Canadian Northern Ry., Rosedale, Toronto, was born at Toronto, Nov. 26, 1884, and entered rail-

way service in Sept. 1901, since when he has been, to July 1902, junior clerk, Division Freight Agent's office, G.T.R., Toronto; July 1902 to Sept. 1904, stenographer, same office; Sept. 1904 to Dec. 1905 chief clerk, Canadian Freight Agent's office, Lehigh Valley Rd., Toronto; Dec. 1905 to Mar. 1907, stenographer, Third Vice President's office, Canadian Northern Ry., Toronto; Mar. 1907 to Aug. 31, 1915, chief clerk to Superintendent, and General Superintendent, C.N.R., Toronto; Sept. 1 to Dec. 31, 1915, chief clerk to General Manager, Eastern Lines, C.N.R., Toronto; Dec. 31, 1915, to Jan. 10, 1917, Inspector of Transportation, Eastern Lines, C.N.R., Toronto; Jan. 10 to Dec. 1, 1917, Terminal Trainmaster, Toronto Terminals, C.N.R., Toronto.

### The Death of Joseph Hobson.

Joseph Hobson, M.Can.Soc.C.E., Consulting Engineer, G.T.R., who died at Hamilton, Ont., Dec. 19, after a prolonged illness, was an outstanding figure in railway engineering for very many years and was associated with four of the great works undertaken on the Great Western and Grand Trunk Railways, these being the International bridge over the Niagara River between Fort Erie and Buffalo, the St. Clair tunnel under the St. Clair River, connecting Sarnia, Ont., and Port Huron, Mich., the replacing of the suspension bridge across the Niagara River at Niagara Falls by the present arch structure, and the rebuilding of the Victoria bridge at Montreal.

He was born in Guelph Tp., Ont., on Mar. 4, 1834, and educated in the local schools and at Toronto. He served an apprenticeship as an Ontario land surveyor at Toronto, and eventually qualified for both Ontario and the Dominion. He then entered the service of Gzowski & Macpherson, who had a construction contract on the G.T.R., between Toronto and Guelph, and later practiced as a land surveyor for some time, in Berlin (Kitchener) and Guelph. He returned subsequently to railway work, and until June, 1869, was engaged as assistant engineer on various lines in Nova Scotia, Ontario and Michigan. From June, 1869, to Apr. 1870, he was engineer on construction, Wellington, Grey & Bruce Ry.; Apr. 1870, to Nov., 1873, Resident Engineer, International bridge, Buffalo, N.Y.; Nov., 1873, to June, 1875, Chief Assistant Engineer, Great Western Ry., Hamilton, Ont.; June, 1875, to Feb., 1896, Chief Engineer, same road, Hamilton; on the absorption of the G.W.R. by the G.T.R. Aug. 22, 1882, he was appointed Chief Engineer, G.T.R. lines west of Toronto, Hamilton, Ont., and on Feb. 1, 1896, Chief Engineer, G.T.R. system, Montreal continuing to live in Hamilton, and retaining that position until Aug., 1907, when he became Consulting Engineer for the company.

As before stated, he was Resident Engineer on the International Bridge across the Niagara River between Fort Erie and Buffalo, he was Chief Engineer of Western Lines, G.T.R., when the Sarnia, Port Huron tunnel was built and the bridges across the Niagara River at Niagara Falls and across the St. Lawrence River at Montreal were built, while he was Chief Engineer of the whole G.T.R.

He was one of the first members of the Canadian Society of Civil Engineers, of which he was councillor in 1888, 1891 and 1892. He was also a member of the American Society of Civil Engineers and of the Institution of Civil Engineers, Eng. Robert Hobson, President, Steel Co. of

Canada, Hamilton, and J. I. Hobson, Treasurer, Canada Steamship Lines, Ltd., Montreal, are sons.

The funeral, which was private, took place at Hamilton, Dec. 21, and was attended by the following G.T.R. officials: U. E. Gillen, Vice President; H. R. Safford, Chief Engineer; M. S. Blaiklock, Engineer, Maintenance of Way; W. McNab, Engineer of Valuation, Montreal; H. E. Whittenberger, General Superintendent, Ontario Lines; E. G. Hewson, Division Engineer; G. A. Mitchell, Superintendent of Bridges and Buildings, and D. McCooe, Superintendent of Track, Toronto.

The Hamilton Spectator says:—"His life was full of the noblest and grandest conquests over the conditions and forces of nature. At a ripe old age, well earned repose came to him in comparative retirement; yet still the benefit of his accumulated knowledge and sound judg-

Joseph Hobson, M.Can.Soc.C.E., who died at Hamilton, Dec. 19, 1917.

ment was sought and cheerfully yielded. Most God-like among men are the rare spirits to whom is given in large degree a power approaching that of creation."

**Colorado Railway Fares Advanced.**—The Colorado Public Utilities Commission has authorized the Denver & Salt Lake Rd. to increase its local passenger fares from 4½¢ a mile to 5 round trip fares to be at a rate of 10¢ less than this. The road is in the hands of receivers, and has had poor traffic for several years.

**The Shawinigan Water & Power Co.,** which owns the terminal electric railway at Shawinigan Falls, and the electric railway at Three Rivers, Que., is reported to have sold an issue of \$4,500,000 two year 6½ convertible notes in Boston, Mass.

N. F. Judah, Auditor, Edmonton, Dunvegan & British Columbia Ry., writes: "I would most certainly miss your valued publication, Canadian Railway and Marine World, if it did not reach me regularly."

### Gross Railway Earnings January 1 to November 30.

	1917	1916	1915
C. I. R.	\$134,833,000	\$124,231,000	\$93,542,000
C. N. R.	37,479,100	34,480,000	24,303,600
G. T. R.	60,573,539	54,971,385	45,509,088
	\$232,885,639	\$213,682,385	\$163,354,588

### Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1916, from July 1, 1917:

	Gross Earnings	Expenses	Net Earnings	Decrease
July	\$3,844,900	\$2,940,000	\$ 904,900	\$ 292,500
Aug.	3,405,200	2,812,000	693,200	478,800
Sept.	3,341,700	2,915,800	1,924,000	36,700
Oct.	3,941,600	3,350,500	591,100	629,200
Nov.	4,050,200	3,295,600	754,700	495,300
	\$18,583,600	\$15,313,800	\$3,269,800	\$2,202,500
Incr Dec.	\$ 437,500	\$ 962,800	\$2,202,600	.....

Approximate earnings for three weeks ended Dec. 21, \$2,408,100, against \$2,616,200 for same period 1916.

### Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, compared with those of 1916, from Jan. 1, 1917:

	Gross Earnings	Expenses	Net Earnings	Increase
Jan.	10,158,307.86	7,726,829.36	2,431,478.50	341,070.27
Feb.	9,084,276.76	7,098,227.96	1,986,048.80	x308,293.94
Mar.	11,846,542.98	7,909,225.16	3,937,317.82	516,987.46
Apr.	12,355,519.60	8,180,541.98	4,174,977.62	441,241.66
May.	14,355,149.63	9,803,426.84	4,551,719.79	179,436.88
June	13,556,979.69	9,641,073.49	3,915,906.20	226,273.09
July	13,377,850.55	9,617,853.33	3,760,007.22	x257,084.51
Aug	12,414,537.25	8,596,998.76	3,817,538.49	x1,650,248.36
Sept	12,244,341.69	8,497,190.83	3,747,150.86	x1,382,608.30
Oct.	14,733,774.02	9,679,072.25	5,054,601.77	x 620,037.60
	\$124,127,290.03	\$86,750,442.96	\$37,376,847.07	x\$2,514,263.36
Incr.	\$10,226,414.11	\$12,749,677.47	\$ 2,514,263.36	.....
Dec.			\$ 2,514,263.36	.....

x Decrease.  
Approximate earnings for November, \$14,942,000, and for three weeks ended Dec. 21, \$9,243,000, against \$13,157,000 and \$9,224,000 for same periods respectively in 1916.

### Grand Trunk Railway Earnings.

Aggregate traffic receipts from Jan. 1 to Oct. 31, 1917 and 1916.

	1917.	1916.	Increase.
G.T.R. ...	\$43,396,555	\$39,127,270	\$4,269,285
G.T.W.R. ...	8,004,931	7,781,671	223,260
D.G.H. & M.R.	2,788,094	2,761,787	26,307

Totals ... \$54,189,580 \$49,670,728 \$4,518,852

Approximate earnings for November, \$6,549,336, and for three weeks ended Dec. 21, \$3,613,592, against \$5,343,653 and \$3,520,136 respectively for same periods in 1916.

### Grand Trunk Pacific Ry. Earnings.

The approximate earnings of the Prairie Section, 916 miles, for November were \$841,638, against \$672,532 for November, 1916, and the aggregate earnings for five months ended Nov. 30 were \$3,124,085, against \$2,295,153 for November, 1916.

The Grand Trunk Ry.'s annual inspection of track was completed early in December, having occupied about six weeks and including a thorough examination of rails, ties, etc., on the 1,145 miles of main line, and on the branch lines. The inspection party travelled in a specially constructed car, fitted with electrically controlled devices for registering the efficiency marks gained by the various sections for excellence of track maintenance, which was described and illustrated in Canadian Railway and Marine World in previous years. There was the keenest competition between the various section gangs, foremen and supervisors, for the honors which are given to the section considered to represent the highest standard of maintenance work.

# Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway,  
Marine, Express, and Telegraph, also Railway and  
Canal Contractors' Interests.  
Official Organ of various Canadian Transportation  
Associations.

Published on the first of each month.

ACTON BURROWS, LIMITED - Proprietors.  
70 Bond Street, Toronto, Canada.

ACTON BURROWS, A. Can. Soc. C.E.  
Managing Director and Editor-in Chief.  
AUBREY ACTON BURROWS - Secretary and  
Business Manager.

Associate Editors  
JOHN KEIR AND DONALD F. KEIR

United States Business Representative,  
A. FENTON WALKER, 143 Liberty St., New York

Member of  
Canadian Press Association,  
Associated Business Papers,  
Audit Bureau of Circulation.

Authorized by the Postmaster General for Canada,  
for transmission as second class matter.  
Entered as second class matter, July 25, 1913, at the  
Postoffice at Buffalo, N.Y., under the Act of Congress  
of March 3, 1879.

SUBSCRIPTION PRICE, including postage any-  
where, \$2 a year.

SINGLE COPIES, 20 cents each, including postage.

The best and safest way to remit is by express money  
order. Where one cannot be obtained, a post office  
money order, or bank draft, payable at par in Toronto,  
may be sent. Cheques or drafts not payable at par in  
Toronto cannot be accepted. Remittances should be  
made payable to Canadian Railway and Marine World.

## Index to Canadian Railway and Marine World for 1917.

At the end of this issue is a very complete index to the contents of the volume for 1917 which as in former years, will doubtless be fully appreciated by the large number of subscribers who bind Canadian Railway and Marine World for reference purposes.

Even a casual glance over the pages of closely printed matter will show the tremendous range of subjects covered and the thorough manner in which this paper represents the entire transportation interests of the whole Dominion, steam railway, electric railway and marine, as well as the subsidiary express and telegraph interests, and railway and canal contracting work.

## Apportionment of Cost of Railway Crossings in London Ont.

The Board of Railway Commissioners passed order 26,833 Dec. 15 as follows:— Re crossings of Burwell, Adelaide, and Rectory Sts. by the G.T.R. in London; and the question of the apportionment of the cost of installing and maintaining the gates required to be installed at the said crossings by order 26527, Sept. 11, 1917. Upon reading what is filed on behalf of the London St. Ry., the G.T.R. and the City of London, it is ordered that 20% of the cost of installing the gates at the crossings of Adelaide and Burwell Sts. be paid out of the railway grade crossing fund, 60% to be paid by the G.T.R., and 20% by the City of London; the watchmen's wages to be paid by the G.T.R., and the remainder of the cost of maintenance to be borne and paid 70% by the G.T.R. and 30% by the City of London.

That 20% of the cost of installing the gates at Rectory St. be paid out of the railway grade crossing fund, 60% to be paid by the City of London, and 20% by the G.T.R.; the interlocking device at the crossing to be connected up with the tower, and the necessary additional levers, if any, installed, so that the half-int rlocker may be operated from the tower, as well as the gates; such work to form part of the cost of installation.

That the London St. Ry. Co. pay the wages of the day and night watchman, as at present appointed at the crossing of Rectory st.; the remainder of the cost of maintenance to be borne and paid by the G.T.R.; and the London St. Ry. to continue to pay the same maintenance charges as provided for in the Railway Committee of the Privy Council's order, Nov. 15, 1896.

## Toronto, Hamilton and Buffalo Rail- way Yard at Bridgeburg.

We are officially advised that the Toronto, Hamilton & Buffalo Ry.'s new yard at Bridgeburg, Ont., which is estimated to cost approximately \$500,000, is expected to be completed by Aug. 1. Its capacity will be about 1,000 cars, but it is being so laid out that tracks to accommodate an additional 1,000 cars can be laid when required.

The plans filed with the Board of Railway Commissioners show the work proposed to be done, and its relation to existing railway lines, pole lines, etc. Before tracks can be laid there is a considerable amount of preliminary work to be done. Bower Road is to be closed for a considerable distance and a new road made

south of the Michigan Central Rd., while the present telegraph and telephone lines and gas mains are to be diverted to the north. The Michigan Central Rd.'s Niagara Division tracks will be diverted from a point at the Y and a new connection with the M.C.R. main line will be made on the John T. James property. The Canadian Niagara Power Co.'s pole line along the M.C.R.'s existing Niagara Branch will be diverted. It is also proposed to close up some other short pieces of road, and the small yard area owned by the Pere Marquette Ry. This is near the Thompson Road, which will be carried under the G.T.R. tracks. The main lead from the M.C.R. tracks will be at mileage 1.21 from Bridgeburg, and connection will be made with the same line at the other end of the yard at mileage 2.63. The yard tracks will be laid out on the most modern principles, for quick handling of cars.

## Steam Railway Track Laid in 1917.

A preliminary table of new track laid in 1917 by the steam railways throughout Canada, made up from official replies to Canadian Railway and Marine World's annual circular is given below. Included in the mileage given are 11 miles of track laid during 1916 on the Alberta & Great Waterway Ry.'s Egg Lake branch, of which we were not advised sufficiently early to include it in our revised table in the Feb., 1917, issue.

The total miles of new track laid is 242.16, compared with 285.94 miles laid during 1916. This mileage was laid on 8 railways, while track was laid on 15 railways during 1916. Of the mileage reported, the Canadian Northern Ry. laid 91.44 miles; the Alberta & Great Waterways Ry. 84.30 miles; and the Grand Trunk Pacific Ry. 24.86 miles. By provinces, track was laid as follows:—Alberta, 128.81 miles; Saskatchewan, 48.14; Quebec, 36.00; Manitoba, 9.80; British Columbia, 9.41; New Brunswick, 8.50; Ontario, 1.50.

Alberta and Great Waterways Ry.—	Miles	Miles
Mileage 202.10 to 275.40 .....	73.30	
Egg Lake Branch, mileage 1 to 11 .....	11.00	
		84.30

Canadian Northern Railway—	
James Bay and Eastern Ry. ....	18.00
Roberval to St. Felicien .....	3.00

Canadian Society of Civil Engineers, Victoria Branch.—Following are the officers of the Victoria, B.C., branch, elected at the annual meeting, Dec. 12:—Chairman, R. W. Macintyre; Vice Chairman, R. Fowler; Secretary, E. G. Marriott; Treasurer, E. Davis; other executive members, W. K. Gwyer, E. P. McKie. The retiring chairman was D. O. Lewis, District Engineer in charge of construction and surveys. Canadian Northern Pacific.

# Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

**Canadian Government Railways.**—C. D. BOVARD, Assistant Superintendent, Districts 2 and 3, Intercolonial Division, is reported to have been appointed station agent at Moncton, N.B., during the illness of C. W. Price.

W. J. MATHISON, heretofore Assistant Superintendent at Halifax, N.S., has been appointed Assistant Superintendent, District 1, Intercolonial Division, in special charge of Montreal Terminals, with jurisdiction to and including Ste. Rosalie Jet.

J. H. DUFF has been appointed Assistant Superintendent, District 1, Transcontinental Division, vice H. A. Ryan, resigned. Office, Cochrane, Ont.

**Canadian Northern Ry.**—S. P. BROWN, B.Sc., M.Can.Soc.C.E., Chief Engineer, Mount Royal Tunnel Terminal Co., Montreal, has resigned and removed to New York, where he has been appointed Vice President and General Manager, Ford, Bacon & Davis Corporation, general contractors.

W. C. LANCASTER, Electrical Engineer, Mount Royal Tunnel and Terminal Co., has resigned to become a captain in the United States Engineers.

G. N. GOAD, heretofore Trainmaster, Toronto District, Ontario Division, Toronto, has been appointed Assistant Superintendent, Toronto District, Ontario Division, vice G. A. Hoag, whose appointment as Superintendent, Superior District, Ontario Division, Hornepayne, Ont., was announced in our last issue. The position of Trainmaster, Toronto District, has been abolished. Office, Rosedale, Toronto.

H. LAMBKIN has been appointed Inspector of Sleeping and Dining Cars and News Service, Western Lines. Office, Winnipeg.

W. A. VANALSTINE has been appointed City Ticket Agent, Saskatoon, Sask., vice G. Swain resigned.

J. D. CAMERON has been appointed Travelling Freight Agent, Vancouver, B.C.

C. J. PIPER has been appointed Commercial Agent, Minneapolis, Minn., vice J. T. Whitelaw, resigned to enter private business.

**Canadian Pacific Ry.**—A. AITKEN, heretofore general yardmaster, Toronto, has been appointed Assistant Superintendent, Toronto Terminal Division, Ontario District, vice W. Garland transferred. Office, Toronto.

R. C. MORGAN, Superintendent Winnipeg Terminal Division, Manitoba District, is acting General Superintendent, Manitoba District, while C. MURPHY is engaged in labor negotiations. Office, Winnipeg.

E. HUMPHRYS, heretofore District Storekeeper, Manitoba District, Winnipeg, has been appointed Fuel Agent there.

A. S. MACDONALD, heretofore District Storekeeper, British Columbia District, Vancouver, has been appointed District Storekeeper, Manitoba District, vice E. Humphrys, appointed Fuel Agent, Office, Winnipeg.

W. E. PIMLOTT, heretofore Storekeeper, Fort William, Ont., has been appointed General Foreman, Stores Department, Winnipeg, vice F. G. Bannister, transferred.

F. G. BANNISTER, heretofore General Foreman, Stores Department, Winnipeg, vice F. G. Bannister, transferred.

F. G. BANNISTER, heretofore General Foreman, Stores Department, Winnipeg, vice F. G. Bannister, transferred.

C. Price-Green  
Industrial Commissioner, Canadian Northern Railway.

H. McCall,  
General Superintendent, Lines West of Edmonton, Alta., Grand Trunk Pacific Railway.

eral Foreman, Stores Department, Winnipeg, has been appointed District Storekeeper, British Columbia District, Vancouver, vice A. S. Macdonald.

**Grand Trunk Pacific Ry.**—G. W. LOMAS has been appointed chief operator, Edmonton yard, Alta.

The following station agents have been appointed: Quinton, Sask., F. W. Finch; Attuand, Sask., J. A. Lavergne; Kelliber, Sask., D. J. Cullen; Balcarres, Sask., W. T. Ralston; Edson, Alta., H. V. Goodwin; Coalspur, Alta., W. R. Goodwin; Giscome, B.C., A. W. Bennett; Smithers, B.C., A. H. Forde; New Hazelton, B.C., G. D. Parent; Pacific, B.C., D. P. Herrin; Prince Rupert, B.C., A. L. Holtby. The station at Junkins, Alta., has been closed.

**Great Northern Ry.**—H. A. JACKSON, heretofore General Traffic Manager, Great Northern Steamship Co., San Francisco, Cal., has been appointed Export and Import Agent, G.N.R. Office, Seattle, Wash. This is a new position.

**Northern Pacific Ry.**—F. S. ELLIOTT, Soliciting Freight Agent, Vancouver, B.C., is reported to have been appointed Local Freight Agent there, with office at the union station.

**Reid Newfoundland Co.**—J. W. N. JOHNSTONE, General Passenger Agent, has also been appointed Assistant to the President. Office, St. John's, Nfld.

P. D. PARK has been appointed Assistant to the President, also Travelling Superintendent of train men (conductors, brakemen and baggagemen), reporting to the Superintendent; and also Travelling Superintendent of Motive Power Department, reporting to Superintendent of Motive Power. Headquarters, St. John's, Nfld.

E. W. TAYLOR, heretofore General Freight Agent, has been appointed Traffic Manager, and will also control time table schedules, movement of all motive power, rolling stock, steamships and all freight and passenger traffic. Office, St. John's, Nfld.

G. COBB, heretofore Superintendent, has been appointed Assistant to General Superintendent, St. John's, Nfld.

H. J. RUSSELL, heretofore Assistant to Superintendent, has been appointed Superintendent, vice G. Cobb promoted. Office, St. John's, Nfld.

W. FITZPATRICK has been appointed Assistant to the Superintendent, St. John's, Nfld.

T. J. ROLLS has been appointed Assistant to the General Freight Agent, St. John's, Nfld.

J. BAXTER, heretofore Travelling Passenger Agent, has been appointed Assistant to the General Passenger Agent, St. John's, Nfld.

T. P. CONNORS, heretofore Roadmaster, has been appointed Superintendent of Maintenance of Way of all lines east of Clarendville. Office, St. John's, Nfld.

A. COBB, heretofore Roadmaster, has been appointed Superintendent of Maintenance of Way of all lines west of Clarendville, and including the yard there. Office, St. John's, Nfld.

The Regina Municipal Ry. is experimenting with a rearrangement of lights in its cars. Under the new plan the lamps are being placed in a line down the centre of the roof with reflectors over them, which diffuse the light throughout the car instead of being ranged round the sides of the cars without reflectors. There will be five fewer bulbs in each car than under the old system. If the new plan is successful a considerable saving in power will be effected.

# The Work of the Canadian Railway Association for National Defence.

**Chairmen of Committees.**—The following are the chairmen of the association's various committees:—Special committee on war and national defence, Lord Shaughnessy, President, C.P.R.; Western administrative sub-committee, Grant Hall, Vice President and General Manager, Western Lines, C.P.R.; Maritime Provinces sub-committee, H. C. Grout, General Superintendent, New Brunswick District, C.P.R.; Committee on passenger transportation, western lines, H. H. Brewer, General Superintendent, Grand Trunk Pacific; Committee on tariffs and statistics, Guy Tombs, Assistant Freight Traffic Manager, Eastern Lines, Canadian Northern. The chairman of the Ontario sub-committee has not yet been announced.

## Administrative Committee's Proceedings.

At a meeting in Montreal Nov. 27 there were present U. E. Gillen, Chairman, Sir George Bury, D. B. Hanna, J. H. Walsh, S. R. Payne. The following matters were dealt with:—

Delay on the part of United States lines in returning empty box cars to Canada. The many telegraphic and mail communications addressed to the American Railway Association at Washington on the matter of increasing the movement of empty box cars to Canada to offset the excess Canadian owned cars in the U. S. not having brought forth the desired results, it was the sense of the meeting that a telegram be addressed to Fairfax Harrison, Chairman of the Executive Committee of the American Association, asking him to meet a delegation composed of three members of the administrative committee of Canadian Railway Association for National Defence in New York, December 5, so that the whole matter of car movements as between Canada and the United States might be gone into and an arrangement reached which would provide for the equalization of the interchange of cars between the two countries. The following telegram was forwarded to Mr. Harrison accordingly:—"Referring to telegram received from your Commission on Car Service data. Administrative Committee of Canadian Railway Association for National Defence in session this afternoon have been discussing very fully the whole car situation and having received assurances that United States railways as represented by American Railway Association will do best possible to increase movement empty box cars to Canada, fact remains that equipment not being received and situation has reached such a point that we feel it desirable to present our case in person. If you find you can make it entirely suitable to be in New York yourself, or your committee, the administrative committee of this association will go to New York to meet you on Dec. 5, with view to reaching some arrangement for alleviation present serious situation. Meantime Canadian lines continuing endeavors move maximum quantity newsprint, but sufficient cars not available to make much impression on great amount traffic offering."

In view of the serious shortage of cars for loading newsprint, pulp and other important commodities for U. S. points and which U. S. newspapers and other industries are urging Canadian shippers and railways to forward in the greatest possible volume in order to avoid suspension of publication of newspapers in U. S. cities, and having in mind the heavy

waste of cars involved in the existing large movement of hay from Canada to the U. S. in loose bales, railways operating in Canada are instructed that in order to serve both Canadian and U. S. industrial interests to the best advantage, they shall until further notice, so far as practicable, avoid supplying box cars for shipments of hay in loose bales destined to other than Canadian points.

It having been pointed out that some lines in Canada are still using Canadian owned freight cars for loading to points in the U. S., notwithstanding the fact that over 60,000 Canadian owned cars are being used in the car pool in the U. S., as against 40,000 U. S. owned cars in Canada which are being loaded back to the U. S. with little if any delay, and in order to permit of the desired movement of war supplies, food stuffs and similar necessities between Canadian points, railways operating in Canada are hereby instructed that until further notice they shall not use freight cars of Canadian ownership for loading to points outside of Canada or beyond the tracks of owning line.

Reports from member lines indicate that further progress can be made in conservation of car supply by reducing the number of freight cars held under and waiting repairs and a communication is being addressed to all railways in Canada urging them to put forth extraordinary efforts to keep the number of cars out of service for repairs down to not more than 3% of the total freight cars on lines.

In view of the increase in demand for cars on Canadian lines that will come about during the ensuing winter due to close of lake and river navigation and for other reasons, it is necessary, if the desired quantity of war supplies and food stuffs is to be moved, that every car transported be given a load equivalent to its full public or weight carrying capacity. The sub-administrative committee at Winnipeg has been instructed to call a meeting of lumber, flour and grain shippers in Western Canada with a view to arranging for capacity loading of cars shipped from the west to the east during the coming winter and shippers and Dominion Government authorities in the east have been communicated with with a view to making similar arrangements so far as may be possible in Eastern Canada.

Reports having reached the association that certain member lines have operated special passenger trains in other than what be termed "cases of extreme emergency" during the present month, it is instructed that such companies be communicated with and the importance of adhering to the policy outlined impressed upon them, so that the necessary conservation of fuel supply may be accomplished.

It is the desire of the administrative committee that the committee on passenger transportation, in considering reduction in passenger service, give special attention to the lengthening of passenger train schedules, so that passenger trains under no circumstances will run at a greater speed than 50 miles an hour; this with a view to further conserving fuel and reducing expenditure of money, man power and material in the maintenance of track and equipment.

It is ordered that in the next issue of time tables member lines incorporate a rule governing the speed of light locomotives and freight trains reading as follows:—"No light engine or freight train

shall run any one mile in less than two minutes."

The Fuel Controller for Canada having drawn the attention of certain Canadian railways to the possibility of their being asked to share their fuel supply with other lines of industry and for domestic use during the coming winter, it is the opinion of this committee that the Fuel Controller be advised that before any such course of action is taken all other means of providing fuel for industrial and domestic use should be exhausted. It is pointed out that, in certain places, coal is being used for the development of electricity where water power is available, and in many parts of the country if necessary, wood can be used for fuel instead of coal, and in view of the importance of the railways being permitted to maintain an uninterrupted transportation of car supplies and other materials, their fuel should not be used for other than their own purposes, except to prevent actual suffering.

This committee directs that the commission on car service give immediate consideration to the question of general adoption of "sailing day" system of handling less than carload freight.

## Conference at New York on Holding of Canadian Cars in the U. S.

U. E. Gillen, Chairman of the administrative committee, Sir George Bury, Vice Chairman, C.P.R., and W. M. Neal, General Secretary of the Association, had a conference in New York, Dec. 5, with members of the American Railway Association in an endeavor to have the U. S. railways send to Canada the Canadian cars that are now in the U. S., or an equivalent number of cars owned by U. S. railways. They pointed out that there are 20,000 more Canadian owned cars in the U. S. than there are U. S. owned cars in Canada, and that, although promises have been made that Canadian or U. S. cars would be sent from time to time, yet in two months, notwithstanding several thousand U. S. owned cars have been sent to Canada, the Canadian roads had gained less than 900 cars. They also showed that shippers all over Canada, desirous of shipping newsprint, pulpwood, hay, lumber and other products, were in a bad way because the Canadian railways were only able to use U. S. owned cars for these shipments going to the U. S., otherwise Canada would be so drained of cars that they would be unable to move munitions and food supplies for the allies. As a result of the representations made, promise was secured that the U. S. railways would double their exertions to forward cars to Canada so that people in Canada desiring to ship to the U. S. might be ensured a reasonable car supply.

Immediately after the New York conference the General Secretary of the Canadian association wrote A. H. Smith, President of the New York Central and a member of the Canadian association's special committee on war and national defence, as follows:—"Since Oct. 1 there have not been less than 19,000 Canadian railway owned box cars on U. S. lines in excess of U. S. railway owned box cars on Canadian lines. Since the same date the Canadian railways have asked the American Railway Association's commission on car service to send them the number of cars due from U. S. lines. To date the number of cars received in Canada in excess of the number delivered to the U. S. is less than 900, notwithstanding the fact

that statements have frequently been made that 4,000 box cars have been forwarded to Canadian lines.

To deal specifically with the four principal railway lines in Canada, that is, the C.G.R., the C.N.R., the C.P.R. and the G.T.R. From the attached statement you will observe that the C.G.R. has 3,760 cars on U. S. lines compared with the 2,309 U. S. railway owned box cars on the C.G.R. The C.N.R. has 3,485 box cars on U. S. lines compared with 5,780 U. S. cars on C.P.R., and the G.T.R. has 21,939 of its box cars on U. S. lines compared with 14,692 U. S. owned box cars on its line. The above relates to box cars only. To consider all classes of freight cars, it is as follows:

	Canadian owned cars on U.S. lines.	U.S. owned cars on Canadian lines.
"C.G.R. ....	4,000	3,483
"C.N.R. ....	4,396	3,486
"C.P.R. ....	17,892	7,945
"G.T.R. ....	29,152	22,931

"Canadian railways are required to move many millions of bushels of grain each month for overseas, also to take care of home requirements, as well as handling volumes of hay, pulpwood, paper for newspapers, and lumber, etc., for U. S. points, a considerable proportion of which, particularly the lumber, is required

5,000 empties since Oct. 1, and have delivered about one-half that amount. Canadian shippers are pressing for cars to load newspaper for U. S. dailies, hay and lumber, much of which is for the U. S. Government, pulpwood, etc. Canadian railways can supply only about 10% of cars needed, and unless relieved they advise they will be forced to embargo certain of such shipments to protect cars for munitions and food. As the two countries are working as allies they feel that your commission should equalize more fairly the car supply. Canadian railways having hard time keeping shippers mollified, and their efforts are made more difficult by information conveyed from Washington to Canadian shippers that cars have been sent to Canada, when as a matter of fact since Oct. 1 on the total exchange of cars, Canada has gained 875 cars, and the situation of the Canadian railways on Oct. 1 was well nigh desperate. It was desired, if possible, to keep the matter from the authorities entering into the question, and the committee are here and would be glad to receive information as soon as possible as to any definite directions that may be given, and what they are to be, as they want to return to Canada tonight. I suggest that some solid trains of box cars be made up, if possible, and moved to some Canadian junction points for the relief of the situation."

Summary of Freight Car Location Nov. 23, 1917

ed by the U. S. Government, and we must have in Canada the box cars owned by the Canadian lines or an equivalent number to enable us to handle the business offered. We would prefer to have our own cars, but if this cannot be arranged then we must insist on an equivalent number of box cars owned by U. S. lines being sent to Canada to take care of our requirements and offset the number of Canadian owned box cars now on U. S. rails.

"In addition to ordering cars from the commission on car service at Washington, we have repeatedly addressed Fairfax Harrison on the subject, and his latest communication to us indicates that the matter has been referred to you as a member of our executive committee, and for this reason we address you as above, and submit the attached statements with an earnest hope that you will at once take the matter in hand with a view to giving us the assistance asked, and which we so badly need."

A. H. Smith then had the following message telephoned to Fairfax Harrison, Chairman U. S. Railroads War Board, at Washington:—"Canadian railway administrative committee called upon me today in view of your message to them. U. S. lines have 20,000 more Canadian owned cars than there are U. S. owned cars on Canadian lines. Your car service commission promised Canadian railways

Fairfax Harrison wrote A. H. Smith in reply the same day as follows:—"Enclosed is a statement by the car service commission of what they have done for Canadian lines in the way of the return of empty cars. It seems to us that Canada has been treated fairly, and indeed, quite as fairly as some sections of the U. S. which present the same problem. I am sure that these gentlemen all realize that their railways are members of the American Railway Association and that the commission on car service has felt the responsibility of being as fair to them as it is to any other members of the American association. You know, of course, that there has been no deliberate withholding of cars for a selfish purpose. Our work during the past six months has demonstrated that certain producing sections of the continent are drained of cars into the eastern territory, where by reason of congestion they have been delayed in return, so that it has required the arbitrary orders of the commission on car service to promote the return flow of empties. The situation with respect to the Canadian roads on box cars has been aggravated recently by the large volume of traffic of newsprint paper, hay, etc., into the U. S., which has created a large balance of Canadian box cars on the south side of the International Boundary, but the Canadian roads will recognize the reason for this by their own experience

with U. S. open-top cars carrying coal into Canada, which have been for many years the subject of claims by U. S. railways. We trust that you will be able to demonstrate to the Canadian roads on this report of the commission on car service that they are having fair treatment, and that we are doing all that is possible in their behalf. By the location statement, published by the commission on car service, it will be seen that the Canadian roads are no worse off than those in groups 4 and 5."

The letter of Chairman Sheaffer of the U. S. commission on car service, referred to in Fairfax Harrison's letter, is as follows:—"During October we directed to Canadian lines 1,500 box cars, on which orders 1564 were delivered. These orders covered in full all requests from Canadian lines to the commission on car service, which in our judgment were justified. There were requests for equipment from the Canadian Northern and Canadian Government roads which we declined, as reports from those lines showed excess box cars on line over ownership. Early in November requests were made through the Canadian Railway Association for additional box cars, some of which were for cars to excess lines as mentioned above, and we responded by directing the movement of 4,700 cars, of which 1,284 have been delivered. These

figures include 1,300 box cars directed to the D. & H. with the understanding that that line would load with anthracite coal to Canadian points, averaging about 65 cars a day; this equipment being in excess of then existing movement and large per cent. of which was in open top equipment. I regret that we have not definite information from the D. & H. as to number of cars delivered. These figures also include 800 cars directed to the Grand Trunk, with instructions to load with salt and other commodities destined to and through Chicago gateway for western lines, of which 165 have been delivered. Thus far in December 1,000 box cars have been directed to Canadian lines; no report yet received showing deliveries. To indicate promptness of delivery, would state that of 200 cars directed Nov. 9, 194 have been delivered; another order Nov. 9, for 300 cars, 188 have been delivered; and third order, Nov. 9, for 300 cars, only 10 have been delivered. This last delay was occasioned by contention on the part of the originating line which has since been settled. 500 cars ordered Nov. 1, completed; 100 cars ordered Nov. 10, completed; 200 cars ordered Nov. 13, 117 delivered; 1,000 cars ordered Nov. 28, no deliveries as yet reported; 1,000 cars ordered Dec. 3, no deliveries yet reported.

"From our viewpoint reasonable requests Canadian lines were filled complete prior to Nov. 1, since which time we have

directed to Canadian lines a total of 5,700 cars, out of a total ordered by this commission to U. S. lines and Canadian lines of 32,250; so that since we had indication of the heavy demand from Canadian lines equal to the demands from U. S. lines we have directed to them 17.6% of total ordered to all lines, which appears to us a fair proportion, in view of Canadian lines ownership of box cars approximating 11% of the total of 1,157,906 box cars owned by lines reporting to this commission. The reports as of Nov. 15 show Canadian lines reporting to this commission as having 85.69% box cars on line, compared with 84.85% on line Nov. 15, 1916, or about 980 cars excess. Of all cars owned by Canadian lines reporting to this commission they had 88.73% on line Nov. 15 compared with 94.07% same date in 1916."

#### Conference in Washington on Car Situation.

A meeting was held at the American Railway Association's office in Washington, Dec. 7, at which the Canadian railways were represented by Messrs. Hatton, Duval, Lock, Crawford and Neal, the U. S. lines being represented by Messrs. Sheaffer, Barnes, McCauley and Monahan, the substance of the discussion and the conclusions reached being as follows:

The American Railway Association will hereafter consider the railways operating in Canada as a whole, instead of attempting to deal with the car situation on each line individually as heretofore. They will accept orders as placed on them by the Canadian association for empty box cars to be moved to Canadian lines, the understanding being that such orders will be kept as low as possible, in view of the existing difficulty in moving cars on railways in the Eastern States, which is the only source of empty box car supply at present. The Canadian railways through the medium of the Canadian associations will distribute amongst themselves the empty cars received.

The chairman of the U. S. commission on car service stated that in operating the box car pool in the U. S. no distinction will be made between the Canadian owned and U. S. owned cars and that the former will be held in the pool, which covers cars belonging to all roads holding membership in the American association. Canadian railways, pending receipt of sufficient empty cars to enable them to fully take care of Canadian traffic and establishment of current return movement of empty box cars from the U. S., will continue present policy of restricting the use of Canadian owned cars to points in Canada. At the same time they will give preference to the supply of U. S. owned box cars for shipments offering for movement into the U. S.

Reference was made to the numerous requests received from the U. S. Government and others for an increased movement of hay from Canada to the U. S., and it was remarked by members of the U. S. commission on car service that according to their information the demand for hay at U. S. points had fallen off recently and at several large cities large quantities of hay were held in cars waiting disposition. They stated further that in so far as they could see, the only object in increasing the movement of hay to the U. S. at present would be to enable the producer to obtain a market for his product.

It was pointed out to the U. S. commission on car service that although they claim to have ordered and forwarded a considerable number of empty box cars

to Canadian lines the general effect of the arrangements they have made has been to decrease the movement of empties to Canada via natural routes, as cars which would have been returned to Canada by U. S. lines voluntarily have been diverted to territories in the U. S., this being one reason for the shortage of cars in Canada and emphasizing the need of additional deliveries of empty cars in accordance with orders placed by the Canadian association.

The question of reports from Canadian railways to the U. S. commission on car service was discussed and it was suggested that the U. S. commission accept from Canadian lines copies of reports which the latter forwarded to the Canadian association. Decision on this point was reserved pending consideration by the American Railway Association.

It was agreed to by the U. S. commission on car service that in addition to accelerating movement of empty box cars to Canada, they will see that advantage is taken of every opportunity to load box cars to Canadian lines, particularly with anthracite coal, certain of the U. S. railways having facilities for loading a larger number of box cars with coal than they are receiving at present.

#### Underloading of Cars to be Prevented.

The Association has been advised that the movement of foodstuffs, particularly potatoes, apples and flour, is being interfered with on account of shortage of cars, and the Food Controller has been advised that the shortage of equipment in Canada is due almost entirely to the existing serious waste of cars resulting from light loading. It has been pointed out to the Food Controller that refrigerator cars having a capacity of 66,000 lb. are billed out with contents weighing anywhere from 7,000 to 30,000 lb. and that many box cars loaded with flour, having a capacity of 94,000 lb., are loaded with 45,000 lb. The Food Controller has been asked to bring his influence to bear upon shippers of foodstuffs who waste cars and in order that he may be assisted in doing so, it is requested that members of the association furnish the names of all shippers of foodstuffs on their respective lines who do not load cars to capacity, and the average weight of their shipments, with the average capacity of the cars loaded.

The Food Controller replied as follows: "In order to alleviate the car shortage, I would be strongly in favor of urging upon the shippers and railways that instructions be issued to all agents that such foodstuff commodities as grain, salt, sugar, apples, potatoes, etc., be not accepted unless loaded to the full cubic or weight carrying capacity of the car. This, I feel sure, would tend to conserve the cars and move the maximum quantity of foodstuff, and thus help to alleviate the car shortage situation in Canada. I trust your association will be able to adopt this recommendation as quickly as possible."

It is urged that all railways operating in Canada renew their efforts to prevail upon shippers of foodstuffs to avoid waste of car space and thereby assist in alleviating the present serious situation.

#### Increasing the Loading of Cars.

Following is a table embodying standards for loading certain commodities now in effect on a member line, and which it is considered should be adopted by all railways operating in Canada:—

FLOUR.		
315 barrels of 214 lb. each	.....	67,410 lb.
340 sacks of 196 lb. each	.....	66,640 lb.
460 sacks of 140 lb. each	.....	64,400 lb.

900 bags of 98 lb. each ..... 88,200 lb.  
Whenever possible the three first series should be shipped in 30 ton box cars in preference.

#### SUGAR.

225 barrels of 320 lb. each ..... 72,960 lb.  
930 bags of 100 lb. each ..... 93,900 lb.

#### NAILS.

878 barrels, averages 107 lb. each ..... 93,950 lb.

#### MUNITIONS.

4.5 in. 2 to a box 5 series ..... 92,500 lb.  
4.5 in. 3 to a box 5 series ..... 90,000 lb.  
4.5 in. brass cases—50 to box 39 series ..... 93,600 lb.  
6 in. mark 3—2 to a box 31 $\frac{1}{2}$  series ..... 92,210 lb.  
6 in. mark 16—2 to a box 31 $\frac{1}{2}$  series ..... 92,210 lb.  
8 in. 1 to a box 11 $\frac{1}{2}$  series ..... 86,620 lb.  
9.2 in. 1 to a box 1 series ..... 76,250 lb.  
18 pounder—brass cases—25 to a box—  
1911 series ..... 93,600 lb.  
Shrapnel—6 to a box—9 series ..... 93,700 lb.

Supplementary circulars will be issued giving data as compiled showing the weights by which shippers should be asked to govern themselves in shipping carload freight.

#### Shippers' Co-operation in Increased Loading.

A very interesting report has been received from one of the association's sub-committees outlining activities in the territory which it represents with a view to increasing car loading. It would appear that the same methods could be followed in other territories with good results. Following are extracts from the report:—

"Fifty-two shippers have been interviewed on the subject of capacity loading of cars with a view to relieving the car shortage. An examination of way bills covering carload shipments shows that there has been considerable improvement recently. All of the shippers expressed themselves as being in sympathy with ment r.p.o. cars; the haulage of r.p.o. cars the movement and promised their hearty co-operation."

"A manager of a lumber company stated shipments from his mill are mostly mixed orders and in some cases have been light loaded. This firm is endeavoring to have consignees place orders for full carloads."

"A pulpwood shipper states he has always loaded his shipments to full capacity of cars and will continue to do so."

"A manager of a lumber company advised they were loading all cars to full capacity and would continue to do so in future. A car was examined while being loaded at the mill and it was found that the men were not making a good stowage of the load. The manager had them unload a portion of the car and reload in such a manner as would allow a greater quantity being put in cars."

"A potato shipper advises that since cold weather he has been loading cars to 45,000 lb. or over. Has promised to write shippers who supply him with fertilizer to ship to full capacity."

"A potato shipper upon being interviewed stated that his firm was loading all cars with 750 bush. per car, and had shipped several cars containing as many as 775 bush., but occasionally they received an order for Virginia for 650 bush. of seed potatoes, but in future would endeavor to get consignees to order at least 750 bush."

"A member of another firm of potato shippers stated he was loading all cars with from 45,000 to 48,000 lb., although there may have been an occasional car loaded lighter, same being seed stock for Virginia. Shipping bills were checked up and statements found to be correct."

"A manager of a canning company is very much interested in loading cars to maximum capacity and stated that his firm was loading on an average of 1,200 cases of sardines to a carload. A case of

sardines weighs 43 lb. This firm has also increased carload shipments of salt from 250 to 300 and 320 sacks. Salt weighs 200 lb. a sack. The manager is in favor of raising the minimum from 36,000 to 50,000 lb. on sardines and is willing to do all he can to help the car shortage. This firm controls 11 or 12 factories."

"A firm of cannerys has increased its load per car and has written its brokers that, owing to car shortage, it would be advisable for them to order 1,200 cases instead of light loads. It is also in favor of raising the minimum and gave assurance that it would do all in its power to help the situation.

"A firm of soap manufacturers now ships 700 cases of soap per car in its carload shipments. Cases weigh 75 lb. each. Formerly 500 cases constituted a carload. Present loading gives an increase of nearly 15,000 lb. a car."

"A manager of a fertilizer company states he is in perfect sympathy with the loading of cars to full capacity and will endeavor to have inward and outward shipments loaded to full capacity of cars."

#### Cars for Paper, Pulp, Etc.

In view of the existing car shortage and the large volume of newsprint, pulp, pulpwood, etc., waiting movement, a conference of representatives of paper and pulp mills and members of the association's commission on car service, was held in Montreal Dec. 10 to decide upon arrangements for the supplying of cars for the commodities mentioned. After full discussion the representatives of the paper and pulp companies expressed the opinion that in the supplying of cars for the movement of their shipments, the railways, in so far as may be practicable, should supply cars in the following precedence: 1. Newsprint; 2. pulp, sulphite, sulphate and mechanical; 3. other papers and boards; 4. pulpwood. The railways are requested to endeavor to comply with the wishes of the shippers as above. It is understood that in ordering cars hereafter the shipper will specify the commodity for which cars are required.

#### Instructions for Return of U. S. Cars.

Arrangements have been made whereby certain U. S. railway owned open top cars, other than self-clearing cars, which Canadian lines have held instructions to send home empty as soon as released of initial lading may now be used for return loading. In arranging loading, however, care should be taken to see that the cars are loaded only as follows: via a point on the home route, or to a point on the owning road, or to a point in the immediate direction of the owning road. It should be understood that, notwithstanding the foregoing, in the evening of a railway requesting empty returns of its open top cars, regardless of type, such cars must be sent home promptly as requested. All open top, self-clearing cars suitable for the handling of coal and coke, except as may be hereafter directed, are to be promptly sent hom empty. Open top, self-clearing cars suitable for the handling of coal and coke are those designated in M.C.B. regulations as follows: Class G—sub classes, GA, GC, GD, GE, GS. Class H.

#### Reduction of Passenger Train Service.

The committee on passenger transportation, eastern lines, at its meeting on Nov. 13, and reported in Canadian Railway and Marine World for December, took preliminary action towards effecting a reduction of passenger train service. Representatives of the association had a

conference with the Board of Railway Commissioners in Ottawa early in December, at which it was decided to make further reductions in the passenger services in order to enable the railway companies to meet serious shortages in coal supplies, which coincides with a pressing need for an increase of transportation facilities for the movement of freight and munitions. The representatives left the Ottawa conference with tentative plans for the reduction of passenger services, and this was followed by a meeting of C.P.R. and G.T.R. operating and traffic officials at Montreal to work on a readjustment and reduction schedule. Similar action was taken by Canadian passenger officials at its headquarters in Toronto. The changes in all passenger schedules will become effective Jan. 6, and although the reductions will not be quite as drastic as the changes ordered by the Board of Railway Commissioners in 1916, when 17 trains running out of Toronto were cancelled, many local services on branch lines will be suspended and about 10 of the trains now running out of Toronto will be cancelled. A heavy cut in parlor car services is being considered, and it is likely that with the exception of such cars as are doing double duty as dining and parlor cars, this travel luxury will be suspended.

The Canadian Railway Association for National Defence has issued the following explanatory notice and has requested all railways reducing service to print it in their time tables:—"From the very first Canada has been a most active participant in the world war. Since Aug., 1914, Canadian railways have been carrying troops, munitions and supplies for the allied armies and peoples. From time to time adjustments and curtailments in passenger service have been made by Canadian railways, in order that the most necessary traffic should have preference. The railways have succeeded not only in handling the special war traffic but also the normal domestic traffic as well. To-day, the volume of overseas and domestic traffic due to the war stands at record height. Owing to the scarcity of materials and of labor, new equipment cannot be provided as rapidly as the traffic grows. To this condition is now added the usual strain of winter weather, snow and low temperatures, reducing the power of the locomotives, and besides there is an unusually large demand for coal for industrial and domestic purposes.

"These conditions can all be overcome, provided the railways of Canada have the co-operation of the people, which will enable them to confine their energies to the carrying of only the most necessary traffic. Some savings in passenger train mileage have already been effected. New reductions are necessary during the winter. If this causes inconvenience to the travelling public, and loss in passenger receipts to the railways, it need only be remembered that every passenger train mile takes at least 100 lb. of coal. It is difficult to secure coal and that received is not as efficient as formerly. The Canadian railways trust that the public will appreciate that reductions in service have been made at considerable sacrifice in revenue, and are arranged to bear as lightly as possible on all communities. One consideration only has led them to make these reductions, i.e., the pressing need of the nation and the empire. The railways feel confident, therefore, that travellers will accept whatever inconvenience is involved in the same spirit of patriotic self sacrifice as have the people in the British Isles."

#### Death of John Taylor.

John Taylor, founder of Taylor & Arnold, Limited, railway, marine and aeroplane supplies, Montreal, died at the residence of his son-in-law, Thos. Arnold, Westmount, Montreal, Dec. 19, after a long illness. He had been failing in health for the last two years and had not left his room since May. He was born at Ayr, Scotland, Mar. 18, 1833, came to Canada in 1837, and had lived in Montreal ever since. After passing through the Montreal High School he commenced his business career in 1851 with Ferrier & Co., wholesale hardware merchants. After a few years he went to Morland, Watson & Co., another hardware firm, and became a partner. This firm organized the rolling mills which eventually became the Montreal Rolling Mills, and are now owned by the Steel Company of Canada. Upon the dissolution of Morland, Watson & Co., he went into business with his brother Homer in railway supplies, etc., but after a few years the partnership was dissolved and he continued in the railway supply business on his own account, Homer taking agencies in the same line. The latter was killed on Oct. 20, 1906, by falling from a C.P.R. train. Then John Taylor took his son-in-law, Thos. Arnold, into business with him, and the two businesses were merged into Taylor & Arnold, Limited. He is survived by one son, J. M. Taylor, of Regina, Sask., and Mrs. Thos. Arnold, of Montreal. He was one of the organizers and an honorary member of the Royal Montreal Golf Club in 1876, and was its first captain and gold medalist and one of the best known golfers in Canada. He was a past master of St. Paul's Masonic Lodge. Thirty-two years ago he became an elder of St. Paul's Presbyterian Church, and ranked as senior elder of the congregation. He served for many years with the heavy artillery in Montreal and had been a governor of the Montreal General Hospital for many years.

**Transportation Club of Toronto.** — At the annual meeting on Dec. 15 the following officers were elected for the current year:—President, W. J. Langton, Superintendent, Dominion Transport Co.; Vice President, W. Fulton, Assistant District Passenger Agent, Rail Lines, C.P.R.; Secretary, W. A. Gray, Contracting Agent, Delaware, Lackawanna & Western Rd.; Treasurer, M. McDougald, Assistant Weighing Inspector, G.T.R. Chairmen of committees were elected as follows—Membership, J. J. Rose, General Agent, Union Pacific Rd.; entertainment, F. V. Higginbottom, City Passenger Agent, Canadian Northern Ry.; publicity, E. T. Boland, General Agent, Robert Reford Co.; reception, T. Marshall, Manager, Transportation Department, Toronto Board of Trade; sick, W. McIlroy, Chief Clerk, District Passenger Agent, C.P.R.; W. A. Gray, Secretary, and M. McDougald, Treasurer, who have held those positions since the club's inauguration, were presented with diamond and pearl tie pins.

Michigan Central Rd. boiler makers, blacksmiths and machinists in Canada, who, it was announced, were to go on strike Dec. 13, decided to ask for a board of conciliation under the Industrial Disputes Investigation Act, to deal with their grievances. New conditions and a new wage schedule are asked for by a federation of the three organizations concerned.

## Traffic Orders by the Board of Railway Commissioners.

### Michigan Central Standard Freight Tariff.

26769. Nov. 24. Re application of Michigan Central Rd. under sec. 327 of the Railway Act, for approval of its Standard Freight Mileage Tariff, C.R.C. 2725, cancelling C.R.C. 848. Upon its appearing that the proposed tariff makes no change in the rates previously approved by the Board; and upon the report and recommendation of the Chief Traffic Officer it is ordered that the said tariff be approved.

### Elgin and Havelock Ry. Freight Tariff.

26771. Nov. 26, 1917.—Granting application of Elgin and Havelock Ry., under sec. 327 of the Railway Act, for approval of its Standard Maximum Mileage Freight Tariff, C.R.C., 3, cancelling C.R.C. 1.

### Hay and Straw Rates.

26791. Dec. 3, 1917.—Re complaint of Montreal Board of Trade against proposed cancellation by Canadian Pacific and the Grand Trunk Railways of joint commodity rates on hay and straw, carloads from stations in Ontario and Quebec to points in the Eastern United States; and order 26035, April 17, 1917. Upon its appearing from letters from the parties filed with the board that the Canadian Pacific and Grand Trunk Railways and the Montreal Board of Trade have agreed on a revised basis of rates on hay and straw, in carloads, from eastern Ontario and Quebec to points in the eastern United States, and Tariff C.R.C. no. E.3367 having been published and filed by the C. N. R. and Tariff C.R.C. no. E.3699 by the G. T. R., to come into force on Jan. 1, 1918, purporting to give effect to the said agreement. It is ordered that order 26035 be rescinded.

### Interchange Track Between Canadian Northern and C.P.R.

26817. Dec. 11, 1917.—Re order 22275, July 24, 1914, directing the Canadian Northern Ry. to construct, maintain, and operate a branch line, or spur, in Sec. 4, Tp. 39, Range 19, west 4th Meridian, in Alberta; the company to exercise the right, as it sees fit to use such part of the C. P. R. property as is necessary to make physical connection; and the right of way to be arranged between the parties. It is ordered that the plan showing the interchange track proposed to be constructed at the point in question, dated Nov. 28, 1917, be approved; and that the Canadian Northern Ry. be required to complete the interchange track by Jan. 21, 1918; the main line switches to be wire-locked with the distant signals of the interlocking plant, and derails to be installed at each end of the interchange track.

### Minimum Car Load Rates for Lumber.

General order 211. Dec. 10, 1917.—Re complaint of Canadian Lumbermen's Association and others against increased carload minimum weights for lumber, both domestic and export, published to take effect on varying dates since April 22, 1917: It is ordered that the carload minimum weights for lumber, for domestic consumption or for export, be as follows: For closed cars under 35 ft. long, inside measurement 35,000 lb.; except that when cars loaded to full capacity will not contain 35,000 lb., the minimum will be the actual weight, but not less than 30,000 lb.; for closed cars, 35 ft. and not over 36½ ft. long, inside measure-

ment 40,000 lb.; except that when cars loaded to full capacity will not contain 40,000 lb., the minimum will be the actual weight, but not less than 35,000 lb. The term "full capacity" to permit a space of 12 in. between the top of the load and the carlines or rafters of the car. The schedules to give effect to this order to come into force not later than Jan. 1, 1918.

## Railway Finance, Meetings, Etc.

**Canadian Northern Ry.**—There has been deposited with the Secretary of State at Ottawa, duplicate originals of three mortgages dated Nov. 23, made to the Dominion Government by the Mount Royal Tunnel and Terminal Co., the Canadian Northern Western Ry. and the Duluth, Winnipeg and Pacific Ry. respectively, to secure advances made to these companies from loans authorized by the Dominion Parliament.

There has also been deposited with the Secretary of State duplicate originals of trust mortgage dated Nov. 16, between the company and the Dominion Government securing loans repayable on demand.

An issue of \$1,750,000 five per cent. notes which fell due on Dec. 1 in New York City, is reported to have been paid off in cash. They were secured by \$2,501,466 Mount Royal Tunnel and Terminal Co 1st mortgage rent charge 5% bonds due 1970.

**Canadian Northern Ry.**—An issue of \$1,750,000 5% notes due Dec. 1, 1917, secured by Mount Royal Tunnel and Terminal Co.'s first mortgage rent charge 5% bonds, due 1970, was paid off in cash on that date.

**Central Vermont Ry.**—At a recent meeting of the board it was announced that the fiscal year has been changed to end Dec. 31 instead of June 30 as hitherto. The next report will cover the accounts and operation for 18 months ended

**Grand Trunk Ry.**—An issue of £1,000,000 of three year 6% notes is reported to have been oversubscribed on the London, Eng., market at 98½. It was made to retire notes falling due during the current month.

The Grand Trunk Ry. offered for subscription in London, Eng., from Dec. 8 to 13 at 98½ £1,000,000 three-year 6% secured notes dated Jan. 15, 1918, repayable at par Jan. 14, 1921, to redeem a similar amount of 5½% secured notes falling due Jan. 14, 1918. They will be secured by the deposit with the trustees of £1,700,000 G.T.R. perpetual 4% consolidated debenture stock.

**White Pass and Yukon Route.**—Gross earnings from Jan. 1 to Oct. 14, \$1,791,585, against \$1,779,406 for same period 1916.

**The False Creek Flats Injunction Suits.** The Vancouver City Council has decided to make application to appeal against the Supreme Court of Canada's decision in the False Creek Flats matter, in which Champion and White have been successful. This firm obtained an injunction against the city continuing the construction of the sea wall west of Main St. bridge, which injunction has been confirmed by the Supreme Court. The stoppage of the work on the sea wall will give a decided set back to the reclamation and development of the False Creek flats, in which the Canadian Northern Pacific Ry. and the Great Northern Ry. are largely interested.

## Freight and Passenger Traffic Notes.

The Canadian Northern Ry. opened its extension from Roberval to St. Felicien, Que., 17.8 miles, for freight and passenger traffic, on Dec. 3.

The Dominion Government will, it is reported, operate a train service from Pas to Kettle Rapids, Man., on the Hudson Bay Ry., until the end of February for the accommodation of fishermen, miners and others. What will be done after that date has not been announced.

The Canadian Northern Ry., which was ordered, in Sept. 1916, to maintain its existing schedule with trains 9 and 10 between Deseronto and Toronto, pending enquiry, has now been ordered by the Board of Railway Commissioners to continue the schedule.

The City of Hamilton's application to the Board of Railway Commissioners for an order directing the G.T.R. to restore passenger train service on the Northern and Northwestern Branch, between Hamilton, Burlington Beach and Burlington has been refused.

The steamship service between Prince Edward Island and New Brunswick and Nova Scotia was discontinued Dec. 11, and beginning Dec. 12 all traffic was routed by the ferry steamship between Cape Tormentine, N.B., and Port Borden, P.E.I.

By the British Government's order all passenger traffic from Australia to European ports has been discontinued in order to permit all vessel space to be used for war purposes. This will direct travel to the Pacific coast, and will benefit Vancouver and the Canadian transcontinental railways.

The Northern Pacific Ry. announces that it will start operating a direct freight and passenger service into the Great Northern Ry. terminals at False Creek, Vancouver, on Jan. 1. The service will be operated via Sumas, B.C., and will consist of one passenger train each way daily, with such freight trains as are necessary. Heretofore the N. P. R. has handled over its Vancouver traffic to the C.P.R.

**Transportation Men in Parliament.**—Among the successful candidates at the general election on Dec. 17, the following particularly connected with transportation interests were elected in the constituencies named:—Hon. J. R. Reid, Minister of Railways and Canals, Grenville, Ont.; Hon. C. C. Ballantyne, Minister of Marine and Fisheries, St. Lawrence, Montreal, Que.; Hon. F. B. Carvell, Minister of Public Works, Victoria-Carleton, N.B.; Hon. F. Cochrane, ex Minister of Railways and Canals, Timiskaming, Ont.; Lt. Col. B. R. Hepburn, formerly President, Ontario & Quebec Navigation Co., Prince Edward, Ont.; Brig. Gen. H. H. McLean, ex President, St. John Ry., Royal, N.B.; F. N. McCrae, formerly President, Lotbiniere & Megantic Ry., Sherbrooke, Que.

**Plots Against Canadian Railways.**—One of the charges against Albert Kaltschmidt, who, with several others, was convicted at Detroit, Mich., Dec. 22, of conspiracy and sentenced to four years imprisonment and a fine of \$20,000, was that he was engaged in a plot to destroy the G.T.R.-Sarnia Port Huron tunnel. Evidence was also introduced to show that it was intended to destroy the C.P.R. main line bridge at Nipigon, Ont. Franz Haehling testified that he had agreed to blow up the St. Clair tunnel.

# Electric Railway Department

## Report of the Commissioner on the investigation into the British Columbia Electric Railway Situation.

The British Columbia Government in July, 1917, appointed Dr. Adam Shortt, formerly Civil Service Commissioner at Ottawa, as commissioner under the Public Inquiries Act, to make a full investigation of the economic conditions and operations of the British Columbia Electric Ry. and subsidiary companies. The investigation was a thorough one, evidence on all matters being taken at considerable length in Vancouver, Victoria and New Westminster, and Mr. Shortt also made a close inspection of the company's power, electric lighting, railway and other plants. His report was handed to the government and was made public Nov. 19. A short summary of its recommendations was given in Canadian Railway and Marine World for Dec., 1917, on pg. 482. The British Columbia Electric Ry. has issued the report in full in a 60 page pamphlet, with an explanatory note, in which it says: "In presenting this report to the public, the company makes no comments, and is actuated solely by the desire to place all the facts with regard to its system before the communities it serves. The public has a right, as well as a duty, to know and understand its public utilities, and we are taking this opportunity of placing the whole report before them in the hope that it will receive the consideration it deserves."

The report refers to numerous documents, and tabulated statements filed in connection with the evidence, all of which were made use of by the commissioner. The report is divided into nine sections. Sec. 1 deals with the company's financial affairs, the grouping of the various utility properties, and the conditions which brought them into being, together with summaries of the several franchises and agreements under which the company operates. The underlying factors of community growth and their dependence upon a unified system of transportation are also detailed and discussed. Sec. 2 deals with the period of expansion and depression, showing that the reaction following the boom period, to 1913, seriously affected the company. The commissioner expresses some surprise that the company did not more seriously outrun with its extension of lines what transpired to be the permanent needs of the districts. The falling revenue consequent upon the period of depression, had an unfavorable effect upon the value of the company's property, which was further affected by jitney competition. In sec 3, the question of "jitney or street car" is discussed so far as the traffic in Vancouver is concerned, while in sec. 4, the question of the interurban jitney is taken up. His conclusions may be summarized as follows:

An open minded examination of the jitney service as it at present exists, should convince anyone that, while it may be a useful supplement to an electric railway service it cannot possibly take its place. It is possible for a trackless motor bus system to take the place of the present street cars, and such a changed system might be operated by the B.C. E. Ry., or by any other large corporation. This system, however, has nothing in common with the existing jitney service, except the one single feature that neither the

jitneys nor the motor busses require tracks or trolleys. As is fully demonstrated in the origin and expansion of the jitney service it involves no rational foresight or organization, no special investment of capital in lines from which it cannot readily be withdrawn, no guarantee as to rates, and no special arrangements to meet the permanent needs of the public—in a word, no responsibility whatever, either personal or corporate, to continue in adequate form a service which has become one of the most permanent and vital requirements of a modern city. On the other hand, a street railway system in a large modern centre of population is the product of years of organization and investment of millions of capital in plant, in the greater part of which cannot be converted to other uses, and is therefore at once a very heavy guarantee for the performance of its obligations and the highest possible inducement to afford where possible an acceptable service to the public, on whose favor it entirely depends. Were the street cars forced to discontinue, the citizens would be entirely at the mercy of an irresponsible service, both as to numbers in operation and fares demanded.

Even should some form of motor service ultimately replace the electrical trolley, as argued by the jitney interests, it must be conducted, as experience everywhere proves, either by responsible joint stock companies or municipal corporations. In either case the independent individual jitney owner, in whose interests the whole argument before the commissioner was presented, must be eliminated. It is difficult to see what advantage there is in throwing out of employment that large and respectable class of citizens of Vancouver and Victoria and districts who constitute the employees of the B.C. E. Ry. merely to ensure the temporary support of a limited number of independent operators of jitney cars, who cannot guarantee, either for themselves or each other, that they will furnish a reliable service for the citizens of those districts, and who in turn must be supplanted by large and permanently responsible capitalist corporations. These in turn must develop other well organized systems with a body of employees under normal and satisfactory conditions with the customary regulations as to hours, rates and the many other terms embodied in agreements between employers and employees.

In sec. 5 the questions of fares, service and one-man cars are considered, the commissioner recommending the revision and simplification of fares; the holding of a conference between the company and the municipal authorities as to fares transfers and service; the trial of one-man cars; the skip-stop plan of operation and through cars to New Westminster. Sec. 6, deals with conditions in Victoria and on Vancouver Island, where the commissioner finds the economic conditions similar to those in Vancouver. He points out that the company should be able to exist in order to give service; that jitneys must go from competitive routes, as the company cannot be expected to meet increased prices and diminishing revenues and have its most profitable business

taken away; he also recommends a revision of the charter.

In sec. 8 the commissioner deals with the question of the apportionment act; the question of the appointment of a public utilities commission. All public services, he says, are necessarily faced with a great deal of criticism, much of which is unreasonable. The primary function of a public utilities commission would be, by a constant accumulation and an intelligent study of the facts, to determine what are and what are not reasonable and justifiable claims. Such a commission would find it necessary "not only to protect the public against the unjust and unnecessary encroachments of corporations, but to the end that the corporations may be able in the most efficient manner to meet the requirements of the public, to protect them against each other and against short-sighted and irresponsible sectional clamor, which if allowed to determine public policy, would cripple or destroy very essential enterprises involving large investments of wealth, the impairment of which would immediately react to the detriment of the community." Certain departmental officials should be appointed members of the commission together "with at least one person of good judgment and wide experience who could devote his whole time to acquiring and co-ordinating the necessary information as to the varied interests of the public involved in the more important utilities. If properly constituted the commission will be able to furnish well matured and just regulations and decisions alike, for the general administration of the various public utilities, as for the adjustment of special grievances and claims as to rates and conditions of service, in accordance with what may be most expedient in the public interest."

Sec. 9 contains the findings and recommendations, of which those affecting the company's street railway interests are appended.

"It is the decision of this commission that an efficient street car service in Vancouver and between Vancouver and New Westminster cannot be maintained under the present condition of competition with jitneys, or public automobile service."

It is recommended that until the financial returns of the street railway service materially improve, as may be determined by reference to any provincial public utilities commission which may be appointed, or by mutual agreement between the municipalities affected, and the street railway company, a city population area be determined within which fares and free transfers on the existing basis shall be maintained.

"That free transfers on the street cars to and from this city population area and the outlying districts of the street railway lines be discontinued, and that a conference be arranged between the official representatives of the municipalities affected and the management of the street railway company with a view to the adjustment of rates and service schedules on the lines beyond the city population area, as may be necessary to the maintenance of the best possible ser-

vice under the present and immediately prospective financial conditions.

"That subject to the approval of the parties to the same conference, on certain specified lines, the operation of one-man cars be given a fair trial with a view to reducing unnecessary costs and maintaining a better service on these routes than might otherwise be possible.

"That the B.C. E. Ry. be authorized to increase the speed limit and by skip-stop to improve the service by special through cars between Vancouver and New Westminster."

So far as Victoria and Vancouver are concerned the recommendations are: That jitney competition with street cars along the routes and in the districts served by them be eliminated, but that in the districts not served by the street cars jitneys and motor busses may freely operate, and that in order to reach the centre of the city they may ply along North Quadra St. to its junction with Yates St. and down Yates St. to Douglas St. It is recommended that the charter under which the B.C. E. Ry. operates in Victoria and district be amended so as to bring it into harmony with the charters granted to Vancouver and the adjoining municipalities, except as to the proportion of gross earnings to be paid to the City of Vancouver.

In the course of an interview after the publication of the report, George Kidd, General Manager B.C. E. Ry., is reported to have said. "We are prepared to carry out to the letter all the commissioner's recommendations as to the car service and the lighting service. We entered the investigation laying all our cards on the table and agreeing to whatever finding he might make. Now he has made his decision, we accept it without reservation, and we have no doubt this city, on its part, will do so also."

The jitney men have expressed their disappointment at the report, and it is anticipated that they will largely disappear.

A delegation of street car men waited on the provincial government recently to express their disapproval of the suggestion in the report favoring the adoption of one-man cars.

A Vancouver press dispatch of Dec. 19 says:—"Amendments to the city by-laws adopted by the Vancouver City Council last night are expected to legislate the jitneys out of business, both in Vancouver itself and on the suburban runs out of Vancouver. The legislation takes effect April 1 next. This is in accordance with Adam Shortt's report upon his investigation of traffic conditions in this city."

**The Hull Electric Co.'s Franchise in Aylmer, Que.**—The Aylmer Town Council contends that the company's franchise in that town expired Dec. 1, and has stated conditions upon which a renewal would be granted. The company claims that its franchise is a perpetual one and is continuing its service. The council decided on Dec. 4, to call for tenders for lighting the streets and for the supply of power within the town. This matter is part of the same franchise. (Oct., 1917, pg. 407.)

**Hamilton St. Ry. Service.**—The Hamilton City Council's special street railway committee announced at a recent meeting that no report would be presented to council for the present, but that the new council would be asked to appeal to the Ontario Railway and Municipal Board for an order compelling the company to provide an improved service.

## Regina Municipal Railway Fares, Deficits and One-man Cars.

Following are extracts from City Commissioner Thornton's report for 10 months, Jan. 1 to Oct. 31, 1917:—

Transportation has been, and continues to be, afforded street railway patrons in Regina at less than actual cost. The fares are today the same as when the road was built in 1911, in spite of universal increases in expenses. It is altogether unfair to the ratepayer as such that he should be taxed for a service rendered to the railway patron as such. The principle is inequitably unsound, and if it continues to be applied will have most serious results. Every utility should be made to pay its way and this can only be effected by charging adequate rates for

operated 87,500 car hours, which on the Calgary basis would represent a saving in operation expense of \$26,250. The passenger revenues for the 10 months would have been \$28,000 greater for the same passengers carried, on a basis of a straight 5c cash fare. These two sums added together almost exactly represent the deficit for the period. The following table indicates concisely the great improvement in the operating statement of this utility as compared with former years. The figures for 1914-1915-1916 are actual, those for 1917 are based upon the actual results for the 10 months increased proportionately to cover the whole year.

	1914.	1915.	1916.	1917.
Revenue . . . . .	\$219,150.67	\$172,177.67	\$212,790.19	\$224,970.60
Passengers carried . . . . .	4,677,505	3,661,177	4,671,402	4,954,972
Operating expenses . . . . .	\$225,184.81	\$180,333.33	\$191,359.68	\$195,873.42
Fixed charges . . . . .	89,718.28	101,599.35	97,575.54	96,066.66
Total operating expenses . . . . .	314,903.09	281,932.68	288,935.22	291,940.08
Operating surplus deficit . . . . .	6,034.14	8,155.66	21,430.51	29,097.22
Total deficit . . . . .	95,752.42	109,755.01	76,145.03	66,979.48

the service rendered. We have before the city council a recommendation that a straight 5c cash fare be adopted. We are firmly of the opinion that this rate is inevitable and feel it should be adopted at once.

Every legitimate means to reduce operating expenses should be adopted. In this connection there is now under consideration the question of one-man car operation. The present cars can be equipped for such operation at a moderate cost, about \$200 a car. It is estimated that a reduction in expense of \$30,000 a year can be effected by one-man car operation. The council has applied to the Saskatchewan Government for legislation to permit such operation, and it is hoped the amendment will be granted. The granting of the application would not mean that the system would be adopted but would mean that the council would be in a position to test out a system which, if it proves to be safe and to afford adequate service, should be put into effect at once.

The results of this department show a material improvement over 1916. The total deficit for 10 months is \$55,000, compared with \$13,000 in 1916. The surplus on operation is \$24,000, compared with \$13,000 in 1916, an increase of 84%. Operating expenses are, however, heavier than last year by \$6,600, owing to an increase in wages of nearly 10% and an abnormal increase in the cost of material. As pointed out above, if this utility is to be put on a self supporting basis, radical measures must be adopted to increase the revenues and cut down expenditures. We believe that all reasonable reductions in expenses have been made under the present system of operation. There remains the one-man car system as a means to affect a radical reduction. By a comparison made recently between the Calgary one-man car system and our own, the following facts were ascertained. The results for one day were contrasted. In Calgary, for a total of 815 car hours operated, the revenue was \$2.13 a car hour against 326 car hours in Regina with a revenue of \$1.73 a car hour. This indicates that the traffic in Calgary is heavier than in Regina. The cost for operators' wages a car hour was 42c in Calgary, against 72c in Regina. In the 10 months period the Regina Municipal Railway has

We have referred previously to the many influences for community benefit, in the development of the outlying districts, the increase of business property values, the bringing in of large new areas under full assessment, the pavement on a portion of the streets, etc., for all of which the street railway is directly responsible and in respect to which its expenses largely increased and for which it receives no direct credit. The city's utility debenture debt is greater than its general debenture debt. Funds for utilities are no advanced on the security of the asset to be created, but on the general credit of the city. Our good credit is our greatest asset, our fundamental need. Since our credit is so largely involved in the ownership of utilities, if for no other reason, they should be operated on business principles only. The credit of any municipality which operates utilities at a loss is necessarily depreciated. The argument that rates are lower than charged elsewhere, or than would be charged by private ownership, while perhaps popular at home, carries no appeal whatever to the investor in securities, in fact as likely as not will create distrust. Rates should be charged for utility services sufficient to pay all expenses, including capital charges, depreciation, obsolescence and taxes, as well as all ordinary operating expenses. We have every faith in our utilities. They can be made to continue to supply first class service to the citizen at minimum cost. They eliminate numerous evils attendant upon private ownership and control.

**Detroit Fares Advanced.**—The Detroit United Ry. on Dec. 1 abrogated its agreement with the city for the sale for seven tickets for 25c, except on the Sherman, Fourteenth, Crosstown and Harper lines, where franchise requirements provide for 8 for 25c and 6 for 25c fares. On the other lines a straight 5c fare is collected. In retaliation the city council passed a resolution requiring the company to pay \$10,000 daily rental for the use of the streets on which franchises have expired, rescinded permission to operate skip stops, and authorized the Municipal Railway Commission to employ Barclay Parsons & Klapp, of New York, to investigate whether the fare increase is justified.

## Electric Railway Projects, Construction, Betterments, Etc.

**British Columbia Electric Ry.**—The North Vancouver District Municipality will vote at the January elections on a bylaw authorizing a grant of \$2,500 to aid the company to lay its tracks on to the ferry wharf and to run its cars thereon. Before this can be done the North Vancouver City Council's assent has to be obtained. (Dec., 1917, pg. 488.)

**Edmonton Radial Ry.**—The Edmonton Alta. City Council is considering the Street Railway Department's proposal to extend the 106th Ave. or Sutherland line, in order to connect the 97th St. (Namayo line) and the 101st St. line; the estimated cost is \$650 for temporary line. The Superintendent states that a considerable saving in operation would be effected if the extension were built. (July, 1917, pg. 286.)

**Edmonton Radial Ry.**—A press report states that it is proposed to build a line across 106th Ave. between 97th and 105th streets at an early date, to enable another belt line to be established. (July, 1917, pg. 286.)

**Hydro-Electric Power Commission of Ontario.**—We are officially advised, with respect to the railway being constructed by the Hydro-Electric Power Commission of Ontario in connection with the Chipawa-Queenston power canal, that the railway will run from the Welland River, near Montrose, around Niagara Falls City to the Niagara River near Queenston, about 12 miles. The line will have two tracks, standard gauge, 70 lb. steel, ballasted with rock. About eight miles of construction have been completed at the northern end of the line. A recent press report states that about 350 men are on the work, which includes the erection of a number of bridges over ravines, and one concrete bridge, now being built over the Niagara, St. Catharines & Toronto Ry. in Stamford Tp. The earth removed in grading is being used to fill in ravines running to the Niagara River. The work is being done under the direction of F. A. Gaby, Chief Engineer of the Hydro-Electric Power Commission of Ontario, under the immediate supervision of H. G. Acres, Hydraulic Engineer, with J. B. Goodwin as works Engineer. The line will be operated by electric power, 550 volt, direct current, from an overhead system, of copper wire strung on wooden posts; electric locomotives being used. (Dec., 1917, pg. 471.)

**Kitchener & Waterloo Electric Ry.**—The Ontario Railway and Municipal Board held a sitting at Kitchener, Ont., Dec. 11, to consider an application to compel the commissioner in charge of the municipally owned electric railway to extend its line to Dominion Tanners' factory. This is a new industry, one of the inducements offered to locate in Kitchener being that the city would build an extension of its electric railway 0.6 of a mile long to the plant. The board adjourned the hearing until the Galt, Preston & Hespeler Ry. could be represented, that company being also interested in the provisional agreement.

**Niagara, St. Catharines & Toronto Ry.** The Board of Railway Commissioners has authorized the company to open for traffic a temporary diversion in Stamford Tp., Ont.; and also to open for traffic its branch line from Ontario and St. Paul

St., to the G.T.R. station, St. Catharines, Ont., 4,700 ft. (Dec., 1917, pg. 488.)

**Nipissing Central Ry.**—Application will be made to the Dominion Parliament for an act to extend the time for the completion and putting into operation of the lines authorized by the company's act of incorporation and amending acts. The railway is now under the management of the Timiskaming & Northern Ontario Railway Commission, on behalf of the Province of Ontario. S. B. Clement, North Bay, Ont., is Chief Engineer and Superintendent of Maintenance.

**The Quebec Ry., Light and Power Co.** has, we are officially advised, completed a new piece of line 0.18 mile long from Fourth St. to connect with track on First Ave., at Charlesbourg Road, Quebec. (Nov., 1917, pg. 444.)

**Sandwich, Windsor and Amherstburg Ry.**—The question of the proposed Ferry St. stop in Windsor was discussed by the city council recently and an opinion was expressed that the city should build the loop and lease it to the company until 1922. No decision was reached. (Nov., 1917, pg. 444.)

**Toronto Suburban Ry.**—We are officially advised that the company proposes to build car barn and express shed at Guelph, Ont., the present terminus of its extension from Lambton. (Dec., 1917, pg. 488.)

**Toronto and York Radial Ry.**—We are officially advised that the company contemplates making considerable betterments on its Mimico division, the extent of which has not been fully determined. In connection with the construction of the Toronto-Hamilton highway, a question has been raised at New Toronto with respect to the location of the railway tracks, and the local board of trade has taken action against the highway commissioners to prevent any alteration being made. (Dec., 1917, pg. 488.)

### Electric Railway Finance, Meetings, Etc.

**British Columbia Electric Ry., and allied companies:**

	Oct. '17	Oct. '16	4 mths. to Oct. 31, '17	4 mths. to Oct. 31, '16
Gross	\$491,964	\$445,263	\$1,842,476	\$1,695,659
Exp.	393,508	351,845	1,551,321	1,401,856
Net	98,456	93,418	291,155	293,803

**Cape Breton Electric Co.**

	Oct. '17	Oct. '16	4 mths. to Oct. 31, '17	4 mths. to Oct. 31, '16
Gross	\$43,397.19	\$36,466.20	\$163,386.85	\$138,393.73
Exp.	28,168.54	18,204.89	105,757.23	74,750.41
Net	15,228.65	18,261.31	57,629.61	63,643.32

**Calgary Municipal Railway**

	Oct. 1917	Oct. 1916
Gross	\$49,316.87	\$53,721.69
Expenses	30,924.27	36,336.84
Net revenue	18,392.60	17,384.85
Fixed charges	17,248.36	17,030.48

**Edmonton Radial Ry.**—The Mayor of Edmonton, Alta., stated on Nov. 30, at a public meeting to consider civic affairs that the E. R. Ry. showed a deficit for the ten months ended Oct. 31, of \$144,118.31 against \$96,863.43 for the same period of 1916. The increased deficit was explained by the fact that at the beginning of 1917 wages of motormen and conductors were increased about \$20,000 a year, and there had also been two very heavy damage claims against the railway. Up to the date mentioned \$14,289-

27 had been expended for claims against the railway, against \$2,581.06 in 1916. A considerable saving had been made by the use of one-man cars and it was hoped that by next summer the department would be in a position to operate its full service with one-man cars with the assistance of extra cars during the rush hours.

**Fort William Electric Ry. Deficits.**—Application is to be made to the Ontario Legislature for the confirmation of a bylaw authorizing the issue of \$225,000 of debentures to take care of the deficits in connection with the city's electric street railway. The bylaw gives the deficits as: 1914, \$29,162.54; 1915, \$64,270.17; 1916, \$64,827.68; 1917, \$65,746.59.

**Regina Municipal Ry.**—The City commissioners of Regina, Sask., in their annual report on the city's finances which was discussed at a recent public meeting, stated that steps must be taken to make some provision for the outstanding loss on the street railway system up to 1914 by the negotiation of a loan covering this loss, which amounts to over \$100,000, from property sales account. The only other alternative, in their opinion, is to cover the loss by a tax levy, or by an increase in the fares. The latter, they state, is more or less impracticable and the former would be more or less unjust to the ratepayer of today.

**Toronto Civic Ry.**—Total receipts for November, \$24,850.69, against \$19,051.66 for Nov. 1916. The number of passengers carried during November was 1,481,471 against 1,135,958 during Nov. 1916.

**Toronto Ry.**—Gross for Nov., \$537,505, against \$489,987 for Nov. 1916, the percentage paid to the city being \$55.823 and \$48.890 for the same periods respectively. The totals for 11 months ended Nov. 30, are \$5,623,235 for 1917, and \$5,356,110 for 1916, the city percentage being \$896,850 and \$846,843 for the same periods respectively.

The regular quarterly dividend of 2% has been declared for the quarter ended Dec. 31.

**Toronto Ry., Toronto & York Radial Ry., and allied companies.**

### Electric Railway Track Laid in 1917.

There was practically nothing doing in the way of new construction on electric railways in Canada during 1917. Only three lines have reported any new work done, the total of new track being 1.56 miles. Construction has been started on a line to be operated by electricity, and eight miles of grading have been completed by the Hydro Electric Power Commission of Ontario in connection with the building of the power canal in the Niagara peninsula.

	Miles
Niagara, St. Catharines & Toronto Ry.— Ontario and St. Paul St. to G.T.R. St. Catharines, Ont., 4,700 ft. ....	0.89
Quebec Ry. Light and Power Co.— 1th St. to 1st Ave., Charlesbourg Road, Quebec .....	0.18
Toronto Civic Ry.— Quebec Ave. to Rummymede Rd. Bloor St. extension .....	0.49
Total miles .....	1.56

## One-Man Cars in Saskatchewan.

A bill amending the Saskatchewan Railway Act was introduced into the legislature Dec. 8. It proposed to add a new section, to be numbered Sec. 237a, and to give cities and towns the power to declare that the provisions of secs. 236 and 237 of the act, which require two men to be in charge of electric cars, shall not apply in such cities or towns during the currency of such bylaw. It would also give the council power to repeal any such bylaw, upon a majority vote of the ratepayers, on the last revised list of voters for the municipality, the provisions of the city act and the town act as to bylaws to govern where they were not inconsistent with the provisions of the present measure. When the bill was introduced on Dec. 8 it was explained that its object is to enable the councils of cities and towns in which electric railways are being operated to pass bylaws providing for the operation of one-man cars. Under the Saskatchewan Railway Act it is required that two men, a motorman and a conductor, shall be in charge of each car. It is not proposed to repeal this provision but to add a section to the act under which the councils, with the assent of the ratepayers, may pass bylaws. The bill was before the standing committee on Dec. 12, when a decision was reached not to report it to the House, on the ground that the committee had not sufficient information before it to reach a decision.

## The Street Railway Situation in St. John, N.B.

At a meeting of a committee of the city council, Dec. 3, Commissioner Fisher proposed that it is desirable that the city should own and operate the gas and electric lighting and the street railway service in the city and vicinity, the chief objects being reduction of rates, improvement and extensions of services and the obtaining of a larger contribution toward street surface maintenance, and that the City Solicitor be requested to advise the council as to the best method to be pursued in acquiring the lighting and railway franchises and the properties of the New Brunswick Power Co., particularly so as to avoid paying more than the actual value for same.

With reference to the paying of the track section of streets, the Commissioner reported that he had had several interviews with the City Solicitor in an endeavor to prepare a recommendation which would have his support, but the latter had charged his attitude in regard to the proposal submitted to the company by the council in September, when he advised that the city had a good case to take to the legislature. He now expresses the opinion that the company should not be asked to pay for any paving, basing this advice on the company's contention that it should not be obliged to pay directly for any street surface maintenance. At the same time the City Solicitor expressed the opinion that the company is not paying sufficient to the city and that its taxation should be adjusted so as to cover its use of and injury to the streets. The Commissioner considered that, as matters stood, it would be useless to make any further request to the company for payment for paving, or to go to the legislature for redress, but to wait for the possible relief under the new assessment act, or pressure of public opinion, resulting in the acquirement of

the properties by the city. In the meantime the Commissioner thinks that the council should temporize with the street surface in the track sections, and not build any foundations under the tracks, as the entire cost of the latter should be paid by the company, the amount of \$5,000 a mile for such foundations mentioned being insufficient. If the council should decide on temporizing with the surface in the track sections, the method of laying permanent paving would probably be to lay it on the sides of the streets only, and to stop at 18 in. from the rail in each case. The 18 in. space could then be surfaced with a thin layer of mixed asphalt and stone, graded and rolled, leaving the spaces between the rails for temporary treatment with gravel and broken stone. No action was taken on the resolutions, it being decided to take the matter up again at a later date.

## International Railway Power Equipment.

The International Ry. of Buffalo, N.Y., which operates the Niagara Park & River Ry. in Canada, has made recently, or has under way, a number of important power equipment additions. In its Niagara St. power station there have been installed a 5500-kw. Westinghouse turbine and 15 Babcock & Wilcox boilers equipped with underfeed stokers, new open heaters and boiler feed pumps. The new Niagara Falls substation contains two 1000-kw. and four 400-kw. General Electric rotary converters. The new River Road substation, containing two 400-kw. General Electric rotary converters, has also been completed, and by the middle of January it is expected to have two other new substations ready for operation, the North Division substation, containing three 2000-kw. General Electric rotary converters, and the Hertel Ave. substation, containing two 1000-kw. and three 400-kw. General Electric rotary converters. With these additions the total substation rating of the system will be 36,300 kw.; the steam station rated capacity, 10,200 kw., and the Canadian hydraulic station, 4000 kw.

## Toronto and York Radial Railway Rights on Yonge Street.

The Toronto & York Radial Ry. asks the City of Toronto \$1,860,000 for the physical assets, franchises, rights, privileges, etc., of the portion of its Metropolitan Division, on Yonge street, within the city limits. The statement of claim is as follows:—

"Value of franchises, rights and privileges to be taken, i.e., the company's exclusive right to operate a street railway on Yonge St. within the city limits for 35 years from Feb. 3, 1894, with rights of renewal for further future periods, and compensation for the taking thereof pursuant to the provisions of the Ontario statute, 1917, chap. 92, sec. 4, less value of running rights to be granted by the city to the railway in return. Value of physical property to be taken, being structures, sub-structures, and super-structures on the highway, according to inventory already prepared and delivered to the city: \$1,860,000."

The city's commissioners and solicitor, in transmitting the claims to the City Council said: "The foregoing was accompanied by certain explanations and figures, insufficient to enable us to form a fair judgment as to the reasonableness of

the company's demands. We therefore repeatedly requested information as to the basis upon which the statement was compiled, but have not succeeded in procuring same. We know that the value set upon the physical assets for which the city has been negotiating approximates \$110,000, which leaves a valuation of valuation of \$1,750,000 for the franchises, rights, and privileges which the company purports to sell, as set out in sec. 1 of its statement. This amount, it claims, gives credit for the running rights which the city proposes to accord. It is essential, to a fair consideration of the claim, that we should be acquainted with the details and reasons upon which it is based. We beg to recommend that the question be submitted to the judgment of the Ontario Railway and Municipal Board as per the terms of the special legislation in that behalf."

The City Board of Control acted on the recommendation given and decided to refer the matter to the Ontario Railway and Municipal Board.

## Increased Electric Railway Fares Authorised in New York and Long Island.

The Public Service Commission of the Second District (up State) of New York has granted an increase in fares to six out of the nine electric railway companies whose petitions have been heard. The companies serve Northport, Amityville, Glen Cove, Sea Cliff and Huntington, L. I.; Hornell, Canisteo, Ithaca, East Ithaca, Newburg, Walden, Peekskill and Ossining. The Hudson River and Eastern Traction Co., operating in Peekskill, is allowed to raise its fares to 7c. The other companies are allowed to raise their fares to 6c.

The commission decided the above cases after argument at length on these points raised by the opposition to the increased fares: (1) That, as the old state railway law limits fares to be charged on street cars within municipal limits to 5c, the commission has no power to raise the rate. (2) That franchises or municipal consents, limiting a fare to 5c constitute contracts, and the commission has no power to raise the fare. The commission overruled these points and held that it has the necessary rate making power. The increased rates of fare, the commission stated, may be reduced, if later on it be shown that they are no longer necessary.

Three other companies have been heard on their petitions for increased fares—the Peekskill Lighting and Rd. Co., which operates about 10 miles of track in and near Peekskill, N.Y.; the Putnam and Westchester Traction Co., a road of about three miles in and near Peekskill, N.Y.; the Glen Cove Rd. Co., which operates about three miles of track in and near Sea Cliff and Glen Cove and Hempstead Harbor, L.I. More than 20 other companies have petitioned for increased fares and it is expected these cases will now be rapidly disposed of. Each company has to make out a case on its own account.

Sandwich, Windsor and Amherstburg Ry. Franchise.—The Windsor, Ont., City Council decided, Dec. 5, to submit a question at the municipal elections Jan. 1, asking the ratepayers to state their views upon a proposed extension of the company's franchise, or the purchase of the system.

## Electric Railway Notes.

The Toronto and York Radial Ry. is negotiating for the purchase of four cars.

Winnipeg Electric Ry. Company's officials state that the chief difficulty in giving an adequate service is the difficulty in obtaining men.

The Sarnia Street Ry. resumed its car service to the Pere Marquette station in Sarnia, Ont., Dec. 13, which it discontinued some months ago.

The Toronto ratepayers are voting Jan. 1, as to whether they are, or not, in favor of the city taking over the Toronto Ry. on the expiration of the franchise in Sept. 1921.

The Sandwich, Windsor & Amherstberg Ry. has added to its rolling stock recently 3 single truck p.a.y.e. cars built in Canada and 2 double truck steel cars built in the United States.

The Brantford & Hamilton Ry. has opened a ticket agency at the corner of Colborne and Market Sts., Brantford, Ont., for the sale of through tickets to Hamilton. Tickets for intermediate points can only be had on the cars.

At the Hamilton, Ont., City Council meeting Dec. 12 the special street railway committee was directed to consider matters relating to the service on certain of the Hamilton St. Ry.'s routes, and delays occasioned to traffic on other lines.

The Toronto Works Commissioner has recommended that the city enter into a two years agreement with the Toronto Civic Ry. employees to confirm the existing rate of wages and working conditions.

The Calgary, Alta., Municipal Ry., owing to increasing traffic, has increased the number of cars being operated on several of its lines, and has rearranged the routes of the Sunnyside cars by making it a one-way route over the Louise bridge and back over Centre St. bridge.

In order to speed up Winnipeg Electric Ry. cars the city works committee has authorized the company to eliminate the waiting platforms at Garry, Smith and Donald Streets, and to stop only on the near side going west on these streets, and on the far side when going east.

A Hamilton St. Ry. official is reported to have stated in an interview Dec. 17 that it would not be a matter of surprise if the service at present being given by the company in the city should be reduced. The matter of power is a very serious one, owing to the munition plants' demands.

F. Hoover, business agent of the Street Railway Men's Union in Vancouver, is preparing a report on one-man cars for presentation to the British Columbia Government in connection with the recommendations on the matter in the Shortt report, which is summarized on another page of this issue. The "report" will doubtless take the form of a protest against the use of one-man cars.

The Toronto Suburban Ry. placed in effect, from Dec. 1, 1917, a special express tariff over its line between West Toronto and Guelph, Ont. The rates are graded from 30c to 40c per 100 lb., with special rates for market produce, etc. The rates include collection and delivery at agent points, viz., Toronto, Georgetown and Guelph. F. Butcher has been appointed in charge of the express department, with office at 2896 Dundas St., West Toronto.

The short supply of coal in Hamilton, Ont., is said to be the cause of the cars on the Hamilton St. Ry. being inadequately heated. E. P. Coleman, General Manager, stated recently that orders for coal were placed in April last, but there had been no deliveries. The company was getting what coal it could, and was making the most economical use of it until the prospects of getting a sufficient supply were brighter. The use of electric heaters was not feasible, owing to the demands for electric power for the munition plants.

In connection with the elimination of the level crossing of railway tracks by the Toronto Ry., on Queen St., Toronto, near Don station, the Board of Railway Commissioners has ordered the C.P.R., G. T.R., Canadian Northern Ontario Ry. and Toronto Ry. to pay in addition to amounts already paid, if any, to the City of Toronto \$115,000, \$30,000, \$135,000, and \$80,000 respectively, in respect of damages incidental to the work, without prejudice to the correctness or otherwise of accounts submitted.

Lethbridge Municipal Ry. employees state that the report that they are being paid at the rate of 37½c an hour is incorrect. They say they are receiving 30c an hour with a war bonus of \$1.75 a week if they work every day, which works out to 33 1/5c an hour. They further claim that while clerks and other city employees received an increase of pay, the manner in which the street railway men's pay is worked out has actually reduced their pay by about \$7.80 a month, equal to one hour's pay per day.

### Mainly About Electric Railway People.

R. H. Long, heretofore Electrical Superintendent, Winnipeg Electric Ry., has been appointed Power Superintendent.

George Garrett, heretofore Master Mechanic, Winnipeg Electric Ry., has been appointed Superintendent of Rolling Stock.

W. M. Fraser, Electrical Superintendent, British Columbia Electric Ry., Vancouver, is reported to have been given full charge of operating.

F. S. Easton, Hydro Electric Engineer, British Columbia Electric Ry., Vancouver, is reported to have been given full charge of its producing plants.

G. A. Mills, heretofore Electrical Engineer, Waterloo, Cedar Falls & Northern Ry., Waterloo, Iowa, has been appointed Electrical Engineer, Winnipeg Electric Ry.

Jas. O. Heyworth, M.A.Soc.C.E., general contractor, Chicago, who has been appointed in full charge of wooden shipbuilding for the Emergency Fleet Corporation, United States Shipbuilding Board, is President of the International Transit Co. of Sault Ste. Marie, Ont.

W. C. Hawkins, Vice President and Managing Director, Dominion Power and Transmission Co., Hamilton, Ont., who has been a director of the Southern Canada Power Co. for some little time, has been elected President of that company, which includes among its subsidiaries the Sherbrooke Railway & Power Co., operating at Sherbrooke, Que.

M. E. McCormick, whose appointment as Assistant to General Manager, New

Brunswick Power Co., which operates the St. John, N.B., street railway, was announced in our last issue, was in the Bangor Railway and Electric Co.'s service at Bangor, Me., for 20 years, working up from service in the car house to Assistant General Manager.

G. D. Archibald, Superintendent, Saskatoon Municipal Ry., who while out duck shooting on Oct. 8 received a gun shot wound which necessitated the amputation of two toes, is able to be out again, and to get around on crutches, after being in a hospital for several weeks. During his absence from duty, H. Swail, Assistant to Superintendent, is acting as Superintendent.

### The Sherbrooke Railway & Railway Co's Directorate, Etc.

W. C. Hawkins, Vice President and Managing Director, Dominion Power & Transmission Co., Ltd., Hamilton, Ont., has been elected President of the Southern Canada Power Co., Ltd., succeeding C. J. McCuaig, of Montreal. This company operates in the Province of Quebec, south and east of the St. Lawrence River and owns and controls the following properties:—Southern Canada Power Co., South Shore Power & Paper Co., La Cie De Gaz, Electricite & Pouvoir, St. Johns Electric Light Co., Brome Lake Electric Power Co., Richmond County Electric Co., Sherbrooke Railway & Power Co., Lennoxville Light & Power Co., Eastern Townships Electric Co., Stanstead Electric Light Co., Burroughs Falls Power Co. and International Electric Co. of Vermont.

The Sherbrooke Railway & Power Co.'s annual meeting was held in Montreal Dec. 13. It does not issue a separate report, its figures being included in the Southern Canada Power Co.'s report with other subsidiary companies. The officers for the current year are:—President, W. C. Hawkins; Vice President, F. W. Teele, Vice President, Southern Canada Power Co., formerly General Manager, Porto Rico Ry. Co.; General Manager, J. B. Woodyatt, General Manager, Southern Canada Power Co.; Secretary Treasurer and Purchasing Agent, L. C. Haskell, Secretary Treasurer, Southern Canada Power Co.; other directors, C. J. McCuaig, S. H. Ewing, S. W. Ewing and Grant Johnston. Charles Johnstone is Assistant Secretary Treasurer and Controller.

### London and Port Stanley Railway Operating Results.

The report for the year ended June 30, 1917, shows as follows:

EARNINGS.	
Passenger . . . . .	\$147,470.44
Baggage . . . . .	1,080.10
Parlor, sleeping and special cars . . . . .	264.47
Mails . . . . .	1,042.80
Express . . . . .	3,298.04
Milk . . . . .	167.10
Freight . . . . .	121,023.03
Switching . . . . .	26,685.14
Miscellaneous transportation . . . . .	118.55
Storage . . . . .	29.86
Demurrage . . . . .	2,653.00
Rent of tracks and facilities . . . . .	6,071.92
Rent of buildings and other property . . . . .	3,267.03
Miscellaneous . . . . .	3,533.74
	<b>\$316,685.21</b>
Operating expenses . . . . .	\$207,356.08
Gross income . . . . .	<b>\$109,329.13</b>
Taxes . . . . .	\$ 3,166.25
Interest . . . . .	48,667.28
Rental of line . . . . .	20,000.00
Sinking fund . . . . .	10,914.12
	<b>\$ 82,747.65</b>
Net income . . . . .	<b>\$26,581.48</b>

# Marine Department

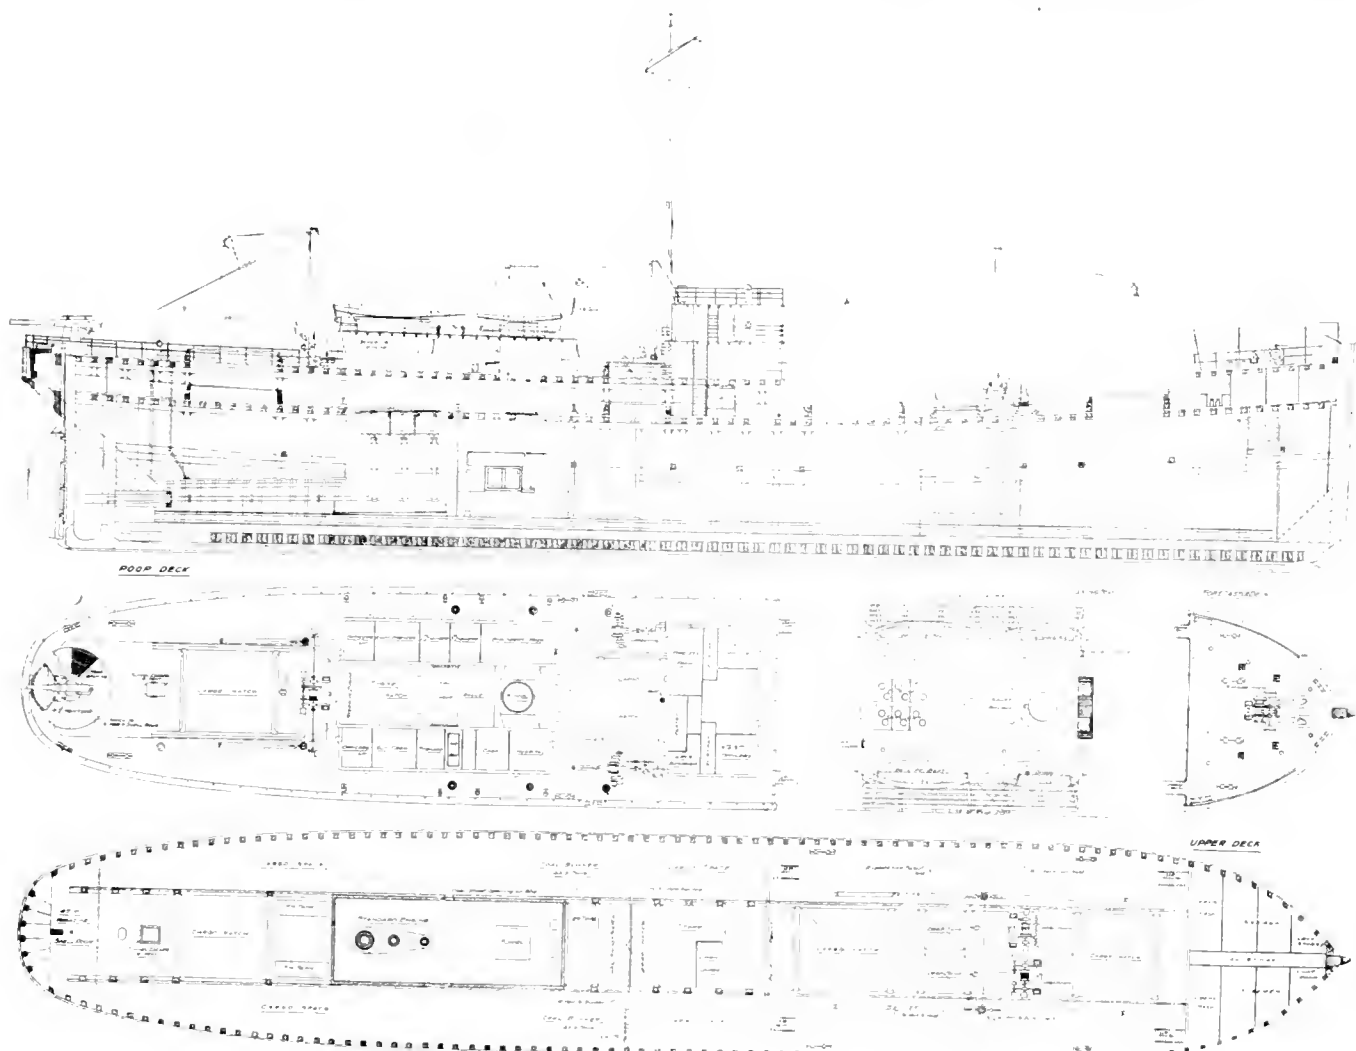

## Specifications and Plans of Standard Wooden Steamships for British Government.

Following is a summary of the specifications for standard wooden steamships for the British Government, which have been prepared by the Imperial Munitions Board's shipbuilding department at Ottawa, and under which the 46 vessels, which have been ordered at different points from Nova Scotia to British Columbia, are being built. The details of construction, fastening, etc., are such as will meet in general with the approval of Lloyd's and the board's technical advisers.

Length between perpendiculars .....	250 ft.
Length over all .....	259 ft.
Breadth, extreme .....	43½ ft.
Breadth, molded .....	42½ ft.
Depth, molded .....	25 ft.
Depth over keel .....	27 ft.
Draft for displacement .....	22 ft.
Draft over keel .....	21 ft.
Deadweight on 20 ft. max. draft to Lloyd's	
summer freeboard, approx. ....	2,500 tons
Deadweight on 21 ft. max. draft, approx. ....	2,800 tons

The vessels are to be of the single deck cargo type, built principally of Douglas fir, with hold beams, wood deck houses

as usual. The forepeak and after peak to be fitted for fresh water with filling pipes, suction, etc. The vessels are to be driven by single screw, with engine shaft amidships, but the builders of the hulls have no responsibility in connection with the installation of the machinery, except in the putting in of foundations for the main engines and auxiliaries, deck gear, and for piercing the hull for sea cocks, valves, etc., as directed by the board's representative, and also in the

Standard Wooden Steamships being built in Canada for British Government.

ers, but nothing in the specifications will relieve the contractor from the responsibility of employing a skilled staff to work out detail drawings and submit proposals for such details to the Classification Society and to the board's advisers, who will, however, give all assistance in their power to help contractors, without accepting responsibility for the proper carrying out of the contract. The vessels are to be built to Lloyd's requirements for A1 classification and to the British Board of Trade requirements as far as necessary for cargo steamers. The hull's dimensions are to be as follows:—

and rails, elliptical stern with long poop deck aft, and raised forecastle forward; 5 hatches; 1 deep ballast tank with longitudinal divisions; 6 watertight wooden bulkheads; 1 watertight bunker bulkhead; 1 screen bulkhead and 1 watertight door between engine room and tunnel. Officers' accommodation is to be in deck-houses on the poop deck, with a bridge and bridge house at the forward end. There will be six cargo winches, one to be a warping winch, and the windlass on the forecastle head is to be suitable for handling anchors and full scope of chain, also to be arranged for warping,

fastening of the deck machinery, fittings and windlass.

All lumber used is to be Douglas fir, unless otherwise specified, and all material is to be to the satisfaction of the board's inspectors. Long lengths are to be used in the keels, keelsons, planking and ceiling, and all decking to be edge grain. Fastenings to be treenails, screw bolts and drift bolts of galvanized and black iron. Builders are to supply the board with hulls built in a workmanlike manner, satisfactory for ocean service and fitted in all respects for the safe handling of freight. Drawings and plans

to be used will be supplied by the board during the progress of the work, and if the contractor is in doubt as to the method of construction or fastening, he is to call upon the inspector, who will at once see that he is provided with the necessary details. Fore and aft peaks will be tested with a head of water, as instructed by Lloyd's and the British Board of Trade's inspectors.

The keel is to be sided 24 in., moulded 20 in., to be in 4 lengths, scarphs 12 ft. long, copper painted before fastening, scarph ribs to be 4 in. deep, and all fastened with 1 in. galvanized button head screw bolts with heads sunk below flush for cementing before shoe is fitted; the ends of the scarphs to be spiked. The shoe is to be of 3 in. fir approximately 24 ft. lengths, fastened with 8 by 7/16 in. galvanized spikes, 15 in. centres and staggered, with heads set in about 1/2 in. and

Rudder post 24 x 24 in., tapering to 12 in. at top of keel. Frames to be double to side 12 in. and mould 24 in. at keel, 18 in. at long floor futtock, 16 in. at turn of bilge, 14 in. in way of top of thick ceiling, 13 in. in way of hold bears, 11 in. at deck and 7 in. at upper deck. The double frames to be efficiently fastened to one another with fir treenails.

In way of the well a single frame to be run up, forming a bulwark stanchion. In the way of the poop and forecastle the double frames will be run up, the ends of the top timbers to be left long to accommodate the covering board. Above the knuckle, the framing at stern will be of the rim type stern, the rim extending forward to frame 2. Three keelsons, the centre being 24 x 20 in., the sister keelsons being 20 x 20 in. The centre keelson to be in 4 lengths and scarphed with 10 ft. scarphs, the port sister keelson in

under the hold beam clamps. Between main and upper deck beams, 5 in. chocks are to be fitted, leaving air spaces. In the outside planking, the first garboard is to be 18 x 10 in., with 5 ft. scarphs; second garboard 16 x 9 in.; and third garboard 14 x 8 in.; bottom planking 12 x 6 in.; bilge planking 10 x 6 in.; side planking 8 x 6 in., up to guard; top side planking 8 x 5 in., the 8 x 6 and 8 x 5 planking to be fastened double and single. Guard to be 16 x 9 in., covering board 5 x 18 in. grooved on under side to receive projecting heads of frames. Rail in way of bulwarks 6 x 20 in., grooved on under side to receive heads of stanchions. Hold beams 14 x 14 in.; main deck beams 14 x 14 in. at 'midships, running to 10 x 14 in. at ends, 5 in. worked and 4 in. sprung, spacing 36 in., to have a camber of 9 in. 'midships; upper deck beams 12 x 12 in., 36 in. centres; main deck hatch coamings 12 x 14 in., notched into beams in way of hatches; upper deck hatch coamings 12 x 12 in. notched into deck beams. A continuous fore and aft stringer to run under deck beams below hatch coamings, 12 x 14 in., scarphed with 5 ft. scarphs; 2 side keelsons 12 x 16 in. to be fitted to ceiling directly under the continuous stringer, and to be continuous and scarphed. A continuous stringer under upper deck to be 10 x 12 in., and scarphed similarly. Quarter pillars 12 x 12 in. between the side keelson and the continuous stringer under main deck beams; upper deck pillars 4 x 8 in. from top of continuous coaming on main deck to under side of stringer on upper deck. Continuous coaming on main deck to be built of 3 course 12 x 12 in. in way of hatches and two courses between; cross coamings on main deck in way of hatches to be laid on top deck; upper deck hatch coamings to be similarly built to main deck coamings; hatchways to be lined with 1/8 in. steel plate with 2 in. half round chafing iron at bottom running in fore and aft direction. As chafing iron will not register with one running athwartships, it is to be carried beyond the hatch ends at both ends for 2 ft. Hatch covers to be of wood 3 in. thick, of two pieces 3 1/2 x 13 in. through bolted to one another with three 5/8 in. bars clinched in the usual manner.

There are to be 4 ordinary watertight bulkheads, one forward of the bunker, one at the after end of the engine room, one at the after peak and at the collision bulkhead, built of 2 thicknesses of 3 in. lumber, laid diagonally and fitted between the two diagonal courses with canvas, painted with marine glue. The boundary timbers will be 7 x 7 in. fitted on both sides of the bulkhead and the vertical stiffeners 3 x 5 in. spaced 18 in. centres. The bulkheads are to be made watertight to construction details furnished. There will be a bulkhead at the after end of bunker, similarly built, but with no canvas between courses, and it will be fitted with necessary openings for access to coal, the vertical stiffeners being spaced 30 in. instead of 18 in. There will also be 2 special bulkheads, fitted as a deep tank and built of 2 thicknesses of 4 in. lumber laid diagonally with canvas between, 7 x 7 in. boundaries on both sides and 6 x 4 in. stiffeners spaced 18 in. centres. In the deep tank a fore and aft centre line bulkhead will be built of 8 in. lumber with lightening holes. The main deck planking will be 5 x 5 in., and the upper deck 4 x 4 in., finishing about half an inch less in each case. The planking is to be in lengths 20 and 40 ft., averaging 30 ft., the edges to be bevelled for caulking, the bevels leaving the vertical grain upward. Two sets of pointers for-

Cross Section, Standard Wooden Steamships, for British Government.

cemented. The stem is to side and mould 18 in. with cutwater reduced to 5 in. and gradually widen out to conform to the curve of the forefoot as it widens to meet the keel. The stem and forefoot to be securely connected to the keel and to each other, and also to the apron and deadwood. An iron stem band is to extend from the top of the stem to beyond the keel scarph connecting the forefoot, and to widen out to suit the forefoot, which is to be scarphed from stem to keel. Apron to side 24 and mould 28 in., to extend down till it dies in the forefoot. Propeller post to mould 30 and generally side 24 in., and in the way of the shaft tube to swell out to 32 in., to be tenoned into keel and skid log. The knee fastening keel to propeller post to be a natural crook, both arms to be not less than 7 ft. and fitted the full 7 ft. along the keel, the other arm to be fitted to suit height of shaft logs. Deadwood forward and aft to be generally 24 by 24 in., fastened to knee aft and forefoot forward and to come about 3 in. above face of ceiling.

3 lengths and the starboard sister keelson in 4 lengths, also with 10 ft. scarphs. A steel rider keelson to be fitted on top of the wood keelsons, and to extend from the forespeak bulkhead to the after peak bulkhead. It is to be made with wide foundation plate with built up box girder 12 x 24 in. riveted to centre of foundation plate. This steel keelson will be supplied to the contractors.

The bottom ceiling to be 12 x 10 in. in lengths, with limber strake fitted adjacent to the sister keelsons. Ceiling in way of bilge to be 14 x 14 in., and ceiling directly above bilge ceiling to 12 x 10 in., the remainder to the under side of main deck stringers to be 12 x 8 in., and 'tween decks 10 x 6 in. Hold beam stringers and clamps to be 16 x 14 and 14 x 14 in. respectively; main deck stringers and clamps 14 x 14 in.; upper deck stringers and clamps 12 x 12 in. A 3 in. air course is to be fitted for one-fifth the entire length of the vessel each end, between keelson and hold beam clamps, and also

ward and 2 sets aft to be suitably located to give strength, and to be 12 x 18 in. to mould suitably, and to be connected at heels with a natural crook. Knees will be fitted at head of hold pillars, and to be 8 in., one arm 2 ft. long and another 3 ft.; similar sized knees to be fitted as lodging knees in way of all openings, and other similar ones, both hanging and lodging, fitted at bulkhead in way of continuous stringer under deck; hanging knees to be fitted under the forecastle deck beams at ends, to be 10 in., with one arm 3 ft. and other 4 ft. Knightheads in way of stem and stern for approximately 6½ ft., and 2 horn timbers to extend from deadwood to after end of vessel, each 12 x 12 in., fastened to skid log, rudder post and frames.

Regarding the construction in way of engine and boiler room, the spaces between the floors in engine room and part of boiler room will be filled in solid from long floor to long floor timber, the lower edge of the filling pieces to be bevelled, and the fore and aft timber fitted to the height of the top of the steel rider keelson, extending from after bunker bulkhead to bulkhead at after end of engine room, these to form engine and thrust seatings. A deck to be laid over shaft tunnel to form bottom of after hold, 10 x 4 in. with 2 in. sheathing in way of hatch; deck beam to be 6 x 6 in., spaced 3 ft. and supported on 6 x 6 in. pillars, 1 pillar on every beam and 4 rows of pillars to be fitted if possible. The bulkhead at forward end of poop to be of solid 5 in. lumber, as also the bulkhead at after end of forecastle. Casing round engine and boilers to be of solid 4 in. lumber.

All outside planks are to be caulked with hand picked oakum, in the proportion of one strand of oakum to each inch thickness of plank. Outside plank seams up to 18 ft. water line to be cemented, balance to be puttied. Deck planks to be similarly caulked and ceilings to be caulked so as to be watertight. Two pole masts or derrick posts to carry sets of derricks capable of handling 5 tons; mast partners to be fitted in way of masts and filled in solid 5 ft. on each side, end pieces being let into the adjacent beams. Ventilators, 15 in., to be fitted in cargo holds and in way of deep tank, with swan neck ventilators where directed. Beds for windlass, winches, steering engine and auxiliary machinery to be laid as directed. A steel rudder to be fitted, with steel stock, with steel gudgeons and pintles, gudgeons lined with lignum vitae.

The accommodation for the crew in the forecastle to be plainly but substantially built, with open iron berths and with lockers. All plumbing to be substantial and executed with great care. Accommodation for officers, with dining room and pantry, all to be in good cargo boat style, with spring berths, hardwood front, upholstered settee, desk, drawers and folding lavatory, and floors laid with linoleum and carpet runner. Dining room panelled in hardwood, with tables, swivel chairs, sideboards, etc., usual for vessels of this class. In the way of engine room casing are to be the galley, crew's mess room, store room, ice house, officers', engineers' and petty officers' bath rooms and lavatories, wireless telegraph room, and accommodation for petty officers, cook and boy.

Two class A life boats to be fitted to the British Board of Trade requirements, one on each side of the vessel, each capable of taking the whole crew, and a service boat to the Board of Trade's class X requirements, to be supplied. The boats are to be supported in davits to the Clas-

sification Society requirements and fitted with all necessary gear and rigging for handling same. The boats will be furnished by the Imperial Munitions Board. Vessel to be fitted with stockless, self tripping type of anchor, with cables of the stud link type. The steering engine of approved make to be arranged directly over the rudder, with all necessary pulleys, chains, quadrants, etc., and fitted with suitable hand gear, and with control rods laid from the steering engine to the steering wheel on bridge. A house is to be built over the steering engine aft, of suitable construction to carry gun seating on deck. Wireless telegraph aerials and leads to wireless telegraph room to be fitted to approval. Vessel to be equipped with an efficient system of heating, and an electric lighting system of 7½ k.w. capacity driven by a turbine to be installed. Complete pumping system for sanitary and fresh water purposes, and a complete fire service.

It is to be understood that while reference is made to winches, windlasses, hawser pipes, steam heating, pumping, fire service, etc., the contractors will only do the necessary work to allow of their being installed, and the specification does not include any equipment, ship or engine supplies, deck or engine fittings, all fittings being supplied by the Imperial Munitions Board.

**Respecting Deserting Seamen.**—An order in council has been passed providing that where a seaman has been imprisoned for desertion, and signifies his willingness to sign on as one of a crew of any vessel trading to European ports, the court by which he was committed, may, notwithstanding that the term of his imprisonment has not been completed, order the sentence suspended and the prisoner released, and direct him to be taken before the shipping master to sign articles and thence to be conveyed on board any such vessel, or the court may order him to be delivered to the master or mate of such vessel, or to any officer of the navy, for the same purpose. Before directing the release of a seaman the court may order that any fine or penalty imposed may be remitted or suspended. If the seaman after his release fails to observe the court's order, he may be arrested forthwith and imprisoned for the uncompleted term.

**Transportation of Explosives.**—The Defence of Canada Order 1917 has been amended to provide that the management or master of any vessel, notwithstanding any statute or order to the contrary, may be authorized, upon the requisition of a competent naval authority, to carry ammunition and explosives, from, to, or between, any places within or without Canada, provided they are packed and stored in accordance with Admiralty regulations, and any provisions of any statutes or orders conflicting with this are suspended.

**An Agile Torpedo.**—In writing of what is stated to be a practically unsinkable steamship, which has been designed in England recently, an exchange says that if a torpedo hit her in three places she would still float. It is not stated what would happen if the torpedo continued business and hit her in a fourth place.

**The Beaver Trading & Transportation Co., Ltd.**, has been incorporated under the Dominion Companies Act, with \$3,000,000 capital and office at Toronto, to carry on a general trading and transportation business. The incorporators named are connected with a legal firm in Montreal.

## A Lake Shipping Amalgamation

The George Hall Coal and Transportation Co., of Ogdensburg, N.Y., Frontier Trading Co., Ogdensburg, and Canada Shipping Co., Montreal, have amalgamated their interests in a number of vessels operated on the St. Lawrence River and Lake Ontario, and these are now being operated under the name of the first mentioned company. The new fleet comprises the steamships Adrian, Iselin, A. D. MacTier, F. P. Jones, Fred. Mercur, George L. Eaton, Hecla, John. Rugee, Lucius W. Robinson, Phenix, and the barges Kendall and Walter A. Sherman, all of U.S. register, and formerly owned by the George Hall Coal Co., the tug Seymour, formerly owned by the Frontier Trading Co., Ogdensburg, N.Y., and the steamships Cabotia, Compton, John B. Ketchum 2nd, James W. Follette, Robert R. Rhodes, Rock Ferry and Senator Derbyshire; the tugs Florence, J. H. Hackett and Margaret Hackett, and the barges, A.D., F. D. Ewen, Katie H., and Zapotec of Canadian register, and formerly owned by Canada Shipping Co., Montreal. It is stated that the vessels will be operated in the coal and wood pulp trades between ports on Lake Ontario and the St. Lawrence River. It is reported that four of the steamships named above as being owned by the George Hall Coal Co., have been requisitioned by the U. S. Government.

The Canada Shipping Co., which is associated with the Canadian Import Co., Montreal, went into the vessel business largely during 1917, and acquired a number of vessels formerly owned by F. E. Hall and Co., Montreal; and the Quebec Transportation and Forwarding Co. It still retains a number of vessels, most of which are owned by individual subsidiary companies.

**Information Respecting Vessel Movements.**—An order in council has been passed providing that no person shall, without permission of a competent naval or military authority, send, or attempt to send by cable, radiotelegraphy or other means of electric communication, to any vessel, or place overseas, any information respecting the movements of merchant ships, not being ships engaged exclusively on lake or river service, or any message from which such information can be deduced.

**Compagnie Furness (France) Ltd.**, has been organized with a capital of 2,500,000 francs, and office in Paris, France, to carry on a general transportation business, and general commercial, industrial and financial enterprises. Lord Furness, head of Furness, Withy & Co., who is also associated with Canada Steamship Lines, Ltd., is chiefly concerned.

**Woods Limited** has been incorporated under the Manitoba Companies Act with a capital of \$25,000 and office at Teulon, Man., to carry on a general business, in connection with which it is authorized to own and operate steam and other vessels, to build wharves, piers and warehouses, and to act as wharfingers, forwarders and public carriers.

**Grain Shipments from Head of Lakes.** Port Arthur, Ont., press dispatch Dec. 22. —In spite of various conditions which were expected to militate against the movement of grain from Port Arthur and Fort William, the season of 1917 proved to be the second best in total of shipments in the history of these ports. A total of 207,721,403 bushels was shipped.

# Shipbuilding Activities Throughout Canada.

## STEEL AND WOODEN STEAMSHIPS BUILDING FOR BRITISH GOVERNMENT.

**British Columbia Wooden Shipbuilding.**—In response to enquiries as to the probable dates for launching any of the wooden steamships being built in British Columbia under the Imperial Munitions Board's orders, R. P. Butchart, Director of Wooden Shipbuilding for British Columbia, is reported to have stated that machinery was being waited for from the east, and until it arrived it would not be possible to undertake any launchings. He stated that several hulls were ready for the machinery, but it would be inadvisable to float them, as there was still a good deal of work to be done on them which could better be done on the stocks. It is the intention to fix in the main shafts and propellers before launching the hulls, the other machinery being installed at the Ogden Point assembling plant, Victoria, to which the hulls will be towed. It was anticipated that several hulls would be launched before the end of December.

**Cameron-Genoa Mills Shipbuilders Ltd.**—The hull of the first of the wooden steamships under construction on the Pacific coast for the Imperial Munitions Board, was to be launched at this company's Victoria yards in December. The keel was laid July 18. The company has a contract for four of these vessels, and these are in various stages of progress, the keel of the last one having been laid at the end of November.

**J. Coughlan & Sons, Vancouver, B.C.**—The Imperial Munitions Board has ordered 4 additional steel steamships from this firm, making a total of 9 of these vessels to be built at these yards. They are to be of 8,800 tons capacity, and are included in the statement of shipbuilding for the British Government given in this issue on another page. Another similar steel steamship is under construction for Norwegian interests and it was expected to have this launched by the end of the year.

**The William Lyall Shipbuilding Co.'s** management is reported to have stated recently that the first wooden hull for the Imperial Munitions Board had been ready for launching for several days, but was held up pending the arrival of the tail shaft, propeller, rudder, etc., and the launching could not take place until these were installed. The second hull was expected to be ready by the end of December, subject to similar delay.

**New Westminster Construction and Engineering Co.**—Work is reported to be proceeding satisfactorily on this arrangement of this company's yards at New Westminster, B.C., for the construction of the hulls of four wooden steamships for the Imperial Munitions Board. The first vessel is being planked and will be ready for the beams shortly. The launching ways are under construction, and it is expected that the launch of the first hull will take place about Feb. 1. The second and third vessels are also proceeding, and the keel for the fourth has been laid.

**Victoria, B.C., Assembling Shed.**—The large shed which is being built on pier 2, Ogden Point, for the assembling and installation of the engines and machinery in the wooden hulls which are being built for the Imperial Munitions Board along the British Columbia coast, is proceeding rapidly. Several of these hulls are now

approaching completion, and when launched they will be towed to Ogden Point. It is expected that the shed will be ready early in the year. The area between the concrete walls of pier 2 has been filled in, and a depressed railway track running the entire length of the shed has been laid.

**Western Canada Shipyards Ltd.**—The first of the wooden hulls under order from the Imperial Munitions Board, to be built by this company at Vancouver, was announced to be ready for launching Dec. 10, with the exception of the rudder and screw. Two other hulls are advancing, one having the inside sheathing about completed and the planking well under way.

## GENERAL SHIPBUILDING NOTES.

**E. E. Armstrong, Hantsport, N.S.**, launched a completely rigged three masted schooner there recently.

**Canada West Coast Navigation Co.** It is reported that the company has sold to French interests 9 of the 12 auxiliary powered vessels, which it had built at Vancouver and Victoria recently. H. W. Brown, General Manager, was stated to have been in Montreal recently in connection with the probable ordering of more vessels of this type, but on his return is reported to have stated that reports as to the sale to French interests were incorrect except as regards the Mabel Brown and Esquimalt.

**Canadian Vickers, Ltd., Montreal**, during 1917, built and delivered 12 submarines for the allied governments; built 8 steel trawlers, complete with machinery and boilers; built 9 steel trawler hulls and installed the machinery and boilers supplied to them; built 29 wooden drifter hulls, and installed machinery and boilers in 16 drifters, all the trawlers and drifters being for the Naval Service Department; built one 7,000 ton cargo boat, Porsanger, which is described and illustrated on another page of this issue; and docked and repaired 30 vessels during the navigation season, with a gross tonnage of 109,450 tons. The company has completed all its shell contracts and has reconstructed the shop for the manufacture of deck machinery, of which it is turning out a considerable amount for cargo steamships.

**The Clare Shipbuilding Co., Meteghan, N.S.**, has commenced work on a second schooner of the same type and size as the Racewell, the launching of which was mentioned in our last issue. She will be 135 ft. long and 350 tons register.

**G. A. Cox, Shelburne, N.S.**, launched a 320 ton schooner there, Dec. 1. She has been named Bachelor, and will be used in the builder's service for the foreign trade.

**Ernst Shipbuilding Co., Mahone Bay, N.S.**—A two masted schooner, named Agnes D. McGlashen was launched in November. Her dimensions are, length 130 ft., beam 26.8 ft., depth of hold 10.8 ft.

**The R. H. Howes Construction Co., New York**, is reported to have taken a seven year lease of the shipyard at Meteghan, N.S., formerly controlled by the late James Cosman. It is stated that schooners of about 350 tons register are to be built there, and that the keel for the first has been laid. It is also stated that the company has purchased the Blackadar

mills, and incorporated them with the Meteghan plant, after equipping them with up to date machinery for shipbuilding.

**International Shipbuilding Corporation, Ltd.**—The remodelling of the lumber mill at Nordin, N.B., formerly owned by the Rosebank Lumber Co., is proceeding rapidly, notwithstanding a fire which destroyed some portion of the property recently. A shed is being erected for the building of ships under cover, so that the men will be protected from the weather. The building will be lighted by electricity. The keel of the first vessel, a four masted schooner rigged ship of about 550 tons, is expected to be laid shortly.

**The Kingston Shipbuilding Co., Kingston, Ont.**, launched on Dec. 22 the first of several steel trawlers which it is building for the Naval Service Department.

**The Marine Construction Co., Canada, Ltd.**, is reported to have taken over the shipbuilding business of D. H. Saker & Co., St. John, N.B. An auxiliary powered schooner is under way, and will be named Dorphontein, when launched. The plant is located on the Warner mill site. The vessel's dimensions are, length 185 ft., beam 40 ft., depth moulded 18 ft. There will be four masts and the auxiliary power will be supplied by a semi Diesel engine of 8,000 h.p. The construction is in charge of J. Densmore, formerly of Boston, Mass., as superintendent, and the management is in the hands of D. H. Saker.

**W. C. McKay & Son, Shelburne, N.S.**, launched a 140 ton schooner there, Dec. 1. Her dimensions are: length 130 ft., breadth 26½ ft., depth 11 ft. Capt. A. Ritchey, Riverport, N.S., is managing owner.

**M. Mahaffy, Toronto**, is reported to have leased the shipyard at Mahone Bay, N.S., formerly operated by McLean Bros. The yard is being enlarged for the simultaneous building of three schooners. The frame for the first vessel is erected and keel has been laid for the second one, larger than the first.

**Montreal Shipbuilders, Ltd.**—The incorporation of this company under the Dominion Companies Act, with an authorized capital of \$300,000, was mentioned in Canadian Railway and Marine World for December. The directors are: President, W. Rutherford, of Wm. Rutherford & Sons Co., Ltd., manufacturers of sashes, doors, etc.; Vice President, E. Peck, Vice President, Peck Rolling Mills; Managing Director, C. M. Morssen, President and Manager, Atlas Construction Co.; other directors, Thos. Hall, of Hall Engineering Works, J. A. Caron, of Caron Bros. The Secretary is Arthur Jarvis. The company's principal object is the building of concrete ships, and it is said that it has taken over the business of the Atlas Concrete Shipbuilding Co., which is building a concrete steamship in Montreal.

**Nova Scotia Shipbuilding Co., Bristol, N.S.**—The three-masted schooner Ruby W., which was launched at these yards recently, is to be equipped with auxiliary driven by oil fuel. Her dimensions are, length, keel, 118 ft., beam 33 ft., depth of hold 12 ft. Another three masted schooner is in frame, for an Australian owner, and orders are on hand for another three-masted schooner and a two masted schooner.

**Polson Iron Works, Toronto.**—Two more steam trawlers for the Naval Service Department were launched at this company's yards, Dec. 25. These vessels are numbered T.R. 16 and 17, three other similar vessels, numbered 13, 14, and 15, having been launched previously by the company. The vessels are each 130 ft. long.

**Polson Iron Works, Toronto.**—A fire occurred at these works, Dec. 6, completely destroying the building containing the pattern and carpenter shop and pattern storage, with all contents. This building was located at the south end of the plant, and considerable damage was done to one of the cargo steamships on the stocks close by, as well as to the shipyard plate shop building. A new building, to house the pattern and carpenter shop, is being erected immediately, and it will be located on the western side of the property, thus removing risk of damage to vessels under construction should a similar fire occur. A new pattern storage building will also be built as soon as possible. None of the patterns concerned with vessels on order, or under construction, were in the store at the time of the fire. A delay of possibly six weeks will occur in the launching of the cargo steamship which was damaged, but it is expected that she will be ready for launching early in the year.

**J. N. Rafuse & Son, Conquer Bank, N.S.,** launched a three masted schooner, named *Integral*, there recently. She is the second of four similar vessels being built there for J. O. Williams & Co. She is of 375 tons register, and is of the following dimensions: keel 122½ ft., beam 32 ft., depth 12 ft.

**Rexton, N.B.**—It is reported that a shipbuilding yard is being prepared for operation for the building of wooden ships, and that orders are in hand for four vessels of about 700 tons each. It is stated that the yard is under the control of a Montreal shipbuilding company.

**The Saulnierville Shipbuilding Co.** is reported to have commenced shipbuilding operations at Saulnierville, N.S.

**Sorel Shipbuilding.**—The shipbuilding yards at Sorel turned out considerable work during 1917, including the following: Dominion Government Shipyard, 3 steel trawlers and 3 drifters; H. H. Sheppard, 5 drifters; Leclaire & Sons, 6 drifters; Sorel Shipbuilding & Coal Co., 6 drifters. These were all for the Naval Service Department. Sincennes-McNaughton Line, Ltd., built 3 large trgs.

**Southern Salvage Co., Halifax, N.S.**—A two masted schooner was launched in the company's yards, during November, and named *Win the War*. Her dimensions are, length 137 ft. overall, beam 26.2 ft., depth of hold 11.6 ft.; tonnage, 187 gross.

**Wallace Shipyards, Ltd., North Vancouver, B.C.**—Work on a steel freight steamship was being pushed rapidly during December, the double bottom being reported as having been completed. The company is reported to be arranging a second berth alongside, with the view of laying another keel early in January, so that work may be carried on simultaneously on both vessels. All the steel for both vessels has been received, and the engines for the first vessel have been completed, the boilers being practically complete. The company is building three sets of engines for other steamships under order at other plants for the Imperial Munitions Board.

**The Yarmouth Shipbuilding Co., Yar-**

**mouth, N.S.,** has a schooner on the stocks practically finished, and as soon as she is launched, the keel for another will be laid.

### Mainly About Marine People.

**H. B. Brownell**, Division Freight Agent, Canada Steamship Lines, Winnipeg, has resigned to engage in private business.

**W. Murdoch**, from Lloyd's staff at Seattle, Wash., has been appointed acting surveyor for Lloyd's at Vancouver, B.C., on account of the death of T. G. Mitchell. A permanent appointment will be made later.

**F. B. O'Connor**, heretofore agent at Nome, Alaska, has been appointed agent, Pacific Steamship Co., Vancouver, B.C., vice S. B. Stocking, who is reported to have been appointed chief clerk in the General Manager's office at Seattle, Wash.

**Capt. J. J. Murchison**, formerly master of the car ferry steamship *Prince Edward Island*, has been appointed dock master at Port Borden, P.E.I., in connection with the operation of the Canadian Government Railways' car ferry service between Cape Tormentine and Port Borden.

**James Yorston**, a well known builder of wooden ships, died at Pictou, N.S., recently, aged 70. He was a partner in J. & J. Yorston, who operated the marine railway, etc., at Pictou, and was also engaged in the fishing business. His son, L. Yorston, is now Manager, Pictou Marine Railway.

**F. J. Warren**, who has been appointed Division Freight and Passenger Agent, Canada Steamship Lines, Ltd., Winnipeg, was for several years in C.P.R. service as a freight claims investigator, and was subsequently Soliciting Freight Agent, Inland Lines, Ltd., and Canada Steamship Lines, Ltd., at Montreal, and since Apr., 1915, City Freight Agent for the latter company at Winnipeg.

**James Carruthers**, President, Canada Steamship Lines, Ltd., has offered to the British Government four aeroplanes for use on the western front. The British Air Board in accepting the gift expressed its warm appreciation of so generous a contribution. Mr. Carruthers had previously given three aeroplanes to the Canadian authorities.

**Capt. J. A. Murray**, harbor master, Quebec, Que., was one of the victims of the disastrous explosion at Halifax, N.S., Dec. 6, being there on special duty in connection with shipping affairs. Prior to his appointment as harbor master at Quebec, he was in C.P.R. service for many years, and for some time prior to her loss, was master of the company's s.s. *Empress of Ireland*. He was Lieutenant-Commander of the Royal Canadian Naval Volunteer Reserves, and also a Lieutenant, R.N.R.

**T. G. Mitchell**, one of Lloyd's surveyors at Vancouver, B.C., died there, suddenly, Dec. 8. He had lived in British Columbia for several years, going there about 35 years ago as chief engineer of the s.s. *Amelia*, owned by the People's Navigation Co., transferring to a similar position on the s.s. *Premier*, now s.s. *Charmer*. He was for some time in C.P.R. service on the B. C. coast vessels, and in 1902 superintended the construction of the s.s. *Princess Victoria* in Great Britain for the company. On his return to Canada he was appointed Lloyd's surveyor, which position he held until his death. Since the outbreak of war, he has also

acted as superintendent of construction under Lloyd's, for steel vessels under construction in the province for the British Government.

### Atlantic and Pacific Ocean Marine.

The Norwegian s.s. *Kristianiafjord*, which was wrecked off Cape Race a few months ago, is reported to have been completely broken up during a severe storm on Nov. 29.

The Nova Scotia schooner *Maple Leaf*, 251 tons, is reported to have been lost at sea. The captain and crew were rescued by a Russian schooner and transferred to a British vessel.

The Royal Mail Steam Packet Co. has denied the report that it intended abandoning the call at St. John N.B., with its vessels on the West Indies route. The s.s. *Caraquet*, which stranded at Trinidad recently, is being overhauled, and as soon as she is ready for service she will again be placed on the St. John route.

The France and Canada Steamship Co. during 1917 purchased fourteen U.S. schooners for general service. These are of various types, four, five and six masted, and have a total deadweight capacity of about 50,000 tons. The name and tonnage of each are as follows: *Camilla May* Page, 1,035 tons; *Carl F. Cressy*, 1,347; *Cora F. Cressy*, 3,748; *Dorothy Palmer*, 4,079; *Edward J. Lawrence*, 5,025; *Evelyn W. Hinkly*, 1,047; *Governor Brooks*, 3,942; *Jane Palmer*, 4,707; *Malcolm Baxter, Jr.*, 2,598; *Martha P. Small*, 3,267; *Oakley C. Curtiss*, 3,561; *Ruth E. Merrill*, 4,504; *Singleton Palmer*, 4,288; *Wyoming*, 5,950.

### Maritime Provinces and Newfoundland.

The ferry superintendent at St. John, N.B., stated to the city council, Dec. 4, that it cost \$27,000 more than the receipts, to operate the St. John ferry, during 1917.

The U.S. Government is reported to have purchased three of the Eastern Steamship Corporation's steamships for \$4,725,000, and in addition, to have chartered two others.

The operation of lights and fog alarms in the Bay of Fundy, on the south coast of New Brunswick, each of Quaco Head, will be discontinued from about Jan. 10 to about April 1, in each year, without any special notice being given.

The Russian s.s. *Edininie*, formerly the steam yacht *Cyprus*, which was damaged by an explosion recently, was sold by tender during December, as she lies at Sydney, N.S. Her dimensions are, length 262 ft., beam 28 ft., depth 27 ft., draft 12.14 ft., 1,600 gross tons. She is equipped with engine of 3000 h.p. driving twin screws.

Canada Steamship Lines, Ltd., has entered action in the Admiralty Court, Hali-tered action in the Admiralty Court, Halifax, N.S., claiming \$200,000 for salvage and damages against the s.s. *Northern King*. The claim covers damage incurred in collision and salvage services rendered to the vessel in Halifax harbor, Dec. 7, following the disastrous explosion of a munitions vessel there. The *Northern King* is one of the steamships owned by the Great Lakes Transit Co., which was cut in two recently for passage through the Welland Canal, for ocean service.

The s.s. *Tuscarora* was reported, Dec. 26, to have been wrecked and lost, near

Cape Breton Island, N.S. She was built at Cleveland, Ohio, in 1890, was owned by the Lehigh Valley Transportation Co., and was one of a number of U. S. lake vessels to be cut in two for passage through the Welland Canal for ocean service. Her dimensions were, length 291 ft., breadth 40 ft., depth 22 ft.; tonnage, 2,386 gross, 1,679 register, and she was equipped with triple expansion engines with cylinders 24, 38 and 61 ins. diam. by 42 ins. stroke, 1,500 i.h.p. at 85 r.p.m.

### Province of Quebec Marine.

While proceeding from Montreal to Quebec, Dec. 3, a small drifter vessel was caught in the ice and jammed close to shore under the Quebec bridge on the Quebec side. It was feared that the vessel would be crushed. The five or six of the crew were removed from the vessel by a cage lowered from the bridge, to which they were hoisted safely. The vessel was cleared from the ice later in the day.

### Ontario and the Great Lakes.

The Montreal, Ottawa and Georgian Bay Canal Co. will apply at the next parliamentary session for an extension of time for commencing and completing the construction of canals as authorized by its act of incorporation, and for other purposes.

The U. S. Lake Survey reports the levels of the Great Lakes in feet above mean sea level for November, as follows: Superior, 602.46; Michigan and Huron, 581.16; St. Clair, 575.76; Erie, 572.97; Ontario 246.6. Compared with the average November levels for the past ten years, Superior 0.05 ft. below; Michigan and Huron 1.02 ft. above; Erie 1.26 ft. above, and Ontario 1.17 ft. above.

The United States Engineer Office has issued a notice to vessel masters, requiring that when vessels anchor in channels connecting the Great Lakes, they shall select for such anchorage deep water as near the bank as possible, leaving the largest practicable clear channel for the passage of other vessels. In no case shall they lie so as to endanger through traffic. This has special reference to anchorage near the head of St. Clair River, near Port Huron, Mich.

### British Columbia and Pacific Coast.

The Alaska Steamship Co.'s s.s. Mariposa, which was wrecked on Strait Island, about 50 miles west of Wrangell, Alaska, late in November, has been broken up during the severe weather experienced along the coast. Attempts at salvaging the vessel, which had a valuable cargo of gold and copper, have been abandoned.

The Grand Trunk Pacific Coast Steamship Co. will, according to press reports, keep its vessels on the northern route in service throughout the winter, on account of heavy traffic to Prince Rupert and Alaska ports. The s.s. Prince George was to be docked at Prince Rupert for a general overhaul at the end of December, and she will replace the s.s. Prince Rupert about the end of January, which in turn will be overhauled, also at Prince Rupert.

Canada West Coast Navigation Co.'s auxiliary powered schooner Margaret Haney, which sailed from Vancouver, May 1, 1917, for Bombay, with lumber,

completed the voyage in 85 days, on which arrangements were made with the owning company that she be retained for service in Indian waters. Recent advices state that on her maiden voyage, when approaching Bombay, she ran on a mud shoal, and after being released ran over a submerged rock and tore away part of her keel and rudder. Repairs were made at Bombay.

The car ferry for the Canadian Northern Ry.'s service between the Fraser River and Patricia Bay, Vancouver Island, which is under construction by the Davie Shipbuilding and Repair Co., Levis, Que., is expected to be completed and ready for operation in the spring. She has been designed with a capacity of 20 cars. The following are the chief dimensions: Length over all 308 ft., breadth 52 ft., depth 20½ ft.; tonnage approximate gross 5,000; net 3,000. Capacity no. 1 hold, 40,000 cub. ft., no. 2 hold 30,000 cub. ft., area of main deck 13,000 sq. ft. She will be equipped with four cylinder, triple expansion engines 2,200 i.h.p., supplied with steam by four Scotch boilers each 11½ ft. diam., at 175 lbs. working pressure.

The C.P.R. British Columbia Coast Service schedule is reported as being arranged for the winter. It is stated that the s.s. Princess Royal, which has been thoroughly overhauled, will be placed on the route from Vancouver to Prince Rupert, calling at way ports, including Rivers Inlet and Ocean Falls, replacing the steamships Princess Beatrice and Princess May, which have been dividing service on that route. Both of the latter vessels will, it is said, be laid up for two months for overhaul, after almost a year in continuous service. The s.s. Princess Victoria has been withdrawn from the triangular route, for her annual overhaul, and the service on that route will be continued by the steamships Princess Adelaide and Princess Charlotte. The night service between Victoria and Vancouver will, it is reported, be undertaken by the steamships Princess Beatrice and Princess Mary.

**Licensing Shipments for the Allies.**—An order has been issued that, provided shippers secure an export license from the Food Controller's office at Ottawa, shipments via U.S. ports may be sent forward without license from the War Trade Board at Washington, if consigned to Great Britain, France or Italy and their possessions and protectorates. Shippers must continue to use the U.S. customs carriers' manifest, but in duplicate instead of one copy only as heretofore, so that the U.S. collector of customs may send one copy to the War Board of Trade at Washington.

Imperial Oil Ltd. has been incorporated under the Dominion Companies Act, with \$50,000,000 and office at Toronto, to take over the business in Canada and Newfoundland, hitherto carried on by the Imperial Oil Co. Ltd. The Imperial Oil Co. has added considerably to its steamship, dock and other transportation facilities recently, five steel tank steamships having been built by the Collingwood Shipbuilding Co.

The Ogdensburg Coal and Towing Co., Dominion Companies Act, with \$1,500,000 Ltd., has been incorporated under the capital and office at Montreal, to carry on a general coal, timber and merchandise business, and to own and operate steam and other vessels for the transportation of passengers and freight throughout Canada and elsewhere.

## The Halifax Steamship Collision and Explosion.

The terrible catastrophe at Halifax, N.S., on Dec. 6, has been dealt with at great length in the daily papers, but most of the matter published has been of a very fragmentary nature. The main facts are that on Dec. 6, the Cie Generale Transatlantique s.s. Mont Blanc, with explosives, inward bound for convoy, from New York, and the Norwegian s.s. Imo, outward bound with grain for Belgian relief purposes, collided in the mouth of the Narrows near Bedford Basin, Halifax harbor, causing a tremendous explosion, doing immense damage both on land and water, and causing the death of approximately 1,500 persons and injury to several thousands. The damage has been so great, that it has been practically impossible to obtain any reliable figures as to losses, either of lives or property, and so far as the loss of life is concerned, it may be taken for granted that the exact total of deaths will not be ascertained at any time. Various estimates have been made as to the cost of replacement of buildings and other property, these generally being in the neighborhood of \$40,000,000.

The s.s. Mont Blanc was a single screw steamship of 3,121 tons gross, 320 ft. long, 44 ft. beam and 15¼ ft. deep, and was built at Middlesbrough, Eng., in 1899. The s.s. Imo was built at Belfast, Ireland, in 1881, and was formerly the s.s. Runic, and owned by the White Star Line, being purchased a few years ago by the Southern Pacific Whaling Co., of Christiania, Norway. Her dimensions are, length 430 ft., beam 45 ft. 2 ins., depth 30¼ ft., tonnage 5,043 gross.

The s.s. Mont Blanc, A. Lamadoc, master, sailed from New York, with a cargo of gun cotton, benzol and t.n.t., under orders to proceed to Halifax to await convoy, and was being taken into Bedford Basin, under charge of a local pilot, Frank Mackay. The s.s. Imo left New York about Nov. 28 and was ordered to Halifax for examination, etc., and was outward bound in charge of pilot Wm. Hayes, who was killed by the explosion.

Apparently owing to mistaken signals, or from other causes, which are being enquired into, the vessels collided near pier 8, the Imo piercing the Mont Blanc and setting fire to the benzol cargo on deck. When it became clear that an explosion was inevitable, the machinery was stopped and the vessel abandoned by the crew. There was, however, a certain amount of way on the vessel, and she headed for pier 8 close to which the explosion occurred. The Imo was eventually beached on the Dartmouth shore.

An official enquiry was opened at Halifax, Dec. 13, before Justice Drysdale, Judge in Admiralty, with Capt. L. A. Demers, Dominion Wreck Commissioner, and Capt. Hawes, R.N., as nautical assessors. At the time of writing, Dec. 29, the enquiry is still proceeding, so that the matter will be more fully dealt with when judgment has been pronounced.

When the s.s. Imo started out on her voyage, which has ended so disastrously, she had just left a repair yard in Philadelphia, and was on her way down the river, when she was libelled by those undertaking the repairs, and was only overtaken by the use of a fast tug boat. She was eventually released on depositing a bond for \$11,000 pending settlement of the claims against her.

Particulars of the damage to the Canadian Government Railways property are given on another page of this issue.

## The White Pass and Yukon Railway's Navigation Operations.

The White Pass & Yukon Ry.'s report for the year ended June 30, 1917, which was presented at the annual meeting in London, Eng., on Dec. 17, embraced the accounts, etc., of the local companies forming the White Pass & Yukon Route for the year ended Dec. 31, 1916. Following are extracts from President F. C. Elliott's report on the River Division for 1916:—

Through navigation to Dawson was opened on the river at White Horse with the sailing of the *Casca* on June 5, and closed with the arrival of the *Dawson* and *Nasutlin* on Oct. 23. Through navigation to points below Dawson opened with the sailing of the *Yukon* from White Horse for Fairbanks on June 6, and closed with the sailing of the *Alaska* from Nenana Oct. 5 for White Horse, which she reached on Oct. 19.

In addition to the usual amount of work done on the boats to put them in proper condition for service, we constructed permanent ways at Atlin, for the purpose of hauling out and wintering the steamboat *Scotia* and the barge *Atlin*. Experience has shown the indavisiability and danger of wintering our steamboats in the water at Dawson. Hence the ways at Dawson were put in condition to receive barges, and arrangements were made with the Northern Light, Power & Coal Co. to secure the use of its ways, which were put in condition to receive steamboats.

The operating expenses of the River Division, between White Horse and Dawson, and Carcross and Atlin, show an increase of \$47,551.74. The principal items of increase are: Boat maintenance, \$32,373.87; boat service, \$2,563; boat supplies, \$5,652.46; longshoring, \$4,087.07.

The increase in maintenance account is due to extensive repairs to steamboats, *Dawson*, *Canada*, *Nasutlin* and *Gleaner*, and the repair work on the different shipyard plants. During last year there was a considerable increase in the cost of repair material, the material used in the White Horse shipyard last season costing approximately \$10,000 more than it would have cost in the previous season. The increase in boat service account is due to boats remaining in commission longer, also to the necessity of importing men to take the places of strikers. We had to pay the transportation of these men from the coast to White Horse and return. Boat supplies increase is due to cost of additional lifesaving equipment placed on all boats in accordance with the Canadian Government requirements, extra number of passengers carried, and increased cost of food stuffs and other commodities. The food supplies issued from the White Horse store cost approximately \$3,000 more than they would have cost in the previous season. Longshore increase is due to extra tonnage handled and also to strikes and labor disturbances at White Horse.

We were handicapped all season on account of shortage of good deck hands and firemen between White Horse and Dawson, as many of our regular men had gone to the front. We also experienced considerable trouble and delay through strikes of longshoremen and crews, but only once were we nearly at a standstill, namely, when the *Dawson* was without a crew at the time she was due to sail from White Horse. However, this difficulty was

overcome by a volunteer crew, consisting of our Superintendent Engineer and our Fuel Agent, who worked as firemen, and a number of citizens of White Horse, who acted as deck hands. While these troubles did not stop the movement of freight, they contributed to the increased cost of handling, especially the item of longshoring.

The tourist traffic during 1916 assumed proportions making it worthy of special note. The total revenue amounted to approximately \$102,000, which is about double that of 1915, and the latter up to that time was the best tourist year we had had. To meet this increased tourist business we purchased two second hand cars to be converted into parlor cars, thus giving us four parlor cars, and various changes were made in the accommodation on the steamboats *Gleaner*, *White Horse* and *Casca*. At Lake Atlin we were confronted with the utterly inadequate facilities for the accommodation of tourists. Consequently, we proceeded to construct a hotel. The plans were designed, materials purchased and shipped north, but owing to the late opening of navigation and low water, the ground was not broken for the hotel until June 10. However, it was completed ready for guests on July 15. The hotel and its management have been commended by everyone, and some have stayed longer than planned, and have declared their intention of returning for a whole summer's sojourn.

The car ferry steamship *Leonard*, which has been operated between the Quebec and Lewis shores of the St. Lawrence River, since Sept. 1914, awaiting the completion of the Quebec Bridge, has been removed from that route, as it is no longer required there. The disposition of the vessel is under consideration by the Railways Department, and some reports state that it is probable she will be placed in operation on the Strait of Canso. She was built at Birkenhead, Eng., in 1914, her dimensions being, length 326 ft., beam 55 ft., mean draft 15 ft. Trains are carried on a tidal deck above the main deck on three tracks each 272 ft. long. The tidal deck rests on gunmetal nuts, working up and down on 10 vertical lifting screws on each side, supported on columns, and the lifting gear is arranged to lift the tidal deck at the rate of 1 ft. a minute when fully loaded, to a height of 18 ft., thus allowing trains to run on at any stage of the tide. There was considerable delay in the building of the vessel, and it was feared that the outbreak of war would prevent her from crossing the ocean, but though she did not leave England until after, she arrived on this side safely, Aug. 18, 1914, crossing under her own steam without incident.

Tide tables and information on currents for the eastern coasts of Canada including the river and gulf of St. Lawrence, the Atlantic Coast, the Bay of Fundy, and Northumberland and Cabot Straits, and for the Pacific Coast of Canada, including Fuca and Georgia Straits and the northern coasts, with data for slack water in the navigable passes and narrows, have been issued in two separate books by the Naval Service Departments tidal and current survey and will be mailed free on request to the department.

## Wreck Commissioner's Investigations and Judgments.

### Striking of S.S. Scandinavian.

An investigation was concluded at Montreal, Dec. 1, into the striking of a submerged obstacle by Canadian Pacific Ocean Services' s.s. *Scandinavian*, in the St. Lawrence River, Nov. 17. The court consisted of Capt. L. A. Demers, Dominion Wreck Commissioner, and Capt. F. Nash and C. Lapierre, nautical assessors. After hearing the evidence, which the court considered as of the greatest importance as regards the reputation of Canada's fairway from Quebec to Montreal the pilot, master and officers of the vessel were exonerated from all blame for the casualty. The evidence showed that there was a depth of 30 or 31 ft. of water in the channel, and that the vessel was drawing 24 ft. 8 ins. aft. The anchors mooring the buoys are of the stockless type, 3 to 4 ft. high from the bottom. The Superintending Engineer of the Ship Channel stated that he gave instructions to sweep the place or part of the river between buoys 90Q and 92Q, where the vessel is stated to have struck. The sweeper detector was laid up, but a scow with roller appliance was sent on, under the supervision of two engineers, and in tow of the tug *Frontenac*. When they arrived at the spot it was found that owing to the fracture of a part of the machinery no work could be performed. Another scow was requisitioned and the first dragging was made just one week after the casualty, and continued for two days until the scow sprang a leak. Some doubt was created as to the effectiveness of the endeavor to sweep the channel, and it was admitted that owing to the ice causing the scow to leak, the staff had to return without completing the work with the thoroughness the occasion demanded. The court commented on the unreliable and unsatisfactory manner in which, according to the evidence, the sweeping was done, and considered it elementary for shipping men, owners, agents and underwriters, to trust that throughout the season, up to the time the last vessel had left the St. Lawrence, immediate help would be at hand. The attempt to assure the public that the channel was clear, or not clear, was not conclusive. An evidence of real effective effort to sweep the channel from bank to bank, would have gone far toward helping the court to arrive at a solution of the case and to offset the evil consequences of a report to Lloyd's, and broadcast, to the effect that a boulder was struck in the ship channel late in the season, practically at the close, with a dozen or more vessels still to pass. In conclusion, the court stated that the evidence was there, and in the face of it, it could not arrive at any other decision than to accept the preponderance of the testimony of the Scandinavian officers, and exonerate them from all blame, and to add that the nature of the obstacle which caused the damage to the hull had not been revealed nor ascertained.

Canadian Marine and Commercial Co., Ltd., has been incorporated under the Dominion Companies Act, with \$500,000 authorized capital and office at Montreal, to carry on business as steamship agents, ship brokers and forwarders, and agents for placing and procuring marine insurance, etc., also to design, build, own and operate steam and other vessels, wharves, docks and other transportation facilities.

### Launch of the s.s. Porsanger at Montreal.

A steel freight steamship was launched by Canadian Vickers, Ltd., at Montreal, Nov. 29, and was christened Porsanger, by Mrs. W. H. Lynch, wife of the company's Managing Director. The vessel was launched stern on, instead of the sideway launch customary in Canadian waters. She has been built under Government permit for Norwegian owners, and classed 100 A1 at Lloyd's and Det Norske Veritas. Her dimensions are, length over all 394½ ft., breadth extreme 49¼ ft., depth moulded 30 ft.; dead-weight tonnage 7,000; gross tonnage, 1,670; load draft, 24 ft. The hull is fitted with double bottom fore and aft, subdivided into 14 separate water tight compartments, with total water ballast capacity of 1,630 tons. The officers' accommodation is in deck houses in the bridge, and the crew are berthed in the poop deck in separate two-berth rooms. All

### United States Government Shipbuilding, Etc.

The following table shows the vessels under contract and pending contract, and vessels which had been requisitioned by the Emergency Fleet Corporation, U. S. Shipping Board, up to Nov. 30.

Type of vessels.	No of vessels	Total deadweight capacity
Wood .....	375	1,330,900
Composite .....	58	207,000
Steel .....	451	3,186,400
Total contracted for .....	884	4,724,300
Contracts pending .....	99	610,090
Total .....	983	5,334,390
Total requisitioned (all types)*..	426	3,029,508
Grand total .....	1,409	8,363,898

\* This total includes requisitioned vessels completed and released—33 vessels; 257,575 tons, that is requisitioned vessels completed, accepted by the corporation and turned over to the U.S. Shipping Board for operation; requisitioned vessels completed and accepted, but later reconveyed to former owners prior to completion and acceptance by the corporation.

Chairman Hurley, of the U. S. Shipping

### Loss of the Dominion Government s.s. Simcoe.

The Dominion Government s.s. Simcoe, which sailed from Quebec about the beginning of November, to remove buoys from the lower St. Lawrence, was lost with the entire crew, about Dec. 6., during a severe storm. A wireless message was received from Fame Point, Dec. 5, that the vessel was in distress and sinking, after which no further message was received. Early on Dec. 5, a message had been received that she had called at Bird Rock, Magdalen Islands, and as she had completed her buoy work in that neighborhood, was bound for Prince Edward Island.

She was built at Newcastle upon Tyne, Eng., in 1909, and was designed and built specially for lighthouse and buoy work. She was classed 100 A1 at Lloyd's for Canadian lake service, and was constructed with water ballast and double bottom fore and aft, and was capable of being navigated through solid ice 12 in. thick. The hull was designed with straight stem and elliptical stern, with seven water tight bulkheads, and two steel masts, the forward one carrying heavy derrick and gear for buoy service, capable of lifting 27 tons. She carried, when built, a steam launch, 2 surf boats and 2 dinghys.

Launching of s.s. Porsanger at Montreal, Nov. 29, 1917.

accommodation is large and roomy and well ventilated and lighted. The vessel is provided throughout with Chadburn's ship telegraphs, manufactured by Taylor and Arnold, Ltd., Montreal. The propelling machinery consists of triple expansion engines, 2 main boilers and large donkey boiler. There are 5 large cargo hatches, 11 steam winches, powerful steam windlass, steam and hand steering gear, 2 steel masts, the topmasts being made telescopic to suit bridges across the Manchester (Eng.) ship canal. It is stated that the work of equipping the hull will not be proceeded with during the winter, owing to the difficulty of working in the open, but it is expected that the vessel will be ready for service by May.

In launching vessels in Great Britain, there is a custom of presenting the sponsor with some article of personal jewelry, but the lady who acted in the present case, did so on the understanding that this would be a donation for the Y.M.C.A. Hut Fund (France), which was made \$750.

Board, in testifying before the Senate investigating committee in Washington, Dec. 1, read a statement showing among other things, 1,427 ships of 8,573,108 deadweight tons under construction, and contract; 74 new shipyards established in the U. S. since Jan. 1, 1917; 149,270 workmen on merchant ships on Dec. 8, an increase of 45.2% in nine weeks.

Chas. Piez, of Chicago, has been appointed General Manager, Emergency Fleet Corporation, U. S. Shipping Board, succeeding Rear Admiral A. R. Harris, who resigned after having only occupied the position a few weeks in succession to Rear Admiral W. A. Capps. Naval Constructor, U.S.N., who resigned on account of ill health. J. O. Heyworth, M.Am.Can.Soc.C.E., general contractor, Chicago, and President of the International Transit Co., of Salt Lake City, Ont., has been appointed in full charge of wooden steamship building and Chas. Day has been appointed Manager of the Production Department.

The s.s. Turbinia, owned by Canada Steamship Lines, Ltd., is reported to have been sold to French interests for salt water navigation, for \$300,000. She was built at Newcastle upon Tyne, Eng., in 1904 and is stated to have cost \$220,000. She was the first steamer of the turbine type to be operated on the Canadian lakes, also the last. The operation of turbine driven steamships on the Great Lakes cannot be a success, as the benefits of the use of the turbine are apparent only in cases of high speed and long distances. By operating turbines at the low speeds necessary for safe navigation on the lakes, and on the comparatively short distances run, there is a large waste of fuel, and useless wear and tear. It has been proved that, up to the present at any rate, for general lake navigation, with its attendant manoeuvring in and out of harbors, and for canal traffic the reciprocating engine is the best. The Turbinia, since arriving on the lakes, has passed through several hands, and for some time, was operated in the West Indies service under charter. As a financial venture on the lakes, she was not a success.

The Lake Carriers' Association, acting on the approval of members holding 85% of the tonnage represented in the association, has voted for the mobilization of the Great Lakes steamships next season, for its operation under a single management, on a similar plan to that already adopted by the railways. A committee of management has been selected, consisting of H. Coulby, President, Pittsburg Steamship Co., Cleveland; J. S. Ashley, Manager, Hanna & Co., Cleveland; H. S. Wilkinson, Manager, Great Lakes Steamship Co., Syracuse; C. D. Dyer, Vice President, Shenango Steamship Co., Pittsburg, and C. L. Hutchinson, Manager, Pioneer Steamship Co., Cleveland.

The Coastwise Steamship and Barge Co. has purchased the four masted schooner Coquitlam City, which has been converted into a barge. She was the first vessel to be built by the Coquitlam Shipbuilding and Marine Railway Co., at Coquitlam in 1913.

## Steamship Building in Canada for British Government and for Norwegian Orders.

Canadian Railway and Marine World has been favored with the following official information as to orders for steamships to be built in Canada placed by the Imperial Munitions Board at Ottawa for the British Government.

Up to Dec. 3, 1917, the Board has ordered 44 steel steamships, of which 4 had been delivered. The individual carrying capacity of these vessels is from 1,800 tons to 8,800 tons d.w. each. The total carrying capacity of the 44 is 213,000 tons.

The total number of wooden steamships ordered by the board up to Dec. 3, 1917, was 46, of which 27 are being built in British Columbia, and 19 in Eastern Canada. The individual carrying capacity of these wooden steamships is 2,500 tons d.w. each. The total carrying capacity of 46 is 115,000 tons.

The total number of steamships of all classes ordered by the board is 90, and the grand total carrying capacity of all steamships ordered is 328,600 tons.

The steel steamships are being built at New Glasgow, N.S.; Montreal, Que.; Toronto, Welland, Midland, Collingwood and Port Arthur, Ont.; Vancouver and North Vancouver, B.C.

The wooden steamships are being built at Liverpool, N.S.; St. John, N.B.; Isle of Orleans, Quebec, Three Rivers and Cote St. Paul (Montreal), Que.; Toronto, and Fort William, Ont.; Coquitlam, New Westminster, Vancouver North Vancouver and Victoria, B.C.

In addition to the above mentioned steamships ordered by the Imperial Munitions Board, 22 steel steamships, of 3,500 ton d.w. capacity each, have been ordered by outside companies for Norwegian account, with a total tonnage of 77,000 tons, which, in addition to the 328,600 tons ordered by the board, makes a grand total under contract in Canada of 405,600 tons. The money value of this total tonnage exceeds \$80,000,000.

A full description and plans of the hulls of the standard wooden steamships are given on another page of this issue.

**Water Transport for United States Mails:**—The U. S. Post Office Department has established coastwise parcel post water routes, primarily to facilitate service for the various army cantonments, which will operate to relieve the war time railway congestion and expedite service for the general public. In the present congested condition of transportation, practically as prompt service is to be obtained by water routes to certain points as by rail, and the railways may by that means be considerably relieved. Steamship routes for parcel post have been established from Boston to Norfolk, and Savannah; New York to Norfolk, Charleston, Jacksonville, Savannah, New Orleans and Galveston; Philadelphia to Savannah and Jacksonville, Baltimore to Savannah and Jacksonville.

Improvement in sea transportation was discussed at the London, Eng., Chamber of Commerce, Dec. 5, when Lord Dabernon emphasized the need of bigger ships of great speed after the war. He suggested the government should start the provision of big harbors. About \$20,000,000 would provide for vessels of 38 ft. draft at practically all the leading harbors from Great Britain to the furthest dominions.

## Shipbuilding in the United Kingdom.

Recent statements in the British House of Commons show that the number and gross tonnage of vessels built in the United Kingdom for British firms during the years from 1913 to, and including, the first half of 1917, are as follows: 1913, 678 vessels, 1,406,415 tons; 1914, 682 vessels, 1,326,589 tons; 1915, 377 vessels, 76,530 tons; 1916, 312 vessels, 527,824 tons; 1917 (6 months), 211 vessels, 629,850 tons.

Up to Oct. 25, 1917, five of the standardized type of steamships had been put into service, and one had been lost. It was expected that 18 more of these vessels would be in service between Oct. 25 and Dec. 31. On the former date there were 1,000,000 tons of this type of vessel under construction in the United Kingdom.

Three new national shipyards are under construction on the Severn River, and it is expected that the first keels will be laid there early this year, and that the vessels so built will be more highly stan-

dardized than any attempted hitherto. A great deal of the steel work will be done in bridge yards, and a considerable part of the labor will be performed by prisoners of war and unskilled help. These yards will provide 34 shipbuilding berths and the approximate cost will be £3,887,000.

The First Lord of the Admiralty stated recently that in 1913, Great Britain launched 2,282,000 tons of shipping of which 1,920,000 tons was merchant shipping. This was the highest output in any one year, and, he continued, if the output for December was as good as that in November, the tonnage launched in 1917 would reach that of 1913.

Regarding the salvaging and repairing of torpedoed vessels, it was announced that since June, only three vessels torpedoed in home waters had been abandoned, and there was only one which it had been decided not to repair for the present. In June, 27% of the total salvaged tonnage was under repair, and early in December, 80% were being put into condition for further service. Since August repairs in dry docks had increased 48%, and repairs afloat 45%.

## Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during December, 1917.

ARTICLES.	Eastbound		Total.
	Can. Canal.	U.S. Canal.	
Flour . . . . .	116,800	763,890	880,690

The Canadian canal was opened April 25 and closed Dec. 17, 1917, season 237 days.

The U.S. canal was opened April 24 and closed Dec. 17, 1917, season 238 days.

## Proposed New Ferry Service for Detroit River.

The Windsor, Ont., City Council Dec. 14 consented to the granting of a patent for a water lot at the foot of Brock St., to be used as a landing for a new ferry line between Windsor and Detroit. The application was made by C. Miller, Barrister, of Toronto, on behalf of a syndicate said to be working in connection with the G.T.R. The application was granted with the stipulation that the property be used only for an international ferry, and when it ceases to be used for that purpose it is to be conveyed to the City of Windsor. If the syndicate fails to carry out its plans within two years the water lot is to be handed over to the city. There is a protective clause that the city is to take possession if any attempt be made to transfer the rights to the Detroit and Windsor Ferry Co. It was stated that the syndicate intends to expend from \$500,000 to \$1,000,000 in the erection of buildings, and in providing double ended ferry boats, but there is no definite information in this connection.

## Telegraph, Telephone and Cable Matters.

C. A. Radford has been appointed chief operator, Grand Trunk Pacific Telegraph Co., Edmonton, Alta.

A Vogel has been appointed city manager, Grand Trunk Pacific Telegraph Co., Calgary, Alta., vice G. Moore, resigned.

The British Columbia Telephone Co. is laying submarine telephone cables in False Creek across the draw span of the Connaught bridge, Vancouver.

J. Stevens has been appointed acting city manager, Grand Trunk Pacific Telegraph Co., Saskatoon, Sask., vice J. E. Grace, transferred to Winnipeg.

J. E. Grace, heretofore city manager, Grand Trunk Pacific Telegraph Co., Saskatoon, Sask., has been appointed city manager, Winnipeg, vice R. M. Hicks resigned.

E. E. Hiscock, heretofore electrical inspector, Grand Trunk Pacific Telegraph Co., has been appointed Electrical Engineer, Central Division, Winnipeg, reporting to the Division Superintendent.

The Great North Western Telegraph Co. has opened offices at Alderdale, Ont., Galahad, Heislors and Lyalto, Alta., and has closed its offices at St. Ulric, Riviere Blanche, Que., and Beaumaris and Mowat, Ont.

J. O. Pilon has been appointed city manager, Grand Trunk Pacific Telegraph Co., Edmonton, Alta., vice R. M. MacMillan, whose appointment as Division Superintendent at Winnipeg, was announced in our last issue.

The Western Union Telegraph Co.'s property along the Great Northern Ry. right of way between St. Paul, Minn., and Seattle, Wash., is reported to have been taken over by the G.N.R., thus cancelling the operating contract between the companies. The property is valued at about \$2,000,000.

Robert MacDonald MacMillan, whose appointment as Division Superintendent, Grand Trunk Pacific Ry. Telegraphs, Winnipeg, was announced in our last issue, was born at Cape George, N.S., Oct. 17, 1887, and entered telegraph service in Mar. 1904 since when he has been to May, 1906, messenger and clerk; May,

1906 to Apr. 1907 operator; Apr. 1907 to June 1910, city manager, Western Union Telegraph Co., Sydney, N.S.; June 1910 to Sept. 1911, assistant manager, same company, Halifax, N.S.; Sept. 1911 to Aug. 1912, operator, C.P.R. Telegraphs, Winnipeg; Aug. 1912 to Jan. 1913, night manager, Grand Trunk Pacific Ry. Telegraphs, Winnipeg; Jan. 1913 to Mar. 1914, city manager, same company, Regina, Sask.; Mar. to Nov. 1914, city manager, same company, Calgary, Alta.; Nov. 1914 to Nov. 1917, city manager, same company, Edmonton, Alta.

## Among the Express Companies.

The Canadian Ex. Co. has opened offices at Gray, Estlin and Quinton, Sask., and Skagway, Alaska.

The Dominion Ex. Co. has opened offices at Clarenceville, Henryville, Noyan Jct., and Sabrevois, Que.

H. E. Race, heretofore correspondent, Canadian Northern Ex. Co., Winnipeg, has been appointed agent at Humboldt, Sask., vice W. R. Russell, transferred.

The Board of Railway Commissioners have approved a Northern Ex. Co.'s by-law authorizing E. W. Bennett, Traffic Superintendent, St. Paul, Minn., to file tariffs for the company in Canada. The Northern Pacific Ry. Commences operating jointly with the Great Northern Ry. over the line between Sumas, Wash., and Vancouver, B.C., and the Northern and Great Northern Ex. Co.'s will also be operated over the same territory, in connection therewith.

The Interstate Commerce Commission held a hearing, Dec. 7, on the application of express companies to file tariffs providing for increased express rates on all classes of express matter, of 10%, between all points in the U.S. and between points in the U.S. and points in adjacent countries. Amongst the companies associated with the application are, the Dominion, Canadian and Canadian Northern Ex. Cos., the Halifax and South Western Ry. Express Department, and the Newfoundland Ex. Co.

The Malahat Motor-Ship Co., Ltd., and The Ship Esquimalt Co., Ltd., which were incorporated during 1917, under the British Columbia Companies Act, with offices at Vancouver, are being wound up voluntarily, with Knox Walkem, Vancouver, as liquidator. The companies were subsidiaries of H. W. Brown & Co., Ltd., with H. W. Brown, General Manager, Canada West Coast Navigation Co., Ltd., as Managing Director. The companies owned the auxiliary powered schooners Malahat and Esquimalt, respectively, which, on completion, were placed under the management of Canada West Coast Navigation Co., Ltd. The latter vessel has since been reported as sold to French interests.

The International Mercantile Marine Co. has declared a cash dividend of \$10 a share on the preferred stock, against an accumulated dividend of 82%. It is announced that the directors consider any plan for funding the accumulated dividends inexpedient for the present.

Commercial Acetylene Welding Co., Inc., has removed its Toronto office to 18 Toronto St.

Lyman Tube & Supply Co., Ltd.—R. Bruce Bennett has been appointed acting manager of the company's Toronto office, succeeding A. Lorne Flaws, who has received a commission as second lieutenant in the Royal Flying Corps.

## Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries unless otherwise stated:

Canadian Car Service Bureau—W. J. Collins, Manager, 401 St. Nicholas Building, Montreal.

Canadian Electric Railway Association—Acton Burrows, 70 Bond Street, Toronto.

Canadian Freight Association (Eastern lines)—G. C. Ransom, Canadian Express Building, Montreal.

Canadian Freight Association (Western lines)—W. E. Campbell, 805 Boyd Block, Winnipeg.

Canadian Railway Association for National Defence, W. M. Neal, General Secretary, 263 St. James St., Montreal.

Canadian Railway Club—J. Powell, St. Lambert, Que. Meetings at Montreal 2nd Tuesday, each month, 8.30 p.m., except June, July and August.

Dominion Marine Association—F. King, Counsel, Kingston, Ont.

Canadian Ticket Agents' Association—E. de la Hooke, London, Ont.

Canadian Society of Civil Engineers—F. S. Keith, 176 Mansfield St., Montreal.

Eastern Canadian Passenger Association—G. H. Webster, 54 Beaver Hall Hill, Montreal.

Engineers' Club of Montreal—R. W. H. Smith, 9 Beaver Hall Square, Montreal.

Engineers' Club of Toronto—R. B. Wolsey, 94 King Street West, Toronto.

Express Traffic Association of Canada—C. N. Ham, Montreal.

Great Lakes and St. Lawrence River Rate Committee—James Morrison, Montreal.

Hydro-Electric Railway Association of Ontario—T. J. Hannigan, Guelph, Ont.

International Water Lines Passenger Association—M. R. Nelson, New York.

Niagara Frontier Summer Rate Committee—James Morrison, Montreal.

Nova Scotia Society of Engineers—A. R. McCleave, Halifax, N.S.

Quebec Transportation Club—A. F. Dion, Quebec.

Shipping Federation of Canada—Thos. Robb, Manager, 42 St. Sacramento Street, Montreal.

Ship Masters' Association of Canada—Capt. E. Wells, 45 St. John Street, Halifax, N.S.

Toronto Transportation Club—W. A. Gray, 143 Yonge Street, Toronto.

Transportation Club of Vancouver—C. E. Blaney, 2337 Third Ave. West, Vancouver, B.C.

Twin Cities Local Freight Agents' Association—E. J. Travers, Fort William, Ont.

Winnipeg Traffic Club—James Gehrey, Bannatyne Avenue, Winnipeg, Man.

# Canadian Railway and Marine World

February, 1918.

## The Question of the Increase of Freight and Passenger Rates Before the Board of Railway Commissioners and the Dominion Government.

Canadian Railway and Marine World for January contained a summary of the judgment given by Sir Henry Drayton, Chief Commissioner, on Dec. 26, and concurred in by four other members of the board, authorizing certain increases in freight and passenger rates on steam railways. General order 213, to put the judgment into effect, was issued Dec. 26, as follows:

Re applications of Canadian Northern, Toronto, Hamilton & Buffalo, Grand Trunk, Grand Trunk Pacific, Canadian Pacific, New York Central, Kettle Valley, and Great Northern Railway companies and the Michigan Central and Pere Marquette Railroad companies, on behalf of themselves and other railway companies operating in Canada, subject to the Board's jurisdiction, for a recommendation to the Governor in council, under the War Measures Act, Statutes of Canada, 1914 (second sessions), chap. 2, permitting all such railway companies to make a general advance in their tariffs of tolls of 15% on all class and commodity freight rates, except coal, and on all passenger fares, and a specific increase of 15c a ton on coal. Upon hearing the matter at Victoria, Vancouver, Nelson, Calgary, Edmonton, Saskatoon, Regina, Winnipeg, Fort William, Toronto, and Montreal, on June 5, 6, 16, 18, 19, 20, 21, 22, 25, 12, and 20, 1917, respectively in the presence of counsel for and representatives of the Canadian Pacific, Grand Trunk, Grand Trunk Pacific, Canadian Northern, and New York Central Railway companies, the Michigan Central Co., the boards of trade of Vancouver, Nelson, Calgary, Edmonton, Saskatoon, Regina, Winnipeg, Toronto, Montreal, and Kitchener, the Canadian Manufacturers' Association, Kitchener Manufacturers' Association, British Columbia Lumber & Shingle Manufacturers, Rat Portage Lumber Co., The Adolph Lumber Co., Retail Coal Dealers, Retail Merchants' Association of Canada (Manitoba Branch), Canadian Credit Men's Association, Winnipeg Implement Association, Stone Dealers' Association, St. Catharines Fruit Growers' Association, Willow Point District Fruit Growers' Association, Kootenay Fruit Growers' Union, United Farmers of Ontario, Saskatchewan Grain Growers' Association, Dominion Livestock Record Board, Western Livestock Association, Canadian Council of Agriculture, Department of Public Highways for Ontario, the Council of Trail, City of Winnipeg, Government of Manitoba, Associated Boards of Trade of Eastern British Columbia, Dominion Cannery, and Price Bros., the evidence adduced, and what was alleged; and upon reading the written submissions filed, judgment, dated Dec. 26, 1917, was delivered by the Chief Commissioner and concurred in by the other members of the Board, a certified copy of the said judgment being attached hereto marked "A":

It is ordered that, subject to the provisions of the Crowsnest Pass agreement and to the provisions of the said judgment, the standard tariffs of maximum mileage tolls approved by the board to

be charged between stations on the individual steam railway systems subject to its jurisdiction, may, by new tariffs to be submitted for the board's approval, and publication in The Canada Gazette, as required by the Railway Act, secs. 327 and 331, and following such approval and publication made effective not earlier than Feb. 1, 1918, be increased as follows, viz.:

Standard passenger tariffs applying between stations on railways east of and including Thornton, Alta., and east of and between Edmonton and Athabasca and the Canadian Pacific Ry. lines between Edmonton and Macleod, through Calgary, where the existing standard toll is less than 3<sup>1</sup>/<sub>2</sub>c a mile, by 15%, subject to a maximum toll of 3 45 100c a mile.

Standard freight tariffs in Alberta, west of and including Cammore and Edson, and in British Columbia, excepting between ports of call on the Arrow, Slokan, Kootenay and Okanagan Lakes and the Columbia River, also the Edmonton, Dunvegan & British Columbia Ry. standard freight tariff, by 10%.

Standard freight tariffs of railways east of and including Crowsnest, B.C.; Cammore, Nordegg, and Edson, Alta., also those applying between ports of call on the Arrow, Slokan, Kootenay, and Okanagan Lakes and the Columbia River, by 15%.

And it is further ordered that, in the interest of uniformity, the only fractional rate (if used) in the said standard freight tariffs be the half-cent, to be accounted the equivalent, inclusively, of twenty-five hundredths to seventy-four hundredths of a cent.

### Appeals from the Board's Judgment, and Extension of Time on Grain Rates.

On Jan. 10 several applications were made to the Board of Railway Commissioners in connection with its judgment of Dec. 26. F. H. Chrysler, K.C., Ottawa, on behalf of the Manitoba Government and J. H. Ashdown, a Winnipeg shipper, obtained leave to appeal to the Supreme Court of Canada on questions of law arising out of the agreement between the Manitoba Government and the Canadian Northern Ry.

F. H. Phippen, K.C., General Counsel, Canadian Northern, obtained leave to appeal to the Supreme Court against the board's finding in connection with the Crowsnest agreement.

In granting leave for these appeals the board decided that the going into effect of the new tariffs should not be affected thereby.

Mr. Fowler, for the North West Grain Dealers Association, asked that the advanced rates on grain be not put into effect until June 1.

C. C. Baker, for the Winnipeg Wholesale Lumbermen's Committee, asked for delay in putting the new rates on lumber in force.

The Chief Commissioner, on Jan. 15, gave the following judgment, which was concurred in by the Assistant Chief Commissioner, the Deputy Chief Commissioner,

and Commissioners McLean and Goodieve.

"As a result of protests which were made by live stock shippers' associations, lumber shippers' associations, and grain shippers' associations, as well as the application of the Manitoba Government for leave to appeal from the judgment herein, a sitting of the Board was held at Ottawa on Jan. 10, 1918, to consider these protests. It was determined at the sitting to give leave to the Manitoba Government to appeal on the questions of law on which that government desired to appeal to the Supreme Court of Canada. The other protests referred to were not disposed of. The matter that the board considered in connection with these protests was the effective date which should be given to the board's judgment. No appearance was made by any live stock shippers' association, and no representations were, therefore, made on behalf of their interests. Dr. Magill and Frank Fowler appeared for the grain interests and Messrs. Kelly and Bacon for the lumbermen.

"I first deal with the lumber situation. At the hearing it was asked that the effective date should be postponed until April 1 next. Other representations have been made in writing, asking that the effective date of the tariffs should be made Mar. 1, Mar. 15, and April 1. There is no doubt that the desire of the trade to escape the higher rates is general.

"The application in this case was lodged in April, 1917. Sitzings of the board, at which the application for an increase of rates was heard, were held as far back as June 5, 1917, and the lumber interests were represented at these hearings. As far back as June 6 last, Mr. Mackin, Chairman of the British Columbia Lumber & Shingle Manufacturers' Association, said: 'We notice one of the railways has stated that it would like to have an emergency declared, and this rate made effective within 30 days. What would be our position with a great deal of business on our books at present sold on the basis of the old rate? Is it not reasonable we should be given sufficient time? We think 30 days is not enough within which to clean up that business.'

"He was asked the question: 'Are your contracts made in that day? In view of the present situation, the changed conditions, are you not making most of your contracts subject to that?'

"His reply was: 'We have for the last ten days been doing that. But most of the lumber is sold on the conditions I have named above.'

"Alex. Wood appeared at the same sitting for the Rat Portage Lumber Co. He thought that three months would be the least time within which orders filed could be got out. Mr. Adolph, of the Adolph Lumber Company, at the sitting held on June 16 in Nelson, B.C., showed according to his quotations, that he had 2,000 orders which would have to be delivered at the present rates, and that he had no right of cancellation. He also stated that he had to deliver his lumber within 30 days if

he could, but that under present conditions it would take two months to deliver it.

"On cross-examination by Mr. Peters on behalf of the railway companies, the record shows—

"MR. PETERS: Have you any lumber contracts taken which you accepted on condition that the rates remain the same as at present? Haven't you got orders now booked where you are protected in case of advance in freight rates?"

"MR. ADOLPH: Yes, as soon as we understood that there was an application."

"MR. PETERS: You did not mention that. I thought you were going to mention it. How long have you had orders like that?"

"MR. ADOLPH: Probably three weeks."

"MR. PETERS: Not longer than that?"

"MR. ADOLPH: I do not think so, and we have not a great many taken under those conditions."

"MR. PETERS: They are all taken that way now?"

"MR. ADOLPH: A man would be a very poor business man to take them any other way."

"What may be said of lumber may be said of every other commodity handled by the railways. The fullest publicity has been given the railways' application for increased rates. The shippers have had notice of it for upwards of eight months. They have certainly had as much notice as they would have had if the railway companies had gone to the unnecessary expense of filing every tariff before the question was considered by the board. Speaking generally, they have been in a position to protect themselves by taking orders at the point of production, subject to the cost of railway haul, whatever that might be. The only notice under the act that the railway companies are obliged to give is 30 days. Shippers, in the present instance, have had notice, as already stated, of over eight months. Doubtless there has always to be more or less inconvenience and perhaps loss suffered every time a rate advance is made, but this trouble is caused just as much by other advances in any necessity whether it be supplies or labor. With the notice that the shippers have had in this instance, this inconvenience should have been reduced to an irreducible minimum if the ordinary precaution, as defined by Mr. Adolph himself, had been adopted. As it is now, there will still be delay before the increases are put in. The whole of the railway demands have not been given effect to. Instead of a blanket rate increase, effect has been given to the position taken by the lumber interests and specific advances are made, resulting in the necessity of having new tariffs provided. In all probability, this will take some time, and until the appropriate tariff is provided the judgment of course cannot be carried into effect. The circumstances and publicity of the application are such that no application for a stay of the judgment ought to be granted.

"This disposes of all requests for suspension of the judgment, except in so far as the movement of wheat is concerned. The position here is entirely different. I would give effect to Mr. Fowler's application. Wheat buyers and country elevators are not permitted to carry on business in the ordinary course, in so far as wheat is concerned. They are compelled by the Board of Grain Supervisors for Canada to purchase wheat at a specific price. They are also compelled by the same board to sell wheat at a specific price. Mr. Fowler's figures, which were not disputed by the railways, show that the Board of Grain Supervisors has held these grain buyers down to a price which will certainly permit of no excessive or unreasonable profit, but will possibly result in some loss, certainly in loss having regard to the activities of the buyers, in so far as wheat itself is concerned."

"In view of the artificial position, therefore, of wheat, brought about by legislation doubtless necessary in view of war conditions, and in view of the position in which wheat purchasers have been placed, I am of opinion that the increases allowed for the carriage of wheat ought not now to be made effective. I would postpone the effective date of rate increases for the transportation of this commodity until June 1 next. This will enable all wheat purchased at the old rate and subject to the old conditions to be hauled to Fort William before the new rates take effect.

"The like conditions do not apply to coarse grains, nor indeed to any grain other than wheat. In my opinion, the effective date of the judgment ought not to be postponed, having regard to these commodities. The board's judgment was issued on Dec. 26, 1917. It was then made public, and the parties to the issue were advised as to the board's action. The judgment was given the fullest publicity by the press. Under the Railway Act, tariffs may be filed by the railway companies of their own motion, or may be directed by the board; and the board in directing tariffs to be filed may designate the date at which any tariff will come into force. In view of all the circumstances, railway companies ought to file the necessary schedules and tariffs to take effect not earlier than Feb. 1, 1918."

The board passed general order 212, Jan. 15. After reciting the applications by the railways, the hearings, written submissions in it referred to the judgments given by the Chief Commissioner on Dec. 26, 1917, and Jan. 15, 1918, and to general order 213, Dec. 26, 1917, it provided as follows: It is ordered that, subject to the provisions of the Crowsnest Pass agreement and the judgment of Dec. 26, 1917, which is hereby made part of this order, the special freight tariffs issued under the authority of the judgment, except those applying on wheat, in carloads, to Port Arthur and Fort William, be published and filed at least five days previous to the date on which they are to become effective, which date shall not be earlier than Feb. 1, 1918; and it is further ordered that the rates authorized by the judgment to be charged on wheat, in carloads, to Port Arthur and Fort William only, may be made effective not earlier than June 1, 1918.

#### Approval of Freight Tariffs.

The Board of Railway Commissioners passed general order 215, Jan. 17, as follows: Re application of the undermentioned railway companies for approval of their standard freight tariffs of maximum mileage tolls. The said tariffs having been filed on the basis permitted by the Board in general order 213, Dec. 26, 1917, it is ordered that the following tariffs be approved; their rate scales to be published in at least two consecutive weekly issues of The Canada Gazette, preceded by the following notice: "The undermentioned standard freight tariffs having been filed for the approval of the Board of Railway Commissioners for Canada, and being found by the board to be in accordance with its general order, 213, and having been approved by general order 215, Jan. 17, 1918, the rate scales thereof are hereby published as required by sec. 327 of the Railway Act."

Algoma Central & Hudson Bay, C.R.C. 441; Algoma Eastern, C.R.C. 195; Atlantic, Quebec & Western, C.R.C. 20; Boston & Maine, C.R.C. 1842; Canadian Northern, C.R.C. W-1052, E-1007; Canadian Pacific, C.R.C. W-2300, C.R.C. E-3379; Central Vermont, C.R.C. 1204; Dominion Atlan-

tic, C.R.C. 552; Edmonton, Dunvegan & British Columbia, C.R.C. 65; Esquimalt & Nanaimo, C.R.C. 371; Glengarry & Stormont, C.R.C. 80; Grand Trunk, C.R.C. E-3735; Grand Trunk Pacific, C.R.C. 244; Manitoba Great Northern, C.R.C. 1352; Brandon, Saskatchewan & Hudson Bay, C.R.C. 1353; Crows Nest Southern, C.R.C. 1354; New Westminster Southern, Nelson & Fort Sheppard, Vancouver, Victoria & Eastern Ry. and Navigation Co., C.R.C. 1355; Red Mountain, Kettle Valley, Victoria & Sidney Railway, C.R.C. V-50; Halifax & South Western, C.R.C. F-51; Kettle Valley, C.R.C. 130; Maine Central Railroad, Supplement 2 to C.R.C. C-1184; Michigan Central, C.R.C. 2735; Napierville Junction, C.R.C. 191; New York Central, C.R.C. 1225, C.R.C. 1226; Pere Marquette, C.R.C. 2144; Quebec, Montreal & Southern, C.R.C. 640; Quebec Oriental, C.R.C. 29; Temiscouata, C.R.C. 300; Thousand Islands, C.R.C. 332; Toronto, Hamilton & Buffalo Railway, C.R.C. 1192.

On Jan. 24 the Board passed general order 215a, approving the following freight tariffs:—Moncton & Boutouche Ry., C.R.C. 29; Quebec Ry., Light & Power Co., C.R.C. 103.

#### Approval of Passenger Tariffs.

The board passed general order 214, Jan. 10, as follows: Re application of the undermentioned railway companies for approval of their standard passenger tariffs of maximum mileage tolls. Standard passenger tariffs having been filed on the basis permitted by the board in general order 213, Dec. 26, 1917. It is ordered that the following standard tariffs of maximum mileage tolls for the carriage of passengers be approved; the said tariffs, together with a reference to this order, to be published in at least two consecutive weekly issues of The Canada Gazette.

Canadian Northern Ry., C.R.C. W1492.  
Canadian Pacific Ry., C.R.C. E1064.  
Central Vermont Ry., C.R.C. 502.  
Dominion Atlantic Ry., C.R.C. 404.  
Grand Trunk Ry., C.R.C. no. E-2669.  
Grand Trunk Pacific Ry., C.R.C. 660.  
Glengarry & Stormont Ry., C.R.C. 2.  
Halifax & South Western Ry., C.R.C. no. P-77.  
Michigan Central Ry., C.R.C. 2441.  
Napierville Junction Ry., C.R.C. 92.  
New York Central Rd., C.R.C. no. NYC-191.  
Pere Marquette Rd., C.R.C. 580.  
Quebec, Montreal & Southern Ry., C.R.C. 262.  
Toronto, Hamilton & Buffalo Ry., C.R.C. 1209.

The board passed general order 214a, Jan. 17, approving of the following additional standard passenger tariffs of maximum mileage tolls: Great Northern, C.R.C. 1161; Maine Central, C.R.C. 214; Temiscouata, C.R.C. 66; Wabash, C.R.C. 996. On Jan. 24 the Board passed general order 214b similarly approving the following passenger tariffs: Boston and Maine Rd., C.R.C. 305; and Moncton & Boutouche Ry., C.R.C. 27.

The standard passenger tariffs referred to above provide for a first class rate of 3.45 cents a mile, instead of 3c as heretofore. The new rates also apply to and from Canadian border points and through fares to United States destinations have been advanced accordingly on the Canadian portion of the fares, so as to protect Canadian border points.

#### The Dominion Government on Appeal Suspends New Rates from going Into Operation.

On Jan. 24, members of the Dominion Government heard at Ottawa, the Manitoba, Saskatchewan and Alberta Government's appeal against the Board of Railway Commissioners' decision authorizing an increase of freight and passenger rates, the argument being presented by H. J. Symington, K.C., of Winnipeg, in an address occupying several hours. At the resumption of the hearing in the af-

ternoon, Sir Robert Borden announced that, in view of the many pressing matters requiring the government's immediate attention, and the probability that considerably more time would be required for hearing arguments, it had been decided to adjourn the further consideration of the matter until March 1. The governments of the three prairie provinces would be given until Feb. 8 to submit their arguments in writing, the railway

companies to be given until Feb. 18 to reply, and to justify the increases ordered, and the prairie provinces governments' would then be given until Feb. 28 to submit further arguments in rebuttal. The question of the leave granted to appeal to the Supreme Court on points of law was discussed, Mr. Symington saying that he could not get ready for an early hearing, as well as preparing the argument to be submitted to the Dominion

Government. Counsel for the Canadian Pacific and Canadian Northern Railways objected to any postponement of the appeals to the Supreme Court, and Sir Robert Borden said the matter would be dealt with by the acting Attorney General, Hon. A. L. Sifton. An order in council was passed subsequently, suspending the going into effect of the increases in freight and passenger rates ordered by the Board, until Mar. 15.

## The Board of Railway Commissioners' Rate Judgment of Dec. 26, 1917.

The judgment given by the Chief Commissioner on Dec. 26 occupies 76 foolscap pages of typewritten matter and its conclusions were summarized in Canadian Railway and Marine World for December. Fuller particulars of it are now given as follows: After stating that the first application was filed by the Canadian Northern, on its own behalf and for all other railways operating in Canada, and that very similar applications were afterwards filed by the Canadian Pacific, Grand Trunk, Grand Trunk Pacific, Great Northern, Kettle Valley, Michigan Central, New York Central, and Toronto, Hamilton & Buffalo Railways, the judgment quoted the Canadian Northern's application as follows:

"Nothing is more essential to the welfare of Canada, whether considered in its own interests or as a part of the Empire, than that the railways operating within its borders should be in a position to respond immediately and effectively to the fullest demands made upon them, either by the general commerce of the country or in connection with the defence of the realm. Every industry, whether engaged in war preparation or in the manufacture of commercial commodities, and every individual in Canada is affected, either directly or indirectly, by the efficiency or inefficiency of transportation facilities, and while at present, owing to scarcity of skilled labor and other causes due to the war, it may not be possible to maintain the transportation service in a condition of highest efficiency, it is an imperative duty on the part of every one to see that the service is adequately sustained.

"The applicants claim that under the present revenues and rates applicable to their enterprises it is impossible to adequately sustain their service, to make needed betterments, or to meet the enormous decreases in net operating income attributable to the very substantial increased cost of fuel coal, materials, supplies, equipment of all kinds and wages entering into the maintenance and operation of their railways. The applicants submit herewith a summarized statement showing that upon the Canadian Northern system alone the increase cost to it of fuel coal, materials and equipment for the ensuing year as compared with the prices in the year just closed, and prepared on the assumed basis of the same quantity of business and the same volume of traffic in the two respective years will amount to over \$5,000,000; that these increases are attributable to the horizontal advance in the prices of coal fuel and other commodities purchased by the applicants in the United States and Canada as required, and are also in part attributable to increased duties, war taxes, and increased transportation costs of connecting carriers, both lake and rail, on imported materials. Since the rates of the railway companies are absolutely fixed under the Railway Act, the applicants are powerless to increase their revenue, to

equalize or even to approach equalization of this increased cost in fuel coal and other commodities, and they are faced with a huge deficit in net operating income unless immediate relief is granted.

"Substantial increases in both freight and passenger rates are therefore imperatively necessary, and the emergency requires that the relief granted should be made in the most expeditious manner and with the least possible delay. If advances in rates be proposed and filed with the board in compliance with its present rules governing the publication of tariffs, a long delay must necessarily ensue before such tariff publication can be prepared and made effective, and for these reasons it is deemed expedient that any advances permitted should be made by virtue of the War Measures Act and that the board upon the passage of any order in council as may be recommended by the board should permit the publication of flat percentage advances to existing tariffs by supplementary tariffs filed with the board and that such supplementary tariffs should be published and made effective at the earliest possible moment."

Public hearings of the applications were held at various points from Montreal to Victoria, B.C., from June 5 to 25, 1917, and several pages of the judgment are devoted to submissions by representatives of the Manitoba Government, various boards of trade, the Canadian Manufacturers' Association, and a number of business and farmers' organizations. Mr. Pitblado, who appeared for the Manitoba Government, challenged the board's jurisdiction to make a recommendation to the Governor in council under the War Measures Act. He said: "It is beside your powers for the railway companies to ask you to recommend to the Governor in council what they should do under the War Measures Act, and I submit that the responsibility and power and control is in the Governor in council, and that the railway companies have no right to ask you to do anything."

Mr. Pitblado also submitted that the railways in their application were attempting to override agreements. The first agreement referred to was the Crowsnest Pass agreement, made by the Canadian Pacific with the Dominion Government which provided that in consideration of \$11,000 a mile paid to the Canadian Pacific, not exceeding in the whole \$3,637,000, the rates should be reduced on a large number of commodities.

The other agreement referred to by Mr. Pitblado is the Canadian Northern Railway's agreement with the Manitoba Government, of 1901. Under that agreement, in consideration of guaranteeing the railway company's bonds and giving them a lease of the Northern Pacific and Manitoba Ry. a reduced rate schedule was agreed to by the Canadian Northern.

The Chief Commissioner upheld Mr. Pitblado's objection that the board has not jurisdiction to advise the Governor

in Council as to what action the Dominion Government ought to take under the War Measures Act. In regard to Mr. Pitblado's argument as to the Crowsnest Pass agreement and the Manitoba agreement, the Chief Commissioner quoted the principal provisions of the act under which C.P.R. rates were reduced upon certain articles, from Fort William and all points east of it on the C.P.R., to all points west of Fort William on the C.P.R., and said in part:

"There is no doubt that there is authority for the proposition that the passage of an act giving a new commission, by it formed, full jurisdiction to fix just and reasonable freight and passenger rates and fares, automatically repealed previous maximum rate laws—the basis supporting such proposition, of course, being that the object of the legislature is plainly declared, viz., the fixing of just and reasonable freight and passenger rates, having proper regard, not only to the question of the reasonableness and fairness of the rate itself, but also to the principle of equality as between different districts and shippers, which would be defeated by the continuance of a special act giving special rights to any particular district of the country, or creating rates, which by change of circumstances and conditions could not be described as just or reasonable.

"I am of the opinion, however, that this principle cannot be applied in the present instance. Sec. 3 of the Railway Act specifically provides that, unless expressly provided in the act to the contrary, wherever the provisions of the Railway Act, and of any special act passed by the Parliament of Canada, relate to the same subject matter, the provisions of the special act shall, in so far as it is necessary to give effect to such special act, be taken to override the provisions of the Railway Act. A specific reduction worked by the special act, therefore, limits the board's general jurisdiction, having regard to rates. In my view, no matter how great the shortage may be in railway revenue, the board cannot advance these Canadian Pacific rates, beyond the reduction secured under the special act. Owing to the manner in which our railways are constructed and the territories occupied by them, no useful object whatever would be served by increasing the rates on other lines, as it would simply mean that they would be carrying no business at the higher rate when the lower was available to the public on the Canadian Pacific rails.

"The situation in connection with the Manitoba agreement is entirely different. There, the act is of a provincial legislature, which does not bind the board. In the first instance, the Canadian Northern is a Dominion corporation. In the second instance, assuming that any of the component railways, which are now combined in the Canadian Northern system, were provincial undertakings, the rule obtain-

ing as to special acts passed by the Dominion Parliament, is entirely reversed in the case of all acts of provincial legislatures. Sec. 6 of the Railway Act provides that where any railway, the construction or operation of which is authorized by a special act passed by the legislature of any province, is declared by the Parliament of Canada to be a work for the general advantage of Canada, the Railway Act shall apply to such railway and to the company constructing or operating the same, to the exclusion of such of the provisions of the special act as are inconsistent with the Railway Act."

"The whole tariff situation and railway subject is surrounded with much difficulty, but some things are at least clear. Among them, it is clearly the board's duty to allow fair and just rates to carriers for the service they perform. It is also clear that the board can neither order nor enforce rates which are unremunerative to the carriers without infringing the principle of the Railway Act by denying carriers a fair and just rate. No enforced unremunerative rate can be said to be just to the carriers. The question is one directly affecting shippers and consignees on the one hand, and carriers on the other; but, in arriving at a solution of what a fair rate for the transportation of coal by the Grand Trunk from the frontier to Toronto would be, the fact that the country had relieved the Grand Trunk of a present liability by making a cash advance to the Grand Trunk Pacific, could hardly be a consideration or a reason why a rate otherwise fair and just ought not to be adopted.

"It is equally clear that any losses the Grand Trunk may have made in the Grand Trunk Pacific can afford no ground for increasing the rate, which, apart from such consideration, was fair and reasonable.

"There is no reason why the business of the Canadian Northern should be conducted at a loss, simply because the country owns it. Under the Railway Act, the board certainly cannot deny the people as a whole a rate which would be fair to individuals when owning the transportation system. It appears that a national railway, just as much as any other railway, ought to be operated so as to cover the cost. The interest cost on the Canadian Northern securities certainly cannot be looked upon as negligible and a matter of no moment to the country. Whether there be room for issue on this score or not, at any rate under the Railway Act the board cannot consider rates on the Canadian Northern on a different basis to those on other roads, simply because the country will in future own the stock."

"Undoubtedly the higher the rate the greater the cost to the country; but, it would appear, that the country as a whole could much better afford to pay increased rates than run the risk of transportation failure or embarrassment."

After referring to the automobile industry, and to the prosperity prevailing in Saskatchewan, the Chief Commissioner continued:—"The position is very similar in the other two provinces, Manitoba and Alberta. This condition in an agricultural community can only be expected as a result of the high prices obtaining for grain, live stock, and other farm produce. Some similar objection has been made in the east. There, again, the manufacture of munitions has in part at any rate duplicated the prosperity of the Prairie Provinces. The figures that have been presented in opposition to the application, correctly taken as they have been from the different companies' annual reports and from Government statistics, are

shown by the recent cost developments to be of little value in determining the position of the companies and the burden of today. The added costs are largely the outcome of advances made in the spring and summer of this year. More than that, they do not seem to be final, but rather appear to be growing. The last annual reports do not, therefore, mirror these increases at all, nor are they of the slightest help in arriving at a proper conclusion on this application. The fact is that abnormal increases in costs have developed since the last annual reports were made. The point was taken that costs of themselves were not the sole factor, but that increased gross to the companies might well offset the effect of the advances, and that this increased gross must be considered as well as the cost advances. As a matter of fact, the increased costs have not been met by the increased gross, as the more recent monthly reports show.

"The Canadian Northern figures for July, August, and September of 1917 and of 1916 are as follows:—

	Gross Revenue	Expenses	Net Revenue	Opting Ratio
July, 1917	\$3,844,883	\$2,940,026	\$ 904,856	76.46
July, 1916	3,834,191	2,636,812	1,197,379	68.77
Aug., 1917	3,465,290	2,812,000	593,290	82.57
Aug., 1916	3,684,900	2,612,900	1,072,000	70.90
Sept., 1917	3,341,700	2,915,800	425,900	87.26
Sept., 1916	3,187,900	2,455,900	732,000	76.95

"These results cannot be disregarded. They show that while the gross revenue of July had a slight increase, the net revenue decreased 24.43%. August, on the other hand, shows a decrease of \$279,700 in gross, but nevertheless has an increase in expenses of \$199,100, resulting in a reduction in net earnings of \$478,800 or 44.66%. In September, there was again an increase in gross amounting to \$153,800, but again the expenses increased by \$460,500, reducing the net return, notwithstanding the greater gross, by 41.86%. The figures for these three months are taken up in the company's general statement for the quarter ended Sept. 30, 1917. This quarterly statement also includes the results of the like quarter of the preceding year. The quarterly statement gives the company's total revenue for these three months as \$10,591,807.57 against \$10,706,995.89 for the same period of the previous year. The result is a comparatively small decrease of \$115,188.32 in gross receipts, which amounts in percentage to but a little over 1% of decrease. The expenses are shown as \$8,667,867.95 for the three months of 1917, as against \$7,704,982.67 for the same period of the year before. The resultant increase in expenses is \$962,885.28, which exceeds 12.49%. The net income for the 1917 period amounts to \$1,923,939.62 as against \$3,002,013.22 for the 1916 period. A decrease in the net income of \$1,078,073.60, which represents a percentage decrease in net amount to 35.91%. The increases in expenses are, as a matter of fact, greater than the totals I give. Necessary work has been deferred, owing to the state of the company's finances. The Canadian Northern certainly cannot be charged with ever expending more than was necessary for the maintenance of its lines. As a matter of fact, the charge in the past has been to the contrary, and the amounts expended by the company under this head can well be expressed as relatively small. Notwithstanding during the period in review the company only expended for maintenance of right of way and structures \$1,976,869.14 in 1917, as against \$2,279,658.41 in 1916, an apparent economy of \$302,789.27, representing a percentage decrease of 13.28%, as being effected in this connection. As a matter of fact, the expenditure is not

saved—it is merely deferred, and the only real result of deferred maintenance and repairs is that the ultimate expenditure will be greater than if made promptly and maintenance and repairs had been kept up concurrently with the necessity. This decrease of expenses is entirely eaten up by other increases. To merely illustrate: The cost of maintenance of equipment (necessary work and repairs on locomotives and other running stock, and the like) increased from \$1,156,419.05 in 1916 to \$1,502,779.46 in 1917, an increase of all but 30%.

"I also instance the advance in the cost of transportation, for this period in 1917 amounting to \$4,491,149.49 as against \$3,655,746.23 for the same period of 1916.

"The results of October are of particular interest, as in this month a substantial increase in gross revenue is shown. The Oct., 1917, earnings amounted to \$3,941,612.62, against \$3,716,784.77 for October, 1916. The resultant increase in gross is \$224,827.85 or over 6%. The expenses, however, grew at a very much greater ratio. Those of Oct. 1916, were \$2,496,512.78, while for Oct., 1917, they were \$3,350,486.03, the increase here amounting to 34.20%. As a necessary result, there is an alarming drop in net income from \$1,220,271.99 to \$591,126.59, a decrease of \$629,145.40. In short, the company's net revenue, with an increased gross of 6% decreases 51.55%.

"It should, however, be noted that, in connection with this month the economies of the preceding quarter in connection with the maintenance of way and structures were not practised. On the other hand, no extravagant expenditure was made under this head. The expenditures of 1917 were \$694,653.25 against \$510,141.25. In view of the increased costs which are apparent in other accounts the increased figures cannot sustain any charge either of improvidence or railway extravagances.

"Attention has already been called to the fact that the company spends but relatively little on its right of way. While the necessity of any possible economies cannot be denied, some economies cannot be practised without loss in efficiency and resultant damage, not only to the company itself, but also to that portion of the public that are dependent upon the transportation that it ought to provide. It is sufficient to give but one illustration of insufficient maintenance and repair. The grain movement of the autumn of 1916 to the head of the lakes was light. The October receipts at the lake terminals only amounted to 19,673,341 bush. of wheat, against 52,367,710 bush. for Oct., 1915. The total grain receipts for the month in 1916 only amounted to 27,189,876 bush. against 60,786,715 for Oct. 1915. In Oct. 1917, 27,729,126 bush. of wheat were received and 31,851,584 of all grains an increase of 4,661,708 over the same month of the year before or over 16%. The Canadian Northern, however, only hauled last October to the lake terminals 7,653 cars while it hauled 8,610 cars in Oct. 1916 of the year before. Instead of a proportionate increase in the road's grain business the month results in a car decrease of 957 cars or 11%. A direct reason for this decrease was the physical condition of the line between Winnipeg and Port Arthur. Train schedules could not be kept, and freight wrecks occurred. Efficiency in transportation, including as it does, sufficient terminal facilities, sufficient cars and locomotives for the business offering, and a properly maintained and repaired line of railway, constitutes the chief public necessity in railway transportation. This efficiency can only

be furnished by companies whose business is sufficiently remunerative as to produce the necessary funds to maintain the railway and to meet the ever-increasing demands of transportation. Transportation, if left long enough to the unaided efforts of insolvent or financially embarrassed companies, must, of necessity, break down, to the country's great hurt and injury.

"The question for the board to determine is whether, in the light of the above facts, effect ought to be given to the Manitoba agreement. If effect be given to the Manitoba agreement, practically no rate increases can be made in western territory, where the great bulk of the Canadian Northern's business is carried on. Should the usual practice as between parties to commercial contracts be followed and if it be the board's duty to consider the agreement as a pure matter of law, and having regard only to the contracting parties and not to public convenience and necessity, it well may be that the mere fact that the rate called for by the agreement constitutes an insufficient remuneration for the service rendered and may result in actual insolvency, constitutes of itself no ground for relief. If a builder agrees to do certain work for an inadequate consideration, his loss or its amount is no answer to his contractual liability. Distinctions, however, between the contractor, on the one hand, and railway companies on the other, are readily apparent. The contractor's charges are not subject to government or commission control. The railway company's charges are. The contractor is subject to no duty to the public. The railway company is. Public necessity and service constitute a direct justification for railway construction and railway company incorporation. Moreover, in case the contractor obtains under his agreement an excessive remuneration, that fact of itself is no bar to his enforcing his agreement and collecting the last cent of his consideration. On the other hand, the board is not bound by any contract under which railways may be entitled to an unreasonably large rate, but reduces that rate to whatever it finds just and reasonable. Under any other practice, traffic officers of the companies, could from time to time, in many cases make special contracts with shippers at unfairly high rates, or, on the other hand, give favored shippers unduly low rates. In either instance, the object of the act, which is to secure uniformity just as much as reasonableness in rates, would be defeated. An unduly low rate constitutes an unreasonable rate, just as much as an unduly high one, and the question of whether a rate is unduly low or unduly high can only be established with a knowledge of the cost entitled by the service, which must from time to time vary.

"It has been stated that railway directors are charged with duties and trusts, first, to the public; second, to the company's employees; and third, to the company's shareholders. I would place the duty to the public, involving as it does proper and sufficient transportation, as being the duty of primary importance. The mere fact that an agreement, in the light of changed circumstances, proves improvident and provides rates insufficient to enable the company's property to be properly kept up and to meet the current demands of transportation, also involves loss to the shareholders, is not an answer to the company's primary obligation to properly operate the road. It may well be that an agreement made by the directors elected by the shareholders cannot be set aside on the application of the

shareholders themselves, but, on the other hand, it is clear that no agreement ought to stand in the way of the public as a whole obtaining the full benefit of that measure of transportation, which a properly maintained condition of the company's facilities would permit. Further, an improvident contract made by one company is not merely of injury to itself and that portion of the public using its line—Parliament has so authorized railway construction that the line of one company or another parallels those of others to such an extent that in many instances an unreasonably low rate reserved by contract made by one company must be adopted by the other line. As a result, the other companies are just as much injured as is the company to the contract, and by an act over which they have not the slightest control. It is also apparent that an agreement which reserves an unremunerative rate applicable in the one district, involves a discrimination as against other districts where traffic and operating conditions are similar, and directly infringes on the provisions of the act requiring uniformity in rates. The board does not consider any agreement made by a shipper to pay a given rate any justification for the rate if it be unreasonably high. On the same principle, when rates reserved by contract prove, in the face of changed conditions and increased costs, unreasonably low, the rates must be made reasonable, notwithstanding the contract. In normal times, the contract was entirely free from objection. The discrimination which it caused in one district as against the other, was relieved by the Regina rate and western rate cases. With today's conditions, the contract reserves an unreasonable rate, under which the Canadian Northern is unable to properly maintain its properties; and, with the changed conditions, agreeable to the above principles and practice of the board, higher rates ought to be put in, notwithstanding the provisions of the agreement.

"The effect of increased costs on railway revenues is not peculiar to the Canadian Northern. With its larger field and greater diversity of operations, the Canadian Pacific returns would not as quickly show the effect of different cost advances as those of the Canadian Northern. The C.P.R. returns, however, for September show an increase of \$30,935 in gross on eastern lines, and on western lines of \$64,803. The expenses, however, have greatly increased, the increase in eastern lines amounting to \$732,049, and on western lines to \$839,145. As a result, with a total gross revenue of \$11,476,695, as against \$11,380,939, Sept., 1917, as compared with Sept., 1916, produces a net revenue of but \$3,727,173 as against \$5,202,611. In other words, the drop in net earnings on the system for the month amounts to a reduction of 28.3.

"Taking the Grand Trunk Railway as the characteristic line in the east—the actual results are very nearly the same as those of the Canadian Northern. The increased traffic which the contestants to the application urged was inevitable to take place has materialized, but the increased gross has entirely failed to make up the losses brought about by increased expenses. The G.T.R.'s total transportation revenue from Jan. 1 to Oct. 31, 1917, was \$43,366,844, against \$39,100,498 for the same period of 1916. The resultant increase was practically 11. For this same period in 1917, however, the working expenses were \$33,659,532.48, against \$27,479,538.79 for 1916. The increase in expenses is, therefore, 22.59%. The fact that expenses are unfortunately increas-

ing and that transportation in the later months of the year is subject to greater burdens than during the earlier months is emphasized by taking the figures for October out of this 10 months period and contrasting the results obtained in October with the results obtained for the full 10 months. Transportation receipts for Oct. 1917 were \$4,793,643 against \$4,618,000 for 1916. The increase is still present, although to a much smaller percentage, the whole increase amounting to 1.85%. The expenses for Oct. 1917, however, were \$3,876,019.95 against \$3,111,193.36 for Oct., 1916. The resultant increase is 24.58%. The result on the transportation net is that it only amounts to \$708,930.05 for Oct. 1917 against \$1,390,537.64, for Oct., 1916. Therefore, it decreased no less than 49%. The effect of the cost of railway operation over the whole country is beyond question. This loss in net of 49% may well be compared to the October figures of the Canadian Northern, where the net decrease was 51.55%. There can be no question, in view of the actual results, that the railways require greater revenues and must have them if proper efficiency is to be maintained and the demand of the country for transportation at all adequately met. I have already dealt with the difficulty in dealing with the emergency in the west and resulting from the agreements and statutes referred to. Difficulties also exist in the east and are specially attributable to the operation of the Grand Trunk under different tariffs. The rate situation in the east has been largely controlled by water competition and the competition of United States lines.

"Speaking generally, there is no doubt that it is the right of a company to ignore competition should it desire to do so; and there is also no doubt that the advances in water rates have lessened the competition from that source materially. The Grand Trunk situation, however, is aggravated by the fact that it is to quite a large extent a U. S. system. It derives a large portion of its tonnage from U.S. points through its ownership of the Chicago and Grand Trunk Ry. and other subsidiary U.S. systems. Again, speaking generally, these subsidiary U.S. systems (which are not only owned by Grand Trunk shareholders, but are operated by Grand Trunk officials, the whole being operated as one system) are operated under rates upon a lower basis than that obtaining in Eastern Canada. Not only does the Grand Trunk carry through Canadian territory goods of U.S. origin billed through to a U.S. point, but it also carries goods of U.S. origin into Canada which come into direct competition with Canadian producers, wholesalers, and jobbers. The discrimination was in the past greater than it now is. An application was made to the board in 1907, with a view of removing the rate discrepancy, and the disability of the Canadian producer was relieved by the order issued in the international rate case, which reduced rates in Canadian territory to as near the rates in U.S. territory as it was then felt that it was practicable to go. While undoubtedly the Grand Trunk proper has benefited by the traffic produced by its U. S. subsidiaries, unfortunately earnings in U.S. territory, based as they were upon lower rate schedules, resulted in unprofitable operation of these subsidiary lines, with the result that the Grand Trunk from time to time has had to make good, deficits occurring on the U.S. portions of the system, amounting to large sums. This, again, has been the subject of complaint by Canadian shippers, who have urged that the surplus that the company

earned out of their rates was used by the company to enable it to carry on transportation in the U. S. at less than cost. This feature of the rate situation was considered by the board in the eastern rates judgment; and, as a matter of fact, the increases there granted were not so great as they would have been had the tariff basis in the U.S. territory of the system been higher. The details of these deficits given the board by the company were filed in the eastern rates case in 1915, and related to the deficits of 1914. The net deficit then shown by the company, resulting from the operation of its U. S. subsidiaries and deducted from the net of the parent company, amounted to \$1,230,448.89. I understand, however, that, with the heavier traffic brought about by the war and before the present abnormal costs obtained, the earnings of these subsidiary lines greatly improved and the parent company was practically, if not altogether, relieved of the burden of these deficits. The statutory reports so indicate. In view of the necessities of the company and the deficits of the past on the company's U.S. subsidiary lines, the board has hoped that the rate situation would improve in U. S. territory and that the company would take advantage of whatever rate increases were possible under leave of the appropriate commissions.

"The condition brought about by advanced costs would appear to be somewhat similar in the U.S. situation to that in Canada. This has been recognized by the Interstate Commerce Commission in its report to Congress based, as it is, on the financial necessities of the roads, as well as the traffic demands of the nation. The Interstate Commerce Commission has recently granted a substantial increase in connection with the very important iron and steel movement in western territory. The Interstate Commerce Commission also authorized general increases in Central Freight Association territory as far back as June 29 last. For some reason or other these were not with ordinary dispatch fully put into effect by the railway companies. This question Mr. Hardwell has had up with the companies' officials.

"Perhaps one of the most important schedules, having regard to the position of the Canadian shipper, on the one hand, and his U. S. competitor on the other, is the Detroit schedule, covering rates from Detroit to Toronto and Montreal, and the intermediate points. The Grand Trunk rates in Canada of importance in this relation are the rates from Windsor (which, of course, is a station en route) to Toronto and Montreal, and upon which the rates from all intermediate stations are scaled. The basis under which traffic has been carried since the publication of the tariff authorized in the Canadian eastern rates case and prior to the publication of those authorized in the U. S. 15% case, is shown by the following schedule:

	Class 1. Cents.	Class 2. Cents.	Class 3. Cents.	Class 4. Cents.	Class 5. Cents.
Detroit to Toronto	38	33	24	17	14
Windsor to Toronto	38	33	29	24	19
Windsor differences	0	0	+ 5	+ 7	+ 5
	Class 1. Cents.	Class 2. Cents.	Class 3. Cents.	Class 4. Cents.	Class 5. Cents.
Detroit to Montreal	61.5	53.3	41.0	28.7	24.6
Windsor to Montreal	60.0	53.0	45.0	38.0	36.0
Windsor differences	1.5	0.3	+ 4.0	+ 9.3	+ 5.4

"From these schedules it will be observed that a shipper from the intermediate station, Windsor, in connection with the all important 5th class, paid 5c more than the shipper from Detroit in the foreign movement to Toronto, and for the movement to Montreal paid 5.4c more. The disparity was not as high in the past, the board having increased class rates in the eastern rates case by an addition of 2c first, scaling down to 1c, fifth class, other classes scaling proportionately. The Canadian increases were allowed owing to the financial position of the Grand Trunk, the board feeling that, although the apparent difference was great, under war conditions and the demand for all commodities the Canadian shipper would not as a matter of fact suffer. This added disability was cheerfully accepted by eastern shippers. Following the publication of the tariffs authorized in the U.S. 15% case the rate situation was as follows:

	Class 1. Cents.	Class 2. Cents.	Class 3. Cents.	Class 4. Cents.	Class 5. Cents.
Detroit to Montreal	70	61½	47	33	28
Windsor to Montreal	60	53	45	38	30
Windsor differences	-10	- 8½	- 2	+ 5	+ 2

"The rates from Detroit to Toronto were not then advanced, the rates in Central Freight Association territory being still under consideration by the Interstate Commerce Commission. That commission, as previously mentioned, announced its decision on June 29, 1917, granting increases independently of the 15% previously allowed, but the railway companies, whatever the reason may have been, did not take advantage of this decision to advance the rates from Detroit to Toronto until Dec. 1. At the time of the hearing in this case, and indeed until Dec. 1, 1917, if effect were given to the application for a 15% increase, the result would have been that the rate from Detroit to Toronto, 5th class, would have been no less than 5.5 lower than the Windsor rate to Toronto, and the difference in favor of the Detroit shipper on articles moving under the 5th class into the Toronto market, as against the Windsor shipper, would have been no less than 8c. The same disability would apply proportionately to all intermediate points. The company has made it possible for the board to grant the advance without creating this discrimination against the Canadian shipper by filing, effective on Dec. 1, 1917, as already stated, its tariff increasing rates as authorized in the Central Freight Association territory. The following schedule shows the rates as they now will be under the rates from Detroit, as provided for by the company's tariff of Dec. 1, 1917, and with effect given as this judgment does, to the company's application for a 15% advance:

	Class 1. Cents.	Class 2. Cents.	Class 3. Cents.	Class 4. Cents.	Class 5. Cents.
Detroit to Toronto	50	42½	33½	25	17½
Windsor to Toronto	43½	38	33½	27½	22
Windsor differences	- 6½	- 4½	0	+ 2½	+ 4
	Class 1. Cents.	Class 2. Cents.	Class 3. Cents.	Class 4. Cents.	Class 5. Cents.
Detroit to Montreal	70	61½	47	33	28
Windsor to Montreal	69	61	52	43½	34½
Windsor differences	- 1	- ½	+ 5	+ 10½	+ 6½

"Absolute parity, of course, is not obtained. It was found impossible to obtain it in the international rate case. While

the rate situation is not all that can be desired in view of the necessities of the company and the higher U. S. rate basis made effective on Dec. 1, I would allow the increase of 15% as asked subject to the exceptions herein made. Increases were sought to be made in the all rail movement from the east to the west. The increases which the companies desired were increases entirely in eastern territory. The new all rail tariff became, therefore, a matter directly affecting the eastern situation, although the movement was entirely into western territory.

"On the record these rates should be considered on a different basis. The companies have already obtained a substantial increase, the 1st class all rail basing rate to Fort William being advanced from 75c to 81c, other classes scaling in proportion. The resultant increase of 6c on 5th class makes an average increase of under 6½% in the five classes of general merchandise; 15% on top of that would make an average increase of approximately 21½%. In view of the manner in which the through tariffs from eastern to western Canada are built up on the combination of the rates current from Port Arthur and Fort William west, and certain arbitrary rates from the eastern shipping points to Port Arthur and Fort William produced to a great extent by the summer competition of the lake and rail route; and in view also of the fact that the rates to different points in western territory have been constructed on the whole result thus obtained, it is obvious that an interference of a different percentage as applied to the whole might work changes in the relative rate bases of different distributing centres in western territory. This, of course, ought not to be done. Much trouble has been taken in the past to arrive at a fair basis of rates as between different districts and to maintain a rate situation of justice from different western distributing points. The matter was referred to the board's Chief Traffic Officer, Mr. Hardwell, to work out the effect of any change in percentages upon the whole district. This has necessitated Mr. Hardwell making up a very large number of rates and putting in much labor in comparing the rates in different sections of the country. His report is as follows:

"A close examination of the rate situation as it affects freight traffic between eastern and western Canada has convinced me that whether the proposal to allow an increase of 10% be sufficient or insufficient for railway needs, it is illogical, and would also upset the system that has always existed of basing the through rates on Fort William. The board recently granted increases in the proportionals for Fort William only:

1st class, from 75 cents to 81 cents.  
5th class, from 31 cents to 33 cents.

"The proposal to accept an increase of 15% in the local tariffs west of Lake Superior, would include the tariff from Fort William; therefore, the rates from Fort William to Winnipeg, for example, would advance as follows:

1st class, from 85 cents to 98 cents.  
5th class, from 38 cents to 43½ cents.

"The suggestion of an increase of 10% from Toronto and Montreal to Winnipeg would result as follows:

1st class, from 1.66 to 1.82½ cents.  
5th class, from 0.71 to 0.78 cents.

"Deducting from these proposed through rates the increased rates from Fort William would leave the eastern proportionals as follows:

1st class, 84½c instead of 81c = 104.2%  
5th class, 34½c instead of 33c = 104.4%

"Therefore, the proportionals recently

allowed would be increased by less than 4½%. Furthermore, the wholesale centres in the west might be expected to complain if their distributing rates were advanced 15% while the shippers in eastern Canada were asked to pay but 10% on their through rates.

"So far as the basing system is concerned, the existing eastern proportionals might be protected by increasing the rates west from Fort William 10 instead of 15, but this would not remove the objections to be anticipated from the western jobbers. It might also be expected to arouse the coast cities, who would hardly favor a less increase in the terminal tariff from the Lake Superior ports than in the terminal tariff from Vancouver, etc. While the eastern arbitrary system may, perhaps, be considered theoretical, these trade objections may prove real. In my opinion, the logical solution is to confine the 10% advance to the proportionals east of Fort William. The recent allowance averaged under 6½% in the five classes of general merchandise so that the total now suggested would approximate 16½. The through rates would then be made by adding the Fort William westbound rates increased by 15%. From Toronto and Montreal to Winnipeg the situation would then be expressed as follows:

	1st Class.	5th Class.
Present rates from Sept. 1, 1917	\$1.66	71c
If present through rates were increased 15%	1.91	81½c
If present through rates were increased 10%	1.82½	78c
If present rates were increased 10% to Fort William and 15% beyond	1.87	79½c
If through rates prior to Sept. 1, 1917, were increased 15%	1.84	79½c

"It will be observed that if the board had included the recent all rail case in the 15% application, and consequently now granted the full 15%, the rates would approximate to Winnipeg those I suggest; in fact, the important 5th class would be the same."

"I would adopt Mr. Hardwell's report. The result is that 15% will be allowed in so far as the territory west of Port Arthur is concerned, but the increase will be held down to 10% on the eastern balance of the through rate."

"There are already difficulties as to the spread of rates on coal. Those spreads would be but further aggravated if percentage increases were allowed on coal. I would allow a flat increase of not exceeding 15c a ton on all coal and coke carried in the eastern and western territories. This flat advance on the long hauls will, of course, be a great deal less than a percentage increase of 15; but, on the other hand, on the shorter hauls, it will be larger than the 15% increase would be. The flat rate will, however, bear less harmfully on the consumers generally. The necessity of this 15c increase on a commodity of direct and urgent necessity to the public is much to be regretted. It is, however, inevitable. In order to increase railway revenues to an appreciable extent, commodities constituting a large part of the tonnage carried must bear an appreciable share of increased rates. Coal in eastern territory is chiefly carried by the Grand Trunk and in western territory the Canadian Northern coal tonnage is fast increasing. Both these systems require increased revenues very badly."

"Common clay and sand, gravel and crushed stone are commodities which cannot, in my view, stand a 15% increase. I would, however, permit the companies to increase their rates on these commodities both in eastern and western territories, by adding to existing rates not more than 5c a ton."

"In western territory, as already indicated, any relief the board can give the railways is limited by the provisions of the Crowsnest Pass agreement. The chief traffic in the west is grain. The Crowsnest Pass agreement will not permit a general increase of 15% to be made to the Lake Superior ports; but under it a flat increase of 2c a hundred, which will approximate a 10% advance on what is perhaps the average western grain rate, can be obtained on the commodities included in the existing tariffs on grain, flax seed and their products and I would allow it. It is quite true that neither the Canadian Northern nor the Grand Trunk Pacific are bound by the provisions of the Crowsnest Pass agreement or act. On the other hand, while it would be open for the board to permit an increase of 15% in their rates, over a very large part of the territory served by one or other of these systems, grain could undoubtedly be hauled to the Canadian Pacific. The result would be that both these companies, in order to protect their traffic, would reduce their rates at all points where their traffic would suffer from Canadian Pacific competition. The element of unequal rates would be again introduced into the western territory; and I am convinced that this is no better for the railways than it is for the districts."

"The Crowsnest Pass agreement again, does not call for lower rates for the whole territory as now operated. The reductions apply merely to the then existing tariffs, and therefore to operations of the company as carried on at the time that act was passed. I am of the opinion that discrimination should be avoided, and that the effect of the Crowsnest Pass agreement must be extended to the system of the company as today operated. Under present tariffs no distinction is made between stations in the territory covered by the company's tariffs in effect when the agreement was made and those upon its subsequent construction. The board, in my view, ought not to permit any such distinction to be now made. The Crowsnest Pass agreement was considered by the late Chief Commissioner Killam, in British Columbia Coast Cities vs. C. P. R. 7 C.R.C., 125, His judgment reads: 'As a result of this act and the agreement made under it, the company made tariffs of reduced rates upon the classes of merchandise referred to, not only from Fort William and points east thereof westward, but also from Winnipeg westward, without similarly reducing rates on the same classes of merchandise from Pacific points eastward. These reductions cannot be considered as having been forced upon the company, but were the result of an agreement which it chose to enter into for the purpose of obtaining a subsidy in aid of the construction of a line of railway. The agreement and the statute did not even deal with rates from Winnipeg at all. When the statute was passed and when the agreement was made, the law prohibited unjust discrimination between localities, and while parliament did not stipulate for similar reductions over western portions of the company's railway, it should not, in my opinion, be considered as having authorized what would, if done otherwise, have produced unjust discrimination. I think that we are justified in inferring that, in respect of the classes of merchandise to which these tariffs relate, the reductions did result in such discrimination, and that the rates from Vancouver eastward, upon similar traffic carried under similar circumstances, should be proportionately reduced.' In my view full effect should be given to the above principles."

"In so far as concerns carload rates on grain, flax seed and their products in the west, other than the rates to the Lake Superior ports and intermediate points held down by the terminal rates; also on the same commodities from Port Arthur and Fort William eastward, and carload grain and grain products in eastern Canada, I would allow the application for a flat 15% advance, subject to a maximum increase of 2c per 100 lb. in the existing rates."

"The consideration of chief importance underlying the lumber rates in the west is their relation one to the other. The spread is of greater importance to the lumber industry than the amount of the rate itself. A straight percentage increase would improperly accentuate existing spreads from lumber producing territories and dislocate business. It would have a specially detrimental effect upon the British Columbia industry. On the other hand, a general flat increase might bear with undue severity upon short hauls. There are rates as low as 5c a hundred. A flat increase of 3c, which on a rate of 46c would be an increase of only 6½%, would, in the case of a 5c rate, amount to an increase of 60%. The whole western lumber rate situation is full of difficulty and presents a highly technical rate problem. The question as to how increases in lumber rates can be best made without dislocation of traffic by changing the rate relationship now existing between present mills and at the same time result in no undue hardship to the consumer, was referred to Mr. Hardwell for his opinion. His report, in part, is as follows:—

"As regards lumber; so far the British Columbia mills are concerned, the desideratum being the preservation of the existing rate relationship between the various mills, as emphasized at the Calgary hearing and in past proceedings, it is clear that this cannot be attained by means of a percentage of increase, even though held down to a maximum per 100 lb. advance for the longer hauls. The entire situation has been very carefully examined, therefore, with the view of settling on flat increases in cents per 100 lb. which should avoid any possible complaints of preference or discrimination. Working on a tariff that has no uniform basis, it is impossible to arrive at advances accurately representing 15%. I find, however, that the adoption of the following recommendation would not only afford a broad basis, but would nearly approximate 15%, viz.:

"To Alberta destinations, also to C. P.R. main line stations as far east as Mortlach, Sask., the increase to be 3c per 100 lb. To all other destinations in Saskatchewan the increase to be 4c per 100 lb. To destinations in Manitoba, also in New Ontario, east to Port Arthur, the increase to be 5c per 100 lb. To a large number of destinations those suggested increases would equal 15%; to others they would be slightly over or under 15%. From the interior mills to Winnipeg the rate would advance from 33 to 38c, or precisely 15%; from the coast mills from 40 to 45c, or 1c less than 15%. From British Columbia to Eastern Canada I would increase the difference over the rates to Port Arthur to 10% as recommended for the class rates. From the interior and coast mills, respectively, the rates to Toronto points would go up from 60 and 67c to 67 and 74c; 110% of the through rates, as first proposed, would give 66 and 73½c. To Montreal points the result would be similar."

"From the other lumber shipping territories I submit the following recom-

mentations:—From northern Manitoba and Saskatchewan spruce districts, 15¢, subject to a maximum of 3¢ per 100 lb. to destinations in Saskatchewan, also in Manitoba east to Winnipeg, and 4¢ to those in Alberta and east of Winnipeg to Port Arthur. From the Lake of the Woods and Rainy River districts 15¢, subject to a maximum of 3¢ per 100 lb. to destinations in Manitoba, and 4¢ to those in Saskatchewan and Alberta. From Port Arthur 15¢, subject to a maximum of 3¢ to Manitoba, 4¢ to Saskatchewan, and 5¢ to Alberta. Between points in Eastern Canada 15¢ flat. As the highest local eastern rate appears to be 20¢, this would make the maximum advance 3¢.

"I would adopt Mr. Hardwell's report. Under it the rate differences from the different competing mills would be maintained as they now are. In so far as the bulk of the movement is concerned, Mr. Hardwell's recommendations will result in the 15% increase; in other instances the increase will not amount to 15%; and, in other cases, the percentage will be slightly in excess of 15%. The adoption of Mr. Hardwell's recommendations will put the lumber rate upon a more scientific basis than it has been in the past. The rate situation which Mr. Hardwell's report preserves is the outcome of an agreement between the associated western mills and the railways. Under this arrangement, the rates from the coast mills east to Winnipeg and Port Arthur, are made the basic rates. The rates from the interior mountain mills and from the mills as far east as Calgary and Blairmore are all based on this standard rate and scale, not strictly having regard to mileage, but scaled according to the agreement between the trade and the railways. These mills enter into more or less competition with mills in the northern spruce belt (northern Manitoba and northern Saskatchewan); also with mills in the Lake of the Woods district on the Canadian Pacific, and in the Rainy River district on the Canadian Northern; and to some extent with the mills at Port Arthur. The situation is highly competitive having regard to the lumber business. Mr. Hardwell's report is in my opinion, the best solution available.

"On through movements of these lumber commodities from western shipping points to destinations east of Port Arthur, under Mr. Hardwell's report, the increase permitted is a proper and logical result having regard to the dispositions made of other through movements, and in view of the increases already made in the all rail and lake and rail rates. While increases have not been made in the U. S. transcontinental rates, I would, nevertheless, permit an increase in the transcontinental class rates, as they do not reflect competition to the extent the commodity rates do. The rates, however, are built up on the all rail movement, but in view of the U. S. scale and for the reasons already given I think the increase ought to be reduced to 10%. Transcontinental commodity rates, however, are directly competitive. If unduly increased over the U. S. transcontinental rates, the results well might be that Canadian produce would not move at all in cases where U. S. produce was available, or in some other instances, if it did move, it would move over U. S. lines. I would not at the present advance the transcontinental commodity rates unless these rates are advanced in conformity with advances made by the American lines.

"Generally speaking, the rail freight rates in British Columbia are on a considerably higher basis than in the prairie

territory. In the western rates case, the board found that a higher level of charges was justified by the greater cost of conducting transportation. An advance of 15¢ would, however, materially increase the spread between the mountain and the prairie tariffs, and having regard to all the circumstances, I am of the opinion that in the Pacific territory an increase of only 10¢ should be allowed, but, of course, no rates to be lower than the prairie rates as increased. This percentage difference will not apply to the rates between the ports of call on the British Columbia lakes, as being now on the prairie basis must take the prairie increase of 15¢.

"Railway tolls covering services incidental to transportation stand on a different footing to those charged for the line movement. The application for a general advance and authority permitting a general advance in freight rates not exceeding 15¢ would, however, include them unless specifically excepted. Some of these charges, for example, tariffs for and the prairie tariffs, and having recently considered by the board. Other such services in their nature represent entirely a terminal activity and have particular importance at different local points. Strong objection has been taken by boards of trade, particularly those at larger points, to any increase being made on this application and on the general grounds on which it is supported to any increase in these tolls. In my opinion the objections are well taken, and I would refuse on the present record any increase of tolls and tariffs applicable to switching, whether local or inter-switching, weighing, demurrage, refrigeration, heated car service, car diversions, reconsignments, storage, wharfage, sleeping or parlor car accommodation, or other special services.

"The application for an increase covers passenger rates as well as freight rates. I am of opinion that the present maximum rate of 4¢ in British Columbia is so high that it ought not to be advanced. On the other hand, I would grant the advance in rates in other territory where the present maximum rate is 3¢ as against the 4¢ rate in British Columbia. In so far as passenger rates are concerned, it is entirely in the public interest at present that passenger travel should be as light as possible. The usual considerations applying to passenger traffic are today reversed. Public interest today calls for a reduction wherever possible in passenger service, to the end that the country's resources of coal, railway facilities and supplies, as well as man power, should be conserved as much as possible for all essential freight movement. The same considerations do not, of course, apply to the necessary freight movement. On the other hand, it must be realized that the board cannot make rates, having in mind an improved and more economic location and system of railways. The board's duty as I see it, and as I have already pointed out, is to control and adjust rates, having regard to the systems of railways that Parliament has authorized. The Board must take the railway ownership just as it finds it.

"No greater profits will be obtained by the railways under the new rate schedule than in the past. The increased rates allowed will certainly not equal the increase in costs to which the railways are subject. These increased costs are not in any way attributable to the railway managements. They are very largely represented in wage increases, which have had the approval of the public at large. Pub-

lic bodies and public sympathy have been with the men in the increases which they have obtained. No objection whatever has been made by any contestant on the ground that the railways have improvidently increased wages. The other items of cost increases are chiefly the result of today's prices of coal, steel material, and railway supplies. The railways suffer in this regard in common with other users of these necessities. The increased cost can certainly not be said to be the railways' fault. It must be realized that these increased costs can only be met by increase in tariffs. The railways' revenues are derived from transportation.

The increases granted do not work out at the same percentage in both eastern and western territory. While it may be that the increases granted in western territory may not prove sufficient to meet the increasing demands on the companies' exchequers, they are as great as the board can authorize on the present application, in view of the Crowsnest case, with the exception of the increases on coal rates. In the west, the application in one instance called for a 15¢ increase in coal rates. As the coal haul in western territory is long, a 15¢ rate increase would, on the whole, have netted more than 15¢ a ton—much more on some of the long hauls. The haul on coal in the east is certainly short, having regard to the volume moved; and the flat increase of 15¢ a ton the railways asked in eastern territory produces more revenue than a percentage increase of 15% would. In adopting the flat increase of 15¢ per ton on coal, I am of opinion that substantial justice is being done.

"While it is true that in so far as western territory is concerned, on the great bulk of traffic, rates would only increase approximately 10% and eastern rates are, speaking generally, raised 15%, it must be borne in mind that, while the rates in the two different sections of the country are much nearer equality since the deductions worked under the western rates case and the increases given under the eastern rates case took effect, again speaking generally, rates in the west are still higher. As a result, subject to the limitations worked by the Crowsnest agreement as extended by this judgment and to the specific directions herein contained the companies are permitted to raise their general rates 15% and make the specific advances herein allowed."

**A good story on E. W. Beatty.**—In addressing the Canadian Railway Club in Montreal a short time ago, in connection with the Victory Loan, E. W. Beatty, Vice President and General Counsel, C. P. R., told the following story on himself. "A friend of mine, who represented interests of considerable importance, was required to go to Washington and confer with a high financial authority on a certain matter, and he did not know just how to proceed. His company was involved in combinations which he feared might offend the Sherman anti trust law, and he said to this friend of his, 'I must be very careful and not do anything that will violate the laws of the United States, so I wish you would give me the name of a good lawyer, and I will consult him as to just how far I can go in bringing about these commercial arrangements.' His friend thought for a moment and then said: 'If I were you, I would not consult with a lawyer at all, I would just go to Montreal and talk it over with Beatty, of the C.P.R.'"

# Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

General order 211. Dec. 10.—Prescribing car-load minimum weights for lumber, for domestic consumption or for export; and directing that term "full capacity" permit a space of 12 in. between top of load and carlines or rafters of car; schedules to come into force by Jan. 1, 1918.

General order 213. Dec. 26, 1917.—Authorizing railway companies to increase standard tariffs of maximum mileage tolls, passenger and freight.

General order 214. Jan. 10.—Approving standard tariffs of maximum mileage tolls for passengers, on basis permitted in general order 213. Dec. 26, 1917, of C.N.R., C.P.R., Central Vermont Ry., Dominion Atlantic Ry., G.T.R., G.T.P.Ry., Gleggarry & Stormont Ry., Halifax & South Western Ry., Michigan Central Rd., Napierville Jet. Ry., New York Central Rd., Pere Marquette Ry., Quebec, Montreal & Southern Ry., and Toronto, Hamilton & Buffalo Ry.

26833. Dec. 15.—Apportioning cost of installing and maintaining gates at crossing of Burwell, Adelaide and Rectory Sts., London, Ont., by G.T.R., as required by order 26527, Sept. 11, 1917.

26834. Dec. 17.—Relieving C.P.R. from providing further protection at 4th Range crossing, South Roston, Que.

26835. Dec. 15.—Dismissing application of Town of Oshawa, Ont., for order directing Oshawa Ry. to furnish passenger service to and from portions of town such as it is giving to G.T.R.

26836. Dec. 17.—Relieving G.T.R. from providing further protection at crossing at Wyton, Ont.

26837. Dec. 17.—Authorizing Michigan Central Rd. to build track extensions on Norton Co.'s lands, Chippawa, Ont.

26838. Dec. 17.—Approving Northern Pacific Ry. Standard Passenger Tariff, C.R.C. 303, applying rate of 4c a mile.

26839. Dec. 17.—Approving plan of Deitz award drain, under G.T.R., in Howick Tp., Ont.

26840. Dec. 15.—Extending to Apr. 30, 1918, time within which St. Martins Ry. shall repair bridges over Hauford Brook and Porter Brook as required by order 25865.

26841. Dec. 14.—Ordering C.P.R. to stop train 821, which leaves Toronto at 7 p.m., at Oakville, Ont., until further notice.

26842. Dec. 19.—Relieving G.T.R. from providing further protection at highway near St. Jacobs, Ont.

26843. Dec. 19.—Dismissing application of University Settlement of Montreal's Baby Welfare Committee for order requiring cars used for milk to be equipped with ice or other cooling process.

26844. Dec. 19.—Dismissing application of Town of Montreal East, Que., for crossings at George V. and Clamette Ave., over Canadian Northern Ry. and authorizing town to build highway crossings over C.N.R. at Gamble Ave. and Boulevard, Montreal East.

26845. Dec. 20.—Extending for one year from date time within which Canadian Northern Ry. shall erect gates at crossings at Bay Ridge Road, Belleville, Ont., required by order 25932, Mar. 10, day and night watchmen to be placed at crossings pending installation; wages to be paid by C.N.R. and C.P.R.

26846. Dec. 19.—Approving plan and specifications of Stock drain, under G.T.R., on part lot 33, East Zorra Tp., Ont.

26847. Dec. 19.—Authorizing C.P.R. to build highway over St. Maurice Valley Ry. at mileage 6.95, maintenance to be paid by Three Rivers Parish, Que.

26848. Dec. 19.—Authorizing Crows Nest Southern Ry. to build spur for Baker Lumber Co., Mott, B.C.

26849. Dec. 20.—Ordering Canadian Northern Ry. to erect at least a 4th class station at Sungudo, Alta., by Sept. 1, 1918.

26850. Dec. 21.—Dismissing C.P.R. application for authority to build spur on Souigny Ave., Montreal, and authorizing it to renew its application at any future time, if it so desires.

26851. Dec. 22.—Authorizing Canadian Northern Ry. to build spur for Gem Mining Co. and Midland Collieries, Ltd., Drumheller, Alta.

26852. Dec. 22.—Authorizing C.P.R. to build spur for Weaver Coal Co., Toronto.

26853. Dec. 21.—Authorizing C.P.R. to remove transfer track at Conquest, Sask.

26854. Dec. 24.—Relieving G.T.R. from providing further protection at Con. 1, Sidney Tp., near Belleville, Ont.

26855. Dec. 21.—Approving clearances of loading shed for Ford Motor Co. of Canada, at Winnipeg.

26856. Dec. 24.—Relieving G.T.R. from providing further protection at highway crossing at Pickering, Ont.

26857. Dec. 24.—Ordering C.P.R. within 90 days to install improved type of automatic bell at highway crossing at McAdam yard, McAdam Jet.,

N.B.; 20% of cost to be paid out of railway grade crossing fund.

26858. Dec. 19.—Rescinding order 26476, Aug. 29, in so far as it affects rates from points on Maynooth, Rideau and Tweed Subdivisions, Canadian Northern Ry., and ordering that certain other rates be substituted. This order is given in full under "Traffic Orders by the Board of Railway Commissioners" on another page.

26859. Dec. 26.—Ordering G.T.R. not to exceed 10 miles an hour in operation of trains over crossing of Hyde Park Road, London Tp., Ont.

26860. Dec. 26.—Ordering Grand Trunk Pacific Ry. to appoint caretakers at Peers and Oatley, Alta., to see that stations are heated and lighted for passenger service, freight and express matter properly housed, and make delivery of shipments between 8 a.m. and 6 p.m., from Jan. 1 to Sept. 1, 1918.

26861. Dec. 27.—Authorizing Saskatchewan Government to build highway crossing over east end of Canadian Northern Ry. grounds at Vibank.

26862. Dec. 26.—Authorizing C.P.R. to build spur for Baker & Betherman, Eastview, Ont.

26863. Dec. 27.—Authorizing C.P.R. to build passing siding at grade across diverted road in W. ½ Lot 13, Con. 7, Camden Tp., Ont.

26864. Dec. 26.—Relieving Grand Trunk Pacific Ry. from providing further protection at highway near Allan, Sask.

26865. Dec. 26.—Rescinding orders 25427 and 26768, Sept. 15, 1916, and Nov. 23, 1917, respectively; and approving Canadian Northern Ry. time table showing train leaving Deseronto at 9.15 a.m., arriving at Belleville at 9.45 a.m., daily, except Sunday; and present local train, eastbound, leaving Belleville at 5.45 p.m., arriving Deseronto at 6.15 p.m., in lieu of Toronto-Napanee local running east of Trenton.

26866. Dec. 28.—Ordering Canadian Northern Ry. forthwith to appoint station agent at Junkins, Alta.

26867. Dec. 31.—Authorizing C.P.R. to build spur for Forest Mills of British Columbia, Ltd., mileage 19.6, Boundary Subdivision, B.C.

26868, 26869. Dec. 26.—Authorizing C.P.R. to rebuild bridges 81.4 and 62.8 over Thames River, Ont.

26870. Dec. 26.—Authorizing C.P.R. to build spur for Military Hospitals Commission at mileage 15.5, Winchester Subdivision, Que.

26871. Dec. 26.—Authorizing C.P.R. to alter spur for Canadian-Connecticut Cotton Mills, Ascut Tp., Que.

26872. Dec. 27.—Dismissing complaint of residents of Osquoode, Vernon, Kars and North Gower, Ont., against C.P.R. train service between Prescott and Ottawa; and dismissing C.P.R. application to inaugurate mixed freight and passenger service between these points.

26873. Dec. 29.—Approving revised location of Essex Terminal Ry. between stake 518+60.24 and Reaume Road, near stake 567+14.58, in Sandwich West Tp., Ont.

26874. Dec. 26.—Authorizing C.P.R. to rebuild bridge 68.0 over River Nith, Galt Subdivision, Ont.

26875. Dec. 29.—Approving Northern Pacific Ry. Standard Parlor Car Tariff, C.R.C. S3, showing rate of ½c a mile between stations in British Columbia.

26876. Dec. 29.—Authorizing Dominion Atlantic Ry. to withdraw trains 3 and 4 and to run trains 96 and 97 on Mondays, Wednesdays and Saturdays only between Halifax and Kentville, N.S.; effective Jan. 6, 1918.

26877. Jan. 2, 1918.—Authorizing Essex Terminal Ry. to cross Canada Southern Ry. (M.C.R.) near Amherstburg, Ont., E.T.R. to pay cost of providing, maintaining and operating half interlocking plant.

26878. Dec. 19, 1917.—Ordering G.T.R. to install gates at crossings of St. Philippe, Convent, St. Ambroise, St. Ferdinand and Ste. Marguerite streets, Montreal, to be operated by day and night watchmen, and apportioning cost; Ste. Marguerite and St. Ambroise streets to be protected by day and night watchmen, pending installation of gates.

26879. Dec. 31.—Approving clearances of proposed coal chute and loader for Saskatchewan Coal, Brick & Power Co., at Shand, Sask.

26880. Dec. 24.—Authorizing Canadian Northern Quebec Ry. to build highway over its track at Orleans St., Maisonneuve, Que.; crossing to be protected by gates, operated by day and night watchmen; 20% of cost to be paid out of railway grade crossing fund, remainder by Town of Maisonneuve; maintenance to be paid by town.

26881. Jan. 3, 1918.—Ordering that 20% of removing obstructions to view at Humber Summit crossing, 1½ miles east of Woodbridge, Ont., be paid out of railway grade crossing fund.

26882. Jan. 3.—Authorizing Grand Trunk Pacific Ry. to build highway crossing and road diversion in South ½ Sec. 3, Tp. 37, Range 16, west 3rd meridian, mileage 538.3, Rosemont Rural Municipality 378, Saskatoon District, Sask.; and to close crossing at mileage 538; and rescinding order 4022, Nov. 16, 1907, authorizing said crossing.

26883. Jan. 3.—Approving agreement between Bell Telephone Co. and Mayo & Blanche Rural Telephone Co., Labelle County, Que., Dec. 14, 1917.

26884. Jan. 3.—Authorizing G.T.R. to build spur for Midland Engine Works Co., Midland, Ont.

26885. Jan. 4.—Authorizing Vancouver, Victoria & Eastern Ry. & Nav. Co. to build extension to Northern Pacific Ry. freight house at New Westminster, B.C.

26886. Jan. 4.—Relieving C.P.R. from providing further protection at crossing near St. Cuthbert, Que.

26887. Jan. 3.—Amending order 26400, Aug. 1, 1917, re G.T.R. interchange tracks at Port Hope, Ont.

26888. Dec. 22, 1917.—Ordering G.T.R. to build undercrossing between farms of H. Ancil and A. Cayer, near Walkers cutting, Bulstrode Tp., Que.; and an undercrossing or grade crossing on Jos. Proulx's property if he so desires, and at his expense; work to be completed by June 30, 1918.

26889. Jan. 5, 1918.—Amending order 26850, Dec. 21, 1918, re C.P.R. application to build spur on Souigny Ave., Montreal.

26890. Jan. 4.—Ordering G.T.R. to lower roadway at subway at Komoka, Ont., 1 ft. and to raise track 1½ ft., to be completed by May 31.

26891. Jan. 4.—Ordering G.T.R. not to exceed 10 miles an hour over Paquette's crossing, Hawkesbury Tp., Ont.

26892. Jan. 4.—Authorizing Canadian Northern Ry. to cross and divert highway between s. w. ¼ Sec. 4, Tp. 43, Range 13, and n. e. ¼ Sec. 32, Tp. 42, Range 13, west 3rd meridian, Sask.

26893. Jan. 7.—Authorizing Hydro-Electric Power Commission of Ontario to build, subject to agreement with Michigan Central Rd., Dec. 17, 1917, a power development canal and construction railway under M.C.R. in Lot 57 Stamford Tp., Ont., and to divert railway temporarily.

26894. Jan. 8.—Authorizing Dominion Atlantic Ry. to build spur for Killam Bros., Yarmouth, N.S.

26895. Jan. 9.—Authorizing Canadian Northern Ontario Ry. to build spur for Imperial Oil Co., at North Bay, Ont.

26896. Jan. 9.—Authorizing C.P.R. to build fender round centre pier of bridge over St. Maurice River, mileage 1.8, Cap de la Madeleine Subdivision, Que.

26897. Jan. 11.—Amending order 26890, Jan. 4, re G.T.R. subway at Komoka, Ont.

26898. Jan. 7.—Ordering that tolls of Canadian Northern Express Co. shall include collection and delivery in portion of Pas, Man., bounded continuously by further side of 7th St., Hudson Bay Ry. and Saskatchewan and Pas Rivers.

26899. Jan. 11.—Approving Northern Pacific Ry. standard freight tariff of maximum tolls, C. R.C. 375, between its stations in British Columbia.

26900. Jan. 12.—Relieving C.P.R. from providing further protection at east public crossing, Vandrevil, Que.

26901. Jan. 14.—Authorizing C.P.R. to file tariff to provide for special toll of \$1 a car per day for detention of cars containing western grain and grain products at Cartier, Ont., for more than 72 hours while awaiting furtherance orders from consignees; tariff effective Feb. 1.

26902. Jan. 14.—Ordering C.P.R. to place cars for loading of grain at Birnie Milling Co.'s elevator, Medicine Hat, Alta.

26903. Jan. 14.—Ordering G.T.R. not to exceed 10 miles an hour in crossing of highway immediately south of station at Holland Landing, Ont.

## Warning Signs for Grade Crossings.—

The Board of Railway Commissioners' secretary issued the following circular to railway companies on Jan. 15: "The board's enquiry into a recent accident at a highway crossing, protected by a watchman, brought out the fact that the occupants of the automobile evidently became confused in the signals given by the watchman. The board is impressed with the necessity of railway companies adopting some standard signal other than the style of flag now in use by crossing watchmen. Railway companies are, therefore directed to consider the adoption of a metal disc, 16 in. in diameter, having a white ground, with the word "Stop" in large letters in black thereon, filing their comments with the board within 30 days of the date of this circular."

## Engineering and Technical Institute of

British Columbia.—Civil engineers and land surveyors of British Columbia are applying to the legislature for incorporation under this title. The institute will also admit to membership architects and others engaged in purely technical occupations.

# The Restoration of the Canadian Government Railways Property at Halifax.

The restoration work at Halifax is being carried on under the general direction of C. B. Brown, Assistant General Manager, and Chief Engineer, Canadian Government Railways, at Moncton; W. A. Duff, Assistant Chief Engineer, and Engineer of Bridges, being in direct charge at Halifax, with office at 137 Barrington Street, C. H. Edgett, being Purchasing Agent and F. M. MacLennan, Auditor. Mr. Duff was at Halifax when the explosion occurred and acted most promptly. Telegraph connection being destroyed, he motored to the nearest station from which he could telegraph, and made a most gra-

completed. The North St. power house roof has been completed, and a boiler put in place and bricked in.

New pier 2: The repairs are about 85% complete. All doors upstairs are in place and glazed. All doors on the south side downstairs are in place and being glazed. Sixteen pairs of doors are in place on the north side. Practically all the branch return pipes have been installed, and the work is still proceeding. All mains, returns, connections and traps will be installed as soon as received. Doors for the north side are being straightened and repaired. The pier and shed have been

The deepwater local freight shed has been repaired.

Grain Elevator. — Temporary repairs are finished. The elevator has been boarded in on the north side and covered with rubberoid finished, and repairs are now being made to the roof on the east side of the building. It has been in use since Dec. 24 and the permanent repairs are about 60% completed. The boiler house building is completed and the boiler put in place and bricked in. The carpenter shop building is boarded in and roof covered with rubberoid, and work is proceeding on the interior of the building.

Halifax Disaster—North Street Station, Canadian Government Railways.

The graphic description of the damage done to the Canadian Government Railways property at Halifax by the explosion on Dec. 6, by F. B. Tapley, Assistant Engineer of Maintenance, C.G.R., published in Canadian Railway and Marine World for January, has evoked considerable favourable comment. We were then only able to show the exterior of the station before the explosion. The views given above were taken some time after the train shed roof had collapsed and when traffic had been resumed. The upper left hand one is looking into the train shed from the track entrance. The upper right hand one shows the train shed minus the roof, from the outside. The two lower views show the interior of the shed.

phic and correct report of the extent of the damage to General Manager Hayes at Moncton, detailing relief, etc., required and enabling prompt action to be taken to rush special trains with doctors, nurses, supplies, etc. Very full particulars as to the railway property were given in Canadian Railway and Marine World for January. We have since been favored with the following particulars of the reconstruction work done up to Jan. 18:—

At North St. station temporary repairs have been carried on both inside and outside of building. The stairs leading to the station have been repaired and are in service. The linen room and express offices have been made water tight. An awning for the concourse has been erected, and will be covered with rubberoid as soon as work in front of building is

in service since Dec. 26.

Pier 3.—Seventeen trusses on the north side have been repaired and repairs were made to side of shed, where necessary. About 200 ft. of track for doors on the north side have been removed, straightened, and replaced. The work is about 75% complete.

Pier 4.—The wreckage from roof and sides of shed has been cleared away. The floor of the annex has been taken up, so that piles can be driven. Stringers and a plank on north side of pier are being finished so that track can be used. The shed is being rebuilt and is about 25% complete.

Pier 9, Richmond.—The debris has been cleared away and also debris on tracks leading to the pier and the pier is now in shape to be used as an open pier.

At Richmond the debris has been cleared away from about 85% of the tracks in the yard and they are being put into service as fast as repairs can be made to them. The water tank at Richmond has been temporarily repaired and has been in service since Dec. 9. All Hudson Bay timber has been loaded and shipped to the south terminals. Pier 9 and three tracks in connection with it have been cleared, and can be used at any time for handling deals, or any other cargo which does not require shed space. The water tank has been temporarily repaired and is giving good service. The sugar refinery site is being cleared.

At Willow Park temporary repairs have been made to 18 stalls in the locomotive house and temporary repairs are being made to 6 additional stalls. The

dangerous portions of the roof of sections 5 and 6 have been removed. Section 4 is being repaired. The "I" beams and columns of this section are straightened, and joists and sheathing are being put in place. The machine shop lower windows are being put in place. Windows are being obtained by salvaging from machine shop and from sections 5 and 6 of locomotive house. The work is about 75% completed. At the bunk house the carpenter work is completed, and the plumbing work is about 75% completed. Sashes are being placed in the office building. Temporary repairs to the stores building are complete and the permanent repairs are now finished. Two bad leaks were discovered in the mains and were repaired and a better supply obtained at the stand pipe.

At the ocean terminals two freight sheds, 600 x 90 ft. each, are being constructed to take the place of sheds which were destroyed by the explosion. They are known as sheds 25 and 28. Grading for tracks near the sheds is finished. Grading for roadway between sheds is finished. Pile driving for shed 28 is completed. Twenty-five per cent. of the floor decking has been placed on the north half of shed 28; 90% of floor grillage has been

has been completed; 125 men are employed on this work. The excavation for foundations of the new garage are complete, and forms for concrete foundation in place; 14 men are employed in this building. At the police office and residence the repairs are well advanced and the building should be shortly completed.

At the torpedo shop a gang is at work taking down trusses and dismantling them, and straightening them to be re-erected; 8 men are employed on the work. Repairs are proceeding on houses 8, 7 and 6. At the small boat slip and shed a small gang is at work dismantling. About one-quarter of the work is completed. At the gymnasium building the brick work is repaired, and half of roof repaired and covered with rubberoid roofing.

### Halifax Disaster Special Train Service on the Canadian Government Railways.

Following are particulars of the special trains run on the Canadian Government Railways between Dec. 6 and 11 in connection with the explosion at Halifax, N.S.:

Dec. 6. From College Bridge, 164 miles. 10 cars Amherst fire brigade, 1 car food

Dec. 8. From St. John, 274 miles, 13 cars. Massachusetts and Maine Relief; 6 baggage cars, 1 1st class and 6 sleepers. From Maine 13 doctors, 4 nurses, 6 Maine Government staff and 2 orderlies, 7,100 blankets, 750 cots. From Massachusetts, 25 doctors, 65 nurses, 8 orderlies. This train had also hospital supplies, cots, and blankets for 500 cots complete.

Dec. 8. From St. John, 274 miles, 5 cars. City of New York. 1 doctor, representing medical department U. S. Government; 1 nurse representing civilian relief U. S. Red Cross; 1 representative Quartermaster Store Department, U. S. Government; 1 Red Cross representative in charge of train; 6 U.S. press men; 10,000 blankets, 10,000 sweaters, 7,000 pairs socks, 1 car food, 100 cases civilian clothing, for men, women and children; 40 cases surgical bandages, 100 gals. liquid disinfectant, 10 bales absorbent cotton.

Dec. 9. From St. John, 274 miles, 14 cars. Montreal relief. Food supplies and private car. Picked up cars of food, also coffins.

Dec. 9. From St. John, 274 miles, 8 cars. Providence, R.I., relief. Baggage car, condensed milk and doctor's outfit; baggage car with bread, window sashes,

Interior and Exterior of Canadian Government Railways Locomotive House at Willow Park, after the Halifax Explosion.

completed on south half of shed 28, with the exception of platform grillage which has not been started yet; 75% of floor girders have been placed on the south half of shed 28; all the columns for shed 28 have been cut to length, and 50% of the brace blocks have been nailed in place and 25% bored for lag screws. Six bents for the north side of shed 28 have been laid out. Good progress is being made and the framing of the superstructure will be well under way this week.

The repairs to the transmission line are over 60% complete. The telephone dispatching line between North St. station and Rockingham has been put back into service.

The Canadian Government Railways officials are also attending to the repairing of the Naval Service Department property; the damage to which is described in the marine department further on in this issue. At the Naval Hospital the lathing has been replaced on the attic and second floor. The concealed electric wiring has been installed in the second floor and attic. Eight out of 12 hot water heating returns have been repaired and put into service. Plastering is proceeding on the second floor. About 56 men are employed on this hospital. At the Naval Dockyard store A has the floor and all the main posts set, with the exception of 4. Store B has the foundation in and half the floor in position. At store D, 50% of the excavation for the grillage

supplies and 8 boarding cars.

Dec. 6. From Moncton, 185 miles, 8 cars, 1 baggage car, 1 hospital commissary, 2 hospital tourists, 1 first class, 2 standard sleepers and general managers' car. This train had railway officials, doctors, nurses and hospital supplies.

Dec. 6. From Moncton, 185 miles, 9 cars Moncton fire brigade, 2 cars, wrecking crane and outfit, 3 hospital and 1 colonist cars.

Dec. 6. From Moncton, 185 miles, 13 cars, 3 box cars, food supplies from Moncton, 7 first class, 1 sleeper, 1 official with doctors and nurses, 1 car food supplies from Sackville.

Dec. 6. From Moncton, 185 miles, 21 cars; steam shovel, small crane, 1 car track spikes, 1 car stores, lanterns, etc., and other cars with food supplies. With this train were 3 gangs workmen consisting of 3 foremen and 15 men.

Dec. 6. From Sydney and New Glasgow, 5 cars. General Superintendent, doctors and nurses.

Dec. 7. From Pictou, 115 miles, 4 cars. Premier Borden and party of doctors and nurses from Charlottetown. In connection with the Premier's special a special trip of the s.s. Aranmore was made from Charlottetown to Pictou.

Dec. 7. From St. John, 274 miles, 5 cars. Massachusetts State Relief; 2 baggage cars, 1 diner, 2 sleepers, with 16 doctors, 15 to 20 nurses, and hospital supplies,

glass and clothing; 1 diner, 5 sleepers; 50 doctors, 50 nurses, 1 chauffeur, 1 druggist, 3 lady secretaries, 2 social workers. Dr. Hough in charge. Dr. Marshall in charge of supplies; Miss Baldwin, head of Red Cross.

Dec. 9. From St. John, 274 miles, 6 cars. Bangor, Me., relief. 2 baggage cars, 2 1st class, 2 sleepers, Christian Science Monitor, doctors and nurses, 35 in party, clothing, blankets and other supplies.

Dec. 14. From St. John, 274 miles, 9 cars. Montreal relief. 4 cars window glass, 2 cars beaver board, 2 cars roofing 1 car lumber.

Dec. 10. From Montreal, 830 miles, 11 cars food supplies.

Dec. 10. From Montreal, 830 miles, 24 cars food supplies.

Dec. 10. From Montreal, 830 miles, 5 cars. 3 cars with clothing and provisions, 2 private cars with doctors, nurses and officials of the T. Eaton Co., Toronto. Sir John Eaton was with this train.

Dec. 10. From Montreal, 830 miles, 11 cars. Toronto relief. 1 car building supplies, 3 baggage cars, 6 colonists, 1 sleeper. This train had carpenters, plumbers and machinists with tools, etc., 8 officers and 337 men.

Dec. 10. From Montreal, 830 miles, 20 cars auto trucks and supplies from Ottawa.

Dec. 11. From Montreal, 830 miles, 25 cars supplies, meat, etc., from Ottawa.

## Birthdays of Transportation Men in February.

Many happy returns of the day to:—

B. H. Bennett, General Agent, Chicago & North Western Ry., Toronto, born at Cobourg, Ont., Feb. 6, 1858.

T. Britt, General Fuel Agent, C.P.R., Montreal, born there Feb. 3, 1871.

J. S. Byrom, General Superintendent, Sleeping, Dining and Parlor Cars, and News Service, Eastern Lines, C.P.R., Montreal, born at Jersey City, N.Y., Feb. 10, 1872.

J. J. Callahan, Superintendent, Oshawa Ry., Oshawa, Ont., born at New Glasgow, Que., Feb. 25, 1875.

H. R. Charlton, General Advertising Agent, G.T.R. and G.T.P.R., Montreal, born at St. Johns, Que., Feb. 9, 1866.

R. Colclough, Superintendent, District 1, Transcontinental Division Canadian Government Railways, Quebec, Que., born at Bic, Que., Feb. 24, 1871.

R. Crawford, Northwest Agent, Northern Navigation Co., Winnipeg, Man., born at Kingston, Ont., Feb. 21, 1870.

A. J. Donegan, ex-Superintendent, Algoma Eastern Ry., now at Nickelton, Ont., born at Perth, Ont., Feb. 17, 1872.

R. W. Drew, Division Freight Agent, Saskatchewan District, C.P.R., Regina, born at Kingston, Ont., Feb. 17, 1874.

E. A. Evans, M.Can.Soc.C.E., ex-General Manager and Chief Engineer, Quebec Ry., Light & Power Co., Quebec, born at Kensington, London, England, Feb. 26, 1855.

Goodwin Ford, General Superintendent, Western Lines, Dominion Express Co., Winnipeg, born at Bordentown, N.J., Feb. 23, 1859.

U. E. Gillen, Vice President (Operating), G.T.R., Montreal, born at Brooklyn, Mo., Feb. 27, 1867.

T. C. Hudson, Division Master Mechanic, Quebec Division, Canadian Northern Ry., Joliette, Que., born at Brockville, Ont., Feb. 20, 1873.

H. Hulatt, Manager of Telegraphs, G.T.R. and G.T.P.R., Montreal born at London, England, Feb. 15, 1883.

C. Gardner Johnson, Lloyd's Agent for British Columbia, Vancouver, B.C., born at Dunblane, Scotland, Feb. 8, 1857.

F. C. Johnson, General Foreman of Shops, C.P.R., Moose Jaw, Sask., born at Montreal, Feb. 26, 1885.

A. H. Jones, Assistant Engineer, Canadian Government Railways, Moncton, N. B., born at Liverpool, Eng., Feb. 16, 1884.

John McCraw, General Agent, Central Vermont Ry., New London, Conn., born at Craigville, Ont., Feb. 6, 1868.

G. L. McCrea, Local Freight Agent, C.P.R., Vancouver, B.C., born at Springtown, Ont., Feb. 9, 1876.

T. McNab, ex-Master Mechanic, Alberta Ry. & Irrigation Co., now of Picture Butte, Alta., born in Scotland, Feb. 16, 1849.

J. K. McNellie, Superintendent, Susquehanna Division, Delaware & Hudson Co., Oneonta, N.Y., born at Toronto, Feb. 23, 1874.

J. D. McNutt, Inspector of Train Dispatching, Canadian Government Railways, Moncton, N.B., born at Stewiacke, N.S., Feb. 8, 1873.

D. C. Macdonald, Assistant General Claims Agent, C.P.R., Winnipeg, born at Elmsdale, N.S., Feb. 9, 1874.

C. S. Maharg, Superintendent, Brandon Division, Manitoba District, C.P.R., Brandon, born in Dufferin County, Ont., Feb. 4, 1867.

V. J. McIsted, ex-Engineer of Water Service, C.P.R., Winnipeg, born at Gardar, N.D., Feb. 20, 1887.

G. A. Montgomery, Vice President and General Manager, Algoma Central & Hudson Bay Ry., Sault Ste. Marie, Ont., born at Bradford, Ont., Feb. 11, 1871.

A. Z. Mullins, Commercial Agent, G.T.R., Grand Rapids, Mich., born at Apin, Ont., Feb. 14, 1862.

M. G. Murphy, General Agent, Passenger Department, C.P.R., Detroit, Mich., born at Halifax, N.S., Feb. 26, 1878.

J. E. Proctor, District Passenger Agent, C.P.R., Regina, Sask., born at Sarnia, Ont., Feb. 17, 1878.

C. T. Ridalls, Car Foreman, C.P.R., London, Ont., born at St. Heliers, Jersey, Channel Islands, Feb. 8, 1864.

A. E. Rosevear, General Freight Agent, G.T.P.R. and Grand Trunk Pacific Coast Steamship Co., Winnipeg, born at Montreal, Feb. 20, 1863.

J. G. Scott, ex-General Manager, Quebec & Lake St. John Ry., Quebec, born there Feb. 13, 1847.

J. J. Scully, General Superintendent, Algoma District, C.P.R., North Bay, Ont., born at Montreal, Feb. 3, 1872.

G. Spencer, Chief Operating Officer,

Board of Railway Commissioners, Ottawa, born in London, Eng., Feb. 21, 1865.

R. H. Sperling, Advisor to the Board, British Columbia Electric Ry., London, Eng., born there, Feb. 9, 1876.

H. E. Suckling, Treasurer, C.P.R., Montreal, born at Gibraltar, Feb. 27, 1851.

Hugh Sutherland, Executive Agent, Canadian Northern Ry., Winnipeg, Man., born at New London, P.E.I., Feb. 22, 1845.

F. L. Wanklyn, M.Can.Soc.C.E., General Executive Assistant, C.P.R., Montreal, born at Buenos Ayres, Feb. 25, 1860.

J. R. Watson, Assistant Superintendent, Sleeping, Dining and Parlor Cars, and News Service, Eastern Lines, C.P.R., Montreal, born at Morpeth, Eng., Feb. 8, 1873.

A. Williams, Superintendent, London Division, Ontario District, C.P.R., London, born at Mono Road, Ont., Feb. 22, 1872.

The Winnipeg Jitney Owners and Drivers' Association at a meeting held Jan. 20, made arrangements to fight all attempts to put them out of existence. There are about 250 jitneys operating in the city according to a statement made at the Board of Control, Jan. 7.

## The Canadian Pacific Railway's Honor Roll No. 29

Abbott, David	Checker	Toronto	Killed in action
Adams, Jas.	Switchman	Calgary	Presumed dead
Bagnell, Alex.	Shedman	Bowmanville	Wounded
Beamish, Wm. Richard	Car repairer	Moose Jaw	Wounded
Bossley, Jas.	Locomotive fireman	British Columbia Dist.	Wounded
Burton, Leslie Wm.	Asst. steward	Winnipeg	Wounded
Cameron Adam R.	Clerk	Montreal	Killed in action
Cannon, Kenneth E.	Wiper	Winnipeg	Presumed dead
Chandler, Reginald R.	Cook	Montreal	Killed in action
Christie, Andrew F.	Clerk	Winnipeg	Wounded
Clarke, E. Vincent	Timekeeper	Medicine Hat	Wounded
Clarke, Wm. B.	Clerk	Toronto	Died of wounds
Colebrook, William	Stower	St. John, N.B.	Killed in action
Crane, Horace F.	Stower	Calgary	Killed in action
Dillon Ernest H.	Sectionman	Douglas	Wounded
Dudley, John	Shipper	Winnipeg	Wounded
Ewen, John Douglas	Clerk	Toronto	Wounded
Gillies, Wm. John	Fireman	Winnipeg	Wounded
Green, Arthur	Asst. agent	Foam Lake	Killed in action
Hack, Cyril	Fitter's helper	Field	Wounded
Haldane, Ewen McG.	Clerk	Sudbury	Died of wounds
Hamilton, William	Sectionman	Estevan	Wounded
Hancock, Albert P.	Foreman and checker	Winnipeg	Wounded
Harrison, George R.	Draftsman	Winnipeg	Wounded
Hiam, Gerald	Dist. Freight Agent	Fort William	Wounded
Hobson, Andrew J. H.	Operator	Douglas Pit	Killed in action
Hooper, Henry S.	Clerk	Portage la Prairie	Wounded
Hendry, Frank G.	Locomotive man	British Columbia Dist.	Died of wounds
Hughes, Wm. G.	Clerk	Montreal	Wounded
Jacobs, William	Machinist's helper	Ogden Shops	Wounded
Johling, Richard	Bridgeman	Lethbridge	Died of wounds
Joyce, Alfred W.	Clerk	Fort William	Wounded
Kemp, John Herbert	Clerk and operator	Peterborough	Wounded
Large, Wm. Chas.	Checker	Port McNicoll	Wounded
McCauley, Jeremiah	Conductor	North Bay	Gassed
MacDonald, Daniel J.	Clerk	Halifax, N.S.	Died of wounds
McDonnell, Roderick	Locomotive man	North Bay	Killed in action
McInnes, Christopher	Asst. Checker	Kamloops	Gassed
Malkinson, Wilfred	Machinist's helper	Calgary	Wounded
Mason, George	Yardman & switchman	Montreal	Wounded
Meeson, Oscar D.	Billie	Winnipeg	Presumed dead
Moyle, Jas. Henry	Brakeman	Chapleau	Wounded
Newbold, Alfred H.	Head storeman	Winnipeg	Died of wounds
Orchard, Larnach	Steward	B.C. Coast Steamers	Wounded
Overy, Albert	Car cleaner	Moose Jaw	Gassed
Parfitt, Reginald J.	Clerk	Montreal	Wounded
Phillips, Mark V.	Steward	B.C. Lake & River Strs.	Wounded
Porter, Clarence R.	Car checker & biller	Owen Sound	Presumed dead
Prince, Lionel	Boiler-maker	Winnipeg	Killed in action
Reid, John Moir	Steward	B.C. Coast Strs.	Killed in action
Richards, Francis P.	Accountant	Winnipeg	Wounded
Rose, Thomas	Loader	Vancouver	Wounded
Scales, A.	Miner	Calgary	Wounded
Sharples, John	Fireman	Sutherland	Wounded and gassed
Sly, George W.	Foreman	Farnham	Wounded
Smith, Hubert	Triple tester	Winnipeg	Gassed
Smyth, William	Clerk	Winnipeg	Wounded
Sturges, Samuel	Truck repairer	Winnipeg	Killed in action
Sutcliffe, John B.	Painter's cleaner	Winnipeg	Wounded
Turnbull, Alexander	Baggage porter	Calgary	Wounded
Turner, Alfred	Car cleaner	Brandon	Killed in action
Type, Augustus	Specialist	Montreal	Wounded
Van Loon, Emile	Check boy	Calgary	Killed in action
Vidal, Maurice H.	Clerk	Sudbury	Killed in action
Warner, Harry	Locomotive fireman	Kenora	Shell shock
Wheatley, George J.	Clerk	Montreal	Wounded
Wilson, James	Machinist	Winnipeg	Died of wounds
Woodwards, George	Checker	North Bay	Killed in action
Young, Rainsford	Clerk	Winnipeg	Wounded

Shown on Honor Lists to Dec. 1, 1917: Killed, 541; wounded, 1,154; total, 1,695.

# Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

**Alberta-Hudson Bay Ry.**—Surveys are reported to be in progress for a railway from Medicine Hat, southerly through Coutts, Alta., at the International boundary, with an extension in the United States, to connect with the Great Northern main line at Great Falls, Mont. C. B. Miles is said to be in charge of surveys.

This is the project originally initiated in Alberta under the title of the High River and Hudson Bay Ry., and in Saskatchewan as the Saskatchewan and Hudson Bay Ry., and under the Dominion Charters of the High River, Saskatchewan and Hudson Bay Ry., and the Calgary and Fernie Ry. The A. H. B. Ry. is the new title of the Alberta section of the undertaking, and the surveys reported to be under way cover the portion of new mileage authorized by the Alberta Legislature in 1917. (May, 1917, pg. 194; June, 1917, pg. 224).

**Alma & Jonquiere Ry.**—The Quebec Legislature has extended the time for the building of this projected railway from LaBarre or St. Gedeon, on the Quebec & Lake St. John Ry., to Little Discharge, to Alma Island, and through Signal, La Barre, Kenogami and Jonquiere Tps., to Jonquiere station on the Q. & St. J. Ry. (Dec., 1917, pg. 470.)

**Calgary and Coal Range Ry.**—The Alberta Legislature is being asked to incorporate a company to build a railway from Calgary south westerly to a point in either Tp. 19 or 20, in Ranges 2, 3 or 4 west 5th Meridian, thence south and south easterly to Tp. 16, Range 1, west 5th Meridian and thence southwesterly to the headquarters of Johnston Creek. Short & Cross, Edmonton, Alta., are solicitors for the applicants.

**The Canadian Northern Ry.'s locomotive house** at Portage la Prairie, Man., was destroyed by fire, Jan. 16.

A transfer track is reported to be under construction at Stebbler, Alta., to connect the Canadian Pacific and Canadian Northern Railways. It was expected to have the connection made by Jan. 31. Stettler is on the C. N. Ry.'s Vegreville-Calgary line, and on the C. P. R.'s Kerrobert-Lacombe line. (Jan. pg. 12).

**Grand Trunk Pacific Ry.**—It is reported that negotiations are practically completed under which the G. T. P. R. will utilize certain of the C. P. R. tracks in Saskatoon, Sask. At present the company runs outside Saskatoon, and in order that its trains may run through the C. P. R. station, connections will have to be made with that company's tracks near Floral on the east and Cory on the west. (Jan. pg. 12).

**Grand Trunk Ry.**—Brantford, Ont., ratemakers voted Jan. 7, by a majority of 272, in favor of a bylaw to raise \$40,000 by debentures towards the cost of constructing a subway under the G.T.R. tracks at St. Paul Ave.

In connection with the reduction of train service on the old London, Huron & Bruce Ry. between London and Wingham, Ont., a proposition is being discussed in the municipalities through which it runs in favor of the electrification of the line. (Jan., pg. 12).

**Great Northern Ry.**—The old frame building on Pender St., Vancouver, B.C., formerly used by the G. N. R. as a passenger station, and which has been closed since the opening of the new building on False Creek, is to be renovated and refitted for a stores building.

The new concrete and steel bridge which opens the North Road at Coquitlam, built through the G. N. R. in straightening its tracks along the Brunette Creek, has been opened for public traffic. Track laying along the new cut-off has been practically completed. The cut-off will reduce the distance between New Westminster and Vancouver by about half a mile, and eliminates the level crossing at the Brunette bridge. On Jan. 2, there was a big landslide adjoining the new bridge, which buried the new track for several hundred feet. The clearing of this away will, it is estimated, cause a delay of about a month in the completion of the cut-off (Nov. 1917, pg. 433.)

**Kettle Valley Ry.**—We are officially advised that tenders have been asked for the grading of the projected branch from Penticton southerly to Copper Mountain, and for the building of the bridges thereon. A. McCullough, Penticton, B.C., is Chief Engineer. (Dec. 1917, pg. 471).

**Michigan Central Rd.**—The Essex County Council is applying to the Ontario Legislature for the confirmation of an agreement respecting the use of a spur owned by the M.C.R. to convey sand and gravel for use under the Highway Improvement Act, from lands purchased by the county to the M.C.R. main line. (Aug., 1917, pg. 306.)

**Pacific Great Eastern Ry.**—A. F. Proctor, Chief Engineer of the British Columbia Department of Railways, has completed an inspection of the line and of the rolling stock. The inspection was made with a view of ascertaining how far the line has been damaged by the recent land slides. (Nov., 1917, pg. 433.)

**Quebec Bridge.**—A passenger train service was inaugurated over the bridge Jan. 6.

In connection with wild press reports as to contraction of the bridge during the winter, one being that there was a contraction of 9 ft., C. N. Monsarratt, chairman of the commission, is reported to have said that provision had been made in the structure for expansion and contraction of 36 in., which is sufficient to take care of a variation in temperature of 180 degrees. Between Dec. 18 and 30, when the greatest variation of temperature was 35 degrees, the contraction was only 4½ in. which was in accordance with expectations. (Jan., pg. 12).

**Red Deer Valley Coal Co.**—The Dominion Government has leased to the company land in the S. E. ¼ Sec. of Sec. 9, Tp. 29, Range 20, west of the 4th Meridian, for the construction of a spur line from the Canadian Northern Ry.'s Vegreville-Calgary line, to the company's collieries.

**Toronto, Hamilton and Buffalo Ry.**—The City Solicitor of Hamilton has prepared a draft lease covering the taking over of Mountain face property by the T. H. & B. R. It provides for the payment of taxes and rents by the company, the prohibition of shunting on Sundays and week nights, between 10 p.m. and 6 a.m., and the removal of all ties, rails and equipment at the expiration of five years. The Council's railway committee was called together on Jan. 15 to pass on the lease before it was forwarded to the Board of Railway Commissioners for approval.

At a meeting of residents of the district on Jan. 18, a committee was formed to look after the interests of citizens and

to continue the fight against the company being given authority to expropriate the land covered by the proposed lease for railway yard purposes. A suggestion was made that a general organization of citizens should be formed for the purpose of forming public opinion in favor of the carrying out of the recommendations of the Tye-Cauchon report in their entirety. (See "The Railway Situation in Hamilton," Jan., pg. 17.)

**Western Power Co. of Canada and Western Canada Power Co.**—The W. P. Co. of Canada is applying to the Dominion Parliament to authorize it to operate the railway built by the W. C. P. Co. and described in sec. 1, chap. 175 of the statutes of 1910 as, from a point at or near the company's works at Stave River, B.C., southerly and westerly to a point on the main line of the C.P.R. between Ruskin and Hammond. This line was built in 1910 and has been used as a logging railway, an electric locomotive being used for hauling the cars. (Feb., 1914, pg. 70, Oct., 1910, pg. 833.)

## Canadian Pacific Railway's Victory Loan Float.

Following are some additional particulars of the C.P.R.'s float which was used in the Victory Loan parades in Montreal and Toronto in November, and which was illustrated and briefly described in Canadian Railway and Marine World for December: The float was built at the company's Angus shops, Montreal, under the direction of W. E. Woodhouse, Chief Mechanical Engineer, and was completed in 48 hours from the time instructions were issued to build it. This model was half the size of the company's standard D-10 freight and passenger locomotive, being 36 ft. over all.

It was constructed as follows: The propelling gear was two Little Giant one-ton trucks, operated independently by two operators. The float was supported on these trucks by centre pins, located centrally between front and back drivers of each truck, and side bearings were provided to steady the load. The frame proper, which supported the locomotive and tender was of rigid construction, having two centre pins which engaged with centre pins on the trucks as above mentioned. The boiler, cab and tender were built up of a wooden frame work, which was fastened rigidly to the main frame, after which boiler jacket steel, 22 gauge, was wrapped around the wooden framework, producing an effect identical with an actual locomotive. The air to blow the whistle was provided from two oxygen bottles, which were located in the tender. Smoke was made as follows: A pan of water was located in the stack, with about 1 in. clearance between the pan and the stack and a fusee was lit and placed below the water pot, the heat of the fusee boiling the water, and the steam and smoke from the fusee escaping through the stack, giving the appearance of a locomotive under steam. The hand-rails, grab irons, etc., were actual duplicates of the real things, the whole make-up being an excellent duplicate (from outside appearances) of a D-10 locomotive.

New Brunswick received \$57,197 from railways taxes for the year ended Oct. 31, 1917.

# Mainly About Railway People Throughout Canada.

**E. V. Bodwell, K.C.**, who died at New Westminster, B.C., Jan. 14, was Solicitor for the Great Northern Ry. at Vancouver.

**G. McL. Brown**, European Manager C. P.R., London, Eng., has been elected a member of the Pilgrims' Club.

**E. M. Goodman**, agent, Timiskaming & Northern Ontario Ry., Liskeard, Ont., has been elected mayor of the town for the current year.

**C. W. Price**, station agent, Canadian Government Railways, Moncton, N.B., has resumed his duties after a short absence through illness.

**H. R. Safford, M.Can.Soc.C.E.**, Chief Engineer, G.T.R., Montreal, has been nominated as Vice President, American Railway Engineering Association for 1918.

**Alex. Campbell**, who resigned his position as Traffic Manager, Edmonton, Dunvegan & British Columbia Ry. in Sept., 1917, has returned to the United States and is operating a ranch in Idaho.

**J. M. R. Fairbairn, M.Can.C.E.**, Assistant Chief Engineer, Eastern Lines, C.P.R., Montreal, has been nominated as a director of the American Railway Engineering Association for 1918.

**J. G. Scott**, formerly General Manager, Quebec & Lake St. John Ry., and now President, Quebec Board of Trade, has been elected President of the British Columbia Skeena Coal Co., Ltd.

**Bion J. Arnold**, of the Arnold Co., Engineers, Chicago, Ill., has been appointed a lieutenant-colonel in the aviation section of the Signal Corps of the U. S. Army, and assigned to foreign service.

**C. E. Horning**, District Passenger Agent, G.T.R., Toronto, has been elected a member of the Toronto Transportation Club's executive committee, to succeed E. Boland, Manager, Robert Reford Co., resigned.

**W. F. Tye, M.Can.Soc.C.E.**, Montreal, formerly Chief Engineer, C.P.R., is reported to have been named as a member of the Dominion Commission on Conservation, in place of the late Sir Sandford Fleming.

**F. P. Brady**, General Manager, Western Lines, Canadian Government Railways, Winnipeg, who was in Ottawa on business with the Railways Department, left there towards the end of January for treatment in the Royal Victoria Hospital, Montreal.

**E. R. Bremner**, who has been re-elected President of the Ottawa Board of Trade, was formerly Assistant General Freight Agent, Canada Atlantic Ry., subsequently District Freight Agent, G.T.R., and since then Canadian Manager, Watson & Todd, Ltd., lumber merchants, Ottawa.

**Sir Collingwood Schreiber, K.C.M.G.**, Hon. M.Can.Soc.C.E., General Consulting Engineer of the Dominion Government, who was confined to his house by illness for some little time, was able to be at his office in Ottawa again towards the end of January.

**D'Arcy Scott**, Assistant Chief Commissioner, Board of Railway Commissioners, and **S. J. McLean**, Commissioner, were appointed Sept. 17, 1908, so that their 10 years terms of office will expire Sept. 17, 1918. They are both eligible for re-appointment.

**Henry Fleming**, who died at Collingwood, Ont., Dec. 25, aged 86, after spending most of his life farming in that dis-

trict, was a brother of the late Sir Sandford Fleming, sometime Chief Engineer of the Intercolonial and Canadian Pacific Railways and afterwards a C.P.R. director.

**A. F. Mitchell**, who has been elected an associate member of the Canadian Society of Civil Engineers, is acting District Engineer in charge of harbor improvements at Victoria and Nanaimo, the construction and maintenance of government wharves, the graving dock at Esquimalt and other public works in British Columbia.

**Major-General Sir Percy Girouard**, Managing Director, Sir W. G. Armstrong, Whitworth & Co., Ltd., of England, at one time on the C.P.R. engineering staff, and subsequently associated with various rail-

**H. H. Vaughan**  
President, Canadian Society of Civil Engineers

way works under the British War Office, in England, Egypt, and South, East and West Africa, has been elected a member of the Pilgrims' Club, London, Eng.

**E. B. Tilt**, who has been elected an associate member of the Canadian Society of Civil Engineers, was formerly Engineer of Tests, Angus Shops, C.P.R., Montreal, and in 1915-16 he was Chief Inspector of steel for the Imperial Munitions Board, and subsequently went to Madrid, Spain, as President and General Manager, Sociedad Hispano-Americano Gaston Williams of Wigmore, C.A. He is at present in Canada.

**Daniel Todd Main**, Works Manager, C. P.R., Winnipeg, who has been elected an associate member of the Canadian Society of Civil Engineers, was born at Kirkintilloch, Scotland, June 18, 1878, and educated in the Isle of Man and Glasgow Technical College (Applied Science). He came to Canada in 1903, and entered Mackenzie, Mann & Co.'s service as draftsman, transferring to C. P. R. service in 1904, since when he has been, to 1907, draftsman; 1907 to Mar., 1908, Locomotive Foreman, Minnedosa, Man.; Mar., 1908, to Mar., 1910, Locomotive Foreman,

Cranbrook, B.C.; Mar., 1910 to Jan. 1912, District Master Mechanic, District 1, British Columbia Division, Nelson; Jan., 1912, to June 30, 1913, Master Mechanic, Saskatchewan Division, Moose Jaw; June, 1913, to Apr. 15, 1915, Master Mechanic, British Columbia Division, Vancouver; Apr. 15 to Apr. 20, 1915, Master Mechanic, Ontario Division, Toronto; Apr. 20, 1915, to Sept. 1916, Superintendent of Motive Power and Car Department, Eastern Lines, Montreal, and since Sept. 1916, Works Manager, Winnipeg.

**Henry Hague Vaughan**, who has been elected President, Canadian Society of Civil Engineers, was born at Forest Hill, Essex, Eng., Dec. 26, 1868, and educated at King's College, London. He served an apprenticeship with Nasmith, Wilson & Co., Patricroft, Manchester, Eng., and went to the U. S. in 1891. He was engaged with various companies as machinist, draftsman, assistant engineer of tests, and mechanical engineer, including the Great Northern Ry., Philadelphia & Reading Ry., and the Queen and Crescent Route, and after a period of service with a supply house, was appointed Assistant Superintendent of Motive Power, Lake Shore & Michigan Southern Ry., Mar., 1902, remaining until Feb., 1904, when he was appointed Superintendent of Motive Power, C.P.R., which position he held until his appointment as Assistant to the Vice President, Dec., 1906, from which position he retired in Apr., 1915, acting afterward as Consulting Engineer. He has been a member of the Canadian Society of Civil Engineers since 1906, a member of the council since 1910, and was elected Vice President in 1912. He is Vice President, Dominion Bridge Co., Vice President and General Manager, Dominion Copper Products Co., and President, Montreal Ammunition Co.

**Arthur H. Harris**, who has been made a Knight Commander of the British Empire, for his services in Canada as Director of Overseas Transport, was born at Devonport, Devonshire, Eng., Oct. 15, 1855. He came to Canada in 1874, and entered railway service that year, since when he has been, to 1887, secretary to Traffic Manager, G.T.R.; June, 1887, to Sept., 1889, Assistant General Freight Agent, Through Traffic, same road, Buffalo, N.Y.; Sept., 1889, to Jan. 1891, General Freight Agent, Through Traffic, same road, Detroit, Mich.; Jan., 1891, to May, 1892, District General Freight Agent, in charge of Southern Division, same road, Hamilton, Ont.; May 1, 1892, to Dec. 1, 1897, District General Freight Agent in charge of all lines east of Belleville, Ont., to the coast, same road; Dec. 1, 1897, to Aug. 1, 1898, General Traffic Manager, Intercolonial and Prince Edward Island Railways; Aug. 1, 1898, to Aug. 1, 1900, General Canadian Traffic Agent, Fitchburg Rd., Montreal; Aug. 1, 1900 to 1902, General Traffic Manager, Quebec Southern Ry., and also General Canadian Traffic Agent, Rutland Rd., Montreal. In 1902 he entered C.P.R. service as Special Traffic Representative, under Vice President Bosworth, and remained in that position until Aug., 1914, when he was loaned to the Imperial and Dominion Governments to organize and direct an overseas transport department, being given the title of Director of Overseas Transport.

**William Zobieski Earle, M.Can.Soc.C.E.** who died at Rothesay, N.B., Jan. 5, after a short illness, was born at Hamilton, N.B., July 23, 1854, and entered railway

service in 1871, as rodman, Intercolonial Ry. In 1872 he served as chairman on government surveys in Manitoba; 1873 to 1874, assistant in charge of party on land surveys; May to Dec. 1874, transit man, on city work and survey of St. John River, Public Works Department; 1875 to 1876, Assistant Engineer on location and construction, St. Martins and Aphani Ry.; 1877, on survey on line from Bras d'Or to Broad Cove, N.S., and remeasurement of Albert Rd.; 1878 to 1880, private practice at St. John, N.B.; 1880 to 1881, Assistant Engineer on location on the second 100 miles of the C.P.R. west of Winnipeg, for the Dominion Government; Mar. 1881 to Apr. 1883, Assistant Engineer, C. P. R.; Apr. 1883 to Oct. 1886, Division Engineer on construction through the Rocky Mountains, C.P.R.; May to Aug. 1887, Division Engineer on extension, Sherbrooke, Que., easterly, C.P.R.; Aug. 1887 to Mar. 1891, Resident Engineer, Oregon Pacific Ry.; Apr. 1891 to July 1892, Chief Engineer, Peninsular Ry. of Lower California; Sept. 1892 to Mar. 1893, Chief Engineer, Coor Bay Roseburg and Eastern Ry., Oregon; Mar. 1893 to Jan. 1896, Principal Assistant Engineer, Bangor and Aroostook Ry., Maine. He was subsequently, Engineer in charge of harbor improvements, St. John, N.B.; Resident Engineer, Public Works Department, Sault Ste. Marie, Ont.; and Manager, St. John Ry., St. John, N.B.; resigning the last named position in 1910 on his appointment as District Engineer, Public Works Department, Winnipeg, and later at Prince Albert, Sask. He left the west for Rothesay, N.B., toward the end of 1917, on account of his health.

### Salisbury and Albert Railway Operation.

This S. & A. Ry. line extends from Salisbury, N.B., on the Intercolonial Ry. near Hillsboro, to Albert, 45 miles, entirely in Hillsboro County. It is one of the lines which it was proposed that the Dominion Government should take over and operate as an Intercolonial branch. One train a day, in either direction, has been operated over the line, but for a considerable time past there has been a good deal of complaint made as to the service given. Since the beginning of the present year there has not been any service between Hillsboro and Albert. As the result of a petition from the district the Minister of Railways, on Jan. 11, authorized the Intercolonial officials to operate the line immediately. Whether this will be only a temporary expedient, or whether it is preliminary to the taking over of the line as a regular branch line, has not been announced.

### Pere Marquette Ry. Track Awards.—

Results of the awards of prizes in connection with the annual track inspection, conducted by the President, were announced recently. A prize of \$100 for the district showing the greatest improvement during the year, was awarded to H. Morris, Roadmaster, Canadian Division, Walkerville, Ont., and another prize of \$100 for shop grounds and buildings, was awarded to Charles Montgomery, Division Master Mechanic, Canadian Division, St. Thomas, Ont.

**Timiskaming & Northern Ontario Ry.** Passenger earnings for Nov., \$55,625.49; freight earnings \$116,033.01; total earnings \$171,658.50, against \$55,039.83 passenger earnings; \$105,798.45 freight earnings; \$160,838.28 total earnings for Nov., 1916.

### Meritorious Services by Canadian Pacific Railway Employees.

The educational bulletins issued by the general superintendents of the company's various districts record the following meritorious services performed by employees recently:—

Chas. Henderson, conductor, New Brunswick District, while in charge of a passenger train detected an unusual jar. He immediately stopped his train, and on investigation found a piece of 18 in. broken out of one of the rails. His commendable alertness undoubtedly prevented an accident.

Edgar G. Beal, conductor, Brandon Division, while in charge of train, noticed that it had passed over a rough spot in the track. He immediately stopped the train and went back and found a broken rail. His vigilance and action are commendable.

The locomotive man on an outgoing passenger train, the rear of which was close to the entrance to the station, backed his train up in order to avoid being struck by an incoming passenger train. He did this without receiving any signal. The prompt action of a trainman in applying the brake no doubt averted an accident.

A locomotive man, assisted by his fireman, replaced broken bolts in tender drawbar strap on wayfreight locomotive on a branch line, completed the trip, and returned to the terminal the following day with repairs made. This avoided considerable delay to the train and also light movement of power.

Trainman G. Gill, while examining train at Streetsville Jct., Ont., discovered broken wheel on car. This emphasizes the importance of close inspection being given by trainmen to their trains when standing at stations or in sidings.

Conductor Orndorff, after passing switch at Galt grade reduction, noticed marks on the track and immediately applied the brakes. On examination of the train one pair of trucks of snow plow were found to be derailed.

### Disposition of Cars Containing Food or Food Products.

A Dominion order in council, under the War Measures Act, 1914, was passed Dec. 24, 1917, providing regulations regarding the loading, detention and disposition of cars containing food and food products, as follows:—

1. A freight car containing food or food products shall not be allowed to remain under load at its destination on any railway in Canada for a longer period than four days after notice of its arrival has been given by the railway company to the consignee of such food or food products.

2. When any freight car containing food or food products remains under load at its destination for a longer period than four days after such notice has been given as aforesaid, the railway company holding such freight car shall notify the Food Controller thereof.

3. When any freight car containing food or food products is held at any railway point in Canada for a furtherance order and such order is not given by the consignee of the said goods within one day of the time of the arrival of the car at such point, the railway company holding such freight car shall notify the Food Controller thereof.

4. Whenever, by reason of such notice or otherwise, it comes to the knowledge

of the Food Controller that any freight car containing food or food products has remained under load at its destination for a longer period than four days, or has been held at any point for furtherance order for a longer period than one day after notice of its arrival has been given to the consignee as aforesaid, the Food Controller may send a written notice by registered mail or by telegram to the consignee that unless the freight car is unloaded or a furtherance order given, as the case may be, within two days from the date of such notice, the food or food products contained in such freight car will be seized by the Food Controller and sold, and if such freight car is not unloaded or a furtherance order given, as the case may be, within the said two days, the Food Controller may thereupon seize the contents of the said car and sell them in such manner as he may deem best, and, after paying all charges for freight and for the expenses connected with the seizure and sale, the Food Controller shall pay the balance, if any, of the proceeds of the sale to the said consignee.

5. The officers of any railway company by which a car or cars is or are being held for unloading or for furtherance orders shall furnish the Food Controller, or any person thereto authorized by the Food Controller, with all information that the Food Controller or such person may require with respect to the date of the arrival and the nature of the contents of any freight car under load held by the railway company at the point or points with respect to which any inquiry is made.

6. The Food Controller may forbid any railway company from accepting any food or food products for transportation from any shipper whose goods have been seized and sold under the provisions of these regulations, without the written permission of the Food Controller.

7. Any person neglecting or refusing to send any notice or give any information required or authorized by these regulations, or accepting any goods for shipment contrary to the provisions of section six of these regulations, shall be guilty of an offence and liable on summary conviction to a fine not exceeding \$500, or to imprisonment for a term not exceeding six months, or to both fine and imprisonment.

**Union Collieries, Limited**, is the title of a company incorporated under the Dominion Companies Act with an authorized capital of \$1,000,000, and office at Montreal. The primary purpose of the company is to acquire the lands and property in Alberta of the Diamond Coal Co., which is in liquidation. This company owned a short line of railway, extending from Kipp, on the C.P.R., to Diamond City. The new company has power to operate steam and other vessels, docks, wharves, elevators, warehouses, freight sheds, etc.; and to lay tramways, switches, sidings, etc., on its own lands.

### Sir William Reid charged with libel.—

Hon. W. F. Coaker, a member of the Newfoundland Government, laid an information early in January against Sir William D. Reid, ex President, Reid Newfoundland Co., charging him with criminal libel, in a letter to Lord Shaftesbury, in which references were made to a visit to Ottawa by Mr. Coaker, during which he was to be "educated" as to the advisability of Newfoundland confederating with Canada. Sir William was released on \$20,000 bail, giving his personal bond of \$20,000 and two bondsmen of \$10,000 each.

# Canadian Transportation Men, Engineers, Etc. in the War.

Canadian Railway and Marine World is desirous of publishing all the information possible about the war work of Canadian transportation men, engineers, etc., and invites its readers to send in information for use in this connection. No doubt a large number of our readers receive many letters from the front, etc., extracts from which would prove of interest in these columns. We would be glad to be favored in this respect.

The Timiskaming & Northern Ontario Railwaymen's Patriotic Association, up to Sept. 30, 1917, had contributed \$64,616.96 to the Canadian Patriotic and Red Cross funds.

The Grand Trunk Railwaymen's Patriotic Association, Toronto, has contributed \$5,000 to the Canadian Patriotic and Red Cross Funds, making a contribution to date, of about \$30,000.

**Canadian Officers Honored.** The following were included in the honors announced in England on New Year's Day. Companions of St. Michael and St.

commanding the 2nd Signal Co. at the front.

Lieut. W. W. Cranston, Royal Engineers, who is reported as killed in action, was in the Canadian Northern Ry.'s engineering department, on the Boston Bar subdivision in British Columbia, under Division Engineer J. D. Black, as follows: From Sept. 24, 1913, until May, 17, 1914, as draftsman; from May 18, 1914, until Oct. 20, 1914, as Resident Engineer.

G. W. Curtis, formerly Industrial Agent, C. P. R., Montreal, who joined the Royal Flying Corps, Nov. 15, 1916, is now an acting flight commander in England. His commanding officer is reported to have recommended him for a first lieutenancy, and he expects to be sent to France at any time.

Capt. F. H. Moody, B.A.Sc., Jr., M.Can. Soc. C.E., formerly Mechanical Editor, Canadian Railway and Marine World, has been seconded for duty under the Ministry of Munitions (Air Board). He went overseas as a major with the 116th Battalion, C.E.F., but reverted to a captaincy

Hospital at Bromley, Kent. He is a brother of Allan Royce, Vice President, and Lt. Col. Geo. C. Royce, Secretary-Treasurer and General Manager, Toronto Suburban Ry.

Captain Robert Shore, and Lieutenants Duncan, McCaimon and Alfred White, of the Canadian Railway Troops, have been awarded the Military Cross.

## Canadian Railway Troops in the Cambrai Fighting.

Roland Hill, writing from the war correspondent's headquarters in France recently, said: "Against the furious counter-attacks which the Huns have made in the Cambrai sector, some Canadian railwaymen have played a minor, but very heroic part. In the scramble at Gouzeaucourt, when Germans actually occupied the village for a few hours, there were hand to hand combats with picks and shovels against rifles and machine guns, and for a time the Canadian shovel brigade held its own. One of the railwaymen grading a level crossing of a line on the morning of the attack, casually looked up from his work to find four Germans with rifles bearing down on his party. He gave one yell to his comrades, and, dashing for the Huns armed only with his pick, killed the first man after parrying a bayonet thrust, and was belaboring the others when his friends came up and wiped out the party. Further up the road the Canadians espied the Germans coming on in force, so the railway builders fell back in good order, the Huns hesitating, thinking they had a fighting unit to deal with—which was literally true. Most of the Canadians got safely away, although the shelling was extremely heavy. A few, who took shelter in an old German dugout, fell into the enemy's hands. But for the fine stand of the practically unarmed railway troops and a famous British fighting battalion—who were working with them, but whose rifles were stacked some distance away—the whole group would have fallen into enemy hands.

"These railwaymen, and with them were a number from the United States, fell back to where the new line was being formed, and that night came into the limelight again. In the meantime, approaching Gouzeaucourt from another direction, came one of the Canadian railwaymen's lorries laden down with material. The heavy shelling it ran through the driver regarded as part of the day's work. It rounded the corner into the village suddenly, and found half a dozen Huns with a machine gun, sitting at the main crossroads. The driver had no room to turn, no time to stop, so he decided to charge. Before the surprised Huns could open fire the lorry went over the gun like a juggernaut, and its crew scattered into the brick wilderness of the village. Then the truck turned on to the crossroads, lumbered back on top gear through more Huns who were collecting, and came, riddled with bullets, to safety.

"Yet another party of railwaymen and their friends of the British battalion were completely surrounded and taken prisoner. Their escort consisted of a full score of Germans under a very snappy little officer. They were hurried up the Cambrai road toward the newly-captured British line, and just as they had given up hope, part of an Imperial battalion espied them. Their captors tried to drive them towards Lavacquerie, but Scotsmen and Canadians, although unarmed, grappled with their guards until rescued by

On the Railway in No Man's Land.

George; Col. G. S. Rennie, C.A.M.C., formerly Chief Surgeon, Dominion Power & Transmission Co., and Toronto, Hamilton & Buffalo Railway; Col. B. R. Hepburn, M.P., Forestry Corps, formerly President, Ontario & Quebec Navigation Co. Distinguished Service Order; Lieut. Cols. Frederick Clarke, formerly Right of Way Engineer, Canadian Northern Ry.; Jas. Cornwall, Atholl Griffin, Chillion L. Hervev, M.Can.Soc.C.E., Jas. McDonald, Lawrence Martin, Walter Moodie, Kenneth Ramsey and Blair Ripley, all of the Canadian Railway Troops, Majors H. F. H. Hertzberg, M.C., and Harold Trotter, of the Canadian Engineers.

## PERSONAL NOTES.

Lieutenant Alex. Allan, R.N.R., who is reported to have been lost at sea Nov. 19, 1917, was the eldest son of J. A. Allan, Glasgow, Scotland, and grandson of the late Alexander Allan, one of the founders of the Allan Line.

Lt. Col. W. P. Anderson, C.M.G., M.Can.Soc.C.E., Chief Engineer, Marine & Fisheries Department, Ottawa, who served in the Fenian raids in 1866 and 1870, and has the general service medal with two clasps; has three sons who have been made members of the Distinguished Service Order. They are Col. W. B. Anderson, of the Canadian Army Corps headquarters staff in London; Lt. Col. T. V. Anderson, who lost an arm at Vimy Ridge and who has an engineering command overseas; and Major Alex. Anderson,

on going to France and was wounded May 26, 1917, and transferred to a London hospital in June. Subsequent to his convalescence he was attached to the 2nd Reserve Battalion, C.E.F., stationed at Shorncliffe, Eng., and was appointed Adjutant, effective Dec. 12, 1917. Towards the end of the year, all Canadian casualty officers, who were engineers, were selected for service under the Air Board, to supervise the manufacture of airplane engines in various parts of the United Kingdom.

Engineer Lt.-Commander John Quine, R.N.R., who has been awarded the Distinguished Service Order, was, prior to the war, chief engineer of the Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince Albert.

Corp. D. Stanton Hudson, formerly of Perth, Ont., who was killed in action in France recently, graduated in civil engineering in Montreal in 1914. He was in the C.P.R. engineering department for a year, then in the National Transcontinental engineering department, and was still in the employ of that line when he enlisted in the Grenadier Guards at Montreal in Sept. 1915.

Major Gilbert Royce, of Toronto, of the Canadian Army Medical Corps, who was in charge of the eye, ear, nose, and throat department of No. 4 Canadian General Hospital at Salonika, for some two years, until he removed with it to Basingstoke, Eng., in Oct. 1917, has been appointed Commandant of the Canadian

the British party. Then they picked up what rifles they could and joined fortunes with the battalion that rescued them. All that night—they volunteered for the job—the railwaymen took their turn in the trenches, and at dawn were in the thick of another great Hun attack. When the roll was called later in the day 20 men were missing. That evening they came back to their officer, weary, but smilingly happy. They had had the time of their lives, they explained. They had volunteered to join an English battalion in the attack that gave us back Lavacquerie.

"In another part of the hard pressed line some overseas construction men completed a line of railway into a village that has figured largely in the present operations, and each night not only mended scores of breaks under cover of darkness, but all night long loaded wounded on their work train and brought them around to the ambulance railhead. It meant about an hour's trip on a fairly smooth roadbed for the casualties instead of two or three hours' jolting in motor ambulances over rough roads. In addition to running his locomotive, the locomotive man kept a huge cauldron of tea boiling on his tender. Not until after the great rush was over did an unlucky shell put the train out of business.

"These Canadian railwaymen showed they could fight as well as they could build, and special congratulations have been given them from headquarters."

### The Arbitration on the Value of Canadian Northern Railway Stock.

The arbitration board to determine the value of 600,000 shares of C.N.R. stock (par value \$60,000,000), 510,000 shares of which are owned by Mackenzie, Mann & Co., Ltd., and pledged to the Canadian Bank of Commerce as collateral, opened in Toronto, Jan. 28, the arbitrators being Sir Wm. Meredith, Chief Justice of Ontario, representing the Dominion Government; Wallace Nesbitt, K.C., of Toronto, representing Mackenzie, Mann & Co., and the Canadian Bank of Commerce; and Mr. Justice R. E. Harris, of Halifax, formerly President, Nova Scotia Steel & Coal Co., who was selected by the other two arbitrators to be the third arbitrator. The following counsel appeared: For the Dominion Government, W. N. Tilley, K.C., Toronto; Gerard Ruell, Chief Solicitor, C.N.R.; and E. E. Fairweather, Solicitor, Railways Department, Ottawa. For the Canadian Northern Ry., F. H. Phippen, K.C., General Counsel, Toronto; and O. H. Clarke, Western Counsel, Winnipeg. For Mackenzie, Mann Co., McGregor Young, K.C., Toronto; and Pearce Butler, Minneapolis. For the Canadian Bank of Commerce, I. F. Hellmuth, K.C., Toronto, and A. M. Stewart. It was announced that regular sittings would commence in Toronto on Feb. 4.

The agreement, under which the arbitration is proceeding, was entered into Oct. 1, 1917, between the King, represented by the Ministers of Finance and of Railways and Canals, Mackenzie, Mann & Co., Ltd., and the Canadian Bank of Commerce. Under authority of the act passed at the Dominion Parliament's last session providing for the acquisition of the C.N.R.'s capital stock, the arbitrators are to determine the value of the 600,000 shares as at Oct. 1, 1917, and may consider the reproduction cost of the C.N.R. system, but shall not include therein any increase in value, due to the war, of labor,

material, or of property. Should the value of the 600,000 shares be determined as \$10,000,000 or more, the price to be paid therefor shall be \$10,000,000, but if the value determined shall be less than \$10,000,000 the value so determined is to be the price to be paid. The arbitrators' decision is to be final, if unanimous, but if not unanimous is to be subject to appeal as provided in the act. The award is to be made by Mar. 1, or within such further period as the parties to the agreement may agree upon. The price determined is to be paid by the government within three months from the receipt of the award, less its proportionate share of the amount of any liabilities ascertained by the government to be outstanding against the C.N.R. system or any of its constituent companies, and undisclosed to, or in excess of the liabilities disclosed to, the arbitrators, apart from liabilities which will be properly chargeable to capital account, unless the corresponding value produced thereby has been taken into consideration as an asset of the company.

The agreement provided that immediately after its execution, at least five-sixths of the 600,000 shares be transferred to the Finance Minister, free of all encumbrances. Sixteen thousand shares, par value \$1,000,000, deposited with the British Columbia Government as security for contracts made by the Canadian Northern Pacific Ry. with that government were to be transferred to the Finance Minister on an order from the owners. Unless the whole 600,000 shares are transferred to the Finance Minister, the Governor in council may declare any shares not transferred to be so transferred, and until all the shares are transferred the Dominion Government may retain, out of the purchase price decided by the arbitrators, the pro rata value of such shares, to be paid over as they are transferred.

The arbitrators have power to employ such legal, engineering or other professional or expert assistance as they may require, the cost thereof to be part of the arbitration costs.

### Freight and Passenger Traffic Notes.

Observation cars have been discontinued on transcontinental trains.

The Canadian Northern Ry. gave notice in Winnipeg, Jan. 23, that the excursions announced to be run during February to the Pacific Coast had been cancelled.

Owing to the entrance of the Northern Pacific Ry. into the Great Northern Ry. station at Vancouver, exchange of traffic between the N. P. R. and the C. P. R. is now made there, instead of at Sumas, B.C., as prior to Jan. 1.

A. H. Sperry, General Manager, Pacific Great Eastern Ry., Vancouver, was reported to have said Jan. 17, that there was no foundation for the report that it was proposed to suspend the operation of trains on this railway permanently.

The Grand Trunk Pacific Ry. started recently operating two fast freight trains a week between Prince Rupert, B.C., and Edmonton, Alta. A daily fast freight train service is maintained between Edmonton and Winnipeg.

The Great Northern Ry. put in operation a reduced train service between Vancouver, B.C., and Seattle, Wash., Jan. 1, only one train a day being run in each direction as against two a day each way previously.

The Canadian Government Railways steamboat Champlain has resumed ser-

vice between Riviere Ouelle wharf and Murray Bay, and will make one trip a day in each direction during the winter, weather conditions permitting.

The Pacific Great Eastern Ry., owing to a number of land slides, has practically suspended train service between Squamish and Lillooet, B.C., and it is expected that it will be several weeks before the line is reopened for traffic.

Under the Intercolonial Ry. timetable, which went into effect Jan. 6, the Ocean Limited does not run on Sundays, being replaced by the Maritime Express, which thus becomes a daily train. A Moncton dispatch of Jan. 22, stated that a number of changes from this timetable would be made Jan. 25, 26, and 27.

H. E. Beasley, General Superintendent, Esquimalt & Nanaimo Ry., Victoria, B.C., is reported as saying on Jan. 11, that at a conference of railway officers recently it was decided that there would be no change of the existing double daily train service over the company's tracks out of Victoria.

The Burlington, Ont., Town Council on Jan. 15, passed a resolution inviting the Hamilton City Council's co-operation in a proposal to compel the G.T.R. to operate a passenger train service over the Burlington Beach section of its line. This service was abandoned some years ago, when the Hamilton Radial Ry. began operations.

The C.P.R., beginning Jan. 6, reduced its service in the Okanagan valley, from Penticton to Sicamous, by lake and rail route from daily to tri-weekly. The people of the valley, however, are able to leave for the coast daily, as on the other three days a week the steamboat makes connections at Penticton with Kettle Valley Ry.

In connection with the reduction of passenger train service it was reported Jan. 15, that arrangements had been made for the abandonment for the present of the Kettle Valley Ry.'s Coquihalla Valley route. Special coast Kootenay cars will be attached to the express leaving Vancouver each morning. From Spences Bridge they will be taken by K. V. R. train to Nelson, reaching Penticton presumably late at night. Westbound service will be given the same connection. Trains from the coast will reach Penticton at 1 a.m.

**Standard Clearances.**—The Board of Railway Commissioners issued the following circular Jan. 21: "The board is considering the advisability of establishing a standard distance between track centres, for the construction of divisional points, terminal sorting yards, and sidings, which will provide a safe and satisfactory clearance for the movements of trainmen and yardmen in the performance of their duties. Railway companies are requested to file their views upon the matter within 30 days from this date, stating what clearance, in their opinion, would provide the necessary room between moving cars for the men referred to while carrying on their work.

**Railway Lands Patented.**—Letters patent were issued during December in respect of Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres.
Calgary and Edmonton Ry. ....	2,799.65
Canadian Northern Ry. ....	1,276.60
General Canada Ry. ....	39.27
Grand Trunk Pacific Ry. ....	1.96
Kootenay Central Ry. ....	.65
Qu'Appelle Long Lake and Saskatchewan Rd. and Steamboat Co. ....	3,426.82
Total .....	7,544.35

## Canadian Northern Train Sheds and Concourse at Vancouver.

Among other works being carried out at False Creek, Vancouver, by the Canadian Northern Pacific Ry. in connection with its new station building, are a concourse and train sheds. The concourse at the rear of, and adjoining, the station building, is 337 ft. long and 40 ft. 8 in. wide, the floor being of reinforced concrete slab construction, carried on piles. The roof, which is about 19½ ft. above the concourse floor, covers an area 307 ft. x 40 ft. 8 in., and is supported by the rear wall of the station, and columns at outside edge of concourse, respectively, a slight fall towards the columns having been given, to take care of surface water, which will be carried to drains, through the down spouts at the columns. These columns are carried on pile foundations,

to the down spouts at the various columns.

One advantageous point which may be claimed for this construction of train sheds, is that of placing the columns supporting the roof covering, between the tracks, thus permitting a clear platform, with no obstacles to prevent the easy and swift manipulation of baggage and express trucks, and thus affording freedom of movement by passengers.

A complete system of electric lighting will be installed on both concourse and platforms, controlled from the concourse, with separate switches to the different portions of the concourse and platforms, allowing of the illumination of all portions as may be required. A telephone system will also be installed, with outlets

**Canadian Society of Civil Engineers' Annual Meeting.**

The annual meeting of this society, the last under this name, was held at Montreal, Jan. 22-24. For some time past it has been contended that the scope of the society should be enlarged by embracing other branches of the engineering profession, and this is being carried out. In view of this, a change of name was considered desirable, and it was decided to adopt the title of the Engineering Institute of Canada.

An honor roll, consisting of 862 members, etc., who have gone overseas during the war, was unveiled. It was announced that 65 members, etc., have received decorations for gallantry in action, and that 58 members, etc., have been killed in action, or died as the result of wounds.

H. H. Vaughan, Vice President and General Manager, Dominion Bridge Co., Vice President and Managing Director,

Transverse Section of Train Shed, Canadian Northern Railway, Vancouver, B.C.

are placed at intervals of 46 ft. 1½ in. along the concourse, and are of reinforced concrete construction, as is also the concourse roof slab. Natural light to the concourse is obtained by a roof light 21 x 21 ft., placed in each bay, between the column centre lines. A ventilator is placed in each of these roof lights.

Two wooden train platforms, in course of construction, are 16 ft. wide and 900 ft. long, starting from the edge of the concourse. They are carried on piles, and are placed at 45 ft. centres, with two sets of rails between them. Between these two sets of rails are placed the columns supporting the beams carrying the roof slab over the train platforms. These columns are on 30 ft. centres the whole length of the sheds, and 45 ft. centres, crosswise, with beams longitudinally and crosswise at the roof level. At a height of 19 ft. and directly over the train platforms, is a slab 20 ft. wide and 900 ft. long, forming the roof covering for the platforms, the remainder, viz., above the rails, being left entirely open, with the exception of the cross beams, which, supported by the columns, are 30 ft. apart, which construction permits the escape of steam and smoke from the locomotives. The entire construction of the train shed columns, beams, and slabs over platforms, is of reinforced concrete design, the roof slabs and beams being properly graded, to ensure the surface water being carried

at various points along the platform, for the convenience of passengers and the railway officials.

Steam feeders will be carried the full length of the platforms, for the easy supply of steam to the cars, while standing on the platform tracks.

The estimated cost of the work is approximately \$163,000. It is being carried out under the direction of M. H. MacLeod, General Manager and Chief Engineer; Pratt and Ross, of Vancouver and Winnipeg, being the architects and engineers.

**June Mechanical Conventions.** — The executive committees of the American Railway Master Mechanics' Association, and the Master Car Builders' Association at a joint meeting in New York recently, decided that in view of the present state of affairs, no convention be held in June, but that if conditions warrant it, a business meeting be arranged for sometime during the year, probably in Chicago.

The Vancouver City Council's by-law for the elimination of the jitney traffic in the city will have the effect of putting them out of business entirely by April 1. This date was fixed so that the necessary power could be obtained from the legislature. There are about 200 jitneys at present operating, 85 of which the license inspector reported Jan. 16, had failed to take out the licenses.

Dominion Products Co., and Consulting Engineer, C.P.R., Montreal, was elected President; and Prof. H. E. T. Haultain, University of Toronto, and R. F. Hayward, Managing Director, Western Canada Power Co., Vancouver, B.C., were elected Vice Presidents. The following councillors were elected: District 1, Prof. Ernest Brown, McGill University, and J. M. Robertson, Montreal. District 2, F. H. McDougall, General Manager, Dominion Iron and Steel Co., Sydney, N.S. District 3, N. E. Brooks, Sherbrooke, Que., formerly Engineer, Maintenance of Way, Western Lines, C.P.R. District 4, John Murphy, Electrical Engineer, Railways Department, and Board of Highway Commissioners, Ottawa. District 5, Prof. Peter Gillespie, Toronto University. District 6, L. A. Thornton, Public Utilities Commissioner, Regina, Sask. District 7, Prof. E. G. Mathewson, British Columbia, University.

**Canadian Northern Realties Ltd.** has been incorporated under the Dominion Companies Act, with \$40,000 capital and office at Toronto, to own, lease and exchange and otherwise deal in lands and general real estate and for other purposes. The incorporators are D. B. Hanna, Third Vice President; G. Ruel, General Solicitor; R. H. M. Temple of the legal department, and G. N. Limpricht and W. Bowler, all in the C.N.R. service.

# The Work of Canadian Railway Association for National Defence.

## Return of Cars from United States.

The association has asked the Dominion Government to back it up in its efforts to get back from the United States the 22,000 freight cars overdue from U.S. roads. While the association's efforts have been successful in increasing the daily returns of Canadian freight cars, the numbers held in the U. S. continue to increase. The Minister of Railways has been asked to bring direct pressure upon Secretary McAdoo in his capacity as Director-General of U.S. railroads.

## Exemptions from Military Service.

A number of men in train, yard and shop service in Canadian railways secured exemption under the Military Service Act, due to the fact that they were required in the interests of the country to help to move the traffic and the association having learned that a number of these men are not working regularly, the railways have been instructed to keep a record of the days worked by men who secured exemption and report the same to the association. It is the intention to advise the government of any such men who do not work regularly so that they may be conscripted.

## Better Coal for Railways.

The association has asked the Dominion Government's co-operation in regard to the fuel situation as affecting the railways by requesting the Dominion Fuel Controller to take steps to ensure the U. S. mines supplying a better quality. Not only have the prices on coal for Canadian railways risen enormously, but the number of heat units per ton has dropped. The coal bill of Canadian railways, which was, in 1907, \$15,137,504, was more than doubled in 1917, although the volume of traffic handled had not increased at nearly so high a rate.

## Proposed Closing of Outside Ticket Offices.

Early in January it was stated in daily press reports that as the result of action by the association the various railways would close their city and town outside ticket offices and that all tickets would have to be bought at station ticket offices. So far nothing has developed in regard to this. Enquiry of the Eastern Canadian Passenger Association has elicited the information that the matter has not been finally disposed of and passenger officials of several roads have informed Canadian Railway and Marine World either that no decision has been arrived at, or that they have no intention of closing their outside offices. In view of the unusual situation prevailing in Winnipeg, Regina, Saskatoon, Edmonton, Calgary and Vancouver, where city ticket offices are maintained, western railway officials do not consider it practical to eliminate them. In most cases the ticket offices are located in the same place with freight traffic officials, and either telegraph or express offices, or both, thereby reducing the expense to a minimum. In the majority of cases, the city ticket office staff is not larger than it would be necessary to increase the station office staff to, if city ticket offices were abolished. In some cases railways own the office buildings and in such cases the question of rental does not enter into the proposition and in other cases the office premises are used for joint departmental purposes and are held on a lease. The stations of some of the interested lines are so located as to make it absolutely

necessary to maintain city ticket offices to meet competition and satisfactorily protect and accommodate traffic. At certain points, U.S. lines maintain an organization for the purpose of securing passenger traffic as against Canadian lines. A comparison of expense of city ticket offices as against earnings would indicate that they are operated at considerably less than 5% of earnings. The elimination of city ticket offices would mean the transfer of expense from city to station offices and would not it is said represent a saving of 5%.

## Proposal to Take Up Railway Tracks.

A Montreal press dispatch of Jan. 8 stated that the association had decided to petition the Dominion Government to order the taking up of from 1,500 to 2,000 miles of railway track, from lines that were not considered of vital importance, so that the rails might be used for relaying on other lines. No official information is available in regard to this, but it is said that the proposal was to lift the rails on the Canadian Northern, from Toronto to Sudbury and from Edmonton to Vancouver; on the Hudson Bay Ry., from Pas, north to the end of track; and on the National Transcontinental from La Tuque, Que., to Cochrane, Ont. It appears that some of the the members of the administrative committee were not present when the decision was arrived at, and that when it came before members of the Government at Ottawa for consideration, at least one of the roads which would be affected protested very strongly. In fact, it is said that the discussion before the ministers was a pretty heated one and that no final decision was arrived at, the matter being still status quo ante bellum.

## Niagara Frontier Traffic.

F. F. Backus, General Manager, Toronto, Hamilton & Buffalo Ry., has been appointed by the association to control traffic at the Niagara Frontier, by supervising and expediting the movement of coal and other traffic, so that the freight is divided up each day among the various Canadian railways, irrespective of how it may have been routed. This is a precautionary step, to make absolutely certain that the Canadian roads be used to their full capacity, so as to prevent any possible congestion. He has been given full power to act for the best general good, and since early in January has been routing freight by the most available routes for prompt movement, irrespective of how it was consigned. Coal and coke are being given preference over anything else, but Mr. Backus does not undertake to trace freight or to give special movement to one lot of coal, etc., as against another.

## Hay Shipments to United States.

Instructions existing on Jan. 5 calling upon railways to give preference to hay in highly compressed bales in the furnishing of cars for shipments of hay destined to the U. S. have been cancelled, and cars may be furnished for shipments of hay in loose bales for U. S. points. As U. S. railways have 22,219 Canadian cars in excess of the number of U. S. owned cars in Canada and there being a serious shortage of cars for the movement of freight between Canadian points, U. S. owned cars only are to be supplied at points on railways operating in Canada for shipments of hay destined for points in the U. S., other than such points as may be located on Canadian railways.

## Interline Billing of Freight.

The association's committee on tariff and statistics considers that the amount of delay to freight and cars involved in the existing arrangement for rebilling of shipments at junction points between railways, the clerical man power engaged in the work resulting from this arrangement, and the expense it brings upon the railways are defects in the general freight handling scheme which it is felt can be remedied by the adoption on all member lines of the practice of interline billing of freight. The committee's discussion on the subject indicates that so far as the freight traffic departments of the railways are concerned, general interline billing should be adopted, that as a result of its adoption car efficiency would be considerably increased and that heavy expenditure of labor and money now involved in rebilling at junction points would be eliminated. The junction reports at present required by the majority of railways on the movement of through traffic received full consideration. The opinion was expressed that arrangements might be made by the respective lines whereby these reports might be eliminated and that information, if actually necessary be obtained in some other manner. After considerable discussion the following resolution was adopted: "That this committee is in favor of general through interline waybilling with audit office settlements where there are through rates. Where rates are a combination of locals, or of a local and interline rate, shipments should be billed through, showing the rate factors, settlement to be made through the audit office. The audit offices should arrange so that intermediate carriers will be protected in the matter of undercharges, etc." It was also resolved: "That where rates now divided on arbitrary basis the same be simplified, where possible, by converting into a percentage basis." The various railways have been asked to submit reasons, if any, why the suggestions embodied in these resolutions should not be adopted and whether they are prepared to make arrangements so that any delay to cars and freight at present incidental to the taking of passing or junction records will be avoided."

## Incomplete Billing of Freight Cars.

It has come to the association's attention that at many points it is the practice for loaded cars to be forwarded without proper and complete billing, thereby rendering liable delays to such cars before delivery can be effected, and improper handling, through absence of complete routing instructions and other necessary information. The demand for maximum car efficiency is so great that the above practice should be discontinued, and with this end in view it is directed that all member lines place instructions in effect at once, that hereafter no loaded cars are to be started from originating point until properly made out bill of lading has been furnished by shipper and complete railway revenue waybill is available to accompany car.

## Stop Off Privileges for Freight.

The demands at present made on Canadian railways in the handling of an abnormal volume of traffic call for the minimizing or elimination of arrangements which may have been made at a time when conditions warranted them, but which now have the effect of reducing car efficiency and retarding the gen-

eral flow of traffic. Amongst the arrangements referred to is what is known as the "stop-off privilege," for completion of loading of cars of lumber, livestock, canned goods, etc. A factor in bringing about undesirable transportation conditions is the billing of cars to certain points "for orders" or "for reconsignment." In order that an arrangement, applicable to all member lines may be reached the railways were asked to send to the association by Jan. 15, particulars of all arrangements in effect on their respective lines whereby shipments are stopped off for completion of load or other purpose or billed to certain point or points to be held for orders, inspection, reconsignment or other such purpose.

#### Rules for Tracing Freight.

The work involved in the tracing of freight and furnishing information to the public as well as to the departments of the railways has grown to an enormous degree, involving the employment of a very large number of clerks in railway offices and interfering with the proper discharge of necessary duties. It is generally known that a very large percentage of the information furnished in response to freight tracing requests does not serve any good purpose and is asked for and supplied, more or less, as a matter of form. In view of the urgent necessity at this time for eliminating all unnecessary work, so that maximum returns may be obtained from the efforts expended it is felt that railways should immediately reduce freight tracing to what may be imperative. The following regulations governing the tracing of freight have been formulated and member lines are directed to adopt them:

1. With a view to eliminating unnecessary handling of tracers between railway offices, tracing of freight should be delegated to the car service department or such other department of the railway as maintains car records, except in the case of local or short haul shipments, where time and labor may be saved by dealing direct with superintendent, yardmaster, or agent.

2. Car movement reports and tracers should be handled by mail when such can be done without seriously interfering with the efficiency of the service.

3. Shipments should not be traced except at request of shipper or consignee, and then only when a reasonable time has elapsed for the shipment to have reached its destination. The existing general practice of furnishing one or more "passing records" of shipments en route should be discontinued.

4. Each tracer should show initials and number of car, commodity, point of origin, date of forwarding, route, consignee and destination or as much of such information as the case may demand.

5. A railway should not be requested to trace freight beyond its own rails, except where absolutely necessary.

6. The practice of requesting "report of delivery of shipment to consignee," involving, as it does, the expenditure of much extra time and labor, should be discontinued, and record of arrival at destination only, be made to suffice. The attention of outside freight traffic department officials is particularly directed to this clause, they having been the principal source of such requests in the past.

7. Where two or more offices or departments of a railway are receiving different forms of passing or junction reports from the same point or points, arrangements should be made to have carbon copies of one report serve.

8. It is suggested to the railways that where the practice is not already in vogue, they arrange for close and systematic checking of station and yard reports showing transit cars and cars awaiting placement, with a view to minimizing delay to cars, thereby removing in many instances the cause for tracing of freight.

In connection with the foregoing the commission on car service adopted a resolution, calling on member lines to reduce their tracing staffs not less than 25%.

#### Commission on car service: Report of loading of cars, i.e. freight for Nov., 1917.

Railway.	Cars loaded during Month	No. lbs.	Aver. lbs. per car
Canadian Pacific .....	7229	88,654,769	12,264

\*October.

All stations loading five or more cars of less than carload freight per day included.

#### Filling Up Sleeping Cars.

On the majority of railways where sleeping cars are operated it has been the practice to add extra sleeping cars to trains before a reasonable number of the berths in regular cars have been sold or reserved, due it is claimed to aversion on the part of the travelling public to occupy upper berths. Among the results of this practice are increased consumption of fuel and in many cases unnecessary use of motive power and man power where, owing to the extra cars, trains have to be double headed or run in sections. Enquiries have led to the opinion that at this time, particularly when the saving of coal is of great importance, and when the maximum number of locomotives must be held for the handling of freight consisting mainly of war supplies, the public will readily agree to the use of upper berths to a greater extent than has been the practice heretofore. It is the sense of the association that member lines should arrange so that extra sleeping car or cars will not be added to trains until 75% of all berths in regular car or cars have been sold or reserved.

#### Vestibule Doors, Guard Rails, etc.

The association is considering the formulation of standard regulations governing the handling of vestibule doors, guard rails, etc., on passenger trains, and has asked all railways to submit copies of their respective regulations relating thereto.

**Quebec Bridge Construction.** — The fourth of a series of addresses on the recently opened Quebec bridge was delivered before the Canadian Society of Civil Engineers in Montreal, Jan. 10, by G. H. Duggan, Chief Engineer, St. Lawrence Bridge Co., under the title: "Notes on the tendered design for the Quebec bridge of the St. Lawrence Bridge Co." Mr. Duggan also addressed the Royal Canadian Institute in Toronto on Dec. 12 on the same subject.

#### Railway Rolling Stock Notes.

Canadian Government Railways is reported to be in the market for 250 general service cars.

The C.P.R., between Dec. 14 and Jan. 15, received 1 steel baggage and express car, 222 steel underframe coal cars and 1 decapod type 275% locomotive, from its Angus shops; and 3 snow ploughs from its Winnipeg shops.

A recent press dispatch stated that the C.P.R., during 1917, built over 10,000 box cars in addition to ordering many from outside sources. Canadian Railway and Marine World is supplied with official information as to rolling stock ordered and built, monthly, and this is published in due course. The figures quoted in the press dispatch are erroneous.

The Canadian Car & Foundry Co. has completed the organization of its car shops at Fort William, Ont., and has started work on the order for 2,000 steel underframe box cars for the Canadian Government Railways, which was placed some time ago. It is expected to make the initial delivery in February and the contract will keep the plant in continuous operation until June. The officials at Fort William are:—A. J. Canfield, Works Manager; G. G. Elster, Superintendent; W. Boyle, Assistant Superintendent.

Canadian Government Railways received the following rolling stock, between Dec. 19 and Jan. 19:—189 stock cars, 30 tons capacity, and 333 steel frame box cars, 40 tons capacity, from Canadian Car & Foundry Co.; 49 steel frame box cars, 40 tons capacity, from National Steel Car Co.; 6 mikado and 2 Pacific locomotives from Montreal Locomotive Works; 12 mikado locomotives from Canadian Locomotive Co.; and 84 second hand coal cars, 35 tons capacity, 386 second hand coal cars, 30 tons capacity, and 91 second hand box cars, 30 tons capacity, from General Equipment Co.

The Canadian Northern Ry. has received 4 consolidation locomotives from Canadian Allis-Chalmers Co. Six more are on order, and delivery is expected to be made shortly. Following are the chief details:—

Weight in working order on front truck	24,500 lbs.
Weight in working order on drivers	208,500 lbs.
Weight on engine, total	233,000 lbs.
Weight of engine and tender	380,000 lbs.
Weight of tender, light	62,000 lbs.
Maximum tractive effort	50,000 lbs.
Boiler, type	Extended wagon top
Boiler, pressure	200 lbs.
Firebox	64½ by 110 13-16 in.
Grate area	49 sq. ft.
Tubes, no. and diam.	262-2 in.; 26-5½ in.
Tubes, length	15 ft. 3 in.
Heating surface, firebox	180 sq. ft.
Heating surface, tubes	2,946 sq. ft.
Superheater, type	Locomotive Superheater Co.'s top header
Driving wheel base	16 ft. 6 in.
Wheel base, engine and tender total	60 ft. 2½ in.
Length, engine and tender, overall	68 ft. 7½ in.
Cylinder, diam. and stroke	24 by 32 in.
Driving wheels, diam.	63 in.
Journals, main	10 by 14 in.
Journals, others	5½ by 10 in.
Coal capacity	10 tons
Water capacity	6,500 imp. gals.

**The Grand Trunk Literary and Scientific Institute** celebrated its 60th anniversary recently. It was organized by F. H. Trevithick in 1857, when he was Locomotive Superintendent of the G.T.R., and led to the establishment of G.T.R. libraries at London, Stratford, Belleville and Lindsay, Ont., and Battle Creek, Mich.

**Railway Assessment in Toronto.** — Property of the various steam railways in Toronto, has been assessed for this year as follows: G.T.R., \$11,178,724; C. P.R., \$3,421,160; Canadian Northern, \$1,341,427.

## Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

**Buffalo, Rochester and Pittsburgh Ry.**—R. R. WILLIAMS, who has been acting Canadian Agent, Toronto, for some time, has been appointed Canadian Agent there vice P. A. Bolopue resigned.

**Canadian Government Railways.**—G. R. JOUGHINS, Superintendent of Motive Power, who returned to Moncton, N.B., recently, after some months absence on account of illness, is reported as about to retire under the provisions of the Provident Fund. During his absence W. U. Appleton, General Master Mechanic, has been acting Superintendent of Motive Power, and W. E. Barnes, Master Mechanic, has been acting General Master Mechanic.

C. B. CLARK, conductor, Cape Tormentine Branch, is reported to have been appointed Yardmaster at Sackville, N.B.

**Canadian Northern Ry.**—H. J. WHITE, heretofore General Car Foreman, Transcontinental Division, Canadian Government Railways, Cochrane, Ont., has been appointed Car Foreman, C.N.R., Trenton, Ont.

W. WALKER, heretofore Day Foreman, Winnipeg locomotive house, has been appointed Locomotive Foreman, Dauphin, Man., vice A. Mallinson, transferred.

A. MALLINSON, heretofore Locomotive Foreman, Dauphin, Man., has been appointed Locomotive Foreman, Saskatoon, Sask.

W. B. STEEVES, heretofore Locomotive Foreman, Saskatoon, Sask., has been appointed Assistant Master Mechanic, Western District Office, Edmonton, Alta.

C. J. PIPER is reported to have been appointed Commercial Agent, Minneapolis, Minn., vice J. T. Whitlaw, resigned.

**Canadian Pacific Ry.**—W. GARLAND, heretofore Assistant Superintendent, Toronto Terminals Division, Ontario District, Toronto, has been appointed Assistant Superintendent, Brownville Division, Quebec District, Brownville Jct., Me. This is an appointment of an additional assistant superintendent for this division.

G. H. DAVIS has been appointed acting Resident Engineer, Toronto Terminals, vice H. R. Silcox assigned to other duties.

W. F. ANDERSON is reported to have been appointed Local Freight Agent, Fort William, Ont., vice C. A. Taylor, resigned to enter private business.

S. A. SIMPSON, heretofore Superintendent, Sleeping, Dining and Parlor Cars and News Service, Winnipeg, has been appointed Superintendent, same department, Moose Jaw, Sask.

J. M. WILLARD, heretofore Chief Travelling Inspector, Sleeping, Dining and Parlor Cars and News Service, Western Lines, has been appointed Assistant Superintendent, same department, Moose Jaw, Sask.

**Caracquet and Gulf Shore Ry.**—W. B. CRONK, Vice President and Manager, Kent Northern Ry., Richibucto, N.B., is reported to have been also appointed Vice President and General Manager, C. & G. S. R., Bathurst, N.B.

**Central Vermont Ry.**—H. M. DEWART has been appointed Assistant Purchasing Agent, St. Albans, Vt.

**Chicago, Milwaukee and St. Paul Ry.**—C. E. HILLIKER, heretofore Canadian Freight and Passenger Agent, Toronto,

has been appointed Division Freight and Passenger Agent, Des Moines, Iowa, the Toronto office having been closed.

**Grand Trunk Ry.**—O. MASSE has been appointed acting Assistant Trainmaster, Districts 1 and 2, Montreal Division, Eastern Lines, vice C. M. Walton assigned to other duties. Office, Island Pond, Vt.

The following station agents have been appointed: St. Cyr, Que., J. A. Poirier; Rouses Point, N.Y. (yard) C. P. Maloy; Port Huron Tunnel, Mich., P. N. Moore; Port Huron, Mich., H. B. Wilson.

**Grand Trunk Pacific Ry.**—L. CARTIER has been appointed Roadmaster, Biggar, Sask., vice W. R. Whitby.

R. M. HALPENNY, heretofore Superintendent, Alberta and Great Waterways Ry., Edmonton, Dunvegan and British Columbia Ry., and Central Canada Ry., Edmonton, Alta., has been appointed Assistant Superintendent, G.T.P.R., Jasper, Alta.

The following station agents have been appointed: Quinter, Sask., D. McKay; Young, Sask., W. R. Carnal; Balearres, Sask., E. Briggs; Rice-ton, Sask., R. E. Chapman; Mawer, Sask., R. J. McCammond; Gilroy, Sask., F. A. Theberge.

**Minneapolis, St. Paul and Sault Ste. Marie Ry.**—H. T. DUFFY, heretofore General Agent, Toronto, has been appointed District Passenger Agent, Duluth, Minn., the Toronto office having been closed.

**Pennsylvania Rd.**—J. E. LITTLE, heretofore Canadian Passenger Agent, Toronto, has been transferred to the Division Passenger Agent's office, New York, the Toronto office having been closed.

**Quebec Central Ry.**—G. D. WADSWORTH, heretofore Assistant General Freight and Passenger Agent, has been appointed General Freight and Passenger Agent, vice E. O. Grundy retired, and his former position has been abolished. Office, Sherbrooke, Que.

**Railways Department.**—The services of A. E. Warren, Assistant General Manager, Western Lines, Canadian Northern Ry., Winnipeg, have been loaned to the Dominion Government, and he has been appointed Chief Operating Officer for the Railways Department, to advise the department upon railway matters generally. Office, Western Departmental Block, Ottawa.

GORDON GRANT, heretofore Chief Engineer, Quebec and Saguenay Ry., and formerly Chief Engineer, National Transcontinental Ry., is reported, by an Ottawa press dispatch, to have been appointed an expert adviser to the Railways Department.

**Reid Newfoundland Co.**—A complete list of officials is given on another page, under the company's heading.

**Canadians Appointed to the Order of the British Empire.**—A London cablegram of Jan. 9 stated that over 2,000 appointments had been made to this new order, the list ranging from commercial magnates to head typists. Among the Canadians appointed are: Knight Commander, Arthur H. Harris, formerly Special Traffic Representative, C.P.R., now Director of Overseas Transport; Commander, Edward Fitzgerald, formerly Assistant General Purchasing Agent, C.P.R., now Assistant to Chairman, Imperial Munitions Board; Officer, Arthur Philip, C.P.R.

## Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1916, from July 1, 1917:

	Gross Earnings	Expenses	Net Earnings	Decrease
July	\$3,844,900	\$2,340,000	\$ 904,900	\$ 292,500
Aug.	3,405,200	2,812,000	593,200	478,800
Sept.	3,341,700	2,915,800	1,924,000	366,700
Oct.	3,941,600	3,350,500	591,100	629,200
Nov.	4,050,200	3,295,500	754,700	495,300
	\$18,583,600	\$15,313,800	\$3,269,800	\$2,202,500
Incr	\$ 437,500	\$ 962,800		
Decr			\$2,202,500	

Approximate earnings for Dec., \$3,273,200, and for three weeks ended Jan. 21, \$11,767,100, against \$3,485,400 and \$1,903,000 for same periods 1916.

## Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, compared with those of 1916, from Jan. 1, 1917:

	Gross Earnings	Expenses	Net Earnings	Increase
Jan.	10,158,307.86	7,726,829.36	2,431,478.50	341,070.27
Feb.	9,084,276.76	7,098,227.96	1,986,048.80	x308,293.94
Mar.	11,846,542.98	7,909,225.16	3,937,317.82	516,987.46

May.	14,355,149.63	9,803,426.84	4,551,719.79	179,436.88
June	13,556,979.69	9,641,073.49	3,915,906.20	226,273.09
July	13,377,850.55	9,617,853.33	3,760,007.22	x257,084.51
Aug.	12,414,537.25	8,696,998.76	3,817,538.49	x1,650,248.36
Sept.	12,214,341.69	8,497,190.83	3,747,150.86	x1,382,608.30
Oct.	14,733,774.02	9,679,072.25	5,054,601.77	x 620,067.60
Nov.	15,191,162.91	9,933,270.27	5,257,892.64	x 306,067.50
	\$139,318,452.94	\$96,683,713.23	\$42,634,739.71	\$2,820,330.86
Incr.	\$12,015,633.12	\$14,835,963.98		
Decr.			\$ 2,820,330.86	

x Decrease.  
Approximate earnings for Dec., \$12,927,000, and for three weeks ended Jan. 21, \$7,055,000, against \$12,289,000 and \$6,870,000 for same periods 1916.

## Grand Trunk Railway Earnings.

	1917	1916	Increase.
G.T.R. . . . .	\$52,205,158	\$47,826,799	\$4,378,359
G.T.W.R. . . . .	9,795,410	9,191,107	604,333
D.G.H. & M.R.	3,400,551	3,283,992	116,559

Totals . . . . \$65,401,149 \$60,301,898 \$5,099,251  
Approximate earnings for Dec., \$5,654,558, and for three weeks ended Jan. 21, \$2,780,717, against \$5,280,245 and \$3,112,728 for same periods 1916.

## Grand Trunk Pacific Ry. Earnings.

The approximate earnings of the Prairie Section, 916 miles, for December, were \$587,712, against \$608,136 for Dec., 1916. The aggregate earnings for six months ended Dec. 31, were \$3,711,797, against \$2,903,289 for Dec., 1916.

## Toronto Terminal Transportation Association.

An association has been organized, with the above title, by railway officials in Toronto, its aims and objects being to attain a higher degree of efficiency in all branches of transportation work and not to allow it to recede in any way owing to the war. The association meets from time to time, to deal with matters relating to transportation questions in the Toronto district and to take steps to bring about a greater state of proficiency. Its organization is as follows:—Advisory Board, J. T. Arundel, General Superintendent, C.P.R.; D. Crombie, General Superintendent, Canadian Northern; H. E. Whittenberger, General Superintendent, Grand Trunk. Executive Committee, W. H. Farrell, Superintendent, G.T.R., chairman; T. Collins, Superintendent, C.P.R.; L. Harris, Superintendent, Canadian Northern; Jno. Gray, General Agent, G.T.R. (since deceased); J. C. Brown, General Agent, C.P.R.; and L. Buller, General Agent, Canadian Northern. Ross MacBean is Secretary.

The C.P.R. is reported to be in the market for 85,000 tons of steel rails, the order for which, it is said, will be divided between Canada and the U.S.

## White Pass and Yukon Railway Co's Annual Report.

At the annual meeting in London, Eng., Dec. 17, the report for the year ended June 30, 1917, which was presented, included the results of the operation of the local companies, all of which capital is owned by the W. P. & Y. R. Co. for their financial year, which ended Dec. 31, 1916. The profit and loss account, after charging interest on debenture stock and debentures, payable in income debenture stock, and all expenses, shows a loss for the year of £11,804 19s. 9d. Adding thereto £24,674 14s. 11d. balance of loss carried forward from the preceding year, there is a balance at the debit of profit and loss in the balance sheet of £36,479 14s. 8d.

Following are extracts from President F. E. Elliott's report:—We carried on the railway 12,900 passengers, and 69,691 tons of revenue freight, of which ore shipments from rail points and Atlin District accounted for 45,478 tons. The average haul was 70.91 miles per passenger, and 106.76 per ton of freight, and the average load per car was 8.94 tons northbound and 12.54 southbound.

During the year 20,406 ties were laid, and all necessary repairs were made to keep the rolling stock in serviceable condition. An extension of the branch line was constructed at the Pueblo Mine to facilitate the loading of ore, and the spur track at Carr Glyn was converted into a siding to expedite switching. Extensive repairs were made to the Minto bridge, and the rest of the bridges were overhauled for safety. Considerable work was done during the year in the reconstruction of the ore bunker plant, including the incline leading directly to the bunkers, so as to handle ores shipped from the White Horse district.

January was a very severe month. A blizzard occurred, and the railway was blocked by snow from Jan. 21 to 31. On Jan. 27 a bad washout occurred at the second crossing of the Skaguay River, which took out 130 ft. of the bridge and delayed traffic for eight days. However, we transferred passengers, baggage, mail and some perishable freight for several days before through traffic was again resumed. On the night of Nov. 20 a slide of several hundred tons of rock took out two steel spans of bridge 7c, seven miles from Skaguay. These were temporarily replaced by a wooden trestle, but traffic was stopped for eight days. The operating expenses of the Rail Division show an increase of \$73,287.91 as compared with 1915. This is due to the snow blockade, washout and slide already mentioned, and the handling of increased tonnage.

The tourist traffic during 1916 assumed proportions making it worthy of special note. The total revenue amounted to approximately \$102,000, which is about double that of 1915, and the latter up to that time was the best tourist year we had had. To meet this increased tourist business we purchased two second hand cars to be converted into parlor cars, thus giving us four parlor cars, and various changes were made in the accommodation on the steamboats Gleaner, White Horse and Casca. At Lake Atlin we were confronted with the utterly inadequate facilities for the accommodation of the tourists. Consequently, we proceeded to construct a hotel. The plans were designed, materials purchased and shipped north, but owing to the late opening of navigation and low water, the ground

was not broken for the hotel until June 10. However, it was completed ready for guests on July 15. The hotel and its management have been commended by everyone, and some have stayed longer than planned, and have declared their intention of returning for a whole summer's sojourn.

The winter service for mail, passengers, parcels, etc., was carried on as usual between Whitehorse and Dawson, by means of 4-horsed sleighs and 4-horsed coaches, with the help, on a few trips, of course, of canoes, launches and steamers. During the year 155 trips (equivalent to 51,150 miles) were made, and 175,158 lb. of mail, 388 passengers, 10,231 lb. of parcels, and 641,144 lb. of ordinary freight were carried.

**C.P.R. Dismissal Suit.**—P. F. Patterson, formerly accountant in the C.P.R. Natural Resources Department, at Calgary, Alta., entered suit in an Alberta court some time ago against the C.P.R. and several of its officials, viz., I. G. Ogdene, Vice President in charge of Finance and Accounting Department; J. S. Dennis, Chief Commissioner of Colonization and Development; J. E. Lethbridge and Philip Mileson, claiming \$50,000 damages for conspiracy, alleging that the defendants had conspired among themselves and with the company to induce the company to ruin plaintiff's reputation and to secure his dismissal from the company's service. The case finally reached the Appellate Division, where it was decided that no cause of action for conspiracy had been disclosed against the company, but that there was a cause of action against the individual defendants. The company's appeal was therefore sustained, the plaintiff to pay the costs, but the individual defendants' appeal was dismissed, they to pay the costs. As the case now stands, the plaintiff may proceed against the company for wrongful dismissal and against the individual defendants for conspiracy, but these issues must be tried separately.

**C.P.R. Sleeping Car Heating.**—The C. P. R. is introducing into its sleeping cars a system whereby the heat can be controlled in each berth, compartment and drawing room by the occupants of such accommodation, the plan being similar to the control of heat in private houses. This system is being installed when cars are put into the shops for their annual renovation, but, on account of the prevailing war conditions affecting materials and labor, it will be necessary, of course, to subordinate the installation of the new system to the more important matters of new equipment and repairs, which will be proceeded with first.

**The C.P.R. shops at Weston, Winnipeg.** went on reduced time Jan. 14, the working hours now being from 8 a.m. to 5 p.m., instead of from 7 a.m. to 5 p.m., as formerly. Officials stated that there was now ample rolling stock to take care of the traffic, and that there was no necessity for extra effort to keep the cars in repair.

**Passenger Committee Meetings Postponed.**—Owing to existing conditions, the annual meetings of the Great Lakes & St. Lawrence River Rate Committee, and the Niagara Frontier Summer Rate Committee, which were to have been held at Buffalo, N.Y., Jan. 29, 30 and 31, were postponed until further notice.

The Alberta Federation of Labor at a meeting in Lethbridge, Alta., Jan. 9, passed a resolution condemning the use of one-man cars on electric railways.

## Changes in Reid Newfoundland Co's Management.

At the annual meeting at St. John's, Nfld., recently, the following directors were elected for the current year: Lord Shaughnessy, Sir William Reid, H. D. Reid, R. G. Reid, F. J. Hunter, J. P. Powell, and C. O'Neill Conroy, K.C.

H. D. Reid, heretofore Vice President, was elected President, vice Sir William Reid, and consequent on this change, there was some rearrangement of officials. Following is a list of positions with the present holders: Vice President, R. G. Reid; Treasurer, F. J. Hunter; General Superintendent, J. P. Powell; Secretary, W. A. Reid; Comptroller, H. McNeil; Purchasing Agent, H. Crawford; General Passenger and Ticket Agent, J. W. N. Johnstone; General Freight Agent and Traffic Manager, E. W. Taylor; Assistants to General Superintendent, G. Cobb and E. J. Hoskins; Superintendent of Dry Dock and Motive Power, W. E. Ladley; Master Car Builder, H. Ross; Superintendent, H. J. Russell; Eastern Traffic Agent, J. M. Lyons; Assistant Comptroller, C. U. Henderson; Assistant Treasurer, F. E. Pittman; Assistant to General Passenger Agent, J. Baxter; Assistant to General Freight Agent, T. J. Rolls; Assistant Superintendent, W. Fitzpatrick; Chief Dispatcher, W. Dwyer. The head office is at St. John's, Nfld.

**Australian Transcontinental Railway.** By the recent completion and opening for traffic of the railway between Port Augusta and Kalgoorlie, 1,053 miles, a connection between east and west has been made, thus forming the first transcontinental railway in Australia. The official trip on the formal opening of the line occupied five days, travelling being done by daylight only. It is not expected that the line will be completely ballasted and brought up to full standard for some time. It is also stated that, owing to the difficulty of obtaining deliveries of suitable rolling stock during the war, the cars for some time will be of wood bodies erected on such steel underframes and trucks as are available locally.

**Michigan Passenger Rates.**—The Michigan State Legislature in 1911 passed a law enacting that the railways in the State should charge a rate of 2c a mile. The Duluth, South Shore and Atlantic Ry., continued to charge 3c a mile, but gave refund coupons to passengers to be redeemed later. The State instituted proceedings to enforce the law and a decision was rendered recently by U. S. District Judge Sessions at Grand Rapids, Mich., against the State. The judge held that the law should not be enforced against the company on the ground that the railway was practically confined to the upper peninsula, and that it operated under adverse conditions. The railway does not object to a 2½c rate.

**Dominion Government Committee on Railway Questions.**—Early in January an order in council was passed at Ottawa appointing Hon. J. D. Reid, Minister of Railways; Sir Thomas White, Minister of Finance; Hon. A. Meighen, Minister of Interior; Hon. F. B. Carvell, Minister of Public Works; Hon. J. A. Calder, Minister of Immigration and Colonization; and Hon. G. D. Robertson, minister without portfolio, as a committee of the cabinet to consider the whole railway situation in Canada. The committee has held a number of meetings and an announcement of its conclusions is expected at an early date.

# Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway,  
Marine, Express, and Telegraph, also Railway and  
Canal Contractors' Interests.

Official Organ of various Canadian Transportation  
Associations.

Published on the first of each month.

ACTON BURROWS, LIMITED - Proprietors,  
70 Bond Street, Toronto, Canada.

ACTON BURROWS, A. Can. Soc. C.E.  
Managing Director and Editor-in Chief.

AUBREY ACTON BURROWS - Secretary and  
Business Manager.

Associate Editors  
JOHN KEIR and DONALD F. KEIR

United States Business Representative,  
A. FENTON WALKER, 143 Liberty St., New York

Member of  
Canadian Press Association,  
Associated Business Papers,  
Audit Bureau of Circulation.

Authorized by the Postmaster General for Canada,  
for transmission as second class matter.

Entered as second class matter, July 25, 1913, at the  
Postoffice at Buffalo, N.Y., under the Act of Congress  
of March 3, 1879.

SUBSCRIPTION PRICE, including postage any-  
where, \$2 a year.

SINGLE COPIES, 20 cents each, including postage.  
The best and safest way to remit is by express money  
order. Where one cannot be obtained, a post office  
money order, or bank draft, payable at par in Toronto,  
may be sent. Cheques or drafts not payable at par in  
Toronto cannot be accepted. Remittances should be  
made payable to Canadian Railway and Marine World.

## Eastern Canadian Passenger Association's Officers.

The following have been elected to  
serve during this year:

Chairman—A. I. Miller.

Executive Committee—W. S. Cookson  
(chairman), R. L. Fairbairn, W. H. Snell,  
J. F. Pierce.

Rules Committee—C. W. Johnston  
(chairman), W. Maughan, J. Morrison, J.  
W. Hanley, G. C. Martin, A. L. Miller,  
I. W. Landman, H. H. Melanson, F. T.  
Grant.

General Baggage Agents' Committee—  
J. O. Apps (chairman), G. C. Allen, F.  
L. Fairbairn, C. C. Bonter, J. E. Quick,  
H. P. Dearing, W. M. Skinner, A. E. Plu-  
mer.

Secretary—G. H. Webster.

## Carriage of Explosives on Passen- ger Trains.

The Defence of Canada Order 1917 has  
been amended by order in council, by the  
addition of regulation 21A, as follows:—  
"If the Minister of the Naval Service, the  
Deputy Minister of the Naval Service, or  
any other officer thereto empowered by  
the Minister of the Naval Service, con-  
siders the circumstances of the case suffi-  
ciently urgent to require the same, such  
Minister, Deputy Minister, or other officer  
may order that explosives be carried on  
any passenger train, and the respective  
officers and employees of all railways in  
Canada, including the Canadian Govern-  
ment Railways and any other railway  
owned or controlled by His Majesty, shall  
receive, transport and deliver any explo-  
sives delivered to them for carriage un-  
der such order. Provided, however, that  
no such order shall be given with respect  
to any explosive the carriage of which is  
forbidden by General Order 100 of the  
Board of Railway Commissioners of Can-  
ada, and that the quantity of explosives  
carried on any one passenger train shall  
not exceed in quantity 500 lbs. weight."

C. P. R. Officials' Christmas Greetings.  
—G. M. Bosworth, Vice President in  
Charge of Traffic; C. E. E. Usher, Pas-  
senger Traffic Manager; C. E. McPherson,  
Assistant Passenger Traffic Manager;  
C. E. McPherson, Assistant Passenger  
Traffic Manager, Western Lines; and C.  
B. Foster, Assistant Passenger Traffic  
Manager, Eastern Lines, sent their  
friends at Christmas an illustrated book-  
let "Fightin' Sons of Guns," containing  
a reprint of an article by George Patullo,  
a Canadian by birth, now in France as a  
member of the American Expeditionary  
Force. The article was first published in  
a United States periodical.

The Great West Coal Co. has been in-  
corporated under the Dominion Com-  
panies Act to carry on coal mining and  
allied businesses in Canada. The author-  
ized capital is \$2,000,000; the office is at  
Brandon, Man., and the provisional direc-  
tors are: E. Spice, H. E. Swift, R. W.  
Campbell, C. J. Macleod, and H. V. Hud-  
son, Winnipeg, Man. Among the busi-  
nesses which it may carry on are, gener-  
al carriers, forwarding agents and ware-  
housemen.

Rails for British Western Front.—In  
reference to press statements that more  
rails were about to be taken up from  
Canadian railways and shipped to Bel-  
gium and France, we are advised that all  
the rails that the British authorities ask-  
ed for have been shipped and that no fur-  
ther shipment is contemplated at present.

## Storms Delay Traffic in British Columbia and Ontario.

During the last few days of December  
and the early days of January, railway  
communication in British Columbia was  
held up by storm conditions. Owing to  
heavy rains freshets inundated the tracks,  
land slides blocked them, and the damage  
to telegraph and telephone lines inter-  
fered with the task of operating them.  
The centre of the storm was in the Fra-  
ser Valley, and it was not until Jan. 10  
that the train service was anything like  
normal. The British Columbia Electric  
Ry. suffered severely, particularly on its  
line to Chilliwack, the estimated amount  
of the damage done being about \$150,000.

Traffic in Ontario was seriously inter-  
fered with from Jan. 13 to 18 by a bliz-  
zard which started on the first mentioned  
date and continued until well on into the  
night of Jan. 14. Every railway line cen-  
treling on Toronto was more or less block-  
ed, there being practically no main line  
traffic until the afternoon of Jan. 15. Most  
of the branch lines were opened by the  
evening of Jan. 16, and the remainder of  
a couple of days later. The G. T. R. branch  
line from Lindsay to Haliburton was one  
of the last to be opened, mail posted at  
points on that branch Jan. 12 not being  
delivered in Toronto until Jan. 19.

Canadian Society of Civil Engineers,  
Toronto Branch.—The annual meeting  
was held Jan. 15, when the committee's  
report for 1917 was received and general  
business transacted. The executive for  
the current year was elected as follows:  
P. Gillespie, Chairman; G. Hogarth, Sec-  
retary-Treasurer; Committee, J. R. W.  
Ambrose, W. Chipman, E. L. Cousins, H.  
E. T. Haultain, E. G. Hewson and R. O.  
Wynne-Roberts.

Canadian Society of Civil Engineers,  
Ottawa Branch.—The chairman elected  
for the year is G. Gordon Gale, Vice Pres-  
ident and General Manager, Hull Elec-  
tric Co., and the secretary is J. B. Chal-  
lies, Superintendent, Dominion Water  
Power Branch. Among the members of  
the managing committee is E. B. Jost,  
Hydraulic Engineer, Railways Depart-  
ment.

Strange Death of a G.T.R. Paymaster.  
It was reported, Jan. 17, that the body of  
a paymaster named Robillard of the con-  
struction gang working on the bridge  
over the Godefroi River, between Dou-  
cets Landing and St. Gregoire, Que., on  
the G.T.R., was found hanging outside a  
freight car at Doucets Landing. It is said  
that he had been murdered and the body  
placed there after death.

A club has been formed at the C.P.R.  
Windsor St. station, Montreal, for boys  
between 12 and 18 years of age employed  
there. The club elects its own officers,  
but its affairs are overseen by a commit-  
tee of the station officials.

Canadian Northern Ry.—One year gold  
notes for \$1,250,000, originally issued by  
W. A. Read & Co., New York, at 6 , were  
paid at maturity, Jan. 10. During 1917  
the company's outstanding obligations  
were reduced by \$6,000,000.

The first railway excursion in Manitoba  
was held Dec. 20, 1877, when, on the in-  
vitation of Contractor Joseph Whitehead  
and District Engineer J. H. Rowan, a trip  
was made on the C.P.R. from St. Boni-  
face to a point east of Selkirk.

The Transportation Club of Vancouver  
had its annual New Year's party, as  
usual. The proceedings opened late at  
night on Dec. 31 and were carried on for  
several hours into Jan. 1.

# Traffic Orders by the Board of Railway Commissioners.

A number of orders issued in connection with the "Fifteen per cent. rate case" are given on page 45 and subsequent pages of this issue.

## Canadian Northern Rates to West of Port Arthur.

26831. Dec. 14, 1917. The order 26008, April 12, 1917, directing the Canadian Northern Ry. to file a tariff showing rate from Toronto, by lake and rail, to its stations west of Port Arthur, which shall not exceed its published rates from points east of Toronto to the same destinations, via rail to Toronto, and lake and rail to destination. Upon hearing the matter at Toronto, Oct. 23, 1917, in the presence of counsel for the Canadian Northern Ry. and a representative of the freight and express underwriters, and upon its appearing that the Canadian Northern Steamships Ltd. now own no vessels on the lake route from Toronto to Port Arthur, and that the Canadian Northern Ry. does not "own, charter, or use" any vessel on this route within the provisions of sub-sects. 3 of sec. 333 of the Railway Act, it is ordered that order 26008 be rescinded.

## Transportation of Milk in Refrigerator Cars.

26843. Dec. 19, 1917. Re the question of requiring railway companies to provide refrigerator cars for the transportation of milk where a special milk car is used for the purpose; and the complaint of the University Settlement of Montreal, Baby Welfare Committee, against the lack of proper depot protection at Montreal and points of shipment for milk going to Montreal; and applying for an order requiring cars used for the transportation of milk to be equipped with ice or other cooling process. Upon hearing the matter at Montreal, Nov. 8, 1917, in the presence of counsel for the City of Montreal and the Canadian Pacific and Grand Trunk Railways, it is ordered that the application be refused.

## Transfer Tracks at Conquest and Rosetown.

26853. Dec. 21, 1917. Re order 18682, Feb. 14, 1913, requiring the transfer track between the Canadian Pacific and Canadian Northern Railways, to be constructed by agreement by the C.P.R. at Conquest, Sask., to be completed by May 1, 1913; and order 26386, July 31, 1917, directing the Canadian Northern Ry. to construct a transfer track between its railway and the C. P. R. at Rosetown, Sask. And re the application for authority to remove the transfer track at Conquest. Upon hearing the matter at Saskatoon, Oct. 17, 1917, and at Regina, Oct. 18, 1917, in the presence of counsel for the Canadian Pacific and Canadian Northern Railways, and the Saskatoon and Moose Jaw boards of trade, no objection being offered by the Moose Jaw Board of Trade, provided the said transfer track was not removed before the transfer track at Rosetown was installed, and upon its being now represented to the Board that the transfer track at Rosetown was completed on Nov. 29, 1917 it is ordered that the C.P.R. be authorized to remove the transfer track at Conquest.

## Pulpwood Rates to Campbellford.

26858. Dec. 19, 1917. Re order 26476, Aug. 29, 1917, made upon the application of the Hydro-Electric Power Commission, of Ontario, suspending the advanced rates on pulpwood, in carloads, from certain

stations on the Canadian Northern Ry. to Campbellford, Ont., as published on page 3 of Supplement 20, to the C. N. R. Tariff, C.R.C. no. B-860; also suspending cancellation Supplement 1 to Canadian Northern Ry. Tariff C.R.C. no. E.156. Upon hearing the application at Ottawa, Sept. 18, 1917, the Hydro-Electric Power Commission and the Canadian Northern and Grand Trunk Railways being represented, upon the report of the board's Chief Traffic Officer, it is ordered that the order 26476 be rescinded, in so far as it affects rates from points on the Maynooth, Rideau, and Tweed Subdivisions. And it is further ordered that the following rates be simultaneously filed in lieu of those shown in Supplement 20 to Canadian Northern Ry. Tariff C.R.C. no. N-860, from points on the Irondale Subdivision, viz.: From Baptiste, Highland Grove, and Rumfords,  $6\frac{1}{4}$ c per 100 lb.; from Wilberforce, Monmouth Road, and Tory Hill,  $6\frac{1}{4}$ c per 100 lb.; from Gooderham, Maxwells, Irondale, Furnace Falls and Conways, 7c per 100 lb.

## Northern Pacific Parlor Car Tariff.

26875. Dec. 27, 1917. Re application of Northern Pacific Ry., under sec. 331 of the Railway Act, for approval of its Standard Parlor Car Tariff, C.R.C. no. S3. Upon the report and recommendation of the board's Chief Traffic Officer, it is ordered that the said tariff, showing a rate of  $\frac{1}{2}$ c a mile between stations in British Columbia, be hereby approved.

## Northern Pacific Standard Freight Tariff.

26899. Jan. 11. Re application of Northern Pacific Ry., under sec. 327 of the Railway Act, for approval of its Standard Freight Tariff of Maximum Mileage Tolls, C.R.C. 375. Upon the report and recommendation of the Board's Chief Traffic Officer, it is ordered that the said tariff applying between all its stations in British Columbia be approved; the said tariff, together with a copy of this order, to be published in at least two consecutive weekly issues of the Canada Gazette.

## Interchange Between C.P.R. and G.T.R. at Port Hope.

26887. Jan. 3. Re order 26400, Aug. 1, 1917, directing the C.P.R. to construct interchange tracks between its railway and the G.T.R. at Port Hope, Ont., and the application of the G.T.R. for an order amending said order. Upon reading what is filed in support of the application, it is ordered that order 26400 be amended by adding the following clause, viz., "2. That the company upon whose line, including private sidings contributory thereto, the traffic is loaded, shall be entitled to the line haul and to the privilege of effecting the required delivery on the line of the other company by means of interswitching at destination."

## Track Storage Charges at Cartier.

26901. Jan. 14. Re application of the Transportation Bureau, Montreal Board of Trade, for a ruling by the board on the validity of the track storage charges authorized by order 24436 to be collected on cars containing western grain and grain products detained at Cartier, Ont., for more than 72 hours, for consignees' furtherance orders, as published in Supplement 15 to C.P.R. Tariff C.R.C. no. E-3280. Upon reading the application and what is alleged in support thereof; and upon the report of the board's Chief Traffic Officer, it is ordered that the object sought to be attained by the ascending scale of track storage tolls at Car-

tier, authorized by order 24436, Nov. 11, 1915, having received consideration in general order 201, Aug., 1917, prescribing the amended Canadian Car Demurrage Rules, order 24436, be rescinded on and after Feb. 1, 1918. And it is further ordered that the C. P. R. be authorized to file a tariff to provide for a special toll of \$1 a car per day, for detention of cars containing western grain and grain products at Cartier, for more than 72 hours, while awaiting furtherance orders from the consignees thereof; the said tariff to be made effective Feb. 1, 1918.

## Collection of Cartage Charges.

26905. Jan. 15. Re complaint of Retail Merchants' Association of Port Arthur and Fort William, Ont., against the practice of certain railway companies of advancing cartage charges at certain shipping points and collecting same from the consignees. Upon hearing the complaint at Fort William, Oct. 22, 1917, the Port Arthur and Fort William boards of trade being represented at the hearing, and upon reading the further submissions upon the report of its chief Traffic Officer, and upon its appearing that the board has no jurisdiction to correct the grievance complained of, it is ordered that the complaint be dismissed.

## Railway Employes and the Victory Loan.

One noticeable feature of the recent Victory Loan campaign was the surprisingly large contribution made by many railway employes. Conductors put down their names for \$500 or more without a murmur. So too with the locomotive men and mechanics and in a lesser degree with trainmen and firemen. The reason is that the railway employe was never so well paid as he is today, indeed he is better off even than the munition worker, as his income is not of a temporary nature, and he has the further advantage of pass privileges for his family and of a pension when he gets to be too old for service.

Three hundred dollars a month is quite a common pay cheque to be drawn at the end of the month by a Canadian locomotive man, who earns more than many a captain of an ocean going liner, and sometimes \$350 is touched. Conductors range as a rule from \$200 to \$250 a month, sometimes more and sometimes less. Almost as well paid are the firemen on the western lines, who earn from \$150 to \$230 a month. Section foremen, who have special privileges of houses at nominal rents, free fuel, market passes for their wives and free land for gardens, earn from \$80 to \$110 a month.

C.P.R. stock is now held by over 50,000 persons, chiefly in Great Britain, Canada and the U. S., approximately 12% of it being held in other countries. The holdings in Canada have increased considerably since the commencement of the war, and now represent over 15% of the outstanding capital stock, distributed amongst 7,000 holders. In the last four years, the number of shareholders has more than doubled.

T. McHattie, ex-Master Mechanic, G.T.R., Montreal, in remitting his renewal subscription, writes: "I always look forward with pleasure for Canadian Railway and Marine World from month to month, as the matter it contains is so interesting and instructive."

# Discussion on Draft Gears on Railway Rolling Stock.

The paper on this subject, by L. E. Endsley, professor, University of Pittsburgh, Pa., read before the Canadian Railway Club and published in Canadian Railway and Marine World for Dec., 1917, was discussed by several of the club's members. The following are the most important parts of the discussion:

**T. H. Curtis:** I would like Mr. Endsley to make plain to us the shearing of the 19/31 in. rivets. Does this mean that each lug has 9 rivets in it? If so, are they in the same channel? Or are there two lugs to shear 18 rivets; each lug bearing about half the load? Referring to fig. 2, the cut shows 18 rivets on the side. I think this should be explained.

**L. E. Endsley:** There are 18 rivets in the single shear and two lugs. Sometimes under a test both lugs would shear off. I meant to say that there are two lugs, 9 rivets in each and each rivet in single shear. As regards the 18 rivets in the channels, as shown in fig. 2, it only took 800,000 lb. to shear off 10 rivets and as this was not the strength of the sill, we added more rivets. We did not want to shear the lug off, but to obtain the strength of the sill.

**Jas. Coleman, Superintendent Car Department, G.T.R.:** Mr. Endsley has opened up a very interesting and broad subject—one that all railway companies are very much concerned in at present. It is the opinion of many operating men that in 70% of the claims paid by the claims departments for damage to freight in transit the cause for such damage cannot be traced; this high percentage is due to damage in switching and yard service, due to weak draft rigging. With the ordinary spring draft gear, that has not sufficient tension to absorb the shocks in switching and in road service, the gear becomes solid in switch movement and moves car under load. This means, it forces the load, or contents against the end of the car, scattering it over the floor of car, thereby causing unknown damage to contents, that cannot be determined until car has reached its destination. If the spring tension of draft gear was strong enough to absorb the shock before the spring went solid, it would prevent movement of contents or load in car, also stop movement of car under load and forcing load against ends of car. It is clearly demonstrated, on account of heavy train movement, increased tonnage in train service, and heavy switching service, due to increased tare weight of car and increased capacity of cars, that it has become necessary that a friction draft gear should be applied to all freight and passenger car equipment. It has been fully demonstrated that a spring tension draft gear is not sufficient to absorb the shocks and prevent them from being centralized in underframe and from of cars. In a discussion with some railway men, in connection with claims paid for damage to freight, the cause of which could not be traced, one company, I heard of \$200,000 being paid out in 1916 for damage to freight in transit, cause of which could not be traced, or damage was not discovered until car reached its destination. This amount was only a portion of the total amount of damage, as usually it is pro-rated over the different lines over which the car may be routed. This is conclusive that the mechanical departments should do something to improve this condition, that will prevent the constant flow of expense for damage to

freight, a large percentage of which can be saved and avoided by the introduction of a stronger and more efficient draft gear. Large numbers of equipments have been in service for a number of years, but at the time such equipment was originally constructed, it was not necessary for a heavy friction draft gear. In the last few years, or less than the average life of a great deal of equipment now in service in the country, it has become necessary, due to the increased tonnage of trains and increased draw bar pull on large and heavy locomotives to apply a reinforced steel underframe and a stronger draft gear to stand the service of present day operation, the same applies to improvements made in sorting yards and switching.

**W. H. Yost, Mechanical Engineer, Hart-Otis Car Co.:** As trains get bigger the draft gear must necessarily be made heavier. The modern friction gears give good service and much better than the spring gears. The heavier trains will require us to adopt something heavier.

**C. W. Van Buren, General Master Car Builder, C.P.R.:** There is one feature which Mr. Endsley did not bring out very strongly, although it has no doubt occurred to nearly all car department men here, that is that defects which develop in the draft gear and attachments cannot always be attributed to inferior draft gear. Many cars have been built and remodelled in recent years, with sills too weak to stand up under the severe service to which they are subjected. This is usually called rough switching, and in many cases it is, but we must remember that the traffic conditions which now prevail do not always permit of slow and careful movements of freight cars, and that it is at times extremely difficult to prevent damage to sills, couplers or draft gears without higher capacity gears, heavier couplers and stronger sills, draft arms and other attachments. I am not speaking of spring gear only. It is brought out quite clearly in the paper that friction draft gears frequently do go solid before any other parts of the car are damaged. Perhaps we might say that none of the draft gear manufacturers are keeping pace with the requirements. It has been my opinion for some time that the draft gear usually goes solid before the coupler breaks, and it would appear that the coupler should be the weakest link in the chain. We should design our sills, draft arms and lugs strong enough to stand a shock sufficient to break the coupler, and, if it is possible, the draft gear should be designed with at least as great a capacity as the coupler, and I believe that at least four inches travel is desirable. Officers in charge of the management of railways usually come up through the traffic or operating department, and it has been part of their training to keep the tare weights of cars and trains down to the minimum. Quite frequently, strength, durability and efficiency have been sacrificed in order to reduce the tare weight. Perhaps this condition is to some extent responsible for many of the comparatively weak draft gears in service today. There is one other point I would like to refer to on behalf of friction gear. When we were using nothing but spring gears, we expected to have couplers, followers, lugs, springs, and other parts broken. These failures were seldom criticized; we usually called it rough handling and let it go at that,

but when we got the friction gear and it began to fail, we sometimes said it was no good. We thought it did not stand up in service as it should, and we were sometimes inclined to condemn it because some parts had to be renewed, for we forgot that friction meant wear. I believe that it is impossible to build any friction draft gear which will not at some time during the life of the car require some repairs, and its efficiency, like wheels, brake shoes, couplers, brasses and other parts of cars, depends largely upon the inspection and repairs which it receives. This is something which we should endeavor to impress upon our managements. I believe all car men who have had any experience with friction draft gear are in favor of it as compared to spring gear. Most of our operating men who don't should visit the various laboratories and become familiar with the results of the tests.

**R. W. Burnett, Master Car Builder, Delaware and Hudson Co.:** I feel confident that up to recently 80 or 90% draft gear troubles have been the failure of attachments; that is, couplers, yokes, yoke rivets or attachments to wooden draft timbers. The couplers are now being made stronger, modern cast steel yokes do away with the rivets and distribute the metal so that breakages are greatly reduced and the use of steel centre sills or metal draft timbers is greatly reducing the draft timber attachment failures. The things I have mentioned may seem minor details, but they have constituted the greater part of the failures that have made the draft gear problem so prominent. With modern appliances these troubles will in time be reduced to a minimum which will leave us free to realize to the full on the wonderful developments that the friction draft gear people have made. With the increased weight of the cars and trains, and power of the locomotives, the full capacity that has been developed in the gears will be needed. We must not lose sight of the fact that the great capacity developed in the limited space will mean wear, and we must expect some cost in repairs and renewal, but, I feel that every dollar spent for improved modern draft gears will be saved many times over in repairs to other parts of the cars and in loss and damage to lading.

**K. F. Nyström, Chief Draftsman, Car Department, G.T.R.:** There is one thing brought out very clearly by Mr. Endsley, viz., the wear of the friction draft gears. The great fault with certain friction draft gears is that the parts become worn and produce a slack in the gear. If this slack is not taken care of either by manual or automatic adjustment the gear will lose in capacity and soon be hammered to pieces. It is my opinion that in the ideal draft gear the wear should be reduced to a minimum and the slack or wear taken up automatically, so the gear will be in a good efficient condition during its entire life, the same as, for instance, a brake shoe. I should like to ask Mr. Endsley as to the relation between the draft gear and the centre sill. The draft gear will take care of a portion of the energy, or end shocks, the centre sill has to take care of the balance. How strong should we design the centre sills behind the draft gear to take care of reasonable load, say, in so many pounds static load?

**L. E. Endsley:** It would depend entirely upon the strength of the coupler. If I

had a coupler that would stand about 500,000 lb. I would want to have an under frame that would stand over 600,000 lb., and two 25 lb. channels with 19 sq. in., including cover plate, would give an under frame plenty strong enough. The coupler is going to fail before the strength of the sill is reached. If you have a coupler going 700,000 or 800,000 lb. you must go to a centre sill that will stand a greater load. I want my coupler to break first. If that will stand a million pounds we should have an underframe stronger than that or the underframe is going to fail first.

**K. F. Nystrom:** Two 12 in. channels will not safely stand a million pound shock?

**L. E. Endsley:** I said that two 12 in. channels of 25 lb. per foot would stand 600,000 lb.

**K. F. Nystrom:** If you allow, say, 16,000 or 20,000 lb. per sq. in., you have got to get more than 12 in. channels.

**L. E. Endsley:** You will not bend the sills until you have a stress of 35,000 or 38,000 lb. per sq. in. You will shorten it a little as you get above the elastic limit, but you won't bend it until you get a force which is equal to over 35,000 lb. per sq. in. In the tests mentioned in the paper we used an accurate strained gauge that is constructed to read to 0.0002 parts of an inch. If there is any give in that sill over 0.0002 then this strain gauge will show it. If the webs of the channels are as thick as they are in a 12 in. channel that weighs 40 lbs. per foot the force per sq. in. to destroy or bend the sill is increased. In two sets of channels of the size just given, the area would be approximately 28 sq. in. for the centre sills with the cover plate included. In a test of these channels the force to destroy them was over 1,300,000 lb. or over 47,000 lb. stress per sq. in.

**T. H. Curtis:** I think Mr. Endsley's paper brings out the necessity of not having too much eccentricity through the location of the draft gear in relation to the centre sill. I would refer him to the table in the paper where the draft gear has been 2½ in. from the edge of the channel. It is very little more than half the strength of when it is in the centre of the channel. To get away from this eccentricity it seems to me the trucks should be designed so they will be as low as possible and the spring draft nearer to the centre of the sill. There is another advantage gained by this and that is that it will lower the centre of gravity of the car body. With respect to broken draft gears: one point is that the repair men do not always know when they should be repaired and when they should be replaced. I think the suggestion made by Mr. Nystrom is worthy of consideration and shows the need of a draft gear that will automatically take up the slack caused by wear and abuse. I have not heard anything said here about the auxiliary to the draft gear, which is the buffer block. That is something which takes up some of the greatest shocks and if that were so set that the coupler horns would strike before the draft gear became solid it would be a great advantage as it is something which the repair men can see readily and is something which can be easily fixed.

**Mr. Hatch:** I would like to enquire of Mr. Endsley what effect it would have on increasing the length for the distance of travel on train slack, bearing in mind the difference in loaded cars, difference in piston travel, and so forth. I refer particularly to passenger equipment.

**L. E. Endsley:** Mr. Hatch has opened

a subject that I had hoped to have the best man in the United States with me tonight to reply to, but I received a telegram that he could not be here. There are two entirely different things in this subject, for instance, slack is movement between two cars without any resistance. But the draft gear movement is entirely different. Some men have I think mistaken draft gear travel for slack, and if you increase your slack between two cars you are going to increase the evils due to that slack. Let us assume for instance that you have a foot slack between two cars. You would get one car going in starting the train, and would go a foot before you picked up the next car, and in going that foot, probably could increase your speed a mile an hour or so, but if in going that foot you had resistance equivalent to a large number of foot pounds, and if you have between the two cars 4 in. of draft gear travel under 200,000 lb. final force your average will be 100,000 lb. Now if this force acts through between each car and no slack, the other car would be moving almost before there was any difference in speed, the slack happens after the gear goes solid. If there was a lot of slack on a car I would expect a shock but if I had resistance that the locomotive could not take entirely up, and it had to start the cars with resistance, then I would have a little give between the cars, and when picking up the last car of the train, each car in the train would be moving at almost the same speed. I think one of the things we have overlooked is the advantage we are going to gain by cutting down the slack, that is moving without any resistance whatever. I would be very glad if I had the assistance here tonight of W. V. Turner of the Westinghouse Air Brake Co., to discuss this question more fully, as it is a very deep one.

**J. Hendry, Master Car Builder, G.T.R.:** In my opinion an underframe, properly designed and constructed, having been obtained, the most important part of the design to consider is the type of draft gear. In this connection I think it is generally conceded that a modern friction draft gear gives the greatest protection, as it reduces the cost of maintenance and all other expenses incident to failures. A careful examination of cars placed on shop tracks for repairs will, I am convinced, show that probably 70% are placed on account of defects that have developed due to shocks, and I believe investigation into this cause of damage to lading indicates that a large percentage can be traced to the same cause. If such is the case, and we all know it is, something should be done to relieve the equipment of such ravages.

A great deal of attention has been given to the design of the underframe construction of freight equipment, but the desired results will never be attained unless some device, between the frame and the coupler, is installed which is especially designed to destroy or absorb the force of the blow. A car may be properly designed and constructed through, but if it is not protected against the force of shocks, which all freight cars are subjected to, the weakest point will begin to fail. Springs have been used, varying from 18,000 to 60,000 lb. capacity and gave good protection some years ago, when cars were of light capacity and were handled in short trains; but they do not meet the requirements of today and a large number of roads have started to replace the spring gear with friction devices that have from three to four times the shock-absorbing capacity that can be

obtained from the spring gear. In a friction gear there should be no recoil. The force exerted by the recoil of a spring is practically as great as the force to compress it, and results in much damage to equipment handled in long trains. A reduction of car failures is sure to follow in the adoption of the friction draft gear, which means a great saving to a railway, because of the increased earning power of the cars and the decreased cost of maintenance, lost and damaged lading accounts, delays and interruptions of traffic, transfers of lading and switching through various terminals. The draft gear, I consider, is one of the most important factors in the question of car maintenance and other expenses incident to car failures. It is the only device that we can apply to a car to protect it and its lading from being damaged. It has no other function to perform. It must destroy shocks from impact, shocks from pulling and shocks due to recoil. A few of the damages occurring to cars due to the draft gear failing to perform its work are as follows: If we could use a draft gear between the coupler and the car that would absorb the heavier shock, we would do away with broken couplers, but with improved friction draft gear this may be obtained by continuing to use our present style of couplers without increasing their weight. While knuckles wear out in service, yet a great many of them break; and here again would relieve the knuckle by absorbing the shock. What is true of the coupler and knuckle, is also true of the knuckle pin, either the draft gear absorbs the shock, or we will have to increase the size of the pin or have the knuckle so arranged that when locked in position the strain will not come on the pin. Failure of coupler yokes is also due to shock. These are, I think, being replaced by other forms of attachments, on account of pocket rivet failures, on account of pocket rivets in shear under impact. By eliminating this feature the wrought iron or forged steel yoke with 1¼ x 5 section riveted to the coupler with two 1¼ in. rivets can be operated with very few failures. No one will deny that draft springs are destroyed by shock, but with a properly designed friction draft gear, the failures are few, for the reason that draft gears are not driven solid, even though the draft gear receives a shock sufficient to close it. Draft lugs, draft arms, draft sills, deadwoods and end sills all fail, simply because the draft gear fails to destroy the force of the blow. I do not say that a friction draft gear will cure all the ills to which the freight car has fallen heir to, but I do know that it helps to maintain freight cars in service and keep them off the repair tracks; thereby increasing the earning capacity and efficiency of the freight car. I believe that a standard specification for the testing of draft gear, to determine its shock-absorbing capacity and amount of recoil, should be established to obtain, by means of physical tests, their worth or efficiency as a shock destroyer.

**E. J. McVeigh, General Storekeeper, G.T.R.:** If the fact that I have seen a vast number of broken couplers and draft gears gives me a right to claim some knowledge of these things, then I should be an expert, but I am afraid such is not the case. When I first heard that Mr. Endsley was coming to give us a paper on draft gears, my first thought was, "Have we found a Moses at last who will lead us out of the wilderness of broken and disabled cars?" While Mr. Endsley has given us much valuable information, and if we make proper use of it we will

receive much benefit, no doubt, I do not expect to find the number of broken couplers and draft gears decreased, or the number of damaged cars become less for many years to come, and the discussion by the car men here tonight confirms me in this belief. To me it seems that this question of damaged cars is merely a part of the great railway problem that confronts us today and with which the railways have been at death grips for years. It is, as our president has stated, a business proposition. Mr. Coleman hinted at this when he spoke of the large locomotives that damage our cars. Another gentleman did not agree with this, but claimed that the damage was done largely by the small locomotives in the yards. To me it seems to be all of one piece. We use the big locomotives in an attempt to haul sufficient tonnage to make the haul pay. We shunt our cars fast and roughly, in an attempt to handle enough of them in a day to catch up to the vanishing allowance we have for such work. I am not so very old, and yet I can remember when a railway used a small, weak car with the old pin and link coupler, and a small locomotive to handle them, and made good money by so doing. There were various reasons for this. One was that in proportion to the expense of handling the car and the load, the railway received a fair compensation. Under the head of expense of hauling the load we must count the general operating expense of the railway, and the interest on capital account. The cars cost \$400 to \$500 each. The locomotives cost \$7,000 to \$10,000 each. Repairs to both were small in cost. The wages paid were small. The strength of the locomotive and the car were more evenly balanced than they are today. The locomotive could not damage the cars because they had not the strength—they could not haul 75 or 100 of these cars in a train and pull them to pieces in so doing, but they made money by hauling a reasonable number, because things were more evenly balanced. There wasn't so much talk of tonnage in those days, but they were not such bad days after all. But the world moves, the expense of operation began to grow, the cost of hauling the small train of small cars became so great that it ate up the revenue. The revenue had gone down while the expense had gone up. You can't make two things meet when they pass each other and are going in opposite directions. When this happens in any line of business, outside of railroad-ing, there is a halt called and a readjustment made, not so with the railway, they can't halt, and the power to readjust had been taken away from them, so when they found that hauling the light train did not pay they found a heavier locomotive that could haul a heavier train. Then they found that the old cars could not stand the increased strain, so they bought or built a stronger car, but this was not the answer. The locomotive and cars had cost so much, and wages had again gone up, so that there was still no margin left. What to do now? I know what should have been done, but we all know what was done. The locomotive was again made heavier and back came the old trouble of the car being too weak to stand the extra strain. The coupler broke, so we made a stronger coupler. Then the draft gear gave way and we made a stronger draft gear. Then the sills gave way and we strengthened them, then back to the coupler and so on round and round a vicious circle. Increased cost and upkeep of locomotives cost and upkeep of cars, increased cost and upkeep of track, increased

wages, increase everywhere, except increase in net revenue. Feverish and superhuman efforts on the part of the railways to keep going and give the country that service they have never failed in. These are a few of the things I think I see, and I can only say that while an improvement in the draft gear might be of some slight help it is not the answer to our problem. And what is the answer? In my opinion it is this. Give the railways a fair wage for the service they are giving so they may stop trying to do the impossible. Let them come back to a safe and working basis. The railway is a merchant selling transportation. Does anyone expect the merchant to sell his goods at less than cost? Does anyone expect to find within himself means to overcome such a condition and remain in business? I think not. And why should the railway be expected to do it?

C. Brady, Chief Draftsman, General Master Car Builder's Office, C.P.R.: I would like to ask Mr. Endsley if he has any further information to give out as to tests of gears having high initial starting force, for example: resistance which will require springs that will take in 20,000 lb. or so. It appears from his analysis that there are three different kinds of work that the draft gear must take care of, and the construction will be more or less affected, but it is desirable that the most important function be given the preference. It has always seemed to me that the draft gear was the same as any other part of the car, an operating problem. By that I mean that the cars should be designed to operate at the speed which the operating department considers desirable and it is up to the mechanical department to meet their requirements if possible. Mr. Endsley has been of inestimable assistance to all the mechanical fraternity in designing draft gear, and I believe he is entitled to credit for giving a clearer understanding of the necessity for draft gear being built in proportion to the capacity of the car, in other words, a 70-ton car should have a larger draft gear than a 50-ton car. If the operating department will say as to the capacity of the car and the speed at which it is to be operated, then it is up to the mechanical department to put a car in service that will do the work. There is one other point which should not be overlooked, and that is the general tendency to blame the large locomotive for draft gear troubles. I think this is more or less wrong and that the large locomotive does not damage the draft gear as much as the smaller locomotive, because the smaller locomotive has to take the slack in starting. The best illustration of that is one road in the United States which is hauling trains 10,000 tons with spring gear exclusively and using Mallet locomotives, they do not have any draft gear troubles.

L. E. Endsley: A locomotive has the power to start a few cars. There is always enough slack in a coupler or give of the different cars to have a movement between the cars to start the train. If your draft gears all have initial movement with low resistance for any given travel of the draft gears, this is going to reduce its capacity. I do not believe you need a very large initial movement in the draft gear.

G. E. Smart, Master Car Builder, Canadian Government Railways, President: I believe we are fully alive to the subject of draft gears. Friction draft gear is the gear for all types of cars today. I do not believe there is any railway in Canada that during the last five years has applied any other type than friction draft gears

on its passenger equipment, and the day is coming when there will be no other type on freight equipment. The ideal conditions have been explained tonight—as four miles per hour in switching cars in yards—but we do not always obtain this ideal condition, the switching speed is often more than four miles, judging by the noise of cars being coupled in freight yards. The question narrows down to a commercial proposition; the cost of switching cars and the cost of maintenance of car equipment for repairs per thousand miles. Many times the cost of repairs is increased as the result of reducing the cost of switching cars in yards and further damage as the result of same, which causes trouble and delay on the road after leaving terminals. We have a large number of wooden cars in Canada which must be considered by the railways, and as we cannot obtain steel for steel underframes we shall have to put on these wooden cars, metal draft arm and suitable draft gear. Money would be saved if we could apply a steel draft arm on the wooden centre sill, but steel underframes would be preferable, but owing to the demands for steel for shipbuilding we are not going to be able to do this, as we cannot get the necessary material; the next best method is metal draft arm.

### The Temiscouata Railway's Earnings.

At a meeting of holders of provisional certificates issued by this company's bond certificates issued by this company's bondholders' committee, in London, Eng., recently, the chairman stated that the gross earnings for the financial year ended June 30, 1917, were \$226,817; operating expenses \$202,240; net earnings \$24,577, against \$222,872 gross earnings, \$18,450 operating expenses, and \$42,421 net earnings for 1915-1916. The percentage of operating expenses to gross earnings was 89.17 compared with 80.96 for the previous year. He attributed the decrease in passenger revenue to the fact that the annual pilgrimage excursions usually run by the company, were banned by the Board of Railway Commissioners. The freight carried was 165,393 tons, against 159,985 during the previous year. In the operating expenses there was an increase of \$7,800 for fuel for road locomotives, due to an increase of 35c a ton in the price of coal, and also to the extra amount used due to cold weather. The amount brought forward from the previous year was \$2,313 which, with the net earnings, \$24,577, interest on deposits, \$1,054, and profit on exchange \$1,404, totals \$29,348, from which was paid, \$12,166 for one year's interest on prior lien bonds and \$9,733 to the redemption fund for prior lien bonds, leaving a balance of \$7,448, which is carried forward to the current year's accounts. No dividend will be paid for the past year on the provisional certificates issued by the committee. For the current year, the gross earnings for the first quarter showed an increase of \$15,068, and the net earnings, one of \$3,965. There is an abundance of traffic on the line, and should the car situation improve, better traffic results will follow. The operating expenses are continually increasing, and the company has been obliged to grant increases of wages in all departments. The General Manager reported from Canada by cable that at the end of Nov. 1917 there was a surplus of \$10,000, including the amount brought forward, after providing for fixed charges.

# Electric Railway Department

## An Address on Street Railway Operation.

By Edward P. Coleman, General Manager, Dominion Power & Transmission Co., Ltd.

The following address was delivered before the Hamilton, Ont., Rotary Club recently:—There are many and widely different classes of electric railways, ranging from the street railway proper—or improper, as you may desire—to the modern type of interurban or radial railway, generally constructed on its own right of way, which handles freight and express, as well as passengers, and is operated practically under steam railway rules. I wish to be understood as referring solely to street railways operating within the closely settled areas of busy communities with comparatively frequent car service and stops closely spaced. It will perhaps prevent misunderstanding to say that my statements are not intended to apply, except incidentally, to operation under present conditions. There is no doubt that traffic is now extremely congested on the Hamilton St. Ry., as it is on every street railway on this continent, on account of the present abnormal demands which at times would hardly be met if our tracks could be converted into moving sidewalks. There is a general impression that we should supply more cars, but I wish to say that if we had a hundred more cars we could not use them, on account of the serious shortage of power which now exists. Under the circumstances it is entirely out of the question to divert another horse power to street railway service, and if we were so blind to the situation as to make the attempt we would not be allowed to do so by the Power Commissioner. The many power customers who are here present should certainly appreciate this phase of the situation.

On account of the peculiar character of the work, street railways are also hampered in their operations by the present labor conditions, to an even greater extent than are the operations in other lines of activity represented in this club. For example, the Hamilton St. Ry. requires for its complete operation 272 car men, and during 1917 we hired 246 new men. As 107 men, or 39%, have been with us over two years, you will perceive that this constitutes a very considerable problem in training.

A yearly period of abnormal demand always exists at the merry Christmas season. I will, however, pass over that special feature and merely ask if you know of any busy store, barber shop, or post office where you can walk in at that time of year and be served immediately? Why, then, should not the street railway claim the right to be judged by the same standard?

In considering the question of street railway operation in normal times, we find that what is universally demanded is "satisfactory service," but that in itself is capable of an infinite variety of definitions. As a matter of fact, such a thing as "satisfactory" street railway service does not and cannot exist, as that would imply perfect results under extremely variable conditions which are entirely beyond the operator's control. The nearest approximation to this ideal result is a combination of compromises, and the only possible measure of efficiency is comparison with the service in similar com-

munities. A careful study of the situation develops the fact that precisely the same complaints and criticisms are made of the local street railway service in every busy and progressive community. The principal complaints can be grouped under the following heads, each of which bears a close relation to the others: 1, Frequency of service; 2, Variable spacing between cars and delayed cars, resulting in slow service; 3, Overcrowding of cars; 4, Cars running by passengers; 5, Inefficiency and discourtesy of employees; 6, Physical condition of equipment.

Let us briefly consider the problems

E. P. Coleman  
General Manager, Dominion Power and  
Transmission Company

and limitations of service under these heads, first frequency of service. As business men, you will naturally realize that the operation of a street railway must be governed by economic laws to the same extent as any other active enterprise, and must be as economically successful, that is, it must pay operating expenses, provide for replacement and depreciation and pay such amounts as interest or dividends as to attract the additional capital necessary for improvement and extensions. This should apply, whether the railway is owned by the public or by the so-called private corporation. The normal frequency of service, or car headway as it is technically termed, must then be governed to a considerable extent by the normal average demand. Usually this normal service is supplemented by more frequent service or shorter headway during certain hours of the day and also by trippers or extra cars interpolated to cover special service from large factories or centres of traffic. This condition is complicated by the fact that, 1st, every employee must be provided with a day's work of reasonable length and, 2nd, your legis-

lature has enacted a law which provides that no street railway motorman or conductor may, whether he wishes to or not, work more than 10 hours in any one day or on more than 6 days of any week. The general impression seems to be that a car is run out of the barn and thereafter goes its own way regardless of rhyme or reason, but such is not the case. The car operation of a street railway is divided into car schedules, and crew schedules, with time tables which must be absolutely conformed to, or they will not work out. To the uninitiated it often appears the most simple problem in the world to devise a better or more satisfactory schedule from our patrons' point of view, but when the earnest student of progress undertakes the task he invariably gives up in despair when confronted with the limitations. I remember one very attractive schedule submitted for our consideration, the claims of which were presented with considerable animation until it was pointed out that its operation required an average speed of 72 miles an hour on one portion of the line. The limit of car headway at rush hours is physically fixed by the congestion of traffic on the principal streets traversed, taking ordinary vehicular and pedestrian traffic as well as car traffic into consideration, and in many cities the traffic on these streets is often so dense that it is impossible for a cat to cross during rush hours.

Second, Variable spacing and delayed cars. Taking a normal five minute service on our Belt Line for an example, the problem is to start out 10 cars in each direction, spaced 5 minutes apart, making a round trip every 50 minutes and keep the cars 5 minutes apart and in their proper places at the various time points. The difficulty is to accomplish this under variable traffic demands, that is, not only variable over certain hours of each day, but from day to day as the weather may be fair or stormy, being at the same time subject to local delays from level railway crossings, avoidance of teams and automobiles, and the not infrequent delays caused by accidents of various degrees of seriousness. And then again, how much more difficult must it be when it is necessary to vary the spacing or headway at certain portions of the day to cover normally increased or rush hour traffic. When I state that the normal headway on our Belt Line varies from 5 minutes to 2 minutes, exclusive of trippers during each day, with special variations on Saturdays, you will realize the magnitude of the problem.

Third, overcrowded cars. Overcrowded cars are not only annoying to our patrons, but are responsible to a large degree for variable headway, but an investigation of this important item will develop the fact that the public are more responsible for this condition than they can possibly realize. With a reasonably close headway and cars of ample size, the only possible remedy for overcrowding is not to enter a crowded car but wait until accommodation can be secured. I know that this sounds like very unpalatable advice, but I can assure you that if it were followed the resulting service to each passenger would be more prompt as well

as more comfortable than at present. Given a string of cars a short distance apart, with everyone trying to get on the first car, and no matter how large that car may be or how many cars may be following, the first will always not only be crowded but will delay the others in which proper accommodation might have been secured. The so called comfortable service in Europe (I am speaking now of the period before the war) was secured by laws which forbade passengers to enter a crowded car, and I am assured on competent authority that it was often necessary to wait half an hour before accommodation could be secured. That would not be necessary here, as 5 minutes delay, or at most 10 minutes under the worst conditions, would be the limit, and we have all waited longer than that for service in barber shop or shoe shine parlor. In connection with this item I wish to remark, parenthetically, that the public in Canada are to a large degree responsible for the crowded rush hour conditions by reason of having imposed upon the companies the so called limited fare periods, which in effect offer a premium for using the cars at the time of the greatest congestion. This is entirely wrong in principle, as every merchant will realize.

Fourth, Cars running by passengers. The only means that the street railway operator has under his control to restore normal service or to prevent overcrowding, with its attendant delays, is to run the delayed or crowded car by waiting patrons and leave them for the next car, and this should properly be done in the general interests of the public. This is the fact, but you all realize the storm of complaint that is aroused when it is carried out. We even have the most bitter complaints presented because car crews do not wait for passengers who are running after a car, regardless of the fact that not only would such action, if carried out to any extent, result in variable service, but that the motorman and conductor are compelled to keep their eyes very rigidly on the limited space in the immediate vicinity and ahead of their car to guard against accident and other contingencies. I am sure that if anyone will take a seat at the front of any of our cars and stay through several round trips, giving careful consideration to the details of operation, he will have a much greater respect for the responsibilities of the crew than he can have at present. It is true that a motorman will sometimes run by passengers, with a clear view and a partially loaded car, but this is seldom done intentionally. It is very often the fact that following a near collision, or on approaching a cross street from which an automobile is liable to appear, the motorman may be mentally oblivious to everything excepting the averted or anticipated danger. Our medical members can assure you that this constitutes a well known and common mental lapse in the most intelligent.

Fifth, Inefficiency and discourtesy of employees. How many department store managers could send their employees off around the city in pairs and be willing to guarantee their courtesy and capability under all conditions and in all circumstances? Street railways are under the same limitations regarding their employees as any other employer, and at the same time the street railway employee is in a much more difficult position than obtains in other lines. In many, many cases that have been brought to my personal attention I have been shocked by the discourtesy of passengers to conductors. Too

much should not be expected of these men. Some of our employees, who are the most faithful and reliable in the matter of safe operation, and whose care for the physical safety of their passengers, is the most unrelenting, are unfortunately not gifted with the suave diplomacy of a Chesterfield. We wish our men to be courteous under all circumstances, but a large part of our problem would be solved in this respect if our passengers would be more uniformly courteous to our men. I have myself seen a young conductor become almost hysterical under the badgering of a passenger, with the result that he was rude to the next passenger who innocently accosted him. I do not defend discourtesy, on the contrary we deal with it severely, but it is absolutely necessary that we should deal justly and with careful consideration of all of the attendant circumstances in cases of this nature. We must also realize that 272 men must necessarily vary to a large degree in intelligence and disposition and make proper allowances for the fact.

Sixth, Physical condition of equipment. It is naturally impossible to secure perfection in constantly operated and sometimes abused machinery. An electric car is a very complicated machine and gears will get out of true and rub on the gear cases. Wheels will get flat, but it is not true that it is the same flat wheel that you hear the next day, even if it is the same car. Whenever the wheels are locked by the brakes and skidded, a flat is liable to result, especially on a dusty or sanded track. A car may leave King and James Sts. with its wheels in perfect condition and have a flat before it reaches Hunter St. These flats, which sound so portentously on our solid track structure, are small affairs, often about the size of a silver five cent piece, and are extremely hard to locate. The only remedy is to lay the car up and grind the wheels, or to replace the pair of wheels and axle in bad cases. Under certain weather conditions it is impossible to avoid skidding, and an epidemic of flats will develop which cannot be repaired at once without discontinuing the service almost entirely, but no car is allowed to remain in this condition for any length of time. Ordinarily it is removed from service at once. A long paper could be written on the care and condition of cars alone. How many here realize that our cars are continually washed inside with an antiseptic solution? That is the reason for the peculiar odor sometimes observed, which passengers take to indicate that the car is dirty, when the contrary is the fact. It is only by unremitting care that street cars are prevented from running a close second to the trenches in many respects.

The public can do more to secure good service than can we, if passengers will only observe the following simple precautions:

Board the car promptly and do not stand in the rear vestibule. This not only interferes with the operation of the car and hampers rapid loading, but is an annoyance to everyone getting on the car, especially to ladies.

Pass up forward. The chances are that you will find a seat at the front of an apparently crowded car. I have done so many times. In one case I observed five empty seats in a car that was so packed at the rear end that I was obliged to use the front door.

Leave by the front door if possible. This will reduce the stopping time to a very considerable extent and is much the safest practice.

Do not enter a crowded car. Wait for

the car following.

Do not enter into an argument with the conductor. If there is any cause for complaint, refer it to the office and it will receive careful and considerate attention. If the trouble is over a fare or transfer, the office is the only place where it can possibly be corrected.

We welcome complaints at the office, as they enable us either to give a satisfactory explanation or to correct abuses of which we could otherwise have no knowledge. Indefinite newspaper complaints are of no value except to make useless trouble, and it must be remembered that the newspapers' interest in the matter is based upon far from unselfish grounds.

All complaints to be effective must carry reliable information as to car number, place and time, or we will be absolutely helpless in the matter. In serious cases a reliable witness should be secured, as we cannot act upon a passenger's unsupported word against that of the car men. No court in the land would do that.

### Port Arthur Civic Railway's Financial Position.

J. A. Oliver, the retiring President of the Port Arthur, Ont., Board of Trade, in the course of his address at the annual meeting Jan. 14, made the following reference to the Port Arthur Civic Ry.:—"In 1916, 2,748,213 passengers travelled on our street cars. On July 25, 1917, the railway fares in the city were reduced. Six ordinary tickets or 8 workmen's tickets or 10 children's tickets are sold for 25c. On the main line the rates are doubled at the boundary between Port Arthur and Fort William. During 1917, including the additional fare at the boundary, since July 25, 3,246,953 tickets were collected. On the main line, as well as on each belt line, the number of passengers travelling has steadily increased each month, but the increase has not been sufficient to make up the decrease in the price of tickets within the city. The main line, however, has made up at least \$2,000 each month since the change. The street railway revenue since 1916 amounted to \$125,000, being an increase of \$19,000 over 1916. The commissioners, however, out of this amount paid \$7,000 for the repairs on Cumberland St. and \$3,000 for the bridge over the Neebing River, leaving the net deficit on the railway at \$8,000 less than in 1916. For the benefit of the citizens, let me state that the net earnings exceeded the operating expenses by \$23,000, but this excess is not sufficient to clear the interest on investment and depreciation charges; and in addition the sinking fund each year must be met. To sum up the position as regards public utilities during last year, this city faced a loss on its street railway, telephone and water, and had a surplus on its light and power and Current River improvement accounts, the net loss for the year being \$55,425."

Winnipeg Electric Ry. Stops.—Referring to a complaint as to the number of stops, A. W. McLimont, General Manager, Winnipeg Electric Ry., said to the city's Board of Control Jan. 15:—"While most of our patrons are willing to admit there are too many stops, reluctance is shown immediately their own particular stop is questioned, but with the appreciation of the public of the advantages obtained for themselves by reducing the number of stops in securing more rapid and generally improved transportation, I feel they will co-operate with us in this respect."

## The City of Toronto and the Toronto Railway.

At a meeting of the Toronto Board of Control, Jan. 18, the Mayor outlined his proposals in regard to the operation of the Toronto Ry. and for the improvement of the service. He stated that the company was several hundred cars short, and overcrowding was never worse; that the Ontario Railway and Municipal Board, in six years, had made several orders and revoked them, and that the law courts seemed unable to cope with the evil, and public rights were nowhere.

The Mayor's proposals, which were agreed to by the Board of Control, cover an application under sec. 260 of the Ontario Railway Act, for the Ontario Government, through the Ontario Railway and Municipal Board, to take over and operate the railway on account of breach of contract between the city and the company; to place penalties on the company for failure to build the cars ordered to be built, the penalty to be \$500 a day, dating from Jan. 1, 1918; to commit the company's officials and for a mandamus to compel the company to build the cars as ordered; for an indictment against the company for overcrowding, for maintaining a public nuisance, and for breaches of the Public Health Act; for legislation overruling the Imperial Privy Council's recent judgment on the overcrowding case; to compel the Ontario Railway and Municipal Board to enforce its orders, and in general to "reform" the Ontario Railway and Municipal Board.

No doubt many of these proposals are in reality New Year resolutions, but whether so, or not, they are strong evidence of the utter incompetency of those responsible, to realize the situation as it is, or to propose any proper solution of the difficulties, for which, to a certain extent, the city council is blameable. By sec. 260 of the Ontario Railway Act it is provided that where an agreement between a municipality and a company for the operation of a street railway has been violated, the Ontario Railway and Municipal Board shall hear all matters relating to such alleged violation, and shall make such order as to it may seem just, and may direct such company or such municipality to do, or refrain from doing such things as may be necessary for the fulfillment or may constitute a violation of such agreement; and for the enforcement of such order, it may take possession of, and operate, such street railway, and carry it on with all the powers possessed by the company. It therefore follows that an application by the city for the board to take over and operate the railway would lie pending a hearing as to the alleged violation of the agreement. If the city alleges a violation of the agreement, its duty is to lay the claim before the board, upon which an enquiry will be held, and should the evidence justify it, an order would be made.

Legislation for affixing a penalty clause to an order for building additional cars has already been refused by the Ontario Government, and it is not likely, under existing circumstances, that another application will meet with success. On the matter of building additional cars, the board some time ago ordered that the company place in service by Jan. 1, 1918, 100 additional double truck cars, and by Jan. 1, 1919, another 100. This order was made just prior to the outbreak of war, and only a very small proportion was built, the disorganization of ordinary business, owing to the demand for munitions,

being responsible for the company's failure in complying with the board's order. On hearing various applications of the city on the matter, the board expressed the view that it would be useless to attempt to force the issue on account of war conditions, and on the city pressing for some enforcement, and on the company explaining the impossibility of obtaining cars, or the material with which to build them in Toronto, according to the company's agreement with the city, the city was given power to waive its rights regarding the building of cars in the city, and to co-operate with the company in the endeavor to obtain cars from other sources. As was expected, the result was the same, the city being in no better position to obtain cars than the company, even for the civic railways. The situation today, as regards car building, is no better than it was, the demands for war purposes, naturally, being met first. It therefore seems improbable that the legislation asked for will be granted.

The overcrowding question, which is a very serious one, has, owing to the perverseness of the city authorities, developed into something of a joke, a rather grim one truly. The history of the various cases before every variety of court from the police court to the Judicial Committee of the Privy Council, exhibits the ineptitude of the city council for finding a reasonable way out of an intolerable situation. Thousands of dollars have been spent on reports and investigations, to no purpose, while the city has the remedy in its own hands. When a charge of overcrowding was before the local courts some time ago, the company pointed out that it was wrongfully laid, and in admitting overcrowding, claimed that the charge should have been laid in an entirely different manner. On the final appeal to the Privy Council, this contention was upheld, it being stated that "the wrong done is only a civil wrong." The city laid the indictment under the Criminal Code, and not under a civil law, under which a judgment may be rendered, providing for the abatement or remedy of the mischief done. Apparently, it is the intention to proceed along the same lines as before, and in addition, to apply for legislation by an amendment of the Ontario Railway Act, providing penalties for overcrowding.

Regarding the power of the Ontario Railway and Municipal Board to enforce its orders, it may be said that it is possessed of ample powers in this respect, but it is not called upon to enforce its orders against its better judgment.

**Execution against Toronto Ry.**—A motion to stay an execution obtained by the City of Toronto against the Toronto Ry. was heard Jan. 21. The execution was obtained following an order by the Board of Railway Commissioners, directing the Toronto Ry., in conjunction with the C.P.R., G.T.R. and Canadian Northern Ry. to pay certain sums, in the case of the Toronto Ry., \$80,000, amounts due in connection with the construction of the bridge over the steam railways, carrying Queen St. East and the T. R. tracks. Questions were raised as to the board's jurisdiction, the Toronto Ry. being a provincial company, and also whether the courts are not being made ancillary machinery to the enforcement of the board's orders. Judgment was reserved.

## Sandwich, Windsor and Amherstburg Railway Franchise.

The following three questions were submitted to the ratepayers of Windsor, Ont., at the annual municipal elections Jan. 7:

1. Are you in favor of the city corporation, by due process of law, taking over the lines and other property of the Sandwich, Windsor & Amherstburg Ry., the same to become, through mutual arrangement, and upon fair conditions, the property of the several municipalities immediately concerned, and the whole of the lines or branches of the said railway to be operated by the Hydro-Electric Power Commission of Ontario?

2. The Sandwich, Windsor & Amherstburg Ry. having refused to make the necessary extensions of its lines to meet the needs of the municipality, unless its existing franchise be extended till 1932, are you in favor of the franchise being extended to that date in order to secure the said extensions?

3. Are you in favor of the city constructing the necessary extensions of the tracks of the Sandwich, Windsor & Amherstburg Ry., and securing, through the Ontario Railway and Municipal Board, an arrangement on a rental basis for the operation of such extensions by the aforesaid railway until the expiration of its franchise in 1922?

The first question was answered in the affirmative by 1,510 to 330; the second question was answered Yes by 380 and No by 891; and the third was answered Yes by 997 and No by 399.

It is stated in regard to the subject of the first question that the plan in mind is to prepare for the purchase of the system by the time the franchise expires in 1922 and for the operation of it under the direction of the Hydro-Electric Power Commission of Ontario.

The city council has under consideration a plan for building a loop at Ferry Ave. The company claims that this loop is necessary in order to give an adequate service, but it is argued on the other hand that double diamonds at the corner of London and Oulette Sts. and at Sandwich and Oulette Sts. are all that is necessary. The question involved is whether a two-way service is required on the west side for the Sandwich and tunnel cars.

The council will take up at an early date the question of building certain extensions to the company's existing tracks at the city's cost. One of the propositions made is to extend the line from Oulette to McDougal St., to Gladstone or Lincoln St. and to connect it with the Ottawa St. line in Walkerville. (Jan., pg. 32).

**Ottawa Electric Ry. Strike Averted.**—Owing to the dismissal of a motorman and a conductor on the O.E.R., for violation of rule 15, by leaving their car, the farebox being stolen during their absence, the other employees threatened to go on strike on Jan. 21, but this was averted, as a result of a conference between President T. Ahearn and the men's grievance committee, the company agreeing to reinstate the conductor and motorman and the men agreeing not to press for a five-minute lay-off on each trip, which they contended was necessary, if rule 15 was not to be violated in the future. The chairman of the men's grievance committee, and the secretary of the men's organization, spoke highly of their treatment by Mr. Ahearn, and of his declining to have the loss involved by the fare box being stolen, while the conductor and motorman were absent from the car, being borne by them.

## Storm Damage on the British Columbia Electric Railway.

Canadian Railway and Marine World has been favored with the following particulars of the damage done on the B.C. E. R. Co.'s Fraser Valley Branch by the storms known as "the silver thaw." The letter was dated Vancouver, Jan. 14: The first storm swept the valley on Dec. 13, but fortunately little damage was done to the distribution system. The high tension, as well as trolley, wires were broken in one or two places but were soon repaired and little inconvenience was caused. The B. C. Telephone Co., however, suffered very severely and it will be some months before its poles and lines will be replaced as they existed formerly.

The second storm commenced on the night of Dec. 27, and continued for the best part of three days, during which period heavy rains fell, freezing when coming in contact with wires, poles, rails, trees, etc. The ice was of the transparent kind and formed to a thickness of between 4 and 5 in. on the standing objects and the weight, together with the wind, caused many poles carrying high tension, trolley and telephone wires to fall. On one stretch of two miles of track 146 poles fell and at another point 106 were brought down. All the damage to the railways occurred between Coghlan and Chilliwack, the former point being 25 miles east of New Westminster.

As soon as the extent of the damage done was ascertained, wrecking equipment, consisting of 3 steam locomotives, 1 steam derrick, 2 line cars, and 3 work trains, was rushed to the scene of the trouble and work commenced immediately to repair lines. One of the locomotives was borrowed from the C.P.R., and the other two small logging ones from the Timberland Lumber Co. and the Shearwater Lumber Co., both industries on the Fraser Valley Branch, and by this means it was possible to proceed with clearing operations without the aid of electrical energy. Ice formed on the rails, wires, etc., almost as quickly as it could be removed, and this, coupled with the fact that in many places poles, which at one time stood on both sides of the railway had fallen across the centre of the track, made progress very slow for the first three days. At the end of three days milder weather set in, a chinook wind soon caused all ice and snow to disappear, and while this helped tremendously, in one way it caused exceedingly high water in all streams and rivers, washing out the tracks in many places, the most serious one occurring at Whatecom Road, just east of Huntingdon, where the Nootsack River intersects the railway, and where a gan 65 ft. long and 20 ft. deep had to be bridged. At another point just west of Chilliwack, the track was washed out in spots for three-quarters of a mile from 1 to 4 ft. deep. Smaller washouts were encountered frequently.

During the whole time train service was operated between New Westminster and the point of clearing, part of the way by trolley and the balance by steam power. During the first week three trains were operated only to Coghlan, then to Gifford, then to Abbotsford, and then to Huntingdon, finally reaching Chilliwack on the night of Jan. 9. At the time of writing the trolley wire is up and operative as far as Huntingdon—from there to Chilliwack the trains are being hauled by steam power.

It is estimated that about 550 poles are

down or hanging, a number of which will require to be reset, but in order that the line may be put in operation with the least possible delay, poles are being placed at intervals of approximately 200 ft. on which trolley bracket arms are being placed. The trolley wire is following the erection of these arms and only just sufficient other wires are placed on the poles as will permit re-establishing light, power and telephone connections with Chilliwack and intermediate points which have been so hard hit. This will be followed up with the placing of additional poles at distances of 100 ft. apart, and when complete will be of similar construction to the distribution system on the Burnaby Lake Branch. The double pole line, which formerly existed on the Fraser Valley Branch, will not be re-established.

Several small slides occurred around Vedder Mountain, but these were cleared away by section forces before trains reached that point.

There are employed on this repair work approximately 50 linemen and groundmen, 30 trackmen and 10 bridgemen, in addition to men in train service and on wrecking equipment. The equipment available to make repairs does not justify the employing of a greater number than this, and it is doubtful if additional skilled labor could be got, even if wanted.

Sufficient materials are on hand to make temporary repairs only, and it is necessary to get a supply of copper wire, guy wire, telegraph wire, trolley ears, pull-overs, bunk house equipment, etc. It is quite impossible to give anything like an accurate figure as to what the cost of repairs will amount to, but from a casual inspection of a portion of our property affected, made a few days after the storm it is estimated that \$150,000 may be required. If all goes well it is anticipated that the high tension line will be re-established into Chilliwack by Jan. 23 or 24, and the trolley and telephone services about the same time.

At present three passenger trains are being operated each way on the Fraser Valley Branch: one goes to Mt. Lehman only, the other to Huntingdon, while the third operates to Chilliwack. In addition to these 1st class trains a milk, way freight and express service is also operated over the whole line. These services will not be augmented until the trolley wire and roadbed are more substantially repaired.

**Nova Scotia Tramways & Power Co.**—The Nova Scotia Public Utilities Commission, in dealing with the company's recent application to increase the authorized capital stock from \$6,000,000 to \$10,000,000, and to issue \$975,000 of bonds, approved a capital expenditure of \$845,641, but deferred approval of a further expenditure of \$569,586 and, for the present, declined to approve the proposed increase in capital.

**Near stops in Winnipeg.**—The Winnipeg Electric Ry. started on Jan. 9 to stop its cars for passengers before crossing a number of intersecting points, instead of both before and after crossing as formerly. Where poles are available, stopping places are designated by poles painted white. In order to facilitate the service the company has in a number of instances where local conditions are suitable, eliminated the far side stops.

## Electric Railway Finance, Meetings Etc.

**Brantford Municipal Ry.**—A press dispatch states that during 1917 the earnings totalled over \$111,598, an increase of about \$13,000 over 1916. The increased earnings have been absorbed by increased wages and other operating charges.

**British Columbia Electric Ry. and allied companies.**

**London & Port Stanley Ry.**—At the annual meeting of the London City Council Jan. 15 the following appointments were made: London & Port Stanley Ry. Board—Mayor C. R. Somerville, Controller J. H. Saunders, Ald. P. J. Watt, F. R. Watkinson, L. S. Holmes, W. A. Wilson, H. B. Ashplant, S. R. Manness and Winnett. Members of the London Railway Commission—Sir Adam Beck and Philip Pocock.

The Mayor at the inaugural meeting of the London City Council Jan. 15, referring to the L. & P. S. Ry., said: "It is possible that the London Railway Commission, by curtailing every capital expenditure not imperatively demanded, may be able to meet all or part of the bonded indebtedness of the L. & P. S. Ry. The commission provided for the payment of its own debenture account, but the city still has to pay, annually, about \$5,000 on account of the old L. & P. S. Ry. debt."

**The British Columbia Electric Ry. Social Club officers for the current year as elected Jan. 14 are:** Honorary President, G. Kidd; Honorary Vice President, W. G. Murrin; President, E. A. Chamberlain; Vice President, E. E. Walker; Secretary, P. Lewis; Treasurer, J. V. Armstrong; Executive Committee; R. Carvel, F. E. Reid, J. Lightbody, F. Fatkin, C. Cook, O. C. Mix, S. A. Horner, A. Forsyth, H. Findlay, P. Runcie, A. Manfield, J. Munro, R. V. Moss, W. G. Chandler, J. G. Richardson, F. Potts, E. W. Arnott, F. Fisher, J. McNee and J. Baldwin.

## Electric Railway Notes.

The British Columbia Electric Ry. office staff held its annual dinner recently, G. Kidd, General Manager, presiding.

The Montreal & Southern Counties Ry. has under consideration the purchase of two electric locomotives of 50 tons capacity each.

South Vancouver municipality decided Jan. 11 to oppose any proposal made by the British Columbia Electric Ry. to increase fares.

The Brantford Municipal Ry. has reduced the service to Paris, Ont., from a car every hour to one every two hours in either direction.

The Quebec Railway, Light and Power Co. is reported to be about to apply to the city council to authorize it to increase its passenger fares.

The Guelph Radial Ry., owing to the necessity of conserving power, has reduced its car service to one hour at noon, and the ordinary service in the evening.

The Cape Breton Electric Co. is reported to have decided to place in service, on its electric railway in Sydney, N.S., early this year, a number of what are commonly known as "safety" cars.

Hon. John Oliver, Minister of Railways for British Columbia, went to Seattle, Wash., Jan. 6, to study the street railway situation there and in other Washington cities, in connection with Adam Shortt's report on the British Columbia Electric Ry.

Edmonton, Alta., City Council has been asked by the Street Railwaymen's Union to reconsider the question of the recognition of the union, the reinstatement of men who were laid off at the termination of the recent strike, and the wage schedule.

The British Columbia Electric Ry. carried 2,742,575 passengers in Vancouver during Nov., 1917, against 2,231,699 in Nov. 1916. On Monday, Dec. 24, 1917, the Vancouver city line cars carried 142,666 passengers against 110,411 Dec. 24, 1916.

The Edmonton City Council will consider at an early meeting a bylaw embodying all regulations for working for employes in the street railway department, to take the place of the agreement which was terminated with the strike last year.

The Edmonton City Council is applying to the Alberta Legislature for a number of amendments to its charter, among them being one authorizing the charging of fares on the Edmonton Radial Ry. on the zone system, instead of the present system.

The Public Utilities Committee of Edmonton, Alta., is giving considerable consideration to the fare question on the Edmonton Radial Ry. The city council is applying to the Alberta Legislature for power to charge fares on the zone system if thought expedient.

The Brantford Municipal Ry. Commission decided Jan. 16 to suspend all freight traffic on the Grand Valley section of the line from Brantford to Galt, Ont., from Jan. 19, owing to power shortage. The passenger service is confined to a car every two hours in each direction.

The Sandwich, Windsor & Amherstburg Ry. has curtailed the service on its lines in Windsor, Ont., by laying off six cars. The mayor called for a resumption of the full service on Jan. 10, and said the coun-

cil would appeal to the Ontario Railway and Municipal Board if satisfaction was not given.

The Windsor, Essex and Lake Shore Ry. has cut its service between Windsor and Leamington, Ont., by taking off the car leaving each terminal at 9 p.m. The special freight and express car will make one trip a day in each direction, leaving Leamington at 10 a.m. and leaving Windsor at 2 p.m.

Among items culled from the Winnipeg Free Press of Jan. 23, 1893, in "Twenty-five years ago to-day," was the following: "Though the Winnipeg St. Ry. system is now complete, A. W. Austin has gone to New York to see if something better than electricity cannot be found for street transportation."

A. W. McLimont, General Manager, Winnipeg Electric Ry., advised the Winnipeg Board of Control, Jan. 7, that expert advice had been called in by the company to advise as to the system of heating the street cars. There had been numerous complaints, and the company was going to see what could be done to remedy matters.

The Toronto Suburban Ry. has advised the Ontario Railway and Municipal Board that it considers its portion of the cost and maintenance of the safety devices placed at the crossing of the T.S.R. by the Toronto Civic Ry. at Lansdowne Ave. and Davenport Road, is excessive. The board is looking into the matter and has ordered a report by its engineer.

The Guelph, Ont., City Council is asking the Ontario Legislature for a reorganization of the council and among other things the dissolution of the board of directors of the Guelph Radial Ry., and that the directors' powers shall in future be vested in the members of the council, who shall be considered to be directors under the acts relating to the G. R. Ry.

Superintendent Noir of the Edmonton, Alta., Radial Ry., complains of the manner in which the public treat the waiting rooms. He states that their condition is due to wanton mischief and deliberate destruction, and instances a recent case where the stove in the waiting room was overturned and considerable damage done, while the lamp and everything available was stolen.

Montreal Tramways Co.'s employes are reported to have decided at a meeting, Jan. 15, to ask for a 4% increase in wages on the ground that they were being asked to work longer hours because of the shortage of labor due to the operations of the Military Service Act. It is stated that some of the employes were of the opinion that a strike should be called on Feb. 1, if the demand was not complied with.

The Brantford Municipal Ry. Commission announced Jan. 11 that owing to the Hydro Electric Power Commission of Ontario's request that the power load be reduced, it was necessary to reduce the schedule on the main line to a 15-minute one, and on the Eagle Place and Holmedale line to a 20-minute one. This applies to the day traffic up to 6 p.m., after which hour the regular schedules are in force.

The question of the employment of naturalized aliens has again become a live one in Calgary, Alta. Some months ago a resolution was passed directing the dismissal of all aliens, but at the last meeting of the council of 1917 this was repealed. T. H. McCauley, Superintendent Calgary Municipal Ry., states that he has

employed only one such alien under the new order, and that for snow shovelling and other work.

The International Ry., which operates the Niagara Falls Park and River Ry., between Queenston and Chippewa, Ont., will, it is said, be considerably affected by the U. S. War Department's order requisitioning all electrical energy imported and distributed by the electrical companies at Niagara Falls, N.Y., and will be compelled to rely largely on its steam generated power, which has been held in reserve for emergencies.

G. Kidd, General Manager, British Columbia Electric Ry., has advised the Point Grey municipality that the company cannot run cars on its line in the municipality much longer under existing conditions, and suggests an increase of fares from 10 tickets for 50c to 10 tickets for 70c; school children's tickets to remain as at present, as far as Magee station. It is stated that the cost of operating cars in the municipality is 23c a mile, while the revenue is only 6.7c a mile. A committee of business men has been formed to discuss the matter with the company.

We have been advised that it is not likely that the projected line from the G.T.R. to the military hospital at Whitby will be electrified. There was a proposal that a street railway be constructed, running from the C.P.R. through the town to the hospital, and the Hydro Electric Power Commission of Ontario looked into the matter, and reported that such a line could only be operated at a considerable annual loss, which would have to be borne by the town. As a result nothing was done, and we are informed that it is not likely that the line from the G.T.R. to the hospital will be electrified.

**Increased rates for electric railways.**—Following the issue of general order 213 on Dec. 26 by the Board of Railway Commissioners, authorizing steam railways to advance freight and passenger rates generally speaking 15%, except in British Columbia, several electric railways under Dominion jurisdiction filed freight and passenger tariffs with the board making similar increases. The board has refused to sanction these tariffs, on the ground that no application having been made by electric railway companies for rate increases and no costs or other statistics having been submitted in their behalf no general order can be made in their favor.

**British Columbia Electric Ry. Franchises.**—The Mayor of Vancouver and representatives of some other city and rural municipalities on the mainland in which the British Columbia Electric Ry. operates, met Jan. 7, to discuss the question of a consolidation of the company's franchises. It was arranged to hold another conference later, so that every municipality in which the company operates may be represented. A press report says: "It is understood the scope of the next conference is to include not only the consolidation of B. C. E. R. franchises but also unity of action in regard to all B. C. E. R. matters generally in which any or all of the municipalities or cities are interested."

**Higher Fares for Boston.**—The Massachusetts House of Representatives has under consideration a bill providing that the Boston Elevated Rd. may charge a 6c fare, the extra cent to be paid to the city of Boston in lieu of other taxes. The bill further provides that the city shall utilize the funds received from this source for the maintenance of subways, tunnels and other ways along the company's lines.

## British Columbia Electric Railway Co's Annual Report.

The following report was presented at the annual meeting in London, Eng., Jan. 4:—

The following charges have been made against the revenue account for the year:

Provision for renewals maintenance	£101,459	4	3
Provision for income tax	15,000	0	0
Addition to capital amortization fund	2,761	17	11
	£119,221	2	2
The net revenue for the year, after making the above deductions, amounts to	£160,844	6	8
To which is added—			
Balance brought forward from last year	6,859	13	3
Amount transferred from reserve fund	44,000	0	0
	£211,703	19	11
And deducted—			
Interest on debenture and debenture stock for the year to June 30, 1917	£132,671	1	6
Dividends already paid on 5% cumulative perpetual preference stock for the year to June 30, 1917	72,000	0	0
	£204,671	1	6
Leaving, to carry forward to next account, a balance of	£7,032	18	5

It will be noted that in order to make the above dividend payments it has been necessary to transfer £44,000 from the reserve fund. The above figures represent an improvement of approximately £26,000 over the previous year's results.

As intimated in the statement issued to the stockholders in July, 1917, the British Columbia Government appointed Adam Shortt, of Ottawa, as a commissioner to investigate the question of transportation in the City of Vancouver and the surrounding districts, it being agreed that this company and the Vancouver City Council would abide by the decision arrived at by the commissioner. By mutual agreement, the enquiry was subsequently extended so as to include the whole scope of the company's operations. The commissioner's report has just come to hand, and his findings and recommendations are annexed to this report. The commissioner's full report, which comprises 110 closely typed foolscap pages, and which deals with many purely technical matters, is being set up in print, and a copy will, when ready, be forwarded to any stockholder on application. The commissioner's report justifies the company's past policy and operations and is not only an answer to criticisms, but upholds the contentions of the directors and management in regard to the jitney competition. Negotiations are now being carried on by the company's management in British Columbia with a view to making arrangements for giving effect to the commissioner's recommendations, and pending the outcome of these negotiations the directors are of opinion that it is not advisable to deal further with the situation arising out of the recent amendments to the Vancouver Incorporation Act explained in the statement issued to the stockholders in July last. A further statement will be issued to the stockholders as soon as the arrangements have been completed.

For the first four months of the current year the gross earnings show an increase of approximately \$146,817. This increase has, however, been more than absorbed by increased expenses due to higher wages and increased cost of materials, in consequence of which the net earnings for

the period show an approximate decrease of \$2,648. Having regard to the uncertain outlook for the immediate future, the directors feel that it is prudent to postpone the payment of the interim dividend payable Jan. 15, 1918, on the 5% cumulative perpetual preference stock. It, however, at the end of the financial year, an improvement in the operating results is shown, the whole or part of the dividend may be distributed in July next, and a resolution giving authority to the directors to draw on the reserve fund so far as may be necessary for this purpose will be submitted to the meeting.

The directors desire to express their appreciation of the very valuable services rendered during a most arduous year by the General Manager and other responsible officials of the company, and also of the co-operation of the whole staff. Two directors, R. M. Horne-Payne and E. Maes Harvey, who are due to retire, offer themselves for re-election.

### Electric Railway Projects, Construction, Betterments, Etc.

**British Columbia Electric Ry.**—The municipalities of Point Grey, South Vancouver, Burnaby and other suburban districts are taking up the question of consolidating the B.C.E.R. Co.'s various car line franchises. A conference has been called at the instance of the Point Grey municipal council. (Jan., pg. 32).

**Chatham, Wallaceburg & Lake Erie Ry.** A press report states that it is proposed to utilize Hydro-Electric power on the Chatham-Wallaceburg section of this railway. Owing to coal shortage the company has been unable to generate sufficient power at its own plant to keep the line going. It was reported Dec. 29 that converters were being installed at Wallaceburg, and that hydro-electric power would be utilized early in January.

**Edmonton Radial Ry.**—A press report states that about 900 ft. of line is under construction to connect up two parallel lines in Edmonton, Alta., and thus form a new belt line.

A waiting room has been erected at the corner of 109th St. and Jasper Ave., Edmonton. (Jan., pg. 32.)

**London St. Ry.**—The London, Ont., city council has under consideration a petition asking that a request be made to the company to extend its line north on Quebec St. from Dundas St. to the C.P.R. tracks. (Dec., 1917, pg. 488.)

**Nova Scotia Tramways & Power Co.**—A press report states that the company expects to place in service about 3.5 miles of new track during this year. (Sept., 1917, pg. 369.)

**Okanagan Lake, B.C., to Oroville, Wash.** A press report states that in connection with the development of the West Kootenay Power Co., in the Copper Mountain district, an electric railway may be built from Okanagan Lake to Oroville, at the International Boundary.

**Ottawa Electric Ry.**—A special committee was appointed by the Ottawa City Council Jan. 18 to meet the company's officers and ascertain under what arrangements the company would consent to extend its car lines to Ottawa East. About a year ago, when the matter was discussed, the company stated that it would not

make the extension for two reasons: first, that it would not operate cars over the Pretoria Ave. bridge, and second, that owing to the short time its franchise has to run, it was not prepared to make such extensions. (Oct., 1917, pg. 407.)

**Sandwich, Windsor & Amherstburg Ry.** We are officially advised that the company recently completed the laying of 2,000 ft. of new track on Ottawa St., Walkerville, Ont. This is an extension.

**The Southern Canada Power Co.,** which has among its subsidiaries the Sherbrooke Ry. & Power Co., is contemplating the construction of about 100 miles of high tension transmission line, and has called for tenders on poles, cross arms, insulators, cross arm braces, wire and other material for same.

**Whitby, Ont.**—Construction is reported to have been started on a line from the G.T.R. main line to the Military Hospital at Whitby, Ont. It is reported that this piece of line will be electrified, and will ultimately form part of the electric lines proposed to be built under the Hydro Electric Power Commission of Ontario's plans.

**Windsor, Essex & Lake Shore Rapid Ry.**—A press report states that a plan has been given consideration for the building by the Windsor, Ont., city council of a cross town line on Erie St., Windsor, and renting it to the W. E. & L. S. R. Ry. for operation. (Dec., 1917, pg. 407.)

### Damage Action Against the Montreal Tramways Co.

Five actions for damages were entered in a Quebec court Jan. 4, against the Montreal Tramways Co. The total amount of damages claimed is \$9,575, the smallest amount being \$300 and the largest \$4,000. From the declaration of the plaintiffs—J. R. Trudeau, Pierre Gagnon, Alderic Crump and Ulric Belanger—it appears that on Oct. 27, 1917, they were all passengers on a Lachine car; that between the Montreal West and Senecal stations while they were all in the smoking compartment of the car, the conductor ordered them to stop smoking. They refused to abide by his request, whereupon he ordered the motorman to back up the car to Montreal West. In backing up the car, a collision followed, in which the plaintiffs allege they were seriously injured and they blame the Montreal Tramways Co. for the action of its employees.

**Toronto & York Radial Ry.'s Metropolitan Division.**—The Ontario Railway and Municipal Board, at the request of the Toronto City Council, will conduct an arbitration into the question of the price which the city is to pay for acquiring portions of the T. & Y. R. Ry. Metropolitan Division within the city. The matter came up for discussion before the board Jan. 11, when R. C. Harris, City Works Commissioner, stated that the parties had come so close together on the amount to be paid for the physical assets, that the matter could be settled in an hour, but could not agree on the amount for the intangible assets. The board fixed Jan. 28 for the hearing, when it would also be determined whether York County had any right to enter the proceedings.

The Quebec Legislature has approved the Shawinigan Water & Power Co.'s application for an increase of capital from \$15,000,000 to \$20,000,000. The company owns the Shawinigan Terminal Ry. Co. and the Three Rivers Traction Co.

## The Nova Scotia Tramways & Power Co. and the Halifax Explosion.

It was impossible to obtain in time for our last issue any reliable information as to the damage done to the Nova Scotia Tramways and Power Co.'s property by the explosion of the munitions steamship *Mont Blanc* in Halifax harbor on Dec. 6. We are now indebted to the company's Managing Director, H. R. Mallison, for the following facts:

In view of all the circumstances, the company escaped very lightly. One of its transportation inspectors, T. Burgess, who was in the vicinity of the explosion, was killed instantly, and the force of the explosion practically tearing the clothes off his body. By the time the body was found, ghouls had been at work and had robbed him of his fortnight's pay and his watch and chain. One of the company's cars happened to be almost opposite the *s.s.* *Mont Blanc* at the time of the explosion. The motorman in charge was killed immediately, the conductor by some miraculous means escaped with his life, but was very severely injured, and has not yet been able to get about. So far as can be learned, none of the passengers in this car were killed; though its top structure was completely demolished, and all that remained of the truck and equipment was a bunch of twisted scrap. Other cars that were on the line in the vicinity of the explosion were very badly damaged and twisted, and at least three cars will have to be completely rebuilt, as far as the bodies are concerned. All of the company's rolling stock sustained damage such as broken glass, broken window sashes, broken doors, twisted joints in the wood work, and other damage caused by concussion. A number of rheostats were cracked, and some of the truck frames were badly shaken up.

A number of conductors and motormen who were on their cars at the time, were injured more or less by flying glass, but none of them seriously. So far as can be learned, only three platform men were killed while on duty, but altogether nine employees have been lost as a result of the disaster.

The overhead line in the destroyed area was completely demolished, this including the overhead trolley work, as well as the light and power distribution circuits, are lamps, transformers, etc. Over 200 electric meters were completely destroyed as a result of the explosion and ensuing fire, and in addition, the company has had to remove about 250 meters, some of them in a more or less damaged condition, from houses which have been deserted since the accident.

The damage to the company's power house was, fortunately, not of a serious character. All the doors and windows were blown in and completely shattered, and some of the joints in the steam piping were sprung, but the generating machinery and the boilers were not in any way affected, and consequently, the light and power service was resumed as soon as the destroyed section of the city was cut free from the distributing system.

The repair shop, car barns and offices all sustained damage to doors and windows; the steel sashes in the machine shop and storeroom, which were glazed with wired glass, were blown out of the wall, sash and all.

The sprinkling system in the buildings was also damaged and discharged as a result of the concussion, but the water was turned off before any great amount

of damage occurred from this source.

The tracks and gas mains in the streets did not suffer damage to any great extent. Some of the crown plates on the gas holder were sheared off, and about 200,000 ft. of gas were lost. Fortunately, it was possible to repair this damage, and after three days and nights of hard work, to resume a gas supply to the city; the mains entering the destroyed area having been cut off in the meantime.

When the accident occurred, a great number of the company's employees who lived in the destroyed area, immediately left their posts and hurried to aid their families, and as a result only about 40% of the employees were available for service. The morning following the disaster, snow began to fall, and a very severe blizzard raged during all the day and night. Owing to the damage to rolling stock, and the fact that many employees were not available for their regular duties, the car service was completely tied up. All efforts were directed toward improving this condition, but it was not until Sunday, Dec. 9, that it was possible to resume any semblance of car service. Very valuable assistance was received on the Saturday night by a company of soldiers garrisoned in the city, and also by 150 seamen off a United States warship, which came into port the previous day. Owing to the scarcity of employees, it was found extremely difficult to keep the snow fighting equipment in operating condition and this, too, very seriously hampered the company resuming service.

On Monday, Dec. 10, a second blizzard completely tied up the car service for the day. A partial service was resumed again on Dec. 11, and from that time on the service has been increased until the customary schedule is now being operated.

The destruction of a large area of the city has forced the residents into other districts, and as a consequence the trend of traffic has very markedly changed, necessitating a reconsideration of the service formerly given.

Owing to the number of men required for reconstruction work, the company found it very difficult to get its full complement of men back into the service. A number of employees whose old homes were in the surrounding country, returned there when they found that their city houses had been irreparably damaged or burned. As a result, the management took into consideration the advisability of employing women conductors, and has finally adopted this principle. On Dec. 31 eight women conductors were in charge of cars, and a number of others were training. The experience, so far, is that the services of women conductors are practically as efficient as those of men, and it is the intention to utilize women's services for this purpose to the fullest extent possible.

**Oshawa Railway Service.**—The town of Oshawa, Ont., applied to the Board of Railway Commissioners some time since for an order directing the Oshawa Ry. to furnish a passenger service to and from various portions of the town similar to what it has been giving to the G.T.R. Co. The application was heard at Oshawa, Dec. 11, the town, the Oshawa Ry. and the C.P.R. being represented, and upon reading submissions filed and the report of one of the board's inspectors, it was ordered that the application be refused.

## The Street Railway Fare Question in Edmonton.

At the invitation of the Edmonton, Alta., City Board of Control, a conference of public organizations was held Jan. 14, to discuss various questions, particularly financial, connected with the Edmonton Radial Ry. The following organizations were represented: Board of Trade, Trades and Labor Council, Labor Representation League, Property Owners' Association, Property Owners' Protective Association, Delton Home Rule Association, Local Council of Women, Consumers' League, Teachers' Association, Ministerial Association, 142nd St. League, Bonnie Doon Ratepayers' Association.

After a lengthened general discussion, Mayor Evans said three things had been suggested to help to improve matters, one was to cut out all transfers, another was to have tickets at 4 for 25c, with workmen's tickets 6 for 25c, and children's tickets at 10 for 25c. There might also be a special night car rate to come into operation after a certain time at night, and, thirdly, there was the zone system. This, to his mind, was the most rational one. It was decided not to take a vote on any of the three suggestions until a definite plan for working on the zone system was prepared.

During the discussion Commissioner Harrison made a statement showing that for the first 11 months of 1917 the railway had a deficit of \$155,615, which was larger than for the 12 months of the previous year. This was attributed to fewer passengers, increased cost of material and higher wages paid. It was added that there was a deficit of 1 7/10c on each passenger carried. The power charges for 1917 were less by \$64,000 than they were in 1912. The strike of July, 1917, made a difference of \$600 in the final showing.

D. Donaldson, who is spoken of in a local paper as "representing the Society of Canadian Engineers," said that the success of a street railway depended upon density of population, and the Edmonton Radial Ry. could be compared to James Ramsey's store if it was taken up and planted down at Camrose. They had to get out of their minds all idea of making the street railway pay.

## Electric Railway Traffic in Regina.

A statement prepared by Regina Municipal Ry. officials shows that the traffic is about 65% greater in winter than in summer. Two days were selected for the test, viz., Monday, Sept. 10, and Monday, Dec. 10, both of which happened to be fine days, and typical of the season. The cash fares received on Sept. 10 were \$474.82, and on Dec. 10, \$795.56. The traffic figures for the two days on the various lines were:

	Sept. 10	Dec. 10	Per cent. increase
Red . . . . .	3,179	5,867	84.6
White . . . . .	2,169	4,013	90.3
Blue . . . . .	3,016	5,196	72.3
Green-red . . . . .	3,038	4,012	32.6
	11,342	19,088	68.3
Specials . . . . .	1,574	2,212	40.5
	12,916	21,300	65.0

**Toronto Railway Purchase.**—At the municipal elections on Jan. 1, Toronto ratepayers were given a ballot with the question, "Are you in favor of the city taking over the Toronto Street Railway in 1921?" They answered it by 39,979 affirmative votes and 3,759 against.

## The Montreal Tramways Co's Snow Clearing Work.

The following extracts from a paper on snow removal in Montreal, read by Paul E. Mercier, B.A.Sc., Chief Engineer and City Surveyor for Montreal, before the last Good Roads Congress in Montreal, are of interest at this season.

The City of Montreal has a total area of 26,226 acres. The length of the streets aggregate 485 miles, 104 miles of which have electric railway tracks. The snow fall varies, but has averaged, for the last 41 years, 119.3 in. The snow removal is done entirely by the city, by day work. The cost of removal of snow from the sidewalks, is paid by the proprietors at the rate of 5c per running foot. The cost of the snow removal from streets with electric railway tracks is paid half by the Montreal Tramways Co. and half by the city. The cost of the snow removal in any other streets is paid by the city. As the country surrounding Montreal has winter roads, the city does not entirely remove the snow from its streets, but keeps, during the winter, a thickness of 6 to 12 in. of snow.

The Montreal Tramways Co. has a wonderful organization to keep its tracks clear during a snow storm. Regular routes are mapped out for the sweepers, before the beginning of the winter. Routes that can be handled to best advantage from it are given to each depot. These routes are arranged so that each can be covered by its sweeper in from 45 minutes to one hour and also arranged so as to have one central conveying point for three or four sweepers. In case of need, it is, therefore, easy to direct a sweeper from another route, when it reaches this spot. In each car, a blue print is posted, giving the detailed route of that particular car. The necessary men are appointed to each car at the beginning of the winter, and they are kept during the entire winter. The Superintendent meets all of these men before the winter opens and discusses with them proposed improvements on actual conditions. Their organization is so well thought of, that, as Arthur Gaboury, the Montreal Tramway Co.'s Superintendent, said: "Each man knows where to go and what he has to do, and it seems that he simply goes and does it."

The Montreal Tramways Co. has 39 sweepers and 12 levellers or wing cars. Most of the sweepers are of the 2-broom type, having on the right side a large iron wing to clear the snow from the outside of the track and on the left side a smaller wing to clear the devil strip. Following are details of the equipment:—

Single truck sweeper: Two 50 h.p. motors, G. E. 80, and one K10 controller at each end, one K10 controller for broom, length 28 ft., width 8 ft., height 11 ft., weight 31,000 lbs., wing 8 x 22 ft. Used to brush off the snow from the track and push it towards the sidewalk.

Double truck sweeper: Two 50 h.p. motors, G. E. 80, and two K35 controllers for motors, two 101 motors and one K10 controller for broom, length 39½ ft., width 7 ft. 6 in., height 11 ft., weight 44,500 lbs., wing 11 ft. Does the same work as the first one.

Leveller or wing car: Flat freight car fitted up with iron shaped wing 12 ft. long and 2 ft. high. The wing is pushed out by reinforced wooden bar, operated by chains and drum; four 50 h.p. motors, G. E. 80, weight of car 43,400 lb. Used to push the snow towards the sidewalk.

Single truck leveller or wing car: Made

from old box car, length 26 ft. 7 in., height 11 ft. 1 in., width 8½ ft., two G. E. 80 motors, wing 16 ft. long, weighted down by double floor filled in with rails and cement, total weight 30,640 lb.

At the beginning of the storm, all hands are called. The Tramway Co.'s sweepers are sent out on the route; the city plows are sent out to remove the snow from the roadways and from the sidewalks. The heavier the snow storm, the shorter the routes are made, so that each plow can be back at the starting point before the snow accumulates. Snow shovellers are sent out to keep the street corners clear of snow. Whenever a section foreman feels that his section will be snowbound, he calls the Division by telephone for more help. In case of emergency, section or division lines are wiped out and everybody works with one ambition: beat all the others in results. Working hours are the usual hours in a ten hour day; but, if necessary, the work lasts as long as the snow.

The cost of removing snow from streets is \$2,500 a mile.

### Mainly About Electric Railway People.

F. J. Colbeck was re-elected a member of the Brantford Railway Commission at the municipal elections Jan. 7.

W. R. McRae, Master Mechanic, Toronto Ry., Toronto, has been elected a member of the American Institute of Electrical Engineers.

A. E. Wideman and A. G. Alexander were re-elected members of the Port Arthur, Ont., Public Utilities Commission at the municipal elections Jan. 7.

Jos. J. Gibbons, Business Manager, Toronto Street Railwaymen's Union, has been re-elected an alderman of the City of Toronto. He was a conductor for 17 years.

W. D. Robbins, who has been Secretary, Toronto Street Railwaymen's Union, for ten years, and an alderman since 1912, has been elected a member of the Toronto City Board of Control.

E. L. Milliken, heretofore General Manager, Cape Breton Electric Co., who was appointed some months since as General Manager, Houghton County Traction Co., has left Sydney, N.S., to take over his new duties at Houghton, Mich.

His Honor Frank Stillman Barnard, Lieutenant Governor of British Columbia, who has been made a Knight Commander of St. Michael and St. George, is the eldest son of the late F. J. Barnard, M.P., who founded the British Columbia Express Co. He has for a number of years been interested in the British Columbia Electric Ry., latterly as Advisor to Directors.

W. N. Warburton, General Manager, London & Lake Erie Ry. & Transportation Co., was presented by the company's employees, on Christmas eve, with a gold mounted pipe in case, a leather upholstered arm chair and a club bag. An accompanying letter expressed the employees' appreciation of his "uniform kindness and thoughtfulness of their welfare," and spoke of him as a "friend rather than as a master."

W. J. Lynch, General Manager, Quebec Ry., Light, Heat & Power Co., and M.

W. Kirkwood, General Manager, Galt, Preston & Hespeler St. Ry., have been elected members of the Canadian Electric Railway Association's executive committee, to fill vacancies caused by the death of H. G. Matthews, formerly General Manager, Quebec Ry., Light, Heat and Power Co., and by the removal of E. L. Milliken, heretofore Manager, Cape Breton Electric Co. to Houghton, Mich.

M. F. Werth, who has been appointed Superintendent of Power, Detroit United Ry., Detroit, Mich., was made Assistant Superintendent of Power in June, 1916, and has been acting Superintendent since the promotion of E. H. Burdick to be Assistant General Manager in July, 1916. He is a native of Richmond, Va., graduated from Virginia Military Institute, electrical engineering course, and began his career as a railway man with the Mahoning & Shenango Ry. & Light Company, of Youngstown, Ohio. Later he was with the British Columbia Electric Ry.

George A. Mills, whose appointment as Electrical Engineer, Winnipeg Electric Ry., Winnipeg, was announced in our last issue, was born at Indianapolis, Ind., July 5, 1885, and was educated at the Iowa State College, Ames, Ia., graduating in electrical engineering in 1909; 1909 to 1910, apprentice, Allis-Chalmers Mfg. Co., Cincinnati, Ohio; 1910 to 1911, instructor in electrical engineering, University of Pennsylvania, Philadelphia; 1911 to 1917, Electrical Engineer, Waterloo, Cedar Falls & Northern Ry., Waterloo, Ia., when he had charge of electrical design and construction of 60 miles of 1,300 volt, d.c., high speed interurban and freight line, also the enlargement of power station and operation of electrical generation, conversion, distribution and engineering, and of rolling stock.

### Report on Toronto Civic Railway.

The Toronto City Council's works committee reported on the civic railway towards the end of December as follows: Traffic increased steadily during 1917. Comparing the first 10 months of 1917 with the first 10 months of 1916, the Gerrard St. route increased 19.22%; Danforth Ave. route 13.88%; St. Clair Division 31.14%; Bloor Division 10.99%; and the entire system 21.68%. The Lansdowne Ave. route of the St. Clair Division which was opened for traffic on Jan. 16, 1917, is 0.615 mile long. A single track extension to the Bloor Division, from Quebec Ave. to Runnymede Road, 0.493 mile long, was opened for traffic on Nov. 12, 1917. We are now carrying about 49,000 revenue passengers a day.

One single-truck car was added to the equipment of the Gerrard route, and all rolling stock is working to its full capacity. A 9 car capacity addition to St. Clair Ave. barn was occupied in February.

The wages of trainmen and shedmen were increased from 30c to 33 1/3c an hour on Jan. 1, 1917, and on June 16 they were changed to the scale adopted by the Toronto Ry., having a minimum of 30c and a maximum of 37c an hour.

Electric Railway Assessment in Toronto.—Assessments for this year, on electric railway and allied property in Toronto, are as follows: Toronto Ry., \$4,952,780; Toronto and York Radial Ry., \$410,181; Toronto Suburban Ry., \$79,355; Toronto, Niagara and Western Ry., (not operating), \$4,500; Toronto Power Co., \$1,052,276; Toronto Electric Light Co., \$3,493,221.

# Marine Department

## Specifications and Plans of Marine Engines for Standard Wooden Steamships for British Government.

Canadian Railway and Marine World for January contained a very full summary of the specifications for the hulls of wooden steamships being built in Canada for the British Government, under orders placed by the Imperial Munitions Board at Ottawa. Following are the complete specifications for the marine engines for these vessels:

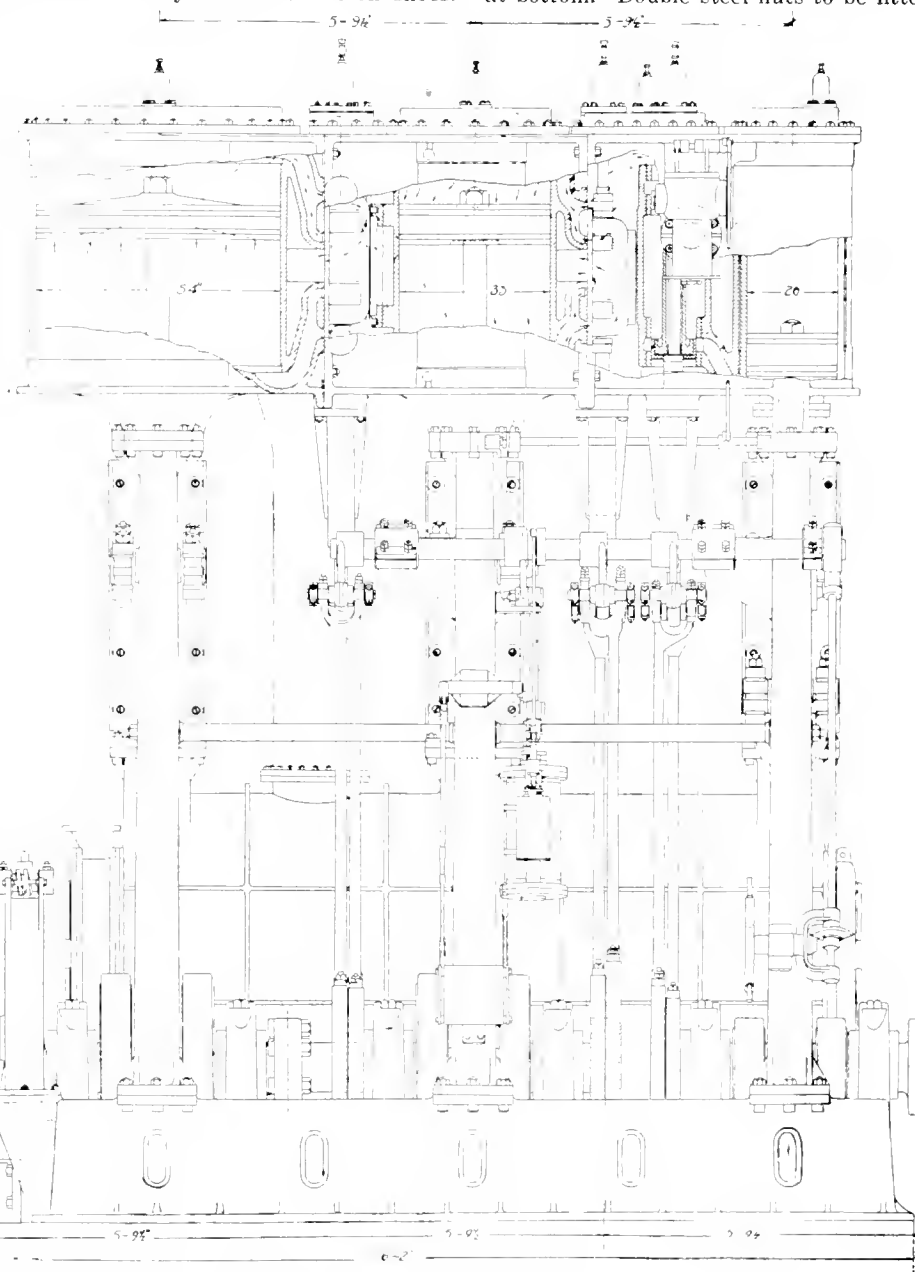

**General description.**—To be triple expansion surface condensing engines, having 3 cylinders each, working on separate cranks placed at angles of 120 degrees. Slide valve motion to be Stephenson link type. All materials to be of best quality, and all workmanship first class in execution, according to the 100 A1 class of Lloyd's Register of Shipping, London. All to be constructed in accordance with the working drawings supplied. Eye bolts and shackles with approved gear to be fitted to all heavy parts of engine.

**Cylinders.**—H.p. to be 20 in. i.p., 33 in. i.p., 54 in. diameter with a common stroke of 40 in. The average working h.p. to be about 10,000 at sea, at about 65-70 revs. a minute. Engine to be arranged from forward to aft as follows: High pressure, intermediate and low pressure cylinders. High pressure to have piston valve; low pressure and intermediate to have double ported slide valves with relief frames. High pressure cylinder and piston valve chamber each to be fitted with a separate liner of hard gray cast iron. All cylinders to be of good quality hard close grained gray iron. Drain valves to be fitted to the bottom of each cylinder and steam chest, all operated from engine working platform by hand levers and gear. Drain cock from h.p. cylinder to be piped to bilges, the intermediate and low pressure cylinders to condenser. Relief valves and pipes, and indicator gear

to be provided on all cylinders. Cylinders to be lagged on sides with insulation of magnesia, and cleated with steel plates, fastened with bands and screws. Cylinder covers to be sound castings, strongly ribbed, and to have corrugated cast iron plates on top. Eye bolts for lifting and starting screws to be fitted to each cylinder and one strong beam with roller and screw for lifting cylinder covers, etc., to be fitted in engine room.

**Pistons** to be hollow box castings, well ribbed and furnished with rings and

with rings as shown on drawings. The intermediate and low pressure slide valves to be double ported and to be made of hard cast iron. Valve rods to be of steel, guided at top, outside stuffing box at bottom. Double steel nuts to be fitted

Marine Engine for Standard Wooden Steamships, Elevation of Starboard Side.

to be provided on all cylinders. Cylinders to be lagged on sides with insulation of magnesia, and cleated with steel plates, fastened with bands and screws. Cylinder covers to be sound castings, strongly ribbed, and to have corrugated cast iron plates on top. Eye bolts for lifting and starting screws to be fitted to each cylinder and one strong beam with roller and screw for lifting cylinder covers, etc., to be fitted in engine room.

**Pistons** to be hollow box castings, well ribbed and furnished with rings and

U. S. or other approved metallic packing to be fitted to h.p. and i.p. rods.

**Connecting rods** to be of open hearth steel to Lloyd's requirements, length between centres being 8½ ft. The top ends to be forked and fitted with adjustable brass bearings; lower ends to have cast steel bearings lined with white metal of approved composition and secured by w.i. or steel bolts and nuts with locking rings, lubricating pipe to be fitted to each rod.

**Slide Valves.**—H.p. to be piston valve,

at top end. Washer to be fitted at bottom of slide valve. H.p. and i.p. valve spindles to be fitted with U.S. metallic packing or other approved make. Slide valve motion to be of Stephenson link type, with double eccentric. All working parts to be made with adjustable bearings. Eccentric sheaves to be cast iron, with good wearing surface, and eccentric straps of cast iron bushed with white metal; to have liners for adjustment. Eccentric rods to be of forged steel.

Reversing engine to be of direct steam driven type, with floating valve motion exhausting to condenser, and to be operated from the engine working platform. Hand reversing gear to be provided. Reversing shaft to have adjustable bearings. Reversing arms to have adjustable slides for linking up all valve gears.

Columns to be of cast iron hollow section. Guides are to be single, the guide surface to be of hard, close grained iron with water cooling for ahead motion.

The engine bed plate to be of cast iron, with 6 adjustable bearings of cast steel, white metal, bushed. Bottom halves to

Pump levers to be of steel plate, driven from i.p. cross head to drive the air, circulating, feed and bilge pumps through links with adjustable brasses. Pump cross head to be fitted with guide bracket and adjustable bearings. Bearings in the pump motion to be of brass. Bearing for pump lever on column to be of white metal.

Air pump to be of single acting type Edwards system, fitted with brass bushing. Valves to be of brass as indicated on plan. Pump rod to be of Muntz metal. Air pump to have drain cock and shifting valve.

so that each pump can be inspected while the other is working.

Bilge pumps, two in number, single acting pumps of cast iron; bushing, plungers, valves and seats to be of brass. Each pump fitted with air vessel of cast iron. To be fitted with safety valves. Both pumps arranged so that they can deliver overboard, and one to draw from sea and discharge to deck and sanitary tank.

Main stop and throttle valve of cast iron, bolted to high pressure cylinder. Rods of steel to be operated conveniently from engine working platform as shown in plan.

Crank shaft to be built up section in 3 interchangeable parts 11½ in. dia., with solid forged couplings. Crank webs to be of cast or wrought steel. Crank shaft may be either iron or steel to pass Lloyd's requirements.

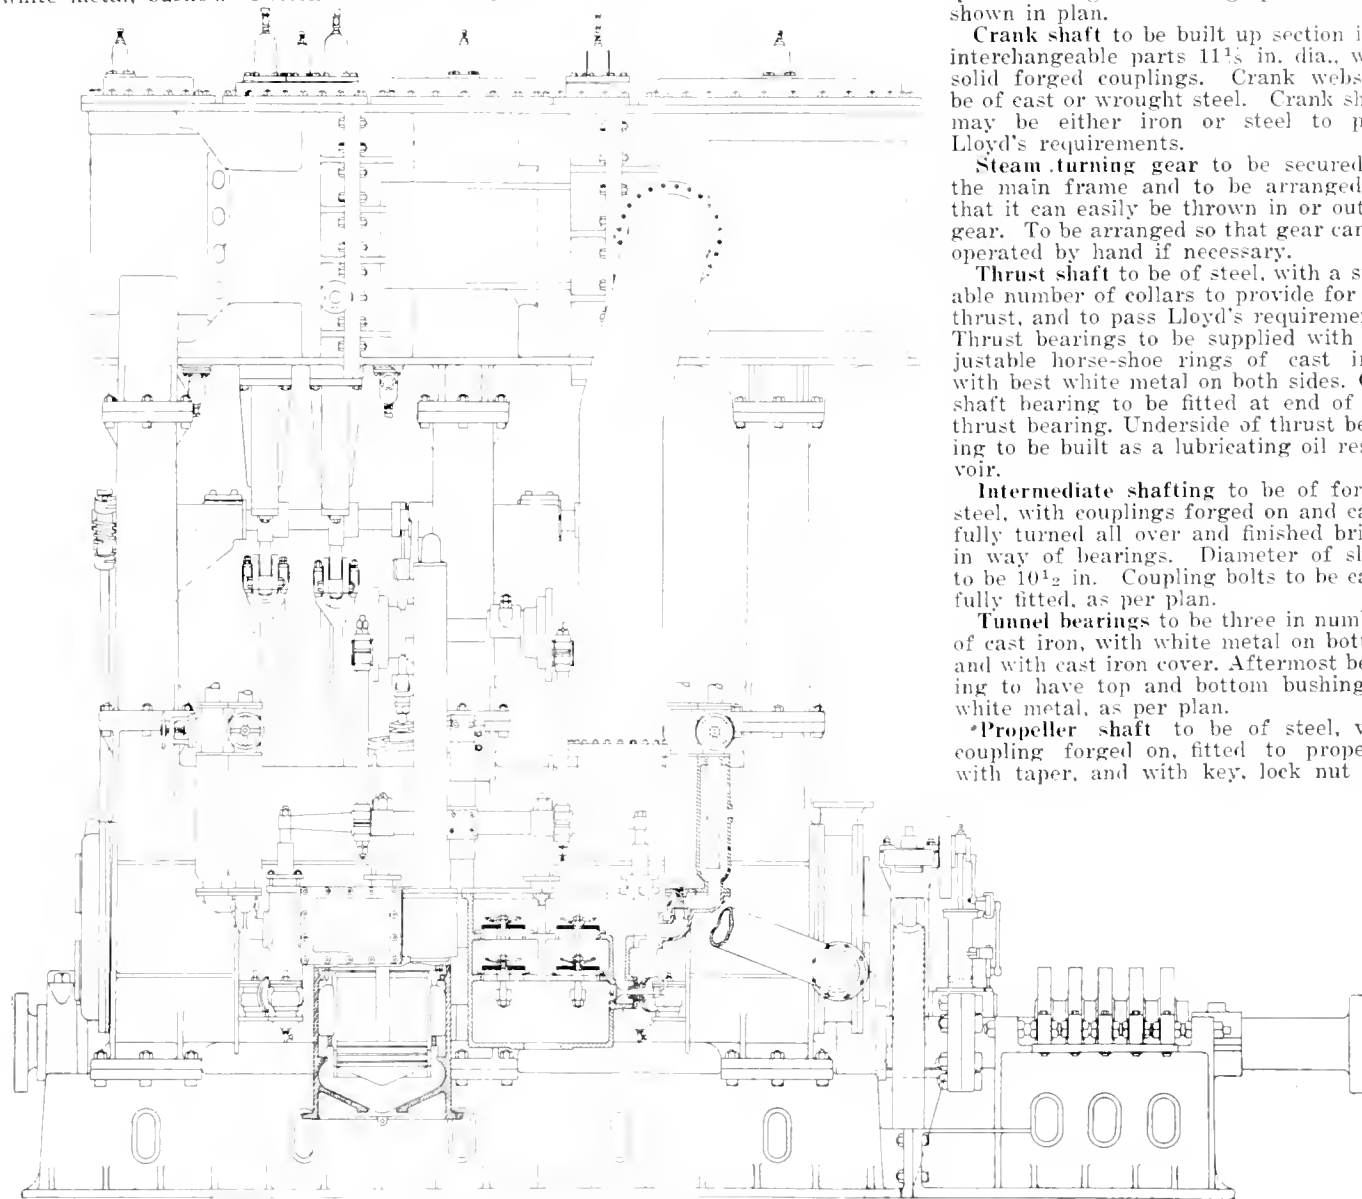

Steam turning gear to be secured to the main frame and to be arranged so that it can easily be thrown in or out of gear. To be arranged so that gear can be operated by hand if necessary.

Thrust shaft to be of steel, with a suitable number of collars to provide for the thrust, and to pass Lloyd's requirements. Thrust bearings to be supplied with adjustable horse-shoe rings of cast iron, with best white metal on both sides. One shaft bearing to be fitted at end of the thrust bearing. Underside of thrust bearing to be built as a lubricating oil reservoir.

Intermediate shafting to be of forged steel, with couplings forged on and carefully turned all over and finished bright in way of bearings. Diameter of shaft to be 10½ in. Coupling bolts to be carefully fitted, as per plan.

Tunnel bearings to be three in number, of cast iron, with white metal on bottom and with cast iron cover. Aftermost bearing to have top and bottom bushing of white metal, as per plan.

Propeller shaft to be of steel, with coupling forged on, fitted to propeller with taper, and with key, lock nut and

Marine Engine for Standard Wooden Steamships, Elevation of Port Side.

be of semi-circular section, so as to be removable without lifting shafting. All bearings to have large lubricating cups, and nuts and other fittings which will down bolts and foundation bolts to be supplied as per detailed drawings.

Condenser to be of cast iron, having rolled brass tube plate, ¾ in. thick, with 613 ¾ in. outside diameter brass tubes, tested inside and out, to provide 1,560 sq. ft. of cooling surface. Tubes to be packed in brass ferrules adapted to hold tubes in direction of flooding. Manhole and clearing doors to be provided. All bolts and nuts and other fittings which will come in contact with sea water to be brass.

Circulating pump to be of double acting type; to have all bushings, pistons, valve guards and seats of brass. Valves to be of rubber. Plunger rods to be of Muntz metal.

Feed pumps to be two in number, driven from pump cross head, single acting of cast iron. Bushing, valve, and boilers with water when operating full power and to be able to work independently of one another. Pumps and housing of cast iron. Bushing, valves, and seats, of brass. Plungers of steel with brass sleeves. Each pump to have an air vessel of cast iron. Safety valve, air valve, and all the necessary valves and cocks on suction and pressure pipes,

ping, to Lloyd's requirements. Diameter of shaft 12 in. A continuous brass liner to be fitted on tail shaft, running in the lignum vitae bearing in stern tube, all as per plan.

Propeller to be of cast iron, a right hand screw of solid section with 4 blades 14½ ft. diameter and 15¼ in. pitch. To be taper bored to fit propeller shaft, with through way, and to be secured by nut, having left hand thread. A spare propeller to be supplied. Care to be taken in moulding propeller to obtain smooth surface true to pitch.

Stern tube to be of cast iron, fitted with forged steel nut on the aft side. To have brass bushing in after end, which

is to be fitted with lignum vitae strips, end grain wood in lower half, the forward end of stern tube also to be fitted

with brass bushing. Inboard end of stern tube to have stuffing box, with brass neck rings and cast iron gland. The studs to

be of Muntz metal 10½ in. long from face to tube flange, to permit packing at sea. Cored holes as shown on plan for water cooling system.

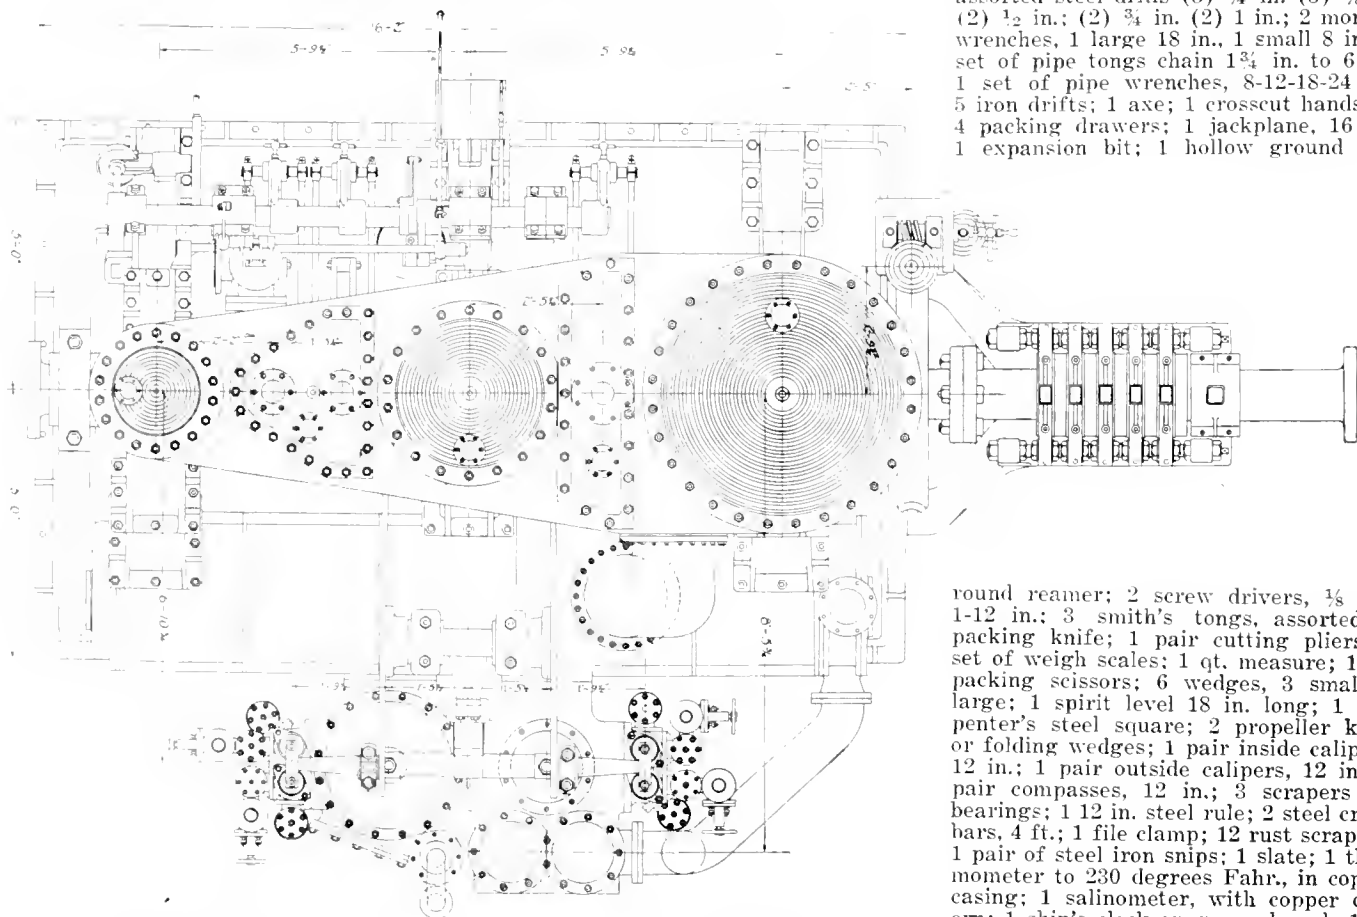

**Piping.**—One main exhaust pipe 17 in. diam., with openings for auxiliary exhaust pipes; one discharge pipe from circulating pump to condenser, 8 in. dia.; one elbow for circulating pump suction from sea, 8 in. diam.; one air pump discharge 6 in. diam.; one U bend for air pump discharge 3 in. diam.; all of cast iron as per plan.

**Main oil piping and cups.**—Main bearings each to have one large brass oil cup, with siphon wick feed, connecting rods to be oiled at top and bottom from brass drip cup, which will be fed from drip pipes connected to oil box, bolted to top of front column, cross head slides to be oiled at top from four drip pipes connected to oil box bolted to top of back columns, crosshead to have a brass dipper comb fastened to lower side and working into a cast iron dipper tray bolted to bottom of slide. Eccentrics provided with one brass oil cup each, bolted to eccentric rod and connected to sheave by brass oil pipe. One sight feed lubricator of 1 quart capacity to be fitted to throttle valve. All as per plan. All other working parts to be provided with oil holes and cups, as indicated on the plans of various parts.

**Tools for engine.**—1 set of wrenches for engine fitted in rack; 1 anvil, 100 lb.; 1 soldering ladle, 5 in.; 1 portable blacksmith forge; 1 large hammer, 32 lb.; 1 sledge hammer, 16 lb.; 1 copper hammer, 5 lb.; 1 lead hammer; 1 hand hammer, 2 lb.; 3 cold chisels; 6 assorted files; 1 set of taps and dies in case from ¼ in. to 1½ in.; 1 brace with 6 bits for wood, ¼, ⅜, ½, ⅝, ¾, 1 in.; 1 ratchet, 12 in.; 1 ratchet stand with adjustable arm; 12 assorted steel drills (3) ¼ in. (3) ⅜ in. (2) ½ in. (2) ¾ in. (2) 1 in.; 2 monkey wrenches, 1 large 18 in., 1 small 8 in.; 1 set of pipe tongs chain 1¾ in. to 6 in.; 1 set of pipe wrenches, 8-12-18-24 in.; 5 iron drifts; 1 axe; 1 crosscut handsaw; 4 packing drawers; 1 jackplane, 16 in.; 1 expansion bit; 1 hollow ground half

Marine Engine for Standard Wooden Steamships, End Elevation.

Marine Engine for Standard Wooden Steamships, Top View, looking down.

round reamer; 2 screw drivers, ⅜ and 1-12 in.; 3 smith's tongs, assorted; 1 packing knife; 1 pair cutting pliers; 1 set of weigh scales; 1 qt. measure; 1 air packing scissors; 6 wedges, 3 small, 3 large; 1 spirit level 18 in. long; 1 carpenter's steel square; 2 propeller keys, or folding wedges; 1 pair inside calipers, 12 in.; 1 pair outside calipers, 12 in.; 1 pair compasses, 12 in.; 3 scrapers for bearings; 1 12 in. steel rule; 2 steel crowbars, 4 ft.; 1 file clamp; 12 rust scrapers; 1 pair of steel iron snips; 1 slate; 1 thermometer to 230 degrees Fahr., in copper casing; 1 salinometer, with copper cistern; 1 ship's clock on gauge board; 1 oil funnel; 1 oil squirt gun; 1 tin measure,

1 gal.; 4 assorted tin oil cans; 2 filling cans for oil (2½ gall.); 2 oil funnels, 1 pint; quantity of assorted bolts and nuts and sizes bar iron; 1 set eye bolts ¾, ½, ⅜, ¼, ⅓, 1, 1½, 1¾ in.; 2 eye bolts ⅝ in. long link for bottom ends; 2 brass oil waste pans; 1 brass cock for oil barrels; 1 large funnel; 3 water buckets; 1 small grindstone, fitted in iron trough; 1 3-ton chain block; 1 5 parts tackle with iron sheave; 4 hand lamps of tin; 4 lamps or lanterns; 1 engine indicator; 50 ft. of 1½ in. hose, with coupling and nozzle; 4 bulkhead lamps of brass, fitted in engine room.

**Spare gear.**—According to requirements of class, but with the following additions: 1 set of air pump valves; 1 set of circulating pump valves; 1 set of feed pump valves; 1 spare propeller; 25 condenser tubes; 50 screwed glands for tubes.

**Lloyd's spare gear.**—Connecting rod or piston rod top-end bolts and nuts; 2 connecting rods or bottom-end bolts and nuts; 2 main bearing bolts; 1 set of coupling bolts; 1 set of feed and bilge pump valves; 1 set of piston springs; quantity of assorted bolts and nuts; iron of various sizes.

## The Dominion Government's Shipbuilding Programme.

The Minister of Marine, the Hon. C. C. Ballantyne, gave out the following statement, on Jan. 3: "It will be recalled that in a statement of policy issued by the Union Government shortly before the general election, it was set forth in effect that the establishment of the shipbuilding industry in Canada on a sound and permanent basis would receive early consideration. In the meantime the question has engaged the government's attention, with the result that a decision has been reached to utilize the full capacity of existing shipyards in Canada in the production of modern steel cargo steamers of the most approved types for the use of the government and for registry in Canada. The productive capacity of these yards, which at present are engaged in the construction of ships for the British Government, local interests and for foreign account—the latter almost exclusively for Norwegian registry—may be roughly estimated at from 275,000 to 300,000 tons annually. During the continuance of the war and for some time thereafter the construction of steel ships in Canadian yards for foreign registry will not be permitted. This policy is in line with that adopted by both Great Britain and the United States.

"The Naval Constructor's branch of the Department of Marine and Fisheries is busily engaged in the development of the details of the contemplated programme. The work has not sufficiently advanced to enable a definite statement to be made, but the construction of three different types of ships is under consideration. One type will comprise vessels of approximately 3,000 tons. These may be built in shipyards on the Great Lakes. Another type will comprise ships of from 5,000 to 7,000 tons, while yet another will be a type with a dead weight capacity of from 8,000 to 10,000 tons.

"The production of tonnage has become one of the most important that can occupy the attention of serious men and of governments. As is well known, shipping has sustained enormous losses since the commencement of the war. As the result of its activity in maintaining commerce on the seas and providing for the requirements of the allied armies, these losses have borne most heavily on British shipping. The entry of the United States into the war—the most important event of the past year—and that country's resolve to place a large army in the field have made and continue to make heavy demands on shipping. The losses continue though in much less degree than in the months immediately succeeding the inauguration of the unrestricted campaign by the enemy. Additional tonnage has therefore become equally

important as the production of food and munitions and the supplying of recruits for the army.

"The Government in the consideration of this question recognizes that one of the chief difficulties in the way of successfully carrying on a construction programme arises from the fact that steel plates and shapes are not now manufactured in Canada. The overwhelming advantage to Canadian industry as well as to the general cause, of making Canada self-contained in this regard is obvious. To overcome this difficulty and to meet the situation in an efficient manner, negotiations are now under way with responsible persons with the object of establishing at some suitable place or places in Canada, mills for the rolling of ships' plates and shapes to provide the maximum requirements. These negotiations are progressing satisfactorily and it is expected that a more definite announcement in this regard will not be long delayed."

On Jan. 4 the following additional information was given out: The ships will be built and owned by the government. They will be operated partly, at least, and perhaps wholly, by the Government, although, in special cases, they may be chartered to responsible parties. After the war they will be owned and operated by the government in co-operation with government owned railways. In a word, the policy inaugurated is a policy of government ownership of ocean transports.

The government's contemplated programme will involve an expenditure of from \$50,000,000 to \$60,000,000. C. F. N. Duguid, Naval Architect of the Marine Department, who has a wide experience in yards in Belfast and on the Clyde, will be the technical officer in charge of the work.

Ships now under construction for the British Government will be completed. Contracts for these vessels were let by the Imperial Munitions Board, and most of them will be completed early in the summer. After that Canada will take charge of all construction.

No new shipyards will be constructed for the present, but the existing yards will be utilized to their fullest capacity. There will be an equitable distribution of labor between the various plants so as to ensure the maximum of efficiency and speed in output of ships. Steel rolling plants—heretofore exclusively confined to the United States—will probably be erected at Sydney and New Glasgow, N.S., Hamilton and Sault Ste. Marie, Ont.

The New York & Cuba Mail Steamship Co.'s s.s. Mantanzas, which ran on the ledges recently, was released Dec. 29, and towed stern first into Halifax harbor.

## Canadian Vessel Statistics for 1916.

The total number of vessels on the Dominion register at Dec. 31, 1916, was 8,660, measuring 942,598 net tons, a decrease of 97 vessels, and an increase of 13,286 tons, compared with 1915. During 1916, 432 vessels were removed from the register, of which 260 were broken up, reported out of existence, condemned, dismantled or abandoned; 26 were wrecked; 22 were sold to U. S. Government; 1 to French Government; 1 to Russian Government; 20 stranded; 7 lost; 7 abandoned at sea; 2 lost by collision; 14 foundered; 18 burnt; 25 transferred to Newfoundland; 17 to Barbados; 5 to Great Britain; 1 to Australia; 2 registry no longer required; 3 sunk by mines and 1 by torpedo. It was estimated that 42,566 persons were employed on vessels registered in the Dominion during 1916.

Vessels built during the year numbered 244, aggregating 28,303 tons, compared with 246 vessels and 18,832 tons in 1915. The number and tonnage of the new construction, according to provinces, is as follows:—

	Number.	Tons.
Quebec . . . . .	51	8,643
Nova Scotia . . . . .	65	7,661
Ontario . . . . .	26	5,507
British Columbia . . . . .	65	4,487
Manitoba . . . . .	15	1,573
New Brunswick . . . . .	22	332
Total . . . . .	244	28,303

The total vessels on the register is divided according to provinces as follows:

	Sailing and Steamships.	Steamships.	Gross tonnage of Steamships.	Net tonnage of sailing and Steamships.
Ontario . . . . .	2,117	1,597	353,439	327,676
Quebec . . . . .	1,452	573	225,959	273,769
British Columbia . . . . .	1,687	1,255	128,976	145,525
Nova Scotia . . . . .	2,061	484	46,627	123,052
New Brunswick . . . . .	1,074	264	24,682	50,147
Prince Edward Is. . . . .	155	27	7,557	10,652
Manitoba . . . . .	95	78	8,567	8,953
Yukon . . . . .	11	10	2,716	2,295
Saskatchewan . . . . .	5	4	660	529
Totals . . . . .	8,660	4,202	799,183	942,598

Ports of registry are distributed as follows:—Ontario 38, Nova Scotia 21, New Brunswick 7, Quebec 6, British Columbia 4, Prince Edward Island, Manitoba, Saskatchewan and Yukon 1 each; no provision being made for registering vessels in Alberta.

The Dauphin Milling and Creamery Co. has been incorporated under the Manitoba Companies Act with power among other things to own and operate freight and passenger vessels, to carry on the business of a common carrier, and to act as forwarder, wharfinger, and warehouseman. The authorized capital is \$125,000; the office is at Dauphin, Man., and it has as provisional directors: S. Code, F. Fostick, D. C. Richardson, R. Fegan, J. F. Code, F. E. Simpson, Dauphin, Man.

Colborne Trading and Transportation Co. Ltd. has been incorporated under the Dominion Companies Act, with \$2,000,000 authorized capital and office at Montreal, to carry on a general merchandise, import and transportation business, and in connection therewith to own and operate steam and other vessels, wharves, docks, warehouses and other transportation facilities.

Pilots and Military Service.—Judge McCorkill, at Quebec, Jan. 23, decided that a pilot on the St. Lawrence River, was more useful to the Empire by remaining at the disposal of ships than by going into military service.

## Steam and Sailing Ships Under Construction Throughout Canada.

Following are particulars of shipbuilding which was in progress throughout Canada, at Oct. 31, 1917, in addition to other vessels reported previously. The figures given in each case are the gross tonnage:

### Steamships, Atlantic Coast.

Canadian Vickers, Ltd., Montreal: 2 cargo str., 9,400 tons, steel; 1 dredge, 2,364 tons, steel; 12 trawlers, 3,050 tons, steel; 23 drifters, 3,350 tons, wood.

Davie Shipbuilding Co., Levis, Que.: 1 car ferry, 5,000 tons, steel.

Grant & Horne, St. John, N.B.: 1 cargo str., 2,800 tons, wood; Nova Scotia Steel & Coal Co., New Glasgow: 2 cargo str., 3,000 tons, steel.

Sincennes-McNaughton Lines, Sorel, Que.: 1 tug, 420 tons, wood.

Southern Salvage Co., Liverpool, N.S.: 1 cargo str., 2,800 tons, wood.

Total, Atlantic coast, 44 steamships; 32,280 gross tons.

### Steamships, Great Lakes.

Collingwood Shipbuilding Co., 2 cargo str., 4,800 tons, steel.

Georgian Bay Shipbuilding & Wrecking Co., Midland, Ont.: 1 tug, 50 tons, wood.

Midland Dry Dock Co., Midland, Ont.: 3 cargo str., 6,000 tons, steel.

Polson Iron Works, Toronto: 8 cargo str., 18,800 tons, steel; 10 trawlers, 2,640 tons, steel.

Port Arthur Shipbuilding Co., Port Arthur, Ont.: 7 cargo str., 14,737 tons, steel; 6 trawlers, 1,530 tons, steel.

Thor Iron Works, Toronto: 2 cargo str., 4,874 tons, steel; 2 trawlers, 540 tons, steel.

Toronto Shipbuilding Co., Toronto: 2 cargo str., 6,000 tons, wood.

Welland Shipbuilding Co., Welland, Ont.: 2 cargo str., 4,700 tons, steel.

Total, Great Lakes, 40 steamships, 64,621 gross tons.

### Steamships, Pacific Coast.

British Yukon Navigation Co., Vancouver, B.C.: 1 pass. and frt. river str., 1,000 tons, wood; 1 motor boat, 100 tons, wood. Cameron-Genoa Mills Limited, Victoria, B.C.: 2 aux. schrs., 3,000 tons, wood.

J. Coughlan & Sons, Vancouver, B.C.: 3 cargo str., 17,190 tons, steel.

Pacific Construction Co., Port Coquitlam, B.C.: 2 cargo str., 5,600 tons, wood.

Wallace Shipyards, Ltd., N. Vancouver, B.C.: 4 cargo str., 17,500 tons, steel; 2 frt. and pass. str., 11,600 tons, steel; 2 aux. schrs., 3,000 tons, wood.

Yarrows, Limited, Esquimalt, B.C.: 1 stern wheeler, 400 tons, wood.

Total, Pacific Coast, 18 steamships, 58,790 gross tons.

	Steamships.	Gross tons.
Atlantic coast .....	44	32,280
Great Lakes .....	45	64,621
Pacific coast .....	18	58,790
	107	155,691

### Wooden Sailing Schooners, Atlantic Coast.

J. A. Balm & Co., Margaretsville, N.S.: 1 scr., 409 tons.

T. K. Bentley, Advocate Harbor, N.S.: 1 scr., 449 tons.

Omer Blinn, Grosses Coques, N.S.: 1 scr., 375 tons.

G. M. Cochrane, Fox River, N.S.: 2 scr., 850 tons.

Innocent Comeau, Little Brook, N.S.: 1 scr., 250 tons.

J. W. Comeau, Comeauville, N.S.: 1 scr., 329 tons.

John Deveau, Meteghan, N.S.: 1 scr., 425 tons.

J. Ernst & Son, Mahone Bay, N.S.: 1 scr., 520 tons.

L. E. Graham, Port Greville, N.S.: 1 scr., 360 tons.

W. R. & C. A. Huntley, Parrsboro, N.S.: 2 scr., 650 tons.

Leary & Sons, Bridgewater, N.S.: 2 scr., 265 tons.

Lewis Hardwood Co., Lewiston, N.S.: 1 scr., 670 tons.

Dr. McDonald, Meteghan, N.S.: 1 scr., 544 tons.

W. C. McKay & Son, Shelburne, N.S.: 3 scr., 480 tons.

W. K. McKean & Co., Liverpool, N.S.: 1 scr., 400 tons.

Albert Parsons, Walton, N.S.: 1 scr., 400 tons.

Quebec Shipbuilding & Repair Co., St. Laurent, Que.: 2 scr., 2,600 tons.

J. N. Rafuse, Bridgewater, N.S.: 3 scr., 755 tons.

J. W. Raymond, Port Maitland, N.S.: 1 sch., 375 tons.

Robar Brothers, Bridgewater, N.S.: 1 scr., 130 tons.

Robert Rutledge, Sheet Harbor, N.S.: 1 scr., 300 tons.

Shelburne Shipbuilders, Shelburne, N.S.: 1 scr., 350 tons.

Smith & Rhuland, Lunenburg, N.S.: 2 scr., 225 tons.

Southern Salvage Co., Liverpool, N.S.: 1 scr., 150 tons.

Wagstaff & Hatfield, Port Greville, N.S.: 1 scr., 400 tons.

Total, 34 wooden schooners, 12,661 gross tons.

## Naval Department Damage by Halifax Explosion.

In reference to the damage to the navy yard and the naval vessels at Halifax, N.S., by the explosion of Dec. 6, we are advised that the damage to the dockyard was quite extensive and the buildings were all more or less wrecked and some completely destroyed. The damage to the naval vessels was not serious, consisting in demolishing of upper works, perforated decks, broken glass, etc. One vessel caught fire and was slightly damaged. The department was rather lucky in being about on the edge of the heavy line of explosion. The property adjoining the dockyard was completely swept by the rush of air, and while the buildings in the yard were rather badly damaged only a couple were actually destroyed. The Naval Hospital was damaged and will not be habitable until the end of February or early in March. The Naval College is standing and the walls and roof are good. The building will not be in condition to receive the cadets for this term and temporary arrangements have been made with the Royal Military College at Kingston, Ont., for accommodation and the Naval College has been moved to Kingston for the term which began at the end of January. Five large temporary buildings are being erected in the Halifax yard to house the offices and stores during the reconstruction of the damaged buildings.

## Mainly About Marine People.

Admiral C. E. Kingsmill, Director of Naval Service for Canada, has been created a knight bachelor.

J. L. Weller, M.Can.Soc.C.E., formerly Engineer in Charge, Welland Ship Canal, and Mrs. Weller, have left St. Catharines, Ont., to spend the winter in the south.

F. J. O'Connor has been appointed agent, Pacific Steamship Co., Vancouver, B.C., vice S. B. Stocking, who has been appointed chief clerk to the General Manager, Seattle, Wash.

W. E. Burke, Assistant Manager, Canada Steamship Lines, and Mrs. Burke, left Toronto early in January to spend some weeks at Miami, Fla., expecting to return about the middle of February.

A. B. Swezey, who has been Manager of the Mediterranean saloon department, Cunard Co., New York, for 25 years, is reported to have been appointed Manager of the joint office of the Cunard Co., Anchor Line and Anchor-Donaldson Line, at Vancouver, B.C., and C. A. Whitlock is reported to have been appointed Assistant Manager.

Stephen Birch, President, Kennecott Copper Corporation, and formerly Vice President, Alaska Steamship Co. and the Copper River & Northwestern Ry., is reported to have been appointed President, Alaska Steamship Co., vice S. W. Eccles, deceased, with office in New York. The actual charge of the company's operations remains under R. W. Baxter, Vice President and General Manager, Seattle, Wash.

## The Detroit River Car Ferry and Tunnel Situation.

A press report stated recently that the car ferry services between Windsor, Ont., and Detroit, Mich., operated by the Grand Trunk, Pere Marquette and Wabash Railways, was to be abolished and that those lines would in future use the Michigan Central Rd. tunnel. Another report stated that the car ferry steamships now operated between Windsor and Detroit, by the Canadian Pacific, Grand Trunk, Pere Marquette and Wabash Railways were to be pooled, and that this will be an advantage to the service in general, and that it would not appear to be good policy to abandon any facilities that the railways have for communication between Canada and the United States.

The Michigan Central tunnel has capacity for far more business than it is now handling and in times of emergency has transferred cars from one country to the other for other roads. It would, however, not be practicable for the other railways mentioned to stop using their car ferries at once, as while the tunnel was designed for and is possibly capable of handling the entire traffic, it would be necessary to revamp the entire terminal situation on both sides of the river, as the existing railway lines were not originally planned to use the tunnel, but to use the car ferries, and there would have to be additional tunnel yard facilities and various connections provided before such an increase of business for the tunnel could be taken care of.

The privilege granted to U. S. fishing vessels operated by power, to enter Canadian Atlantic ports under license, for the purchase of bait, ice and other supplies and for the transshipment of catch and the shipping of crews, has been extended to U. S. vessels having no other propelling power than sails, for the current year.

## Shipbuilding Activities Throughout Canada.

### STEEL AND WOODEN STEAMSHIPS BUILDING FOR BRITISH GOVERNMENT.

**Cameron-Genoa Mills Shipbuilders Ltd.,** Victoria, B.C.—One of the 4 wooden steamship hulls under construction at these yards was expected to be launched during January, after which she was to be taken to the Ogden Point assembly shed for the installation of the machinery, which is all ready waiting for it. She was to be named War Tye.

**Foundation Co.,** Victoria, B.C. — The wooden steamship War Songhees was launched at the company's yards Dec. 27. As she was being launched she struck a boom and it was feared that some damage was done to the hull, or to the rudder post or propeller shaft.

**Grant & Horne,** St. John, N.B.—The first of the wooden steamships being built by this firm for the Imperial Munitions Board is approaching completion. The framing was complete early in January, and preparations were well advanced for the installation of the machinery. The timber, etc., was also received for the second vessel, which will be proceeded with at once.

**William Lyall Shipbuilding Co.,** Vancouver, B.C.—The first of the six wooden steamship hulls being built for the Imperial Munitions Board was expected to be launched during January. She was ready for launching in December, but was held pending the arrival of the tail shaft. The second vessel, early in January, had all her planking up, the main deck on and the upper deck nearly completed; the third hull had the garboard on, about three quarters of the planking done and was ready to receive the decking; the fourth was closed in fore and aft and work was proceeding on the ceiling; the fifth had the framing finished and the keelson bolted, while on the sixth, over half of the square framing was completed.

**Ogden Point Assembly Plant.** — The contractors, Grant Smith & MacDonnell, are reported to have stated, recently, that they expected to have the assembly plant at Ogden Point, Victoria, B.C., completed and ready for full operation by Feb. 1. The work was retarded to some extent by weather conditions, but it was speeded up considerably in the early days of the new year. A quantity of machinery is on hand for equipping the wooden hulls, and large quantities are constantly arriving from eastern points. A large portion of the necessary steam winches, steam steering gear, etc., is being made in British Columbia.

**Pacific Construction Co., Ltd.,** Coquitlam, B.C.—It is reported that extensive contracts for the construction of vessels have been awarded to this company, which has two wooden steamship hulls under way for the Imperial Munitions Board. Surveys are reported to have been made for additional shipbuilding facilities alongside the present berths.

**Wallace Shipyards, Ltd.,** North Vancouver, B.C.—It is reported that negotiations are in progress for the construction of two steel steamships of the "War" type, and the management has announced that if the order is received, another berth will be laid down immediately on the west side of the existing one, where a steel steamship of this type is under construction.

**Western Canada Shipyards, Ltd.,** Van-

couver, B.C.—The first of the wooden steamship hulls under construction for the Imperial Munitions Board was launched Jan. 14 and named War Nootka, by Mrs. A. R. Mann, wife of the company's President. The company has orders for six of these hulls, and work on the remainder is proceeding rapidly.

### GENERAL SHIPBUILDING NOTES.

**Canadian Car & Foundry Co.**—A Fort William, Ont., press dispatch of Jan. 29, says this company has received a contract for building steel steamships for the United States, to the value of \$10,500,000.

**G. M. Cochrane,** Fox River, N.S.—A tern schooner of 460 tons register, was launched at this yard recently, and named Alfred Hedley. She is owned by Adam B. Mackay, of the Mackay Steamship Co., Hamilton, Ont. Her dimensions are, length 152.6 ft., breadth 36 ft., depth 12.6 ft.

**J. Coughlan & Sons, Ltd.**—One of the 3 steel cargo steamships of 17,190 gross tons, on order with this company at Vancouver, was launched Jan. 20, and named Alaska. She is being built for Norwegian interests.

**Fraser Valley Shipbuilding Co.,** Vancouver, B.C.—A company, with this name, is being organized by a number of local men, to undertake the construction of all classes of vessels, wood, steel and concrete. A site for a plant is said to have been chosen in a central location on the Fraser River, within the city boundaries.

The s.s. Keith Cann, built recently for Hugh Cann and Sons, Ltd., Yarmouth, N.S., for service between Yarmouth and St. John, was given a trial run on Jan. 10. The trip was carried out successfully, an average speed of 11½ knots being maintained.

**Marine Construction Co., Canada, Ltd.,** St. John, N.B., has a schooner of about 900 tons under construction, and is making arrangements for the building of other similar vessels.

**Joseph McGill,** Shelburne, N.S. — A tern schooner, 246 tons register was launched from this yard recently, and named Sparkling Gance, for Harvey & Co., St. John's, Nfld. A similar vessel is now under construction for the same firm.

**Newfoundland Shipbuilding Co.,** Harbor Grace, Nfld.—This plant is reported to be ready for the construction of auxiliary powered vessels of about 1,200 tons dead-weight capacity. It is said to be the intention at a later date, to enlarge the plant to cover the construction of steel steamships. It is said that the company has orders on hand for the construction of 13 auxiliary powered vessels, of the sametype as those built recently on the Pacific coast for Canada West Coast Navigation Co. Each vessel will be equipped with 2 hot bulb engines of 120 b.h.p. driving twin screws. The interests concerned with this company are identical with those controlling the Thor Iron Works, Toronto, and also the projected Dominion Shipbuilding Co., which is laying out a large shipbuilding plant at Toronto.

**St. Lawrence Shipbuilding & Steel Co.** Ltd. has been incorporated under the Dominion Companies Act, with \$1,000,000 authorized capital and office at Sorel, Que., to take over as a going concern the business carried on there by Beauchemin Fils Co., Ltd., with all its assets and liabilities, and to build, operate and deal in

vessels of all kinds, engines, boilers, etc., and to carry on a general brass, iron and steel foundry business.

**St. Martins Shipbuilding Co.,** St. Martins, N.B.—A 450 ton schooner is under construction at these yards, and it is expected to have it ready for launching in the spring. Arrangements are going forward for the building of other schooners.

**The Tidewater Shipbuilding Co., Ltd.,** is operating a shipyard at Three Rivers, Que., with James M. Smith as General Manager. Canada Steamship Lines Ltd. is interested in the company.

**C. T. White & Son,** Alma, N.B.—Two schooners of about 500 tons each are on the ways, with the expectation of launching in the spring.

**Yarmouth Shipbuilding Co.,** Yarmouth, N.S.—The schooner which was mentioned in our last issue as being under construction by this company, was launched toward the end of December and named Eleanor S. She is to be equipped with twin engines of 25 h.p. each. She is owned by the Yarmouth Fish Co.

### Newfoundland Shipping and Insurance in 1917.

The Newfoundland Marine Insurance Co.'s report for 1917, refers to Newfoundland shipping as follows: "The many losses in our foreign going fleet during last winter were probably the worst experienced in this trade in any one season, but it had no discouraging effect upon Newfoundland merchants and exporters, as is evidenced by the large fleet of new vessels now owned in this country and engaged in our foreign carrying trade. The unusually large number of vessels which have been built in this country during the past year, of larger tonnage than formerly, bears a striking testimony to the enterprise of those interested in our export trade.

"During 1917 we accepted marine risks of \$6,262,648.20 and war risks of \$1,346,183.47, a total of \$7,608,831, with gross premiums of \$108,231.81. We had losses upon the marine risks of \$16,377.00 and upon our war risks commitments of \$25,817.00.

"Lloyd's underwriters have notified the trade here that there will be a substantial advance in their rates on Newfoundland risks by domestic sailing craft, as well as on all our foreign going sailing vessels. This is a matter that should receive earliest consideration. Lloyd's rates are now getting extreme on our local craft and the high values of our produce greatly increases the aggregate amount of premiums. It is important, therefore, that as much as possible of this money should be kept in the country. These frequent advances in rates show the need of local underwriters and we must do everything in reason to protect the local business."

**Maritime Wrecking & Salvage Co. Ltd.** has been incorporated under the Dominion Companies Act, with \$1,000,000 authorized capital and office at Montreal, to carry on the business of salvors and wreckers of ships and craft of any kind, to build, repair and operate steam and other vessels, dry docks, marine railways, etc.

**Colonial Shipping Co. Ltd.** has been incorporated under the British Columbia Companies Act, with \$40,000 authorized capital and office at Vancouver, to own and operate steam and other vessels and carry on a general transportation business.

## Shipbuilding in British Columbia.

By Bradford W. Heyer, Vancouver, B.C.

Quite the most important development in British Columbia during 1917 was the development with regard to shipbuilding. While the shipbuilding industry advanced most during the past year, it had its beginning back in 1915, when the B.C. Government passed a shipbuilding act giving aid to those wishing to build ships, by a guarantee of security, and also by guaranteeing a fixed fair return on the investment for a period of years after the war. Twelve auxiliary powered schooners were built, 6 by the Wallace Shipyards of North Vancouver and 6 by the Cameron-Genoa-Mills Shipbuilders, Ltd., of Victoria. These ships were built for the Canada West Coast Navigation Co. which availed itself only of the guarantee of profit from operation, and did not apply for aid in the construction of the ships. These vessels are sailing ships, with auxiliary boiler equipment, and were intended to be used more especially for the deep sea shipment of B.C. lumber. The last of these vessels took the water in the spring but, because of the huge demand for bottoms, they have seldom returned to B.C. ports for reloading.

The Wallace Shipyards took the first contract for a steel vessel since the beginning of the war, the War Dog, for Japanese interests. This vessel, of 4,900 tons dead weight capacity, was floated during the summer, and has since departed with cargo for Britain and has been transferred to British ownership. The company has another under construction and has a contract for a third of similar design for British owners.

During the summer of 1916 Norwegian interests were on the coast seeking to place orders for steel ships wherever responsible people would accept them. J. Coughlan & Sons, structural steel fabricators, of Vancouver, signed a contract for four steel ships of 1,800 tons dead weight capacity. These vessels were to cost on an average \$1,250,000 per vessel. During the fall of 1916, the Imperial Munitions Board placed with J. Coughlan & Sons orders for two more ships of similar design, and took over three of the Norwegian vessels, leaving only one to be delivered to the Norwegian interests. It is expected, however, that before the Norwegian vessel takes the water, which will be some time in January, 1918, that arrangements will be made for either her transfer or charter to British owners or the Admiralty.

During Dec., 1917, contracts were signed with the Imperial Munitions Board for four more vessels to be built by J. Coughlan & Sons, who have now approximately \$13,000,000 of tonnage in process of construction.

In the spring of 1917 the Imperial Munitions Board awarded 27 contracts for wooden steamships of 2,800 tons dead weight capacity, amounting approximately to \$13,500,000. These contracts were awarded as follows: Foundation Co., Victoria, 5; Cameron-Genoa-Mills Shipbuilders, Victoria, 4; Wm. Lyall Shipbuilding Co., N. Vancouver, 6; Western Canada Shipyards Ltd., Vancouver, 6; New Westminster Construction & Engineering Co., New Westminster, 4; and Pacific Engineering and Construction Co., Coquitlam, 2. These vessels are all of standard design, 250 ft. long, 44½ ft. beam, and 25 ft. deep. They are built on the cost plus a fixed profit basis. Most of the equipment, including engines and boilers, are

being built in British Columbia. About four of these ships are ready to take the water, and it is expected that all will be in the water by May of this year. While nothing is known of future orders to be placed for this class of ship, it is confidently believed that all the yards that have shown themselves competent to build this class of vessel will be kept building to capacity.

The building of steel ships in competition with the Atlantic seaboard does not seem to promise permanence. Because of war conditions it is likely that the steel shipbuilding industry of British Columbia will be worked to the limit, but without the establishment of a steel industry in this province the outlook is not bright. The establishment, therefore, of a steel industry along this coast is one of supreme importance to the industrial development of British Columbia, and is a question that should be taken up in a national way.—Toronto Globe.

## Wreck Commissioners' Investigations and Judgments.

**Princess Mary-Henriette Collision.**—The investigation held by Capt. J. D. Macpherson, Wreck Commissioner for British Columbia, assisted by Capt. S. W. Bucknam and D. S. Jones-Evans, as nautical assessors, into the collision in Vancouver harbor, Sept. 25, 1917, between the C.P.R. s.s. Princess Mary and the Coastwise Steamship & Barge Co.'s s.s. Henriette, was concluded at Vancouver, Dec. 6, and judgment rendered, Dec. 14, as follows:—The court, after carefully studying the evidence adduced, which was of such a conflicting nature that the court's opinion of the memory and veracity of some of the witnesses was not very favorable, can come to no other conclusion than that the blame for the collision must be imputed to the actions of both the masters of the vessels concerned. While no direct violation of the International Rules of the Road is concerned, there can be no doubt that both masters showed a want of discretion, a lack of patience and poor judgment, and both took unnecessary risks, with the result of a collision, slight fortunately, in broad daylight, fine weather and in the open waters of the harbor. The court, however, is of opinion that reprimand and a warning to both masters to be more careful in future under similar circumstances, will meet the requirements of the case, and therefore returns to Capt. Charles Campbell, master of the s.s. Princess Mary, and Capt. Otto Bucholz, master of the s.s. Henriette, their respective certificates of competency, with the remark that it trusts that its leniency will be appreciated, as it certainly will not be repeated should a casualty occur in the future under similar conditions.

**Forwarders Ltd.,** the incorporation of which was announced in a recent issue, has been formed to take over the assets of Forwarders Ltd., which formerly owned and operated the steamships Port Colborne, Port Dalhousie and W. H. Dwyer in upper lakes service. These vessels were chartered for ocean and European service on the outbreak of war, and have since been torpedoed and lost. Hall and Holcomb, Ottawa, are chiefly interested.

## Shipbuilding and Repairing at Esquimalt.

Yarrows Limited are building at Esquimalt, B.C., three stern wheel steamships for shipment to India. Two of them will be 132 ft. long and 32 ft. beam, exactly similar to two shipped to the same destination previously and one will be 165 ft. long and 35 ft. beam.

During the past year Yarrows Limited executed a large amount of important naval repair work for the Imperial, Canadian and Japanese governments, and at present the yard has a considerable amount of naval repair work in hand for the British Admiralty. In addition to this, the company executed a considerable quantity of other important repair work during the year, among which may be mentioned the following: Grand Trunk Pacific Coast Steamship Co.'s steamship that had been ashore, was repaired at Esquimalt, the work necessitating the renewal of practically the whole of the ship's bottom for a length of 180 ft.. The s.s. Niels Nielsen, a 8,800 ton cargo vessel, was repaired after sustaining heavy damage due to stranding. A new, fully laden cargo vessel of 8,800 tons, which was brought back from sea in a disabled condition, was fitted with a new 18 ft. dia. manganese bronze bladed propeller. This propeller was cast, fitted, and the ship made ready for sea again within a week, without docking or disturbing her cargo, the work being carried out by building a wooden cofferdam round the vessel's stern. The s.s. Gray, which was very badly damaged and had her back broken and buckled, was repaired, the work necessitating the removal of about 37 plates, the relining up and straightening of the ship, and the removal of the stern frame. At the present time, the G.T.P. Coast Steamship Co.'s s.s. Prince John is on the ways for general overhaul and for repairs to damage done by stranding. In addition to the above, a large number of vessels were drydocked for repairs and general overhaul.

A specialty has been made of the conversion of steamships from coal to oil burning, one of the most recent jobs being the cable ship Restorer, which was fitted out to carry 100,000 barrels of fuel oil. Several of the C.P.R. coast steamships and of the G.T.P. Coast Steamship Co.'s steamships and various local dredgers, have been converted from coal to oil burning. A large number of cast iron and manganese propeller blades, some weighing as much as 8 tons, have been made, also a number of large marine engine and other castings, bed plates, h.p. l.p. and i.p. cylinders being made for engines 24 x 38 x 62 x 42 in. stroke, also some large nitric acid retorts, weighing as much as 8 tons each. The plant is equipped with an oxy-acetylene welding and cutting outfit, and handles a large amount of special coppersmithing and pipe work, also galvanizing.

The yard is situated at Esquimalt Harbor, a suburb of Victoria, and covers an area of about 8 acres. The wharf is over 500 ft. long, and can accommodate, on both sides, vessels sent in for overhaul and repairs. The marine railway can accommodate vessels up to 300 ft. and 2,500 tons dead weight. Vessels of larger size up to 480 ft. are handled in the drydock. The plant is equipped with 60 ton shearlegs and a 10 ton floating compressed air plant, which can be used on repairs to vessels lying off the yard. The company employs on an average about three hundred and fifty men.

## Atlantic and Pacific Ocean Marine.

The Dutch s.s. *Nieuw Amsterdam* arrived at Rotterdam at the end of December with a cargo of grain for Belgian relief. She was in Halifax harbor at the time of the disastrous explosion on Dec. 6, and bore considerable traces of the damage she incurred.

The U. S. steamship *Alfred Mitchell*, one of the lake steamships transferred for Atlantic service, was libelled by her crew at Charlottetown, P.E.I., recently for \$4,200 representing wages due. She was on the way to a U. S. port when stress of weather drove her to Georgetown, P. E. I.

The auxiliary power schooner *Beatrice Castle*, which as previously announced, was sold by Canada West Coast Navigation Co., or one of its subsidiary companies, to W. B. Castle, President of the Zena Iron Works, Duluth, Minn., is now reported to have been sold to the French Government. She was built by Cameron-Genoa Mills Shipbuilders, Ltd., and was launched at Victoria, B.C., Nov. 23.

W. Smith, second officer on one of Canadian Pacific Ocean Services' Atlantic steamships, was sentenced at Liverpool, Eng., recently, to imprisonment for one month on each of two charges of stealing pickles, tea and bacon, the property of the company, from the Canada Dock, the sentences to run concurrently, and a Liverpool constable was fined \$5 for receiving the goods knowing them to have been stolen.

The s.s. *George N. Orr* was driven ashore on the north side of Prince Edward Island, Jan. 10, while en route from Montreal to New York with a cargo of hay. She is stated to be owned by the United States Shipping Co., but is owned by the Canada Atlantic Transit Co., Montreal, and is reported immv ET ET Montreal, and is registered in the U. S., and probably has been requisitioned by the U. S. Government.

The s.s. *Angouleme* was reported recently to have been wrecked on Main a Dieu Island, off the Nova Scotia coast, and it was feared that she would be a total loss. We were advised Jan. 17 that she had been released, the damage not being so great as was anticipated. She was built by the Thor Iron Works, Ltd., Toronto, and was launched Aug. 1, 1917, and christened Orleans. She was built to the order of James Playfair, President and General Manager, Great Lakes Transportation Co., Midland, Ont., and while she was on the stocks was sold to the Oriental Navigation Co., of New York and Nantes, France.

The schooner *Malahat*, which was built by Cameron-Genoa Mills Shipbuilders, Ltd., at Victoria, B.C., last year, for the Malahat Motor-Ship Co., Ltd., a subsidiary of Canada West Coast Navigation Co., composed of interests concerned with Canada Steamship Lines, Ltd., is reported to have been sold to Canada Steamship Lines, Ltd. The vessel, which was to have been equipped with auxiliary power of the Bolinder type, sailed from Port Alberni, B.C., Oct. 13, 1917, for Sydney, Australia, on her maiden trip, without the auxiliary machinery, owing to the difficulty in obtaining delivery in time. She took 65 days on the trip. She is returning to Vancouver, where the machinery is to be installed, after which, it is stated, that she will enter the West Indies trade.

The auxiliary schooner *Bowler* is expected to sail from Vancouver shortly, for Australia with a cargo, where she

will be taken in charge by a French crew and taken to France, having, it is reported, been sold to the French Government. The *Bowler* was originally the s.s. *Zafira*, and was built at Aberdeen, Scotland. For several years she was operated in the coal trade between Hong Kong and Manila, and was purchased by the U. S. for service during the Spanish-American war. She was subsequently bought by a Vancouver shipbuilder and has been lying in Burnard Inlet for about a year. All the machinery, etc., was removed and she was stripped to the steel frame, after which she was sheathed with 3 in. plank and equipped with a Diesel engine of 350 h.p., 4 steam winches, steam windlass and other fittings. Her dimensions are, length 237 ft., breadth 32 ft., depth 17 ft. The rebuilding was carried out under Bureau Veritas' regulations, and was supervised by Capt. S. F. Mackenzie, a well known Pacific coast mariner.

## Maritime Provinces and Newfoundland.

A channel 70 ft. wide, to a depth of 9 ft. has been dredged in the Boughton River, P.E.I., to Bridgetown, the head of navigation, where a wharf has been built on the north side of the river.

The Halifax Graving Dock Co., which suffered heavy loss through the disastrous explosion at Halifax, Dec. 6, is erecting temporary buildings to replace those wrecked, and hopes to be able to handle vessels there early in February.

The Public Works Department has completed the construction of a wharf in Cummings Cove, west of Deer Island, N.B. It extends out 385 ft. from high water mark, and is 20 ft. wide, with a block 50 ft. square at the outer end.

The s.s. *Beverley*, which went ashore at St. Marys, Nfld., recently, and which was released subsequently with comparatively slight damage, is reported to have been sold to W. A. Munn, St. John's, Nfld., for \$125,000, and to have been chartered for a Mediterranean trip with fish.

The sealing steamship *Seal*, owned by Farquhar & Co., Halifax, N.S., is reported to have been sold to Baine, Johnstone & Co., St. John's, Nfld. She was built at Glasgow, Scotland, in 1911, and is screw driven by engine of 85 n.h.p. Her dimensions are, length 175 ft., breadth 22½ ft., depth 12¼ ft.; tonnage, 608 gross, 277 register.

The s.s. *Governor Dingley*, operated until recently by the Eastern Steamship Corporation between Boston, Mass., and Yarmouth, N.S., has been requisitioned by the U. S. Government, and is being used as a training ship for merchant service crews. The same company's s.s. *Calvin Austin* is also being used for a similar purpose, and both are stationed at East Boston.

The Wedgeport Transportation Co., Ltd., has been removed from the Nova Scotia Companies Register for noncompliance with the requirements of the law. H. T. LeBlanc, Wedgeport; C. W. Collins, Granville Ferry; J. S. McCulloch, Annapolis Royal; H. J. Collins, Annapolis Royal; B. S. Collins, Granville Ferry, and F. C. Whitman, Annapolis Royal, N.S., were chiefly interested in the company.

The Public Works Department has completed the following dredging work in North Rustico harbor, P.E.I.:—Gauthier creek, up to a small basin near the fishing stages southward of the village, for 2,350 ft. by 60 ft. wide and 8 ft. deep, and the outer end of the fishing stages

for 500 ft. by not less than 4½ ft. off any stage, and has also enlarged the turning basin and dredged it to an average depth of 7 ft.

The Halifax pilotage bylaws have been amended by the substitution of a new bylaw in place of bylaw 21. It provides for the appointment of one or more apprentices to each pilot boat, when the commissioners deem it necessary, each apprentice to serve five years, be of good moral character, and have the rudiments of an ordinary English education. At the expiration of their apprenticeship, they shall be eligible to be licensed as pilots, provided they have served at least six months as seamen on board a steam or sailing vessel, and have been found by the commissioners, after examination, to possess the qualifications required of pilots, by law.

## Province of Quebec Marine.

Traffic through the Lachine Canal was considerably heavier during 1917 than in 1916. In 1917 there were 7,936 vessel passages, by 607 vessels aggregating 294,773 tons. The cargo tonnage was 3,335,943, and the number of passengers 69,910. The heaviest traffic was down bound.

On the reopening of navigation, a channel about 1¼ miles long, northwest of Longue Pointe shoal, in Montreal harbor, from Longue Pointe to Racine wharf, carrying at least a depth of 27 ft., will be marked by 6 spar buoys, placed at intervals from the northeast corner of Vulcan wharf to the southeast corner of Racine wharf.

The Dominion Government dry dock at Lauzon is reported to be practically complete, but it is said that the opening will not take place until September. The crib work at the entrance is yet to be done, and a portion of the work at the opposite end. The power house and pumping machinery are complete, and will be tested shortly. Several men are at present engaged there, mostly in the machine shop, but general work will not be resumed until the reopening of navigation.

## Ontario and the Great Lakes.

The Midland Shipbuilding Co., Midland, Ont., has increased the number of its directors from five to seven. D. L. White is President, and T. C. Luke, Secretary.

The Toronto, Hamilton & Buffalo Navigation Co.'s car ferry steamship *Maitland No. 1*, discontinued its service between Port Maitland, Ont., and Ashtabula, Ohio, Jan. 4, for the remainder of the winter, owing to ice conditions.

The Toronto, Hamilton & Buffalo Navigation Co. announces that it has temporarily withdrawn the car ferry between Port Maitland, Ont., and Ashtabula, Ohio. Traffic, which would otherwise move via these points, is now being routed via Niagara and Detroit frontiers.

The Toronto Ferry Co.'s dock at the foot of Bay St., Toronto, was practically destroyed by fire, Jan. 6, the damage being estimated at \$55,000. The fire was confined to the company's property, though Canada Steamship Lines' s.s. *Chippewa*, which was berthed close by, was somewhat damaged by fire and water.

The United States Lake Survey reports the levels of the Great Lakes in feet above mean sea level, for December, as follows:—Superior, 602.16; Michigan and Huron, 580.80; St. Clair, 575.53; Erie, 572.67; Ontario, 246.45. Compared with

the average December levels for the past ten years. Superior was 0.13 ft. below; Michigan and Huron 0.80 ft. above; Erie and Ontario 1.09 ft. above.

Press reports emanating chiefly from Detroit, Mich., recently, stated that the abandonment of the car ferries between Windsor and Detroit, was likely to be a local result of the operation of the U.S. railways by the Government. It was also stated that the G.T.R. has been anxious to use the M.C.R. Detroit tunnel, and thus do away with its car ferry service across the river. We were officially advised, Jan. 12, that the G.T.R. does not at present contemplate the abandonment of its car ferry service between Windsor and Detroit.

The s.s. Forest City, owned by the Sil-Islet Navigation Co., Fort William, is reported to have been sold to W. McCullough, Manager, Fort William Grain Co., for \$27,000. She was built at Wilmington, Del., in 1891, and was formerly known as King Edward. The hull is of steel divided by five water tight bulkheads, and is of the following dimensions, length 175 ft., breadth 31 ft., depth 9½ ft.; tonnage, 571 gross, 449 register, and is equipped with beam condensing engine with cylinder 38 in. diam. by 108 ins. stroke, 400 i.h.p. at 25 r.p.m., and supplied with steam by two Scotch boilers 11 by 9 ft. at 25 lbs. working pressure.

### British Columbia and Pacific Coast.

The Union Steamship Co. of British Columbia is increasing accommodation for passengers and freight on its wharf at Vancouver.

The s.s. Imperoyal, owned by Imperial Oil, Ltd., Toronto, was docked at Wallace Shipyards, North Vancouver, Jan. 14, for repairs to her propeller.

The Dominion Public Works Department will receive tenders, Feb. 4, for the construction of a wooden freight shed and the fireproofing of grain conveyor supports, on the west side of the government wharf, Vancouver.

The Tacoma, Wash., Chamber of Commerce, is reported to be negotiating with J. W. Troup, Manager, British Columbia Coast Service, C.P.R., for the service of one of its Princess steamships between Tacoma and British Columbia ports.

The Seattle Drydock and Construction Co. has secured judgment for \$87,000, against Grant Smith and MacDonnell, in connection with the capsizing of a floating dock rented from the dock company, for use on the Victoria Harbor improvement contracts.

The Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince John completed repairs at Yarrows Ltd., yards, Esquimalt, early in January, and sailed from Nanaimo with coal for northern ports, Jan. 8. After completing the trip she was placed on the run to Queen Charlotte Islands and Alaska alternately.

Salvage operations are reported to be proceeding on the remains of an old bark which foundered off San Juan Island in 1874, while en route from Nanaimo, B.C., to San Francisco. It is stated that all the upper works of the vessel have disappeared, and also the iron work, but that the copper sheathing and cargo of coal are intact.

The Grand Trunk Pacific Coast Steamship Co.'s auxiliary schooner Tillamook was docked at Seattle, Wash., early in January, for a general overhaul. She is

to be fitted with a new pilot house, and equipped with a steam heating plant and two electric winches, of 5 tons capacity each. During 1917 she was operated between Prince Rupert and the Alaska canneries.

The Grand Trunk Pacific Coast Steamship Co. is reported to be negotiating for the purchase of the s.s. F. A. Kilburn, from the Independent Steamship Co., San Francisco, Cal. The vessel has been operated for some time in the general freight and passenger trade between Columbia River and San Francisco, and if the sale is consummated, it is said to be the intention to transfer her to the Alaska cannery trade.

The s.s. Spokane, which went on the rocks at Idol Point recently, was released under the direction of Capt. W. H. Logan, Victoria, B.C., representing the Salvage Association, London, Eng. Her stem was bent and broken and on the starboard side there was a large opening 21 ft. long. This was patched with cement, about 100 tons being required, and pumping machinery was put in, with a capacity of 2,250 tons of water an hour. She was taken to Seattle, Wash., and arrived in port drawing 7 ft. forward and 19 ft. aft.

The liquidator of the All Red Line Ltd., is suing Capt. C. O. Polkinghorne for \$11,677, and also for a declaration that a resolution of the company is invalid, which authorized the writing off of a number of accounts due to the company, and the release of certain parties from any claim for liability, except in so far as one claim for \$2,035 against Capt. Polkinghorne is concerned. The company owned the steamships Santa Maria and Selma, which were purchased recently by the Union Steamship Co. of British Columbia.

The steam tug Lorne, which the Grand Trunk Pacific Coast Steamship Co. purchased recently from A. McDermott, Victoria, was expected to be ready for service during January. She was formerly owned by the Puget Sound Tug Boat Co., and was wrecked in Sept. 1914, when on the way from Seattle, Wash., to Vancouver, after which she was laid up in Eagle Harbor. The hull has been practically rebuilt in the G.T.P. dry dock at Prince Rupert, and the machinery has been overhauled, and a new tail shaft, supplied by Yarrows, Ltd., has been put in.

**Marine Engineers' Wages.**—At a recent meeting of the Great Lakes executive of the National Association of Marine Engineers at Toronto, the question of wages was discussed. The present rates are, chief engineers, \$1,200 to \$1,800; second engineers \$960 to \$1,500. It is reported that the rate asked for the forthcoming season will be, chief engineers \$1,440 to \$2,100; second engineers \$1,152 to \$1,800.

**Co-operative Shipping Co. Ltd.** has been incorporated under the Dominion Companies Act, with \$1,000,000 authorized capital and office at Montreal, to build, own and operate steam and other vessels for the transportation of mails, passengers and merchandise, and to conduct a general transportation business by land and water.

**Pilotage Investigation.**—An Ottawa dispatch of Jan. 25 states that the Minister of Marine will appoint a commission shortly to investigate the pilotage systems at the various ports in the Dominion. It is also stated that in view of the recent disaster at Halifax, N.S., the system in operation there will be the first one to come under enquiry.

### Pacific Coast Steamship Rates.

The Pacific Steamship Co. put into effect Jan. 20 a new schedule of fares from Victoria, B.C., to San Francisco, Wilmington and San Diego, Calif. The increases are as follows:

Victoria to San Francisco—Upper deck from \$19 to 23; lower deck, from \$17.50 to \$19. The steerage rate remains unchanged at \$12.

Victoria to Wilmington—Upper deck, from \$26 to \$33.50; lower deck, from \$25 to \$27; steerage, from \$15 to \$18.

Victoria to San Diego—Upper deck, from \$32.50 to \$36.50; lower deck, from \$28 to \$30; steerage, from \$15.75 to \$20.

**Panama Canal Traffic.**—For the year ended June 30, 1917, 1,876 vessels of all classes passed through the Panama Canal, against 787 in 1915-16 and 1,088 in 1914-15. In the year 1916-17, 905 vessels passed from the Atlantic to the Pacific and 971 from the Pacific to the Atlantic. The total tonnage for 1916-17 was 7,229,255, and the tolls were \$5,631,781.66.

**"War" series vessels** which are under construction at various U. S. Pacific ports, presumably for British interests, are being requisitioned by the U. S. Government, and those which have been named are having their names changed, the War Flame, War General and War Leopard have been renamed New Haven, Westfield and Westport, respectively, and those not yet christened are to be given names associated with the U. S.

**Canadian Co-operative Marine Corporation Ltd.** has been incorporated under the Dominion Companies Act, with \$1,000,000 authorized capital and office at Montreal, to carry on a general commercial and transportation business as owners or agents for others, and to build, own and operate steam and other vessels, and also to engage in general co-operative marine insurance business and for other purposes.

**Wolvins Limited** has been incorporated under the Dominion Companies Act, with \$2,000,000 authorized capital and office at Montreal, to import, export, manufacture, transport and deal in merchandise, to build public and private works, and in connection therewith to own and operate steam and other vessels and other transportation facilities. F. S. Isard, Comptroller, Canada Steamship Lines, Ltd., Montreal, is one of the incorporators.

The Winnipeg Citizens' Research League has issued a bulletin "Jitney or street car," giving the findings of Adam Shortt into the recent investigation into transportation matters at the Pacific Coast.

The C.P.R. s.s. Princess Victoria was towed to Yarrows yard, Esquimalt, Jan. 8, for hull cleaning and painting.

## MARINE ENGINE AND BOILER

ENGINE—Fore and aft compound, 12 x 24 x 14, pumps and shafting complete.

BOILER—Locomotive type, 130 pounds steam pressure.

MUSKOKA NAVIGATION CO.,  
Gravenhurst, Ont.

## Harbor Improvements at Victoria B. C.

The annual report of the Inner Harbor Association of Victoria, issued recently, shows that there is an increased width of about 60 ft. available on the west side of the harbor, immediately south of the Esquimalt and Nanaimo Ry. bridge, by the removal of rock from Discovery Rock, while Hospital Rock, east of Songhees Point, was also cut back about 80 ft., giving additional width where the C.P.R. ferry boats leave the harbor. The area in James Bay, north of the C.P.R. wharf, has been deepened from 14 to 20 ft. below low water mark, giving a safe mooring for the larger boats at all stages of the tide. The north side of the main channel between Songhees Point and the entrance to West Bay has been improved, the removal of rock from the south of Pelly Island giving 100 ft. additional width, and between Pelly Island and the entrance to West Bay, an additional 150 ft. An additional 100 ft. of width has also been made at Shoal Point. During 1917, about 252,000 cub. yds. of rock, hard pan, etc., were removed, some 16,000 cub. yds. being blasted by the drilling plants and the rock breaker. In the upper harbor considerable improvements were carried out in the area fronting Cameron-Genoa-Mills Shipbuilders' launching ways and the Foundation Co., where a depth of 20 ft. below low water has been cleared. The removal of rocks in the centre of the upper harbor has been undertaken, and when this work has been completed, a depth of 20 ft. below low water will be cleared, the same as in the mooring basin at the Marine Department's wharf north of the railway bridge, and near Point Ellice bridge.

## Chartered Vessels and War Region Risks.

The Dominion Coal Co.'s appeal against a judgment of the Court of Appeal, came before Judicial Committee of the Privy Council recently. The Dominion Coal Co. chartered the s.s. Maskinonge from E. F. & W. Roberts, as owners of the vessel then under construction, for seven consecutive seasons from the spring of 1912, for the St. Lawrence coal trade. The rate was fixed at 4 shillings a ton and the owners were to insure the vessel. After war broke out the s.s. Maskinonge became the property of the Maskinonge Steamship Co. of Liverpool, Eng., and a new agreement was entered into, whereby the vessel was chartered for six consecutive years at 6s. 6d. a ton, and a clause was inserted providing that if the vessel was ordered by the charterer to trade in the war region, the war risk insurance premium payable by the owner, was to be refunded by the charterer. This charter came into operation in Nov. 1915, and the vessel was employed on the St. Lawrence until the navigation season closed, when she was placed in operation between Sydney and Halifax, N.S., and Boston, Mass. On Oct. 8, a German submarine appeared off Nantucket and sank five vessels. On enquiry by the owner, the charterer stated that it was the intention to continue the vessel on the same route, whereupon the owner claimed that it had been ordered to trade in the war region, and that the war risk premium payable by the owner should be refunded by the charterer.

A claim was entered in an English court, and judgment was given in favor of the charterer, it being held that the

actions of the submarine did not make the waters between Cape Breton and Boston a war region, and that the charter did not order the vessel to trade in the war region. The owner appealed the case to the Court of Appeal, when the decision was reversed and judgment entered for £1,765 and costs against the charterer. The judgment stated that when, as in this case, there had actually been warlike operations by the appearance of a German submarine and the sinking of vessels in the area in which this vessel was trading or ordered to trade in future, and that there was reasonable apprehension that these operations would recur, and no reasonable grounds for coming to the conclusion that this was a mere sporadic attack, then that constituted this area a war region within the meaning of the contract. The Dominion Coal Co. has now appealed the case to the final court, contending that it had not ordered the vessel to trade in the war region, and that the sporadic appearance of a single German submarine for one day at a place off New York, about 100 miles from the vessel's actual trading limits, did not constitute the waters in which she was trading, between Cape Breton and Boston, a war region. Judgment had not been received at the time of writing.

## United States Lake Port Development and the Welland Ship Canal.

In a report to the U. S. War Department recently, on the possible effect of the construction of the Welland Ship Canal, by Canada, the Chief Engineer made the following statement: It is evident that the improvement of the Welland Canal alone will have but little influence on existing lake commerce between U. S. ports, other than to permit the vessels now engaged in that commerce to gain access to the New York State barge canal at Oswego. The deepening of the harbors of the Great Lakes and the connecting waters to 25 ft. would permit vessels to load to greater draft than at present, and this advantage could be given without any deepening of the Welland Canal, except as that canal affects access to the port of Oswego. The additional improvement of the harbors and connecting waters necessary to permit them to accommodate all vessels able to pass through the Welland Canal, when enlarged by Canada, consist in the deepening of such harbors and connecting waters to about 25 ft., which would involve an expenditure now deemed incommensurate with the benefits to be derived therefrom. The character of the vessels which may be expected to use the canal when so enlarged are those of the type now constituting the lake fleet."

## Telegraph, Telephone and Cable Matters.

The Great North Western Telegraph Co. has opened offices at Beamsville Camp, Ont., and Debdon and Madison, Sask., and has closed its offices at Dropmore, Man.

The Marconi Wireless Telegraph Co. of America had a net income for 1917 of \$609,430, against \$259,888 for 1916. Gross earnings were \$1,328,525 and \$862,501 for the same years respectively.

The following assessments on "wire" companies have been made in Toronto for this year: Great North Western Telegraph Co., \$187,319; C. P. R. Telegraphs,

\$173,178; Dominion Telegraph Co., \$1,420 \$173,178; Dominion Telegraph Co., \$1,420; Bell Telephone Co., \$2,962,614.

The Montreal Telegraph Co.'s annual meeting was held at Montreal, Jan. 11. The balance sheet for 1917 shows assets of \$2,151,823, of which the principal item is telegraph lines in Canada and the U. S., valued at \$1,625,890. Cables are valued at \$33,487, offices and equipment \$212,500, and real estate \$279,946. Cash accounts receivable and other securities total \$161,862. The company's lines are operated under lease by the Great North Western Telegraph Co., and the payment of dividends is guaranteed by the Western Union Telegraph Co.

The C. P. R. Telegraphs reports that nearly all its wires in Halifax, N.S., were interrupted as a result of the explosion of a munitions ship in the harbor, Dec. 6, one circuit remaining in service long enough to report the disaster. Communication was established later in the day and then continued without interruption. Some delay was caused in restoring full communication, owing to the severe storms subsequent to the explosion, and there was a delay in handling the traffic, owing to the reduced facilities and to the large number of messages. Additional staffs of operators were dispatched from eastern centres.

## Among the Express Companies.

The Board of Railway Commissioners has approved the Northern Ex. Co.'s standard mileage tariff of maximum tolls C.R.C. 40.

George A. Newman, Treasurer, Dominion Ex. Co., Toronto, died there, Jan. 19, aged 66. He was one of the original officials of the company.

A. J. Seaton, heretofore Assistant Superintendent, Eastern Division, Canadian Ex. Co., has been appointed Superintendent, Eastern Division, and his former position has been abolished. Office, Montreal.

W. E. Norman, heretofore Assistant to Superintendent, Western Division, Canadian Ex. Co., has been appointed Assistant Superintendent, Western Division, reporting to the Superintendent, and his former position has been abolished. Office, Toronto.

The Board of Railway Commissioners has ordered that the tolls of the Dominion and Canadian Ex. Cos. shall include the collection and delivery of express freight within the limits of Timmins, Ont., excepting Elm, Maple and Birch Sts., north of Sixth Ave., and also Sixth Ave. west of Maple St.

The Board of Railway Commissioners has ordered, on the application of the Board of Trade, Pas, Man., that the Canadian Northern Ex. Co.'s tolls shall include the collection and delivery of express freight in the portion of the town bounded continuously by the further side of Seventh St., the Hudson Bay Ry. and the Saskatchewan and Pas Rivers.

Under instructions from the Commissioner of Customs, express companies have been charging for storage in bond of express shipments waiting customs entry, as follows: under 15 lb. free; 15 to 25 lb. 5c; 25 to 100 lb. 10c; 100 to 200 lb. 15c; and over 200 lb. 20c. On the Toronto Board of Trade's application the Board of Railway Commissioners has ordered that the charge be discontinued pending the filing of such a tariff with the board, this formality having been omitted.

## Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Taylor & Arnold, Ltd., Montreal, reports that its engineer, Godwin Shenton, has secured in Philadelphia, a contract for Chadburn's telegraph equipment, for the first 50 standard steamships to be built for the U. S. Emergency Fleet Corporation, by the American International Shipbuilding Co., in its Hogg Island plant.

Calendars for 1918 have been received from: John Bertram & Sons Co., machine tools, Dundas, Ont.; Dearborn Chemical Co. of Canada, Ltd., Toronto; Hiram L. Piper Co., Ltd., railway signals, lamps and supplies, marine lamps, lifebuoy lights and distress signals, Montreal; Ly-

man Tube & Supply Co., railway and industrial supplies and equipment, Montreal; Taylor & Arnold, Ltd., railway and marine specialties, Montreal.

Prest-O-Lite Co., Inc., Toronto, has issued a booklet, 28 pages, 8½ x 10¾ in., entitled "Turning waste into profit," which deals with the matters of conservation of steel and iron through oxy-acetylene welding and cutting. It is illustrated with half tone engravings of welding repair operations in railway, machine and other shops.

## Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries unless otherwise stated:

Canadian Car Service Bureau—W. J. Collins, Manager, 401 St. Nicholas Building, Montreal.  
Canadian Electric Railway Association—Acton Burrows, 70 Bond Street, Toronto.  
Canadian Freight Association (Eastern lines)—G. C. Ransom, Canadian Express Building, Montreal.  
Canadian Freight Association (Western lines)—W. E. Campbell, 805 Boyd Block, Winnipeg.  
Canadian Railway Association for National De-

fence, W. M. Neal, General Secretary, 263 St. James St., Montreal.

Canadian Railway Club—J. Powell, St. Lambert, Que. Meetings at Montreal 2nd Tuesday, each month, 8.30 p.m., except June, July and August.

Canadian Ticket Agents' Association—E. de la Hooke, London, Ont.

Canadian Society of Civil Engineers—F. S. Keith, 176 Mansfield St., Montreal.

Dominion Marine Association—F. King, Counsel, Kingston, Ont.

Eastern Canadian Passenger Association—G. H. Webster, 54 Beaver Hall Hill, Montreal.

Engineers' Club of Montreal—R. W. H. Smith, 9 Beaver Hall Square, Montreal.

Engineers' Club of Toronto—R. B. Wolsey, 94 King Street West, Toronto.

Express Traffic Association of Canada—C. N. Ham, Montreal.

Great Lakes and St. Lawrence River Rate Committee—James Morrison, Montreal.

Hydro-Electric Railway Association of Ontario—T. J. Hannigan, Guelph, Ont.

International Water Lines Passenger Association—M. R. Nelson, New York.

Niagara Frontier Summer Rate Committee—James Morrison, Montreal.

Nova Scotia Society of Engineers—A. R. McCleave, Halifax, N.S.

Quebec Transportation Club—A. F. Dion, Quebec.

Shipping Federation of Canada—Thos. Robb, Manager, 42 St. Sacramento Street, Montreal.

Ship Masters' Association of Canada—Capt. E. Wells, 45 St. John Street, Halifax, N.S.

Toronto Transportation Club—W. A. Gray, 143 Yonge Street, Toronto.

# Canadian Railway and Marine World

March, 1918.

## The Extension of the Canadian Pacific Railway's Pier D at Vancouver.

The C.P.R. has had completed recently an extension to one of its piers at Vancouver, which makes the new pier one of the largest structures of the kind on the Pacific Coast. The extension was made necessary by the steady growth of coastwise and trans-Pacific traffic. The pier, which is known as Pier D, is located on Burrard Inlet at the foot of Granville St. It is a creosoted pile structure, and on account of the depths of water and mud encountered is of considerable interest from an engineering standpoint. The older portion of the pier was built in 1913 and measured approximately 376

feet, freight slips are also installed, together with a standard gauge railway track which runs the entire length of the east side, and makes it possible to deliver open car freight directly under the ship's slings. The east and west sides of the pier are divided by a depressed standard gauge track, running down the centre of the pier and serving both sides. A one story shed, of heavy mill type construction, is built over the new pier, on top of which is a promenade, connected with the lower deck by stairways on the west and north sides. This promenade is designed for passenger traffic, but also

point of equilibrium was reached and no further settlement of the fill would occur. At that time, an amount was dredged off the fill, roughly approximating the weight of the structure later to be placed upon it, the ability of the underlying material to stand the load could be reasonably relied upon. Careful weekly soundings were kept over the entire area covered by the fill, as also along lines parallel to and outside of it. These soundings showed a slow, but fairly continuous, settlement on the part of the fill, and a slow corresponding rise at the bottom outside of it, until after a considerable

Canadian Pacific Railway Pier D, Vancouver, as completed.

ft. on the centre line by 150 ft. It carried a two story structure, the lower deck being devoted to freight, and the upper deck to passenger traffic and various offices for operating, customs and immigration officials. The primary use of the old pier was for coastwise traffic.

The extension measures approximately 537 x 150 ft. and runs to the harbor line. As the pier has two distinct uses, viz., for coastwise and trans-Pacific traffic, it is so designed, the west and north sides being primarily intended for the coast boats and the east side for trans-Pacific and miscellaneous freight traffic. The west and north sides have complete arrangements for berthing four coast steamships at one time. These arrangements comprise in general, separate freight elevators of the Barlow type for each boat and separate passenger ramps or stairways, each taking the passengers direct from the boat to the upper floor level, without interference with the freight traffic. The east side is designed with continuous sliding doors, giving openings as desired at any point along practically the entire length of the pier. Two heavy adjustable

serves for sight seeing purposes, as it affords a good view of Vancouver harbor.

The old pier was a creosoted pile structure, and a study established the desirability of making the new structure of the same general type. Test holes in or near the area of the extension showed depths of water from 40 to 70 ft. at mean low tide. The tide range is approximately 16 ft. The harbor bottom itself was a mixture of mud, silt, sand and shell, ranging from 10 to 30 ft. in depth, and below this strata of clay and gravel. Hardpan lay variously at from 70 to 140 ft. below low tide. It was apparent that a fill would have to be made, and the material for it was readily obtained from a dredging contractor who was making channel improvements at the First Narrows, about two miles from the pier site. About 250,000 cu. yds. of material were used. The fill had a dual purpose: first, to displace the soft harbor bottom, and second, to provide end and lateral support to the piles to be driven into it. The theory was that the fill would gradually both displace and compress the lighter and softer material beneath, until a

period no further settlement could be observed. As was expected, the part of the fill next to the old pier came to rest first, and permitted pile driving to be begun at a time when the outer portion of the fill was still in movement.

The type of substructure for the pier was fully considered and it was evident that creosoted wooden piling would be the cheap and logical solution of the problem. It was desired, so far as possible, to have the piling penetrate the fill, and rest on the harbor bottom beneath, thereby increasing the area of surface contact, as well as assuring full bearing power, and therefore safety, in case of any future movement on the part of the fill itself. To do this, piling lengths considerably over any known lengths for concrete piles were required. As the terebo is active in these waters a treated pile was necessary. Creosoted Douglas fir piles, with full 15 lb. treatment under boiling process, were therefore determined upon. All other established methods for pile preservation were, however, considered before final decision was made. The contract called for approximately 2,550 piles

from 85 to 125 ft. long. It was also decided that all deck timber, which was either in contact with the water or near enough to it to be continually damp should be treated. Bracing, caps, stringers and laminated deck timber were therefore specified for 12 lb. treatment under the boiling process. All timber was to be of Douglas fir and of standard specifications. The pile driving work was given to S. Doe, of Victoria. As there was no rig available for handling piles of the weight and lengths of those to be used, Mr. Doe built a special scow driver, with leads measuring 130 ft. in height,

travelling derrick, running on a track laid across the pier, and so arranged that it could be jacked up on rollers and moved forward under its own power. This moving operation took about two hours. About 40 lin. ft. of pier could be handled from each position of the track. The derrick was used for handling all creosoted timber, which was delivered on scows alongside as required, picking up, moving across the dock and depositing in place. The average time for handling the 7 in. x 12 in. x 40 ft. stringers, from the scow to the far side of the dock, and back again for another lead was approxi-

and moored alongside of or near the dock, while field office, storehouse and compressor house were located at the extreme end of the old pier outside of the shed, where they would not interfere with the operation of the pier and yet be easily accessible.

While piles were being treated, inspectors were kept at each plant, and the quantity and quality of creosote used, temperatures, pressures and time of treatment were carefully watched and recorded. Each pile was numbered and stamped after being passed and full data on its treatment recorded. When driv-

Canadian Pacific Railway Pier D, Vancouver. Looking north during construction, Aug., 1917.

So far as is known, this is one of the largest, if not the largest, scow driver ever built.

As there was a large amount of boring and drift bolting to be done, a motor driven air compressor was installed, pipelines extended from it and connections tapped in at intervals, with hose to the various air tools. These comprised air riveters, with special sets for drift bolt driving, and boring machines of various sizes. The borers were especially useful in laying the 2 x 4 in. Australian hardwood which served as flooring, and which had to be bored for nailing. This boring alone required approximately 70,000 holes.

Another useful machine was a small

mately two minutes.

A skid driver was used to drive the track extension along the old pier, and a few column piles under the old deck which had been omitted in building the original pier. When its pile driving work was finished, it was turned into a skid derrick, with an 80 ft. boom, and used to erect the roof trusses, which were framed and assembled on the deck and lifted complete on to the columns in one operation. This derrick was used to raise the 2 x 6 in. laminated roofing, a team load at a time. It also performed a variety of miscellaneous work, as its long boom and skids made it a very handy rig.

A fully equipped blacksmith shop was built on a small scow, to avoid fire risk,

ing, a report was also made by an inspector on each driver, as to the pile number, location, penetration and length of cutoff. It was thus possible to readily trace the history of any pile from its time of treatment until driven. All piles were spotted by transit and stayed soon after driving.

The driving at all times was extremely hard. Piles were driven on 6 ft. 8 in. x 8 ft. centres. Piles were capped by 10 x 16 in. and 12 x 14 in. creosoted timbers, drift bolted into place. Capping was kept several bents behind the pile driving, so that the jar from the driving would not change the elevation of the piles after cutoff. Creosoted stringers were laid across the caps and drift bolted

to them. A laminated creosoted 2 x 4 in. decking was laid diagonally on the stringers, the idea being to give additional rigidity by tying several parallel pile bents together in this way. Piles were also braced diagonally, and additional longitudinal bracing was run down each side of the depressed track. The outside railway track had its own special bracing. Waling was also installed at periods of maximum low water. On the laminated deck, there was laid a flooring of 2 x 4 in. Australian hardwood, running parallel to the pile bents. This flooring was air bored and spiked with great care to get a tight joint.

The shed area was divided down the middle by a depressed standard gauge track, which brought the car doors at

outside bays. The roof itself was made up of 2 x 6 x 30 ft. lamination, covered by a 3-ply asbestos roofing mopped on. A low monitor, ventilated by fixed louvres was run down the centre of the roof and also extended over the old portion of the shed. Running around the outer edge of the roof is a covered promenade 6 ft. wide. Two stairways lead from it to the lower outside deck. On the east side the promenade railing is in removable sections, as it is planned to land trans-Pacific passenger traffic to this promenade and so avoid passenger movement on the lower freight level. A heavy removable passenger gangway runs on the east side railway track and is provided with adjustable landing gangways on each side between itself the ship and the promenade.

few sliding doors and solid wall. The wall is made up of shiplap covered with corrugated iron. The north wall is provided with two doors.

Three freight elevators of the Barlow type were installed, one being a new machine and the other two being transferred from former locations on or near Pier D. Two adjustable freight slips were also installed. As the east side track crosses these slips, a device was worked out so that this section of track operates with a turntable. When the slip is up, the track is locked in place, and supported rigidly on the pile bents. When the slip is down, the track is given a quarter turn, so that the rails lie parallel to the slip axis and can be readily trucked over. Each slip is operated by two worms and

Canadian Pacific Railway Pier D, Vancouver. Transverse section, through one story shed, looking north.

the deck level. The area on each side of the track was divided into bays 36 and 46 ft. wide respectively, with outside bays of 27 ft. each, with roof columns 20 ft. centre longitudinally. These columns were posts, carried on special piles, independent of the rest of the substructure. The roof was required to bear, not only its own weight plus snow and wind load, but also a promenade with a possible live load of 100 lb. per sq. foot, the total load being about 150 lb. per square foot. It was also desired to have the roof line match that of the old pier, and at the same time keep a minimum clearance of 16 ft. under the trusses in the shed. The wooden trusses over the centre bays were 82 ft. long, and designed with separate members of 14 x 28 x 28 ft. over the

The passenger bridge was originally on the east side of the pier and was moved to the west side. The space formerly occupied by it was closed up and turned into offices.

The entire east side of the pier is made up of continuous sliding doors. There are 95 of these running on two parallel tracks and overlapping. They are hung on adjustable rollers, which will take up settlement. The bottom track is made up of T and angle irons, left open through the deck, so that nothing can collect to interfere with the working of the doors. The doors are glazed in the upper half and screened, with a 3 ft. section of window above them, to provide additional light. The west side walls are made up of short sections of continuous doors, a

gears, on a common shaft, with endless hand chain attachments. The slips are supported by steel hooks, which drop back when the slip is to be lowered, by means of a lever pulled from the deck level. The centre depressed track is fitted with an electrically driven car-haul, with a capacity of 10 loaded cars. Its use will avoid the presence of any steam locomotives inside the pier, with their attendant fire risk and smoke.

Motors, with a total capacity of about 200 h.p., are installed on the pier. The current is brought to a concrete transformer station at the south end of the pier and distributed in ducts. No transformers are allowed on the pier, on account of fire hazard. Lighting current is also transformed off the pier and distri-

buted by conduit, the circuits being arranged so that practically any combination of lights can be obtained. Lighting plugs are installed along the side of the depressed track, to provide for portable lights for loading and unloading freight cars. Screened bracket lights are placed at 40 ft. intervals around the outside of the shed, and red and green beacon lights at the outer end. An electric fog bell is also installed.

Fuel oil lines are carried down each side of the pier, with valves at the various boat landings. A covered water line is laid along the bottom of the roof trusses, and branch lines are taken off at intervals, for supplying the boats and for fire protection. Hose valves and lines of hose, laid on tilting hose racks, are also supplied, and so arranged as to cover the entire pier area. Five bubbler type drinking fountains are installed and two lavatories.

A considerable amount of miscellaneous work was necessary to adapt the old pier to the increased traffic. The upstairs offices had to be considerably enlarged and revised, and facilities, formerly in the office space, moved to new locations. Small enclosures also had to be built for customs, baggage, express and similar purposes. At the south end of the pier one of the steel columns supporting a part of the Granville St. ramp, and the southeast corner of the pier structure, had to be cut out in order to provide clearance for the east side track connection with the yard tracks. A 75 ft. girder was installed in the place of the old column and two shorter girders which it supported. No lifting equipment was available, so that the entire operation was conducted by block and hand jacks. The east side track connection also made necessary the entire revision of the deck at the south end of the pier, and the building of several ramps to lead from the track level to the various higher levels in the adjacent sheds. It was also necessary to extend the concrete footings on six columns under the Granville St. ramp.

The entire work was done by Sydney E. Jenkins & Co., of Vancouver, under the direction of J. G. Sullivan, M. Can. Soc. C.E., Chief Engineer, Western Lines, C. P.R., Winnipeg and H. Rindal, District Engineer, C.P.R., Vancouver.

**C.P.R. Trainmen's Wages.**—The conciliation board, consisting of T. G. Mathers, Chairman; I. Pitblado, K.C., for the company, and D. Campbell on behalf of the men, appointed recently to deal with the company's trainmen's wages on its Western Lines, reported early in February that an agreement had been arrived at on all matters in question. The rates under the new schedule, except those for the New Westminster Subdivision, which are fixed for the life of the schedule, are the existing rates, but when new rates are arranged in the U. S., following the movement now proceeding there, the new rates adopted for the U.S. will replace the existing ones.

**First Aid Work on G.T.R.**—The final tests in the first aid competition among the various shop teams on the G.T.R. system, for the Chamberlin silver shield, took place at Montreal, Feb. 22, the winning team being from the Stratford, Ont., shops, and the second and third being from the Point St. Charles, Montreal, shops. Each member of the winning team received an annual pass over the system, and each member of the other two teams received a pass over the lines in the division in which he is employed.

## Birthdays of Transportation Men in March.

Many happy returns of the day to:—  
 W. G. Annable, General Passenger Agent, Canadian Pacific Ocean Services, Ltd., Montreal, born at Ottawa, Mar. 2, 1875.

John Archibald, Locomotive Foreman, C.P.R., Coquitlam, B.C., born at Edinburgh, Scotland, Mar. 13, 1872.

Jas. Balkwill, Division Superintendent, Canadian Division, Michigan Central Rd., St. Thomas, Ont., born in Southwold Tp., Ont., Mar. 8, 1870.

Sir George Bury, Vice President, C.P.R. Montreal, born there, Mar. 6, 1866.

Allan Cameron, Superintendent, Land Branch, Department of Natural Resources, C.P.R., Calgary, Alta., born near Owen Sound, Ont., Mar. 14, 1864.

H. S. Carmichael, Passenger and Freight Manager, Canadian Pacific Ocean Services, Ltd., London, Eng., born at Glasgow, Scotland, Mar. 7, 1874.

F. G. J. Comeau, District Freight Agent, C.P.R., Halifax, N.S., born at Meteghan River, N.S., Mar. 10, 1859.

W. A. Cooper, Manager, Sleeping, Dining and Parlor Cars and News Service, C.P.R., and member of Government Food Consumption Control Committee, Montreal, born there, Mar. 22, 1871.

A. E. Cox, General Storekeeper, Canadian Northern Ry., Winnipeg, born at Huddersfield, Eng., Mar. 12, 1863.

Hon. N. Curry, President, Canadian Car & Foundry Co., Montreal, born in King's County, N.S., Mar. 26, 1851.

C. T. Delamere, acting Engineer of Construction, Eastern Lines, C. P. R., Montreal, born at Brainerd, Minn., Mar. 18, 1881.

H. G. Dring, General Passenger Agent, C. P. R., London, Eng., born at Easton, Northamptonshire, Eng., Mar. 8, 1881.

Patrick Dubee, Secretary-Treasurer, Montreal Tramways Co., Montreal, born there, Mar. 4, 1876.

Frederick Elliott, President Victoria Navigation Co., Ltd., Thurso, Que., born at Montreal, Mar. 8, 1858.

M. P. Fennell, Jr., Secretary-Treasurer and Comptroller, Montreal Harbor Commissioners, Montreal, born there, Mar. 13, 1885.

W. R. Fitzmaurice, Superintendent, District 2, Intercolonial Division, Canadian Government Railways, Campbellton, N.B., born at Bedford, N.S., Mar. 19, 1870.

C. Forrester, Superintendent, London Division, Ontario Lines, G.T.R., London, born at Winstead, Ont., Mar. 5, 1876.

Jas. D. Fraser, Director and Secretary-Treasurer, Ottawa Electric Ry., Ottawa, Ont., born at St. Andrews, Que., Mar. 26, 1851.

R. A. Gamble, General Yardmaster, Winnipeg Terminals, C.P.R., born at Dublin, Ireland, Mar. 1, 1876.

E. P. Goodwin, ex-Inspecting Engineer, National Transcontinental Ry., Baie Verte, N.B., born there, Mar. 17, 1865.

J. Halstead, Division Freight Agent, C.P.R., Calgary, Alta., born at Bruce-bridge, Ont., Mar. 2, 1877.

R. M. Hannaford, M.Can.Soc.C.E., Assistant Chief Engineer, Montreal Tramways Co., Montreal, born there, Mar. 22, 1865.

C. A. Hayes, General Manager, Eastern Lines, Canadian Government Railways, Moncton, N.B., born at West Springfield, Mass., Mar. 10, 1865.

H. T. Hazen, M.Can.Soc.C.E., Chief Engineer, Toronto Suburban Ry., Toronto born at Truro, N.S., Mar. 14, 1870.

J. I. Hobson, Treasurer, Canada Steamship Lines Ltd., Montreal, born at Guelph, Ont., Mar. 30, 1872.

N. J. Holden, President, The Holden Co., Ltd., Montreal, born at Nobleton, Ont., Mar. 22, 1866.

A. R. Holtby, Master of Bridges and Buildings, Mountain Division, Grand Trunk Pacific Ry., Prince Rupert, B.C., born at Rawdon, Que., Mar. 23, 1859.

Frank Lee, M.Can.Soc.C.E., Engineer Maintenance of Way, Eastern Lines, C. P. R., Montreal, born at Chicago, Ill., Mar. 7, 1873.

J. M. McKay, Superintendent, Saskatoon Division, Saskatchewan District, C.P.R., Saskatoon, born at Tiverton, Ont., Mar. 13, 1868.

Owen McKay, M.Can.Soc.C.E., Chief Engineer, Essex Terminal Ry., Walkerville, Ont., born in Ross Tp., Renfrew Co., Ont., Mar. 13, 1848.

Brigadier-General H. H. McLean, K.C., M.P., ex-President, St. John Ry., St. John, N.B., born at Fredericton, N.B., Mar. 22, 1855.

M. Magiff, Superintendent of Car Service and Telegraphs, Central Vermont Ry., St. Albans, Vt., born at Planks Point, N.Y., Mar. 24, 1852.

Sir Donald D. Mann, Vice President, Mackenzie, Mann & Co., Ltd., and Vice President, Canadian Northern Ry., Toronto, born at Acton, Ont., Mar. 23, 1853.

H. H. Melanson, Passenger Traffic Manager, Canadian Government Railways, Moncton, N.B., born at Scadouc, N.B., Mar. 9, 1872.

J. V. Murphy, General Agent, C.P.R., Portland, Ore., born at Bowmanville, Ont., Mar. 5, 1885.

Peter Paton, Purchasing Agent, Canada Steamship Lines, Ltd., Montreal, born at New Lovell, Ont., Mar. 13, 1869.

F. W. Peters, General Superintendent, British Columbia District, C.P.R., Vancouver, born at St. John, N.B., Mar. 25, 1860.

J. W. Pugsley, Secretary, Department of Railways and Canals, Ottawa, Ont., born at Amherst, N.S., Mar. 12, 1861.

C. J. Smith, Manager and Secretary, Montreal Warehousing Co., Montreal, born at Hamilton, Ont., Mar. 10, 1862.

W. Y. Soper, Vice President, Ottawa Electric Ry. Co., Ottawa, Ont., born at Oldtown, Me., Mar. 9, 1854.

E. F. L. Sturdee, General Agent, Passenger Department, C.P.R., Boston, Mass., born at St. John, N.B., Mar. 29, 1876.

A. A. Tisdale, Assistant to Vice President and General Manager and Purchasing Agent, Grand Trunk Pacific Ry., Winnipeg, born at Mount Vernon, Ont., Mar. 8, 1874.

G. W. Vaux, General Agent, Passenger Department, Union Pacific Rd., Chicago, born at Montreal, Mar. 21, 1866.

A. D. Watt, District Master Mechanic, Grand Trunk Pacific Ry., Prince George, B.C., born at St. Louis, Que., Mar. 5, 1874.

A. T. Weldon, General Freight Agent, Canadian Government Railways, Moncton, N.B., born at Dorchester, N.B., Mar. 6, 1876.

D. O. Wood, Assistant Export and Import Agent, C.P.R., and acting Assistant Director of Overseas Transport, Montreal, born at Kleinburg, Ont., Mar. 16, 1864.

R. Wright, Division Agent, Ontario Lines, G.T.R., Toronto, born at London, Ont., Mar. 15, 1885.

H. K. York, Car Foreman, C. P. R., Swift Current, Sask., born at Victoria Corner, Carleton Co., N.B., Mar. 20, 1881.

## The Central Railway of Canada's Difficulties.

The Exchequer Court of Canada has refused the Central Ry. Co. of Canada's directors' petition for confirmation of a scheme of arrangement between that company and its creditors. Following this, application was made by the City Safe Deposit & Agency Co. of London, Eng., trustees for the bondholders, asking for the appointment as receiver of F. Stuart Williamson, M.Can.Soc.C.E., of Montreal, formerly the C. R. Co. of C.'s Chief Engineer, and the application was granted.

These judgments are the culmination of various proceedings in the Exchequer Court concerning the affairs of the company, of which C. N. Armstrong, formerly of Montreal, and now living in England, is President, having succeeded to that office upon the death of Senator Owens. The other directors are W. D. Hogg, K.C., E. A. D. Morgan, J. T. Bethune, J. O. Dupuis, and J. D. Welis, the latter having also acted as Secretary. The Central Ry. was projected to run from Montreal to Midland, Ont., with several branches, but only some 20 miles have been partially constructed. Bonds for \$427,000 were sold, principally in England and France.

**Coal Production in Alberta.**—The total output of coal in Albert for 1917, according to a report issued by the Alberta Public Works Mines Branch, Edmonton, was 2,637,829 tons of lignite; 2,206,868 tons of bituminous coal; 118,717 tons of anthracite; and 93,818 tons of briquettes. Of this 1,558,121 tons was shipped by rail to points outside the province, Saskatchewan being the largest consumer. There were 93,081 tons shipped to the U. S. from the Southern Alberta coal fields during 1917.

## Grand Trunk Railway Car Shops at Port Huron.

Canadian Railway and Marine World for January contained a description and ground plan of the new car shops built by the G.T.R. at Port Huron, Mich. The accompanying illustration gives a general view of the plant. Following is a list of the machinery installed in the different buildings:—

**Machine Shops:**—1 arc portable electric welding machine; 4 arc portable electric welding machines; tool room lathe, 16 in. x 10 ft.; engine lathe, 24 in. x 22 ft.; engine lathe, 30 in. x 10 ft.; 42 in. passenger car wheel lathe; vertical boring and turning mill; hydraulic car wheel press; 36 in. x 36 in. x 8 ft. heavy planer; triple geared shaper; milling machine; bolt pointing machine; vertical drilling machine; sliding head drill press; wheel and lever feed drill press; power hack saw; motor head stock floor grinding machines; punching

pression riveter; 2 oil storage tanks; 3 forging furnaces; furnace for no. 9 bulldozer; 2 vertical drilling machines; 2 cutters.

**Upholstering Shop:**—Hair picker; 3 sewing machines; overseaming machine.

**Paint Mill:**—Paint mill; 2 paint mixing machines.

**Pipe Fitters Shop:**—Pipe machine; pipe bending machine.

**Electrician's Shop and Battery House:** Drill press.

### Terminal Facilities at Quebec for National Transcontinental Railway Urged.

The question of providing adequate terminal facilities at Quebec for the Nation-

facilities are provided grain dealers will not change their present arrangements in order to take advantage of the cheaper route. During the year ended Sept. 1, 1916, there were shipped from Port Arthur and Fort William to United States ports 193,000,000 bush. of grain, while 138,000,000 bush. were shipped from the same ports through Canada, a considerable portion of which was ultimately sent overseas via Boston and Portland. None of the purposes for which the N.T.R. was built have therefore been accomplished. The only way the railway can be made to pay its expenses, or become a profitable undertaking, is to provide the facilities necessary for the proper handling of the traffic which it has proved itself capable of handling. The Quebec Board of Trade has repeatedly during the past two years or more urged upon the Dominion Gov-

Grand Trunk Railway Car Shops, Port Huron, Mich. General View.

and shearing machine; cutter reamer and drill grinder; double car axle turn lathe; union planer chuck; 4 in. under gear comb chuck; triple valve test rack.

**Cabinet Shop:**—36 in. band saw; three drum sander; light ball bearing tenoner; 8 in. outside moulding; double spindle shaper; emery wheel stand; single surface planer; saw bench (iron frame); improved saw guard; wood turning lathe; grindstone frame and stone; scroll saw; vertical mortiser; universal saw bench; 16 in. jointer; single spindle boring machine; dowel and rod machine; complete veneer press; steam glue boiler; 4 factory trucks; vertical spindle and disk sander.

**Wood Mill:**—Plain rip saw bench; open side moulder; band re-saw and scroll; self feed rip saw; variety saw bench; automatic railway cut off saw; swing saw; timber planer and sizer; universal horizontal car tenoner; vertical hollow chisel car mortiser; horizontal hollow closed car mortiser; auto car gainer; spindle horizontal car borer; vertical and radial car borer; heavy 16 in. variety wood worker; automatic knife grinder high speed matcher; knife balance machine.

**Blacksmith and Forge Shop:**—Bolt heading, upsetting and forging machine; forging machine; bulldozer; punch and shear, 25 in. throat; punch and shear, 30 in. throat; single punch and shear, 9 in. throat; bolt threader; grindstone frame; radial drill press; steam hammer; com-

al Transcontinental Ry. has been attracting considerable attention there recently, and has formed the subject of correspondence between the Quebec Board of Trade, the Minister of Railways and the Montreal Board of Trade. The first communication was addressed to the Minister of Railways, on Oct. 5, by J. G. Scott, President of the Quebec Board of Trade, and formerly General Manager Great Northern Ry. of Canada and Quebec and Lake St. John Ry. This letter was in reply to one received from the Minister relative to the opening of the Quebec Bridge for traffic. Mr. Scott said, "The National Transcontinental Ry. was projected with the distinct promise in Parliament that it would materially cheapen transportation for farmers of the north-west; that it would give all its ocean traffic to Canadian seaports, and that steamship tonnage would always be available at Canadian seaports to handle all its tonnage." Mr. Scott pointed out that the N.T.R. reduces the distance from the northwest by 314 miles and is so well built that experience has shown that grain can be profitably carried to tide-water at 3c a bushel cheaper than it can be delivered by lake and rail route to Montreal and New York. But owing to the fact that the railway, which has already cost Canada \$150,000,000 has not terminal facilities of its own, it therefore cannot handle the traffic. Until these

ernment the importance of providing these terminals. The suggestion that the proposition recommended is too ambitious to warrant consideration during the period of the war, is not considered by Mr. Scott a sound one. He contends that the government's policy is permitting Canadian trade to drift away to the United States, from which country it will be very difficult to recover it after a few years. The city and province of Quebec are vitally interested in this matter because they have expended large sums to encourage the building of railways to the city. The proposition to build the necessary terminals is not too ambitious to warrant consideration even during the continuance of the war, but on the contrary, is most urgent, especially as terminals for the south shore lines coming into Quebec over the bridge will have to be arranged for immediately.

The Montreal Board of Trade's Secretary in writing to the Quebec Board of Trade on Nov. 8, said, "While in entire accord with your board as to the desirability of such terminal facilities for the N. T. R. being provided at the ports it reaches as are likely to be required, the council of this board is of the opinion that before any action is taken by the government in this connection, it should consider whether such terminal facilities shall, as in the case of Montreal, be provided by the port authorities and paid for

out of the port revenues, or whether the government shall provide them as a charge upon the public funds; and further that if the latter course be decided upon, the government would need to give very careful consideration as to the probable extent of the terminal requirements at the several ports before it enters upon any extension scheme for their provision, the fact that these ports have connection with the N. T. R. not necessarily involving a natural supply of ocean tonnage thereat.

To this letter Mr. Scott replied on Nov. 15, discussing the points raised, restating the arguments used in his letter to the Minister of Railways, and enforcing

them by references to trade returns and other facts. While he agrees that much may have to be sacrificed to the war, yet he claims that the country would be justified in undertaking this expenditure upon terminal facilities for the N.T.R. in order to prevent Canada's trade slipping away from it.

The Montreal Board of Trade replied on Nov. 30, that it saw no reason to change its former opinion; that if the war is prolonged it will be increasingly impossible to do anything in the matter; and that the government is in possession of all information necessary to enable it to provide the terminal facilities whenever it is able and willing to do so.

## The Fuel Situation in War Time.

By T. Britt, General Fuel Agent, Canadian Pacific Railway.

Never in the history of the world has coal been of such vital importance. It is the life blood of the nations engaged in this unfortunate world wide war, and the success of the allies is very largely dependent upon its increased production and careful conservation.

It was customary in former years to send the surplus coal produced in Eastern Canada to the New England states and from western Canada to the western states, Central Canada and that part west of the Great Lakes and as far as Brandon, Man., being supplied with United States coal.

The total production of Canadian coal prior to the war was 15,000,000 tons a year and in the United States between 500,000,000 and 600,000,000 tons; the latter being the production for 1916.

During 1917 Canada will produce nearly 2,000,000 tons less, and the United more than in 1916. But as the increase in consumption is approximately 100,000,000 tons, there is a shortage of 50,000,000 tons to be made up by elimination of wastage.

Sending eastern and western Canadian coal to the U. S. and U. S. coal to central and part of western Canada was with the object of sending coal by the most suitable rail traffic routes and waterways, and providing more even distribution.

If the eastern Canadian coal was moved west it would be against the current of traffic to Fort William, and if western Canadian coal was moved to eastern Canada it would put on to railways the burden of transporting the longest distance on the American continent.

The U. S. Government has been very considerate towards Canada and will continue to be so, the intention being to treat Canada on an equality with any state in the Union, but, while doing this, they expect and insist that we do the same as they are doing, viz., inaugurate a campaign for the intensive conservation of fuel.

It is not the purpose of this paper to point out in what way our share of the deficiency is to be made up, it being principally a matter of good engineering and true fuel conservation in the boiler-room.

Canadian railways have already reduced their annual passenger train mileage by 10,000,000 miles, and have further decreased the fuel consumption by lengthening out the times of other trains and by eliminating fast freights, and instead running trains with full tonnage, and by equipping locomotives with superheaters, and the best known modern means of lessening fuel consumption.

The C. P. R. has been helping the cause by breaking up and using old ties

for fuel—this even at considerable expense of labor, train service, etc., gathering and handling.

The U. S. have also made a start in reducing their passenger service and loading their trains to the tonnage limit, thereby effecting a saving of several million tons of coal per annum.

I think that we should go further, and I would submit for the consideration of this club, the necessity of the mechanical members getting together and inaugurating an active educational campaign among the firemen, both locomotive and boiler house men.

To my mind this should not be done by printed instructions, but by actual illustration by competent firemen. While it is all very well to write a fireman and tell him what he should do, it is far more educational for a competent instructor to show how it should and could be done.

There is a lot of fuel wasted by automatic stokers not receiving intelligent attention from the firemen. The stoker itself when in proper working order will do all that is required of it, but there are, however, occasions when it will not do what it is supposed to, it is then that a properly instructed fireman will give necessary assistance with a consequent saving in fuel.

The majority of our passenger trains, particularly the sleeping cars, are overheated, it being largely left to the discretion of the colored porter as to what is considered a comfortable temperature, the result is that the temperature is kept up to a point that means comfort for the porter and discomfort for the passengers.

Our houses are being maintained at an unhealthy temperature. Pneumonia takes a little more than one man in eight, and therefore it grasps from tuberculosis the grim honor of killing the most human beings.

Man is a marine animal, seven eighths water, he needs cool air and moisture around him, overheated dry air makes him susceptible to disease, and in a temperature of over 68 degrees it is difficult for men and women to exist healthfully.

If the people can be taught to live in this temperature, the number of pneumonia victims will shortly decrease. Fresh cool moist air is the foe of pneumonia, and persons who keep their houses cool and breathe pure fresh air have no fear of it.

Celebrated doctors have decided that 65 degrees is ample for persons in robust health actively engaged. 70 is too much, with 68 we have a fair healthy average.

Many activities which involve large consumption of fuel, and many methods

of using this fuel, which are practically legitimate in time of peace, will be found susceptible of changes which involve very slight sacrifices of material interests but afford opportunities for considerable saving of fuel.

We have in the past been an extravagant people in the use of fuel, and as the war continues it will be necessary to get down to bed rock in the matter of fuel economy.

Manufacturers of non-essentials should during these war times voluntarily forego the manufacturing of such articles, before being compelled to do so by government direction.

Wherever possible water power should be utilized.

In wooded districts, of which there are several in Canada, wood should be utilized wherever possible. One cord of hard wood is equal to one ton of coal, and one ton of coal is released for use in war work for every cord of wood substituted. It will be found that there is a vast quantity of dead wood in many sections of the country. It will also be found that the supply of wood in many communities is sufficient for domestic purposes in these parts. This wood in many instances is destroyed as waste, and its conservation will not only serve the patriotic purpose of conserving coal needed to win the war, but will also prove a measure of economy to the user.

In certain districts prison labor might be used as a means of cutting and collecting wood, where, of course, the labor of the prisoners could be utilized without interference with free labor.

As a matter of fact the one practical and needful thing today is to save coal, in order that our transportation lines and munition plants may have sufficient to carry on. It may be patriotic, and a certain amount of pleasure may be derived from singing "Keep the home fires burning," but the saving of one ton of coal is of more practical benefit towards assisting the boys in the trenches than the singing of one hundred songs.

The foregoing paper was read before the Canadian Railway Club in Montreal recently.

## Industrial Census of Canada.

The Governor-General in council has approved of schedules, under the provisions of the Act respecting the Census and Statistics Revised Statutes of Canada, Chap. 68, for taking of a census of certain industries. There are three sets of schedules, first those for lumber and sawmill products; second, general schedules for miscellaneous manufactures, and, third, supplemental schedules for specific industries. Among the latter are schedules for electric apparatus, foundry and machine shop products, locomotives and railway cars and repairs, shipbuilding and repairs, electric light and power plants.

The supplemental schedule for locomotives and railway cars and repairs, calls for information as to the quantity of material which, with details of the product showing the number of new locomotives and cars built, repairs to locomotives and cars, work done for other companies, repairs to cars of all kinds, and repairs and renewals to bridges and buildings. The shipbuilding schedule calls for information of material used, details of contract work given out, the equipment of the yard as to drydocks and marine railways and the product in the way of steel and wooden vessels of more than five tons gross; of small boats under four tons, of all vessels building but not launched, and of all repair work done.

## The Survival of the Fittest.

By H. Hulatt., Manager of Telegraphs, G.T.R. and G.T.P.R.

In the stone age it was the man with the strongest physique and incidentally the biggest club who came out on top. In military matters today the same factors prevail with, however, one extremely important addition, i.e., highly trained and developed brains. "The pen is mightier than the sword" is an old saying, and just as true today as when first written, yet the pen cannot be strong unless the driving force behind it, i.e., brain power, has been properly developed. In the commercial world, and particularly in railway, telegraph and telephone spheres, due to existing extremely competitive conditions and which conditions there is little doubt will become even more strenuous, the requirements indicated above are specially essential.

You want your company to survive—

## Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

General order 214-A. Jan. 17.—Approving standard tariffs of maximum mileage tolls for carriage of passengers of Great Northern Ry., Maine Central Rd., Temiscouata Ry., and Wabash Ry.

General order 214-B. Jan. 24.—Approving standard tariffs of maximum mileage tolls for carriage of passengers of Boston & Maine Rd., and Moncton & Buctouche Ry.

General order 215. Jan. 17.—Approving standard freight tariffs of maximum mileage tolls of all railways in Canada subject to Board's jurisdiction, re 15 per cent. increase in rates.

General order 215A. Jan. 24.—Approving standard freight tariffs of maximum mileage tolls of Moncton & Buctouche Ry. and Quebec Ry., Light & Power Co.

General order 216. Jan. 24.—Amending general order 188, Apr. 23, 1917, re uniform flagging rules for impassable track by adding after words, "Frequent service shall mean nine or more trains per diem," near end of order, the words, "Fast train service shall mean a service at a speed of 35 miles or more an hour."

General order 217. Jan. 28.—Authorizing railway companies in Eastern Canada subject to Board's jurisdiction to increase aggregate minimum weight of L.C.I. shipments of fresh meat, dressed poultry, packing house products, butter and eggs, when loaded in refrigerator cars on private sidings, from 9,000 to 12,000 lb. a car.

26904. Jan. 15.—Authorizing Grand Trunk Pacific Ry. to divert road between Secs. 8 and 9, Tp. 35, Range 3, west 3rd meridian, East Saskatchewan District to a connection with east and west road between Secs. 8 and 17; and authorizing Blucher municipality no. 343 to grade approaches for road crossing, when company shall move planking from present right-angled crossing, and rescinding order 13227 Mar. 14, 1911.

26905. Jan. 15.—Dismissing complaint of Retail Merchant's Association of Port Arthur and Fort William, Ont., against certain railway companies advancing cartage charges at certain shipping points and collecting same from consignees. (This order was given in full in Feb. issue, pg. 68.)

26906. Jan. 11.—Authorizing Essex Terminal Ry. to build highway crossings over its track at Marentette and Elsmere Aves., Windsor, Ont., cost to be paid by City of Windsor, Ont.

26907. Jan. 11.—Dismissing complaint of Montreal Board of Trade's Transportation Bureau, et al. against proposed limitation by C.P.R. of free time allowed for unloading carloads of grain and grain products at St. John and West St. John, N.B., for delivery to Seely Line, from 10 days, including Sundays and holidays, to 5 days, excluding Sundays and holidays.

26908. Jan. 14.—Authorizing C.P.R. to build highway crossing at Gwynne, Alta., in n.w. 1/4 Sec. 19, Tp. 46, Range 22, C.P.R. not to be obliged to maintain permissive crossing in n.e. 1/4 Sec. 24.

26909. Jan. 14.—Approving G.T.R. location plan, Sept. 17, 1917, showing automatic signals on its Toronto-Hamilton line; work to be completed by July 31.

26910. Jan. 11.—Authorizing Canadian Northern Ry. to build spur for Northwest Biscuit Co., Edmonton, Alta.

26911. Jan. 16.—Ordering C.P.R. to install gates at Sanche St., Ste. Therese, Que., to be operated

It is up to you to make it fit to survive. Are you doing your share towards accomplishing this? The beginning of a year is always an excellent time in which to take stock. Are you studying and endeavoring in every possible way to qualify for something better? If so, you are making yourself fit to survive. If, however, you are simply content to do the work assigned to you to the best of your ability, and waiting, like Mr. Micawber, for "something to turn up," you will find yourself very much in the same predicament as that gentleman; one who has not made himself fit, and consequently one who, in the strenuous race, will be left behind, or dropped out.

If you have men under you, what relationship exists between yourself and your staff, is it one of fear or respect? The former brings with it discontent, slacking and general inefficiency, the latter confidence and loyalty, resulting in success not only to the individual members of your staff and yourself, but also

to your company. Are you the "boss" or the "chief"? The former is a relic of the days of slavery, the latter breathes the spirit which should prevail in this 20th century, viz., leadership, high character, broadness of mind, and helpfulness to those who are subordinate to you.

It is the duty of all, if a subordinate shows signs of ambition, initiative, and a readiness to assume responsibility, to encourage and assist him. By so doing not only will we individually, and our company, reap the benefit during his probationship, but, "when our day's work is done" we shall leave as our legacy to the company that has given us the opportunity of earning our living, efficient and loyal successors. If we endeavor to cultivate this 20th century spirit to even a greater degree hereafter, we shall thereby not only radiate co-operation in its truest sense, but at the same time increase our own and our company's efficiency, to the mutual benefit of ourselves, our company, and the public.

by day and night watchmen, who shall also be employed pending installation; 20 per cent. to be paid out of railway grade crossing fund, 25 per cent. of remainder by Ste. Therese municipality, and 75 per cent. by C.P.R.; cost of operation and maintenance to be paid 25 per cent. by Ste. Therese and 75 per cent. by C.P.R.

26912. Jan. 16.—Relieving C.P.R. from providing further protection at Valley Road, St. Stephen, N.B.

26913. Jan. 17.—Ordering C.P.R. not to exceed 10 miles an hour over crossing of highway, first north of station, at Midnapore, Alta.

26914. Jan. 16.—Relieving C.P.R. from providing further protection at first crossing north of Paquin, Que.

26915. Jan. 16.—Authorizing C.P.R. to connect spurs for Forsythe Elevator Co., with Canadian Northern Ry. at Transept, Man.

26916. Jan. 17.—Establishing collection and delivery limits of Canadian and Dominion Express Cos., in Timmins, Ont.

26917 to 26919. Jan. 19.—Approving Bell Telephone Co. agreements with Drummondville Telephone Co., Drummond, Bagot and Yamaska Counties, Que., Dec. 14, 1917; Crown Hill Telephone Co., Simcoe County, Ont., Dec. 13, 1917; and La Cie Telephone Locale St. Georges de Windsor, Richmond and Wolfe Counties, Que., Dec. 31, 1917.

26920. Jan. 18.—Authorizing G.T.R. to build spur for Canadian Chicago Bridge & Iron Co., Bridgeburg, Ont.; and approving clearances.

26921. Jan. 21.—Amending order 26871, Dec. 26, 1917, re C.P.R. spur in Ascot Tp., Que.

26922. Jan. 18.—Authorizing G.T.R. to build spur from Lot 17 to Lot 22, west of Peel St., Penetanguishene, Ont.

26923. Jan. 21.—Authorizing G.T.R. to rebuild highway across its tracks in Fullerton Tp., Ont., mileage 128.91 from Black Rock (Mitchell).

26924. Jan. 22.—Authorizing Manitoba Government and J. H. Ashdown Hardware Co. to appeal to Supreme Court of Canada from general order 213, Dec. 26, 1917, re 15 per cent. rate increases.

26925. Jan. 22.—Approving Northern Express Co.'s standard mileage tariff of maximum tolls, C.R.C. 40.

26926. Jan. 23.—Authorizing Canadian Northern Ry. to appeal to Supreme Court of Canada from general order 213, Dec., 1917, re 15 per cent. rate increases.

26927. Jan. 23.—Approving standard form of release of liability in respect to travelling in non-passenger cars, for use by C.P.R., C.N.R., G.T.R., and G.T.P.R., and rescinding orders 25025, 24789 and 24917, dated respectively May 31, Mar. 6, Apr. 22, 1916.

26928. Jan. 24.—Authorizing G.T.R. to build two spurs for H. Corby Distillery Co., Corbyville, Ont.

26929. Jan. 24.—Approving plan and specifications of work to be done on Owen stone ditch, under G.T.R. in Lots 11 and 12, Con. 2, Charlotteville Tp., Ont.

26930. Jan. 24.—Approving plan and specifications of work to be done on Grace Davidson ditch, under G.T.R. in Lots 14 and 14, Con. 3, Charlotteville Tp., Ont.

26931. Jan. 25.—Amending order 2030, Nov. 12, 1906, re interlocking plant at crossing of G.T.R. by Canadian Northern Ontario Ry. in Hawkesbury, Ont.

26932. Jan. 18.—Relieving Canadian Northern Ry. from providing further protection at highway crossing east of Elrose, Sask.

26933. Jan. 26.—Authorizing G.T.R. to build two spurs for Riordon Pulp & Paper Co., Hawkesbury, Ont.

26934. Jan. 18.—Ordering Canadian Northern

Ry. to install 18 in. culvert at mileage 50, Brazeau Branch, Alta., by May 31.

26935. Jan. 19.—Extending for three months from date time within which G.T.R. shall install gates at Burwell, Adelaide and Rectory Sts., London, Ont., as required by order 26527, Sept. 11, 1917.

26936. Jan. 19.—Authorizing G.T.R. to use bridge at Lynn Road, Elizabethtown Tp., Ont.

26937. Jan. 18.—Ordering New York Central Rd. within 60 days to install improved automatic hell at main street at St. Stanislas, Que., 20 per cent. of cost to be paid out of railway grade crossing fund.

26938. Jan. 26.—Authorizing Nelson & Fort Sheppard Ry. (G.N.R.) to build spur near Hall, B.C., for Mankin Lumber & Pole Co.

26939. Jan. 28.—Suspending, pending hearing by board, proposed charge of 10c. by Bell Telephone Co. for all calls through North Gower, Kemptville and South Mountain centrals.

26940. Authorizing Bell Telephone Co. to erect certain telephone lines in Windsor, Ont.

26941. Jan. 28.—Dismissing application of City of Windsor, Ont., for order fixing conditions upon which Bell Telephone Co. may carry on business within the city.

26942. Jan. 28.—Ordering G.T.R. to install bell at Main St., Komoka, Ont., by June 1, 20 per cent. of cost to be paid out of railway grade crossing fund; G.T.R. to build approach to side road in accordance with board's standard regulations.

26943. Jan. 24.—Authorizing C.P.R. to build highway crossing over its track near mileage 24, Revelstoke-Arrowhead Branch, B.C.

26944. Jan. 28.—Establishing collection and delivery limits of express companies in Winnipeg, Man.; effective Feb. 18, and rescinding order 22346, July 22, 1914.

26945. Jan. 25.—Establishing collection and delivery limits of express companies in Windsor, Ont., effective Jan. 28, and rescinding order 22315, Aug. 4, 1914.

26946. Jan. 29.—Approving agreement, Jan. 19, between Bell Telephone Co. and Tilbury East Tp., Ont.

26947. Jan. 28.—Extending to Mar. 1, time within which Pere Marquette Ry. shall erect station and freight shed at Tupperville, Ont.

26948. Jan. 29.—Ordering C.P.R. not to exceed 10 miles an hour over first public crossing south of Brome station, Que.

26949. Jan. 29.—Authorizing Union Bank of Canada to repay to M. J. Hawkinson, President and Manager Bienfait Commercial Co., Estevan, Sask., \$629 deposited with it to board's credit, with accrued interest, if any.

26950. Jan. 29.—Authorizing Saskatchewan Government to make highway over C.P.R. Reford Branch, between Secs. 28 and 33, Tp. 36, Range 21, w. 3rd meridian.

26951. Jan. 29.—Approving agreement, July 6, 1916, between Bell Telephone Co. and The Ferry Road Telephone Co., Lanark and Leeds Counties, Ont.

26952. Authorizing G.T.R. to build spur for Consumers Metal Co., Lachine, Que.

26953. Jan. 29.—Authorizing Canadian Northern Ry. to take whole of Lot F, according to plan of May 5, 1905, in North Bay, Ont., the property of John and F. Ferguson and Andrew Craig.

26954. Jan. 30.—Approving location of Canadian Northern Ry. station at Erickson, Man.

26955. Jan. 31.—Authorizing Greater Winnipeg Water District to lay pipe line under Canadian Northern Ry. at 3 points, near Winnipeg.

26956. Jan. 31.—Ordering Grand Trunk Pacific Ry. to install standard 2-car stock yard at Ardrossan, Alta., by Sept. 1.

26957. Jan. 30.—Relieving C.P.R. from providing further protection at Main St., Sutton, Que.  
 26958. Jan. 31.—Authorizing C.P.R. to appeal to Supreme Court of Canada from order 26393, Aug. 3, 1917, which ordered it to build public crossing over its right of way between Lots 8 and 9, Con. 5, Kirkpatrick Tp., Ont.  
 26959. Jan. 30.—Ordering that 35 per cent. of the cost of work on bridge at London St., Windsor, Ont., referred to in order 25053, June 13, 1916 be paid by city.  
 26960. Feb. 1.—Authorizing C.P.R. to build extension to spur for City of Moose Jaw, Sask.  
 26961. Feb. 1.—Authorizing C.P.R. to build spur for A. Caruthers Co., Moose Jaw, Sask.  
 26962. Feb. 1.—Authorizing Greater Winnipeg Water District to lay pipe line under Grand Trunk Pacific Ry. at point shown on plan.  
 26963. Feb. 1.—Authorizing C.P.R. to build spur for First National Investment Co., Roche Perce, Sask.  
 26964. Feb. 1.—Approving, for use in railway passenger cars within the Board's jurisdiction, the Pyrene fire extinguisher as shown on plan dated New York Sept. 16, 1914.  
 26965. Feb. 2.—Authorizing C.P.R. to build two tracks across G.T.R. overhead, at mileage 56.8, Galt Subdivision, Ont.  
 26966. Feb. 4.—Ordering C.P.R. to install standard 3-pen stock yard at Armelgra, Alta., as soon as convenient in spring; to be completed not later than Aug. 1.  
 26967. Feb. 4.—Ordering Grand Trunk Pacific Ry., when view of tracks under coal chute, authorized by order 15899, Feb. 1, 1912, is obstructed by weather or other conditions, to protect workmen against movement of locomotive or car under plant by placing man on forward end of locomotive or car to warn workmen on tracks on which movement is being made.  
 26968. Jan. 30.—Ordering Canadian Northern Ry. to keep station waiting rooms at Bruderheim, Lamont, Chipman, Mundare, Lavo, Ranfurly, Innisfree, Minburn, Manville, Islay, and Kitseoty, Alta., open and when necessary heated and lighted 30 minutes previous to scheduled arriving of passenger trains and to keep same open until departure of such trains, whether on time or not.  
 26969. Feb. 4.—Amending order 21167, Jan. 6, 1914, re Bell Telephone Co.'s tariffs.  
 26970. Feb. 6.—Authorizing G.T.R. to build track and siding, across diverted road allowance between Lots 20 and 31, Con. 6, Essa Tp., Ont., and connect with C.P.R. for interswitching, at Utopia.  
 26971. Feb. 9.—Relieving Toronto, Hamilton & Buffalo Ry. from providing further protection at Canboro Road, second crossing west of Fenwick station, Ont.  
 26972. Feb. 9.—Ordering Grand Trunk Pacific Ry. not to exceed 12 miles an hour on curves, with its trains from Lobstock Jet., to Chip Lake, Alta.  
 26973. Feb. 12.—Relieving C.P.R. from providing further protection at Wharf Road, Sand Point.  
 26974. Feb. 12.—Amending order 26939, Jan. 28, re charges for telephone interchange calls between North Gower, Kemptville and South Mountain, Ont.  
 26975. Feb. 12.—Approving clearances at coal tipples and works proposed over and adjacent to Grand Trunk Pacific Ry. spur to serve Great West Coal Co., Ltd., in s. 6, 1/4 7, Tp. 53, Range 23, west 4th meridian, Alta.  
 26976. Feb. 9.—Approving location and plans of G.T.R. station to replace one at Pinkerton, Ont., destroyed by fire Sept., 1917.  
 26977. Feb. 11.—Amending order 25914, Mar. 2, 1917, re highway crossing of C.P.R. between Secs. 28 and 33, Tp. 43, Range 11, west 4th meridian, Alta.  
 26978. Feb. 12.—Approving plan, etc., of work to be done on Dolbear-Gray drain, under G.T.R. in Cons. 2 and 3, Brooke Tp., Ont.  
 26979. Feb. 12.—Amending order 26908, Jan. 14, re C.P.R. highway crossing at Gwynne, Alta.  
 26980. Feb. 14.—Authorizing C.P.R. to build spur for Stewart Sheaf Loader Co., Winnipeg.  
 26981. Feb. 11.—Authorizing G.T.R. to build spur for A. H. Waite, Oro Tp., Ont.  
 26982. Feb. 11.—Authorizing Saskatchewan Government to make highway crossing over C.P.R. Kelfield Branch, in s. w. 1/4 Sec. 34, Tp. 34, Range 19, west 3rd meridian.  
 26983. Feb. 11.—Authorizing G.T.R. to build spur for D. W. Carter, Port Colborne, Ont.  
 26984. Amending order 25910, Mar. 2, 1917, re extension of Newlands St. across C.P.R. at Lougheed, Alta.  
 26985. Feb. 11.—Ordering G.T.R. to restrict operation of its trains over Ottawa Electric Ry. crossing at Booth St., Ottawa, to between 11 p.m. and 6 a.m., daily; except when necessary to make special movements between 6 a.m. and 11 p.m., G.T.R. first to notify O.E.R. of its intention to use crossing, and to protect movement in both directions. Between 11 p.m. and 6 a.m., O.E.R. to stop cars before passing over crossing; and conductor of each car to see tracks are clear, then signal to motorman to proceed.  
 26986 to 26987. Feb. 12.—Approving agreements between Bell Telephone Co. and Plum Hollow & Elmdale Telephone Co., Leeds County, Ont., Mar. 29, 1917; and West Lake Telephone Co., Algonia District, Ont., Jan. 25.  
 26988. Feb. 11.—Authorizing C.P.R. to build spur for Martin-Senour Co., Vancouver, B.C.  
 26989. Feb. 15.—Authorizing C.P.R. to remove station agent at Pakowki, Alta.  
 26990. Feb. 16.—Ordering Kettle Valley Ry. to

erect standard 1-A station building, as required by general order 54, Jan. 6, 1910, at Manning siding, B.C., by May 1.

26991. Feb. 18.—Ordering G.T.R. and C.P.R. to make effective following train service between Ottawa and Montreal: Leaving Ottawa, G.T. 8.15 a.m., C.P. 9.15 a.m.; C.P. 3.30 p.m.; G.T. 4.30 p.m.; leaving Montreal, C.P. 8.15 a.m., G.T. 9.15 a.m.; G.T. 3.30 p.m., C.P. 4.30 p.m.; to commence Feb. 24, until May 1.

General order 218, Feb. 11.—Modifying general order 78 (order 14115), July 14, 1911, prescribing

rules and instructions for inspection and testing of locomotive boilers and their appurtenances, to be adopted by railway companies, subject to board's jurisdiction; same to remain in effect until Dec. 31.

General order 219, Feb. 9.—Amending general orders 95 and 160 to provide that during existence of Canadian Railway Association for National Defence, and continuance of zone divisions under chairmen, said chairmen, instead of railway companies, shall file copies of all embargo notices, with the board, within time limited by said orders.

## Railway Rolling Stock Notes.

The G.T.R., during January, received 4 snow ploughs from Russell Snow Plough Co.

The G.T.R. has ordered 25 switching locomotives to be built at its Montreal shops.

The Essex Terminal Ry. has ordered 2 mogul (2-6-0) locomotives, 106,000 lb., cylinders 19 x 26 in., from the Montreal Locomotive Works.

Chilian State Railways have ordered from Montreal Locomotive Works, 20 Mikado (2-8-2) locomotives, 195,000 lb., cylinders 22 x 28 in.

Rhodesian Railways, South Africa, have ordered from Montreal Locomotive Works, 9 mountain type locomotives, 172,000 lb., cylinders 22 x 24 in.

The Grand Trunk Pacific Ry. has bought 18 all steel Hart-Otis hopper dump cars from the Birds Hill Sand Co. They have been numbered 393700 to 393717.

The Grand Trunk Pacific Ry. has bought 13 express refrigerator cars from Federal Refrigerator Despatch Co. They have been numbered 6050 to 6062.

Canadian Government Railways have received 20 mikado locomotives from Canadian Locomotive Co., and some of them have been loaned to the G.T.R.

Canadian Government Railways have ordered 14 sleeping cars and 7 dining cars from the Pullman Co., to be delivered in May. The cost will, it is said, be about \$850,000.

The C.P.R., between Jan. 15 and Feb. 15, received 146 steel underframe coal cars and 3 decapod locomotives from its Angus shops; and 2 snow ploughs from its Winnipeg shops.

Canadian Government Railways have ordered 6 six-wheel switching locomotives, 251,000 lb. in working order, for the Intercolonial Division, from Canadian Locomotive Co., for delivery in June.

The Timiskaming & Northern Ontario Ry. expected to receive delivery of the 100 steel frame box cars of 40 tons capacity, ordered from Canadian Car & Foundry Co. in June, 1917, towards the end of February.

Canadian Government Railways have ordered 4 ten-wheel locomotives, 162,000 lb. in working order with tender, 3 1/2 ft. gauge, for the Prince Edward Island Division, from Canadian Locomotive Co., for delivery in June.

South African Railways have ordered, from Montreal Locomotive Works, 8 Mallet locomotives, 194,000 lb., cylinders 16 1/2 and 26 x 24 in.; 10 mountain type locomotives, 200,000 lb., cylinders 22 x 28 in.; and 20 mountain type locomotives, 195,000 lb., cylinders 22 x 26 in.

The Minister of Railways has under consideration the ordering of a large amount of additional rolling stock for Canadian Government Railways and for the Canadian Northern, and as well possibly as soon to be rented to other railways which are short of equipment. The orders of locomotives, passenger and

freight cars will probably aggregate about \$7,000,000 or more.

Contracts for rolling stock placed on this continent by Russian representatives, have, it is reported, been suspended indefinitely, but that there is little danger of their being actually cancelled, the amount involved being virtually guaranteed. The Russian situation seems to be changing almost daily, but it scarcely seems probable under existing circumstances, that any of the Russian rolling stock built on the American continent, and remaining undelivered, will be shipped.

Following are details of the 4 narrow gauge 10-wheel locomotives, which Canadian Government Railways have ordered from Canadian Locomotive Co., for the Prince Edward Island Ry.:

Gauge	31 1/2 ft.
Weight on drivers	74,000 lb.
Weight, total	95,000 lb.
Wheel base of engine, rigid	11 ft. 1 in.
Wheel base of engine, total	21 ft. 3 in.
Wheel base, engine and tender	43 ft. 9 in.
Heating surface, firebox	94.5 sq. ft.
Heating surface, tubes	1,054 sq. ft.
Heating surface, total	1,148.5 sq. ft.
Driving wheels, diam.	57 in. over tire
Driving wheel centres	cast steel
Driving journals	7 by 7 in.
Cylinders, diam. and stroke	16 1/2 by 22 in.
Boiler, type	extended wagon top
Boiler pressure	175 lb.
Tubes, no. and diam.	184—1 3/4 in.
Tubes, length	12 1/2 ft.
Brakes	Westinghouse American Superheater
Superheater	Locomotive Superheater Co., Schmidt Type A.
Valve gear	Walschaert
Weight of tender loaded	69,700 lb.
Capacity, water	3,000 imp. gall.
Capacity, coal	4 tons
Trunk, type	4 wheel
Trunk wheel, diam.	31 in.
Wheel, type	Steel centre, steel tired
Journal, diam. and length	4 by 6 1/4 in.
Brake beam	Simplex

Following are chief details of the 6 six-wheel switching locomotives which Canadian Government Railways have ordered from Canadian Locomotive Co., for delivery by June:

Weight, total	154,400 lb.
Wheel base	12 ft.
Wheel base, engine and tender	41 ft. 1 1/4 in.
Heating surface, firebox	132 sq. ft.
Heating surface, tubes	1,391 sq. ft.
Heating surface, total	1,523 sq. ft.
Driving wheels, diam.	51 1/2 in.
Driving wheel centres	cast iron
Driving journals	8 1/2 by 11 in.
Cylinders, diam. and stroke	21 by 26 in.
Boilers, type	Radial stay, straight top
Boiler pressure	180 lb.
Tubes, no. and diam.	158—2 in.; 21—5 3/8 in.
Tubes, length	12 ft. 5 in.
Brakes	Westinghouse American Superheater
Superheater	Locomotive Superheater Co., Schmidt type A.

Reversing gear	Casey-Cavin
Valve gear	Walschaert
Weight of tender loaded	96,600 lb.
Tank capacity	3,500 gall.
Tank, type	sloping back
Coal capacity	6 tons
Trunk type	Arch bar
Trunk wheel, diam.	34 in.
Wheel, type	Steel centre, steel tired
Journals, length and diam.	8 by 4 1/4 in.
Brake beam	Simplex

**Locomotive Men for France.**—The U. S. War Department has asked the Brotherhood of Locomotive Engineers to furnish 1,000 locomotive men, and 50 men for tank services, in France.

# Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

**Calgary & South Western Ry.**—The Alberta Legislature is being asked to incorporate a company with this title to build a railway from Calgary, southwesterly to the coal fields on Fish Creek, 70 miles. Clarke, Carson, McLeod & Co., Calgary, are solicitors for applicants.

**Capilano Timber Co.**—Since starting work in May, 1917, on its logging railway from east of the Vancouver creosoting works, North Vancouver, B.C., grading has been completed for 7.1 miles to a point opposite the Vancouver city waterworks intake, and rails have been laid from the water front northerly for about three miles. The line is carried across the Capilano River by a 200 ft. Howe truss span. It is proposed to extend this line, as the company's logging operations develop, to a point with 5 miles of Howe Sound, 6 miles from Britannia and 13 miles from Squamish, on a gradient not exceeding 1½%. A suggestion was made in Vancouver recently that this line could be taken over by the Provincial Government, standardized and made part of the Pacific Great Eastern Ry. between North Vancouver and Squamish. G. C. Johnston is General Manager of the C.T. Co. (Sept., 1917, pg. 350.)

**Central Canada Ry.**—A Peace River Crossing, Alta., dispatch, Feb. 18, states that S. C. Hill, who is in charge of the construction of the bridge across the Peace River at that point, expects to have pier 8, the last of the deep water piers, completed by the end of March. At the beginning of the winter all the piers, pedestals and abutments had been completed, with the exception of piers 6, 7 and 8, the three deep water piers, for which the underwater parts had been built. Pier 6 is completed, and pier 7 is practically finished, while all the preparatory work is ready for pier 8. Each of these piers is located in 40 ft. of water, and is carried to rock foundations, while they rise to 33 ft. above low water. All the work done on the piers has been done within frame buildings erected on the ice over the site of the pier. These buildings are kept heated day and night so that all the concrete mixing and other work can be carried on under favorable conditions. The piers are protected from the pressure of ice by breakwaters on the upper side, each of which requires 500 tons of concrete in addition to large quantities of rock. It is expected that the steel work on the bridge will be erected during the summer. (Jan., pg. 12.)

**Edmonton, Dunvegan & British Columbia Ry.**—The Dominion Parliament is being asked to authorize the extension of the railway from Tp. 71, Range 7, west of the 6th Meridian, northwesterly to the boundary line between Alberta and British Columbia, passing the southerly end of Swan Lake, 65 miles.

**Grand Trunk Pacific Ry.**—Press reports from Prince Rupert, B.C., state that the company proposes to start construction on a brick passenger station there, to cost \$250,000. It is also proposed to build a locomotive house and machine shop at Cameron Cove, together with a wharf 1,000 ft. long, as a part of its Pacific terminal development. W. P. Hinton, Vice President and General Manager, has just returned to Winnipeg from a trip of inspection over the line. (Feb., pg. 57.)

**Great Northern Ry.**—The Vancouver, Victoria & Eastern Ry. & Navigation Co. is asking the Dominion Parliament to

ratify an agreement between the company and the Northern Pacific Ry. respecting the equal joint possession and use of the company's tracks from the International Boundary at Sumas, to Vancouver, B.C.

Plans for the construction of a large shed on the company's dock at Vancouver, have been deposited with the city's building inspector. The new shed will be 200 x 100 ft., and is estimated to cost \$30,000. (Feb., pg. 57.)

**Greater Winnipeg Water District Ry.**—A press report states that it is proposed to build a spur on Dawson Road, St. Boniface, and some additional siding accommodation during this year. (Jan., pg. 12.)

**Hudson Bay Ry.**—It was reported in Winnipeg, Feb. 21, that the Canadian Railway Association for National Defence had recommended the taking up of 300 miles of rails on this railway for use on other Canadian lines. (Jan., pg. 12.)

**Intercolonial Ry.**—Tenders are under consideration for the building of a frame mail, baggage and express building at Sackville, N.B., and for a frame station at St. Octave, Que.

A press report states that it is proposed to extend and improve the Richmond yards, Halifax, N.S., at an estimated cost of \$6,000. We are officially advised that this not the case.

**Kettle Valley Ry.**—A press report states that the contract for the building of the branch line from Princeton to the Copper Mountain Mines, B.C., will not be let for some time yet. The last date for receiving tenders was originally Jan. 21, but the absence in the east of J. J. Warren, President, is said to have delayed matters. (Feb., pg. 57.)

**Kettle Valley Ry.**—The Dominion Parliament is being asked to extend the time for the building of the following lines:—From near Summer Creek, on One Mile Creek, to the Copper Mountain and Voight Mining Camps, 15 miles; from Princeton; from Vernon, southerly or southeasterly, by Kelowna to Princeton; from near Tulameen, westerly along the Tulameen River, for 50 miles; from near Princeton to the International Boundary, at Osoyoos Lake; from Otter Summit, to the Aspengrove district, 30 miles. Authority is also asked to issue bonds for \$70,000 a mile in respect of the first of the above mentioned lines. (Feb., pg. 57.)

**Magdalen River Ry.**—The Quebec Legislature has extended the time for the building of this projected railway along the Magdalen River valley to Little Falls, and authorizing the building from that point southerly and westerly to connect with the Atlantic, Quebec and Western Ry., and the Canada and Gulf Terminal Ry. at Gaspé, or any other point on either or both railways, also the power if the railway is built to Gaspé, to build wharves, docks and other deep water terminals. F. Murphy, New Carlisle, Que., is Secretary of the company. (Jan., pg. 12.)

**Pacific Great Eastern Ry.**—A proposition is being considered by the business men of North Vancouver for the electrification of the section of the line from North Vancouver to Whytecliffe, 13 miles. As soon as the details have been completed locally, the matter will be taken up with the Provincial Government. No grading has been done between Whytecliffe and Squamish, the ocean terminal.

The line has been completed from Squamish to Clinton, 167.7 miles, and a train service was in operation until the severe weather at the beginning of January. One train was run as far as D'Arcy, mileage 86, Jan. 26, but subsequently all traffic was closed down, and operations of every kind suspended. Grading has been nearly completed through to Prince George, some track has been laid beyond Clinton, and some bridge work done, but everything in the way of operation and construction was stopped by B.C. Government orders, Feb. 13.

It is held that upon a settlement of matters with the contractors, and the assurance of a Dominion subsidy, the B.C. Government will complete the line to Prince George, and provide for its operation. The question of the projected extension from Prince George to meet the Edmonton, Dunvegan and British Columbia Ry. in the Peace River Valley will, it is said, also be taken up. (Feb., pg. 57.)

**Quebec & Atlantic Ry.**—The Quebec Legislature has incorporated a company with this title to build a railway from Quebec to Chicoutimi, thence to the provincial boundary near Cape St. Charles, with branch lines northerly and southerly from the main line, and to make connection in Quebec City with the National Transcontinental Ry. L. Caron, Quebec, is interested in the company. (Dec., 1917, pg., 471.)

**Rouge River Ry.**—The Quebec Legislature has incorporated a company with this title to build a railway from near Grenville, Que., northerly along the valley of the Rouge River, and on to the National Transcontinental Ry.

**Toronto, Hamilton & Buffalo Ry.**—The Hamilton, Ont., City Council has approved the draft lease to the company of a part of the Mountain Park property for yard extension purposes. The rental is fixed at \$933 a year, with an annual payment of \$300 for damage to trees. The company and the Board of Railway Commissioners have yet to approve of the lease.

The Dominion Parliament is being asked to authorize the company to build an extension of its present line from its northwesterly terminus at Hamilton to Toronto, and to authorize it to enter into any agreements with the C.P.R. and the G.T.R. for a term exceeding 21 years, authorized by sec. 364 of the Railway Act. This section covers agreements for operation, right of way and other matters connected with the operation of a railway, all of which to be made subject to the Board of Railway Commissioners' approval.

**Whitby, Ont.**—We are advised that the Dominion Military Hospitals Commission is building, with its own material and labor, some railway tracks on the Provincial Asylum premises at Whitby, Ont., over which it is intended to operate a small locomotive and passenger car for carrying invalided soldiers between the hospital and the G.T.R. main line station. The commission will use a portion of the G.T.R. freight siding which at present serves the hospital buildings.

The Military Hospitals Commission, we are officially advised, has entered into an agreement with the G.T.R. under which the company permits the commission to operate a donkey locomotive and street car over its siding from the Whitby Jct. station, on the main line, to the Military Convalescent Hospital, 0.75 of a mile.

The only track laid by the commission is a siding at the north end, on to which the locomotive and car will be run to leave the G.T.R. siding free for switching purposes. At the south end of the siding a small siding has been laid, running for a few hundred yards over to the hospital. This action was taken owing to the impassable condition of the roads in the locality during the late autumn, winter and early spring, making it practically impossible for motor vehicles to transport invalid soldiers to and from the station. (Feb., pg. 77.)

### Freight and Passenger Traffic Notes.

The Prince Edward Island Ry. cut off four trains Feb. 4 owing to shortage of locomotive power.

The C.P.R. ticket office in Ottawa, it is said, will be moved, May 1, from the corner of Spark and Elgin Sts., to 85 Spark St.

The C.P.R. steamship from Vancouver, B.C., for Seattle, Wash., started on Feb. 22 to leave Vancouver at 11 p.m. instead of 11.30 p.m.

The C.P.R. has started operating a daily train service on its Okanagan Valley line from Sicamore, B.C., in place of the tri-weekly service operated hitherto.

The White Pass & Yukon Ry., for the first time in its history, had to use a rotary snow plough on its White Horse-Cariboo section in January, according to a Vancouver report.

Railway companies generally are urging shippers to load cars to their full capacity and to load and unload them as speedily as possible, for the purpose of conserving rolling stock, and expediting traffic.

The Salisbury & Albert Ry.'s first train from Salisbury through to Albert, N.B., for nearly six weeks, was run Feb. 8, the section from Salisbury to Hillsboro having been opened about two weeks previously.

The C.P.R., it is reported, does not intend to run any special trains out of Winnipeg to the beaches on Lake Winnipeg next summer. An adequate schedule of regular trains will be provided to take care of the traffic.

The Canadian Government Railways car ferry between Borden, P.E.I., and Cape Tormentine, N.B., during the first three months of its operation, carried 885 loaded cars from the mainland to the island; 780 loaded and 175 empty cars from the island to the mainland.

A Winnipeg press report, Feb. 13, states that in the curtailment of passenger traffic throughout the west, under the direction of the Canadian Railway Association for National Defence, there will be no reduction in the service on branch lines where there is only one train a day operated.

The Board of Railway Commissioners has ordered the following passenger train service between Montreal and Ottawa from Feb. 24 to May 1:—Leaving Montreal, C.P.R., 8.15 a.m.; G.T.R., 9.15 a.m.; C.T.R., 3.30 p.m.; C.P.R., 4.30 p.m. Leaving Ottawa, G.T.R., 8.15 a.m.; C.P.R., 9.15 a.m.; C.P.R., 3.30 p.m.; G.T.R., 4.30 p.m.

The Alberta & Great Waterways Ry. put on a train service from Edmonton to the rail head 17 miles from McMurray, Alta., Jan. 28. The train runs over the Edmonton, Dunvegan & British Columbia Ry. to Carbondale, 14 miles, thence over its own tracks. The regular train service has hitherto been operated as far as Lac

la Biche, mileage 113 from Carbondale; the new terminus is at mileage 274.

Upon compliance with the Immigration Department's requirements, persons returning to Canada from temporary stays in the U.S. may obtain refund of head tax, in cases where it was collected from them and held on deposit during the time they were visiting in the U.S. The certificates must be returned to the U.S. immigration officer issuing them, who will authorize the payment of the tax deposited with the agent at the point where the ticket was issued.

The Great Northern Ry. is applying to the Board of Railway Commissioners to authorize the discontinuance of its train service between Cloverdale, Haselmere and Melrose, B.C. Appended to the application is a statement showing that the cost of operating the 7.8 miles between these points was \$305.58, while the receipts were \$120. This is a piece of line connecting the New Westminster Southern Ry., with its branch to Port Junction; and the Canadian Northern Pacific Ry. near Rosedale, and operated as part of the Vancouver, Victoria & Eastern Ry.

**Dominion Government Purchases.**—An order in council passed at Ottawa, Feb. 6, provides that the order in council of May 8, 1915, establishing the War Purchasing Commission, and the orders amending the same, shall apply to all purchases to be made by the different government departments, of any materials, supplies, stores, goods or articles of any kind. The War Purchasing Commission is directed to take into consideration, among other things, the existing arrangements for the purchase of supplies for the Canadian Government Railways, and any other purchases in respect to which it may be difficult, without detriment to the public interest, to enforce the order. Pending such consideration and report, the commission may, in respect of such purchases, modify the order to such an extent as may be deemed necessary or desirable in the public interest.

**Heating of Waiting Rooms.**—A circular issued by the Board of Railway Commissioners, on Feb. 11, requires railway companies to show cause, within 30 days of the receipt of the circular, why an order should not issue, requiring all companies, at agency stations where there is no night staff, to open station waiting rooms and, when necessary, provide heat and light, at least 30 minutes prior to the scheduled arriving time of all passenger trains, and to keep the waiting rooms open until the departure thereof, irrespective of whether the trains are on schedule time or not.

**Flagging Rules for Impassable Track.**—The Board of Railway Commissioners passed general order 216, Jan. 24, amending general order 188, of April 23, 1917, prescribing regulations for the uniform maintenance of way flagging rules for impassable track, by adding after the words "Frequent service shall mean 9 or more trains per diem," near the end of the order, the words "Fast train service shall mean a service at a speed of 35 miles or more per hour." General order 188 was published in full in Canadian Railway and Marine World for July, 1917, pg. 277.

**Right of Way Taxation.**—Judgment was given, on Feb. 4, in a British Columbia court, declaring that the land secured in the cities of Vernon and Armstrong, B.C., for right of way for a C.N.R. branch through those places was not taxable, but that all other land purchased by the company was taxable.

### A Loan Company's Unfortunate Railway Investment.

The Dominion Permanent Loan Co., Toronto, is being wound up under an order of an Ontario court. The company has been in existence for a number of years, F. M. Holland being its General Manager. It came forward in the railway financing field in 1901, at which time the late Hon. J. J. Stratton, M.L.A., of Peterborough, was its President, and the late T. P. Coffee, a Toronto lawyer, was largely interested. At that time Tracy W. Holland became interested in the charter of the Spokane & British Columbia Ry., incorporated in the State of Washington, and the D.P.L. Co. was the source from which it was financed. The S. & B.C. Ry., in the name of J. R. Stratton, T. P. Coffee, T. W. Holland and others, secured the incorporation of the Kettle Valley Ry. for the purpose of building the Canadian end of its projected railway. This line was surveyed from Grand Forks, southerly to the International Boundary, about three miles, which, with the extension to Republic in Washington, was opened for traffic in 1903. The company subsequently acquired, after considerable litigation with the Great Northern Ry. over some Indian reserve property, a right of way from Republic to Spokane, but has never done any construction. The company secured power from the Dominion Parliament for the building of lines east and west and north from Grand Forks, but nothing was done in the way of construction until the C.P.R. became interested, and took over practically the whole of the company's Canadian interests.

The same interests as were associated with the K.V. Ry. subsequently became interested in the old Musquodoboit Valley Ry. in Nova Scotia, and projected in connection with it the Halifax North Eastern Ry., together with a bridge across the strait to Cape Breton Island. After futile attempts to float bonds in England, the project was abandoned, and the line has been built by the Dominion Government as an Intercolonial Ry. branch.

The Dominion Permanent Loan Co.'s assets are reported to consist largely of the 30 miles of the Spokane & B.C. Ry., in the State of Washington, with the right of way from Republic to Spokane; some rolling stock; an interest in a land company, and some claims against the C.P.R. in respect of the Kettle Valley Ry. The S. & B.C. Ry. was carried by the loan company as an asset valued at \$4,000,000.

**Shipment of Silver Spruce Prohibited.** Under the War Measures Act, 1914, the Dominion Government has made regulations by which no railway or other transportation company shall accept any shipment of silver spruce, unless the bill of lading is accompanied by a certificate that such shipment contains no silver spruce suitable for the manufacturing of aeroplanes. This regulation applies to all silver spruce offered for shipment to any consignee except the Imperial Munitions Board. The penalty for infraction of the regulation is \$500.

**Vancouver Transportation Club.**—Following are the officers for the current year:—President, R. Greenhalgh; First Vice President, E. Farr; Second Vice President, C. H. Daniels; Directors: H. S. Durkee, J. A. Jewett, A. B. Coulet, R. Hay, R. M. McLean, W. G. Connolly, E. G. Gordon. The honorary officers are: President, R. Marpole; First Vice President, D. E. Brown; Second Vice President, H. Swinford.

# Mainly About Railway People Throughout Canada.

Lady Mann has taken a house on Westmount Boulevard, Montreal, and will spend some time there with her son.

**J. E. Quick**, General Baggage Agent, G.T.R., will it is said, retire on June 30 next under the company's pension rules.

**C. N. Monsarrat**, Chairman, Quebec Bridge Commission, has been elected a director of Canada Foundries & Forgings, Ltd., Welland, Ont.

**J. H. D. Munson**, K.C., of Winnipeg, for many years Chief Counsel there for the Canadian Northern Ry. and the Winnipeg Electric Ry., died on Feb. 8, aged 59.

**L. Mulkern**, Division Freight Agent, C.P.R., St. John, N.B., was in London, Ont., Feb. 13, to attend the funeral of his father, M. Mulkern, who died there aged 84.

**Sir John Wolfe Barry**, who made the plans for the projected bridge across the second narrows of Burrard Inlet, Vancouver, B.C., died in London, Eng., recently, aged 82.

**G. H. Ham**, of the C.P.R. headquarters staff, Montreal, was one of the principal speakers at the recent annual meeting of the Texas Passenger and Ticket Agents, at Dallas, Texas.

**E. O. Parent**, G.T.R. agent at Pembroke, Ont., is reported to have been given a permanent pass on all the company's eastern lines, in recognition of 15 years efficient service.

**W. J. Harmer**, formerly C.P.R. telegraph operator at Banff, Alta., and latterly Deputy Minister of Railways and Telephones for Alberta, has been appointed to the Dominion Senate.

**F. L. McPherson**, District Engineer, British Columbia Public Works Department, Nelson, is reported to have been appointed Assistant to the Provincial Engineer of Public Works, Victoria.

**D. T. Main**, Works Manager, C.P.R., Winnipeg, has been elected a member of the Canadian Society of Civil Engineers, and not an associate member, as incorrectly stated in our February issue.

**Norman L. Hardy** is reported to have been appointed acting Deputy Minister of Railways and Telephones for Saskatchewan, ex-Deputy Minister W. J. Harmer having been appointed a Senator.

**J. E. Proctor**, District Passenger Agent, C.P.R., Regina, Sask., was presented with some silverware by the local staff, Jan. 30, on leaving for Calgary, Alta., where he has been appointed to a similar position.

**E. O. Grundy**, who retired recently from the position of General Freight and Passenger Agent, Quebec Central Ry., Sherbrooke, Que., and who has been seriously ill, was reported out of danger early in February.

**John Molloy**, of Winnipeg, who died in St. Boniface Hospital, Feb. 18, aged 81, went to Winnipeg in 1872, and was on C.P.R. construction service for some time, afterwards engaging in Dominion land surveying.

**Mrs. Anna S. Lund Hertzberg**, widow of the late Col. P. H. Hertzberg, Royal Engineers, and mother of A. L. Hertzberg, M.Can.Soc.C.E., Engineer, Ontario District, C.P.R., Toronto, died at Christiania, Norway, recently.

**F. P. Brady**, General Manager, Western Lines, Canadian Government Railways, who spent a short time in Victoria Hospital, Montreal, at the end of January,

for treatment, returned to duty at Winnipeg early in February.

**J. P. McNaughton**, General Sales Manager, Dominion Iron & Steel Co., Montreal, was married in London, Eng., recently, to Nursing Sister Lida Duff, C.A.M.C., daughter of the late John Duff and Mrs. Duff, of Sydney, N.S.

**W. P. Hinton**, Vice-President and General Manager, Grand Trunk Pacific Ry., and **C. H. Nicholson**, Manager Grand Trunk Pacific Coast Steamship Service, were the principal guests at a luncheon given by the Transportation Club of Vancouver, B.C., Feb. 8.

**C. C. Rosenberg**, Secretary of the Railway Signal Association since 1906, died at Bethlehem, Pa., Feb. 2, aged 63. He entered Lehigh Valley Rd. service in 1875, and held various positions, including those of Supervisor of Bridges and Buildings, and Signal Engineer.

**Jas. A. Wilson**, travelling auditor, Canadian Northern Ry., while boarding a train at Flanders, Ont., recently, slipped and fell beneath the wheels, being killed instantly. His home was in Winnipeg, where he is survived by his widow, four sons and a daughter.

**Mr. Justice R. E. Harris**, of the Nova Scotia Supreme Court, formerly President, Nova Scotia Steel & Coal Co., and now acting as one of the arbitrators of the value of Canadian Northern Ry. common stock, has been appointed Chief Justice of Nova Scotia.

**J. J. Beck**, Superintendent, Union Station, Toronto, who has been in railway service for 46 years, is stated in press reports as likely to retire in the near future. It is probable, however, that he will remain in office at least until the completion of the new union station.

**W. R. Smith**, M.Can.Soc.C.E., Chief Engineer and General Manager, Edmonton, Dunvegan & British Columbia Ry., Alberta & Great Waterways Ry. and Central Canada Ry., has returned to Edmonton, Alta., after a successful operation for appendicitis at Rochester, Minn.

**S. Newmarch**, who died suddenly at Beaconsfield, B.C., Feb. 3, was born in Montreal, and was engaged for several years in railway construction in the west. He acted as superintendent of a party of construction men sent from Canada in connection with the construction of a railway at Kola Bay, Russia.

**L. K. Silcox**, who has been appointed Master Car Builder, Chicago, Milwaukee & St. Paul Ry., Milwaukee, Wis., was, from 1909 to 1912, shop engineer, Canadian Car & Foundry Co., Montreal; 1912 to 1916, Mechanical Engineer, Canadian Northern Ry., Toronto, and since 1916, Mechanical Engineer in charge of car work, Illinois Central Rd., Chicago, Ill.

**John Try Harwood Ferguson**, Purchasing Agent, C.P.R., Vancouver, B.C., died at Calgary, Alta., Jan. 25, from tumor on the brain. He was born in Sept., 1880, and entered the C.P.R. Purchasing Department at Montreal, in July, 1896, since when he was, to Jan. 1, 1913, junior clerk; Jan. 1 to Nov. 23, 1913, chief clerk; Nov. 23, 1913, to Mar. 1, 1917, Assistant Purchasing Agent, Calgary, Alta.; Mar. 1 to June 1, 1917, Assistant Purchasing Agent, Vancouver, B.C., and from that date, Purchasing Agent there.

**G. D. Wadsworth**, who was appointed General Freight and Passenger Agent, Quebec Central Ry., Sherbrooke, Que., re-

cently, was born there, July 15, 1884, and entered Q.C.R. service in Nov., 1899, since when he has been, to Nov., 1900, messenger boy; Nov., 1900, to Oct., 1904, clerk in car record office, and stenographer to Superintendent; Oct., 1904, to Jan., 1906, clerk and stenographer, General Freight and Passenger Department; Jan., 1906, to Mar., 1916, chief clerk, same department; Mar., 1916, to Jan., 1918, Assistant General Freight and Passenger Agent, all at Sherbrooke, Que.

**Walter U. Appleton**, who has been appointed Superintendent of Motive Power, Canadian Government Railways, Moncton, N.B., was born there, Jan. 29, 1878, and entered Intercolonial Ry. service, Oct. 13, 1890, since when he has been, to Sept., 1895, junior clerk; Sept., 1895, to May, 1899, machinist apprentice; 1899 to 1909, clerk; 1900 to 1901, machinist; 1903 to 1909, chief clerk to Superintendent of Motive Power; 1909 to 1913, Assistant to Superintendent of Motive Power; 1913 to Feb., 1918, General Master Mechanic, I.R. Co., and latterly Canadian Government Railways, all at Moncton, N.B.

**Sir William D. Reid**, a director, and formerly President, Reid Newfoundland Co., who was arrested at St. John's, Nfld., recently, on a charge of criminally libelling a member of the Colonial Government, appeared before the local magistrate there, Feb. 18, when the case was dismissed, the magistrate being reported as stating that the complainant failed to produce evidence of others or himself to deny the innuendo complained of, that he was in collusion for the purpose of promoting confederation, or that the expenses of the trip to Canada and the U. S. were defrayed by the Reid Newfoundland Co.

**G. R. Joughins**, Superintendent Rolling Stock, Canadian Government Railways, Moncton, N.B., who, as announced in our last issue, has retired under the pension rules, was presented with a fitted club bag, a gold watch chain, and an address by the railways shops' staffs, Jan. 26. He was born at Dublin, Ireland, May 17, 1885, and entered Canadian Government Railways service, May 1, 1898, since when he has been, to Aug. 31, 1901, Mechanical Superintendent; Apr. 15, 1904 to Oct. 1, 1915, Superintendent of Motive Power; Oct. 1, 1915, to his retirement, Superintendent Rolling Stock, all at Moncton, N.B.

**John Gray**, who died at Toronto, Jan. 30, from cancer of the stomach, was born at River Beaudette, Que., Sept. 28, 1865, and entered G.T.R. service, Oct., 1880, since when he was to 1883, assistant at Parkhill, Ont.; 1883 to 1889, operator and ticket clerk at various points; 1889 to Jan., 1913, agent at Milverton, Southampton, Hespeler, Ingersoll, St. Catharines, Ont., Buffalo, N.Y., and Hamilton, Ont., successively; from Jan. to Feb. 1913, General Agent, Toronto, and from Feb. 13 to the time of his death, Freight Agent there. The funeral at Toronto, Feb. 1, was attended by a large number of G.T.R. and other transportation officials of Toronto and district.

**Edward Fitzgerald**, who was made a Commander of the Order of the British Empire, recently, was born at Ottawa, Nov. 9, 1874, and educated at the Model School there. He entered C.P.R. service in July, 1892, as junior clerk in the Purchasing Department, and was appointed Commissary Agent Oct., 1898; Assistant to Purchasing Agent, May, 1905; Assist-

ant General Purchasing Agent, Mar., 1910; and assigned to British Government service as officer in charge of the War Office Purchasing Agency in Canada, May, 1915; Purchasing Agent, Imperial Munitions Board, Dec., 1915, and Assistant to Chairman, Imperial Munitions Board, June, 1916.

**Ejnar L. Landorph**, who has been appointed Resident Engineer, C.P.R., Kenora, Ont., was born at Copenhagen, Denmark, Sept. 9, 1888, and during the summer of 1910 acted as assistant teacher of surveying, etc., at the University of Copenhagen. In Jan., 1911, he graduated from that university as a civil engineer. He entered C.P.R. service June 24, 1912, as draftsman at Winnipeg, and from Nov. 7, 1912, to Apr. 30, 1913, was transitman, Brandon, Man.; May 1, 1913, to Nov., 1915, Resident Engineer, Brandon, Man.; Nov., 1915, to Apr. 1, 1916, Resident Engineer, Kenora, Ont.; Apr. 1, 1916, to Feb. 1, 1918, Engineer of Water Service, Winnipeg.

**John Leslie**, Comptroller, C.P.R., Montreal, who has been placed in entire charge of the accounting department, was born at Toronto, and entered railway service with the Toronto, Grey & Bruce Ry., as assistant cashier, and was subsequently cashier, accountant and auditor, successively. On the absorption of the railway by the C.P.R. in 1893, he was placed in charge of the accounts on the Ontario lines, at Toronto, until March, 1895, and until 1897 was at Montreal. From 1897 to Oct. 2, 1899, he was chief clerk to Auditor; Oct. 2, 1899, to Dec. 1, 1908, Auditor of Disbursements; Dec. 1, 1908, to Oct. 1, 1914, Assistant Comptroller, at which latter date he was appointed Comptroller.

**J. W. N. Johnstone**, who has resigned the position of General Passenger Agent, Reid Newfoundland Co., St. John's, Nfld., was born at Campobello, N.B., Oct. 4, 1878, and entered transportation service in the General Freight Department, C.P.R., St. John, N.B., serving in various capacities in that department from junior clerk to assistant to the chief clerk, until Feb., 1902, when he entered Reid Newfoundland Co.'s service as chief clerk to the General Freight Agent, St. John's, Nfld., was appointed General Passenger Agent, Aug. 21, 1906, and for a short time at the end of 1917, was also Assistant to the President (Sir William D. Reid). It is reported that he has been appointed private secretary to Sir William Reid, who has not been President since the last annual meeting.

**George Edward Smart**, who has been appointed Superintendent of Car Department, Canadian Government Railways, Moncton, N.B., was born at Edinburgh, Scotland, Dec. 23, 1873. From 1892 to 1897 he was in various positions in car shop, G.T.R., Montreal; 1897 to 1904, car inspector, G.T.R., Montreal; 1904 to 1906, General Inspector Heating and Lighting, Eastern Lines, C.P.R., Montreal; 1906 to 1909, General Car Inspector, Eastern Lines, C.P.R., Montreal; 1909 to Oct. 1, 1913, Divisional Car Foreman, in charge of passenger and freight car work, Eastern Division, C.P.R., Montreal; Oct. 1, 1913, to Feb., 1918, Master Car Builder, Intercolonial Ry., and latterly Canadian Government Railways, Moncton, N.B.

**John Alexander Dunbar Vickers**, Vice President and General Manager, Western Lines, American Express Co., Chicago, Ill., died there Feb. 16, after a long illness. He was born at Toronto, May 22, 1858, and educated at Upper Canada College. He entered express service at To-

ronto in 1879, and was, to 1889, Superintendent, Vickers Express, and Vickers Express Co., Ltd., of which his father was the founder; 1889 to 1891, Superintendent, Canadian Lines, American Ex. Co., Buffalo, N.Y.; 1891 to 1914, Superintendent, and afterwards General Manager, National Ex. Co., Chicago, Ill.; 1914 to the date of his death, Vice President and General Manager, Western Lines, American Ex. Co., Chicago, Ill. The funeral took place at Toronto, Feb. 20, and was attended by a number of express and transportation officials. V. G. R. Vickers, Vice President, The Holden Co., Ltd., Montreal, and formerly General Superintendent, Foreign and Money Order Department, Dominion Ex. Co., is a brother.

**Ralph Budd**, who has been appointed Executive Vice President, Great Northern Ry., St. Paul, Minn., was born at Waterloo, Ia., Aug. 20, 1877, and entered railway service in 1899, since when he has been, to 1902, consecutively draftsman, rodman, levelman, instrument man and Assistant Engineer, Chicago Great Western Ry.; 1902 to 1905, successively Roadmaster, General Superintendent of Construction, and Division Engineer, St. Louis Division, same road; 1905, Division Engineer, same road, Chicago, Ill.; 1906 to 1909, Chief Engineer, Panama Rd., Colon, Panama; 1909 to 1910, Chief Engineer, Oregon Trunk Ry.; 1910 to May 1, 1914, also Chief Engineer, Spokane, Portland & Seattle Ry.; 1911 to Jan. 1, 1913, also Chief Engineer, Spokane & Inland Empire Ry., and Spokane Traction Co.; Jan. 1 to Feb. 15, 1913, Assistant to President, Great Northern Ry., St. Paul, Minn.; Feb. 15, 1913, to May 1, 1914, Chief Engineer, same road; May 1, 1914, to his present appointment, Assistant to President, same road.

**William P. Kenney**, who has been appointed President, Great Northern Ry., St. Paul, Minn., was born at Watertown, Wis., Jan. 10, 1870, and entered railway service in Nov., 1888, since when he has been, to 1889, telegraph operator, Chicago Great Western Ry.; 1889 to Sept. 1, 1890, yard clerk and clerk in local freight office, same road, Minneapolis, Minn.; Sept. 1, 1890, to May, 1892, clerk and stenographer to General Agent, same road, Minneapolis, Minn.; 1892 to 1899, Contracting Agent, same road; 1899, Contracting Agent, Empire Line; 1900 to Sept. 15, 1902, chief clerk, General Freight Department, St. Paul & Duluth Ry., absorbed by the Northern Pacific Ry.; Sept. 15, 1902, to Apr. 1, 1903, chief clerk, General Freight Department, Great Northern Ry.; Apr. 1, 1903, to Jan., 1905, Assistant General Freight Agent, same road; Jan., 1905, to May, 1908, Assistant to Fourth Vice President, same road; May, 1908, to Sept., 1911, Assistant Traffic Manager, same road; Sept., 1911, to Oct., 1912, General Traffic Manager, same road; Oct., 1912, to date of his present appointment, Vice President in charge of traffic.

**Sir Percy Girouard, K.C.M.G., D.S.O.**, is the subject of a unique distinction, in the petition of a mass meeting of residents of British East Africa, to the British Government, that he be appointed Military Governor of the Protectorate, with full powers to organize the local efforts for the further prosecution of the war, and especially to provide for the immediate requirements of the armies in Palestine and Mesopotamia. Sir Percy was born in Montreal, and gained railway engineering experience on the C.P.R. staff. He entered the British Army in 1888, and served in all parts of Africa during the several wars there of recent

years, his knowledge of railway work being especially utilized. He was Governor and Commander-in-Chief of the British East Africa Protectorate from 1909 to 1912, when he joined the board of directors of Sir W. G. Armstrong, Whitworth & Co., Elswick, Eng. During the present war, his services were taken advantage of for some time on the continent, but it was considered that there was more to be gained by having him in England, and he returned to his former position.

**A. R. Macgowan, A.M. Can. Soc. C.E.**, who has resigned as Superintendent, District 5, Intercolonial Division, Canadian Government Railways, Edmundston, N.B., to enter the Delaware & Hudson Co.'s service at Carbondale, Pa., was presented by the local staff, Feb. 8, with a fitted leather club bag, with a cut glass jewel case and cameo necklace, for Mrs. and Miss Macgowan, respectively. He was born at Moncton, N.B., Jan. 16, 1883, and entered railway service in 1899, since when he has been, to June, 1902, clerk in Accountant and Treasurer's office, Intercolonial Ry., Moncton, N.B.; June, 1902, to Mar., 1905, rodman and transit man, I.R.C., Moncton, N.B.; Mar., 1905, to Jan., 1906, contractor's engineer, North Maine Seaport Ry., Bangor, Me.; Jan. to Nov., 1906, Resident Engineer, Somerset Ry., Moosehead, Me.; Nov., 1906, to May, 1915, Assistant Engineer, I.R.C., Moncton, N.B.; May, 1915, to Jan., 1916, Division Engineer, I.R.C. & Prince Edward Ry., Moncton, N.B.; Jan. to July, 1916, Principal Assistant Engineer, Canadian Government Railways, Moncton, N.B.; July, 1916, to Feb., 1918, Superintendent, District 5, Intercolonial Division, C.G.R., Edmundston, N.B.

**Temperance Act Infractions.**—John Gossip, a Canadian Northern Ry. forwarding agent at Ottawa, was fined \$304 in the Ottawa Police Court, Feb. 1, for two breaches of the Ontario Temperance Act. The first charge was of shipping by public conveyance a package containing intoxicating liquor addressed other than to the actual consignee, and the second was for having liquor in a public place.

**Trespassing on Railway Tracks.**—A Victoria, B.C., magistrate, on Feb. 6, fined a shipyard employee \$5 for trespassing on the Esquimalt & Nanaimo Ry. in making a short cut to his work. The company desires to prevent walking across, or along, its tracks, with a view to lessening accidents, and the case was brought before the courts as an example.

**Fire Extinguishers on Electric Railway Cars.**—The Board of Railway Commissioners issued a circular Feb. 25 stating it was considering the advisability of requiring electric railways to provide fire extinguishing apparatus on passenger carrying cars, including therein, combination cars, if any, and directing electric railway companies to show cause, within 30 days of the receipt of the circular, why such requirements should not be made effective.

**Toronto Ry. Track Assessment.**—The Ontario Railway and Municipal Board on Feb. 20 dismissed the company's appeal against the city's assessment of \$118,950 on its poles, ties and rails. It was contended for the company that this was the first time that the city had assessed the structures and fixtures, and that the company could only be assessed for the rails on the streets. For the city, it was urged that there was a right to levy the assessment, the fact that it had not previously been levied being no reason why it should not have been.

## Canadian Pacific Railway Western Lines, Construction, Betterments, Etc.

Grant Hall, Vice President and General Manager, Western Lines, C.P.R., was in Montreal, recently, arranging for the appropriations for work for 1918. We are officially advised that the following are the principal works to be undertaken:—

Approximately 500 miles of track will be rebalasted and a large amount of ditching, cleaning cuts, riprapping, and widening of embankments will be undertaken.

Some 400,000 new tie plates and 205,000 new rail anchors will be bought and installed.

Eleven reinforced concrete bridges will be built, as follows:—Manitoba District, Nos. 27.6, 29.5 and 33.8, Carberry Subdivision; No. 92.5, Glenboro Subdivision; No. 61.6, Emerson Subdivision; No. 27.3, Minnedosa Subdivision; No. 2.7, Lariviere Subdivision. Saskatchewan District:—No. 118.23, Neudorf Subdivision; No. 69.8, Outlook Subdivision; Nos. 13.6 and 42.9, Lanigan Subdivision.

Two bridges will be filled, viz.: No. 14.6, Cardston Subdivision, and No. 70.7, Wetaskiwin Subdivision, Alberta District.

A considerable amount will be expended in repairing and renewing bridges, including the rebuilding of No. 62.8, Lanigan Subdivision, and No. 130.5, Hardisty Subdivision, Saskatchewan District.

Fifteen new stations will be built, as follows:—Oakbank, Man.; Tramping Lake, Primate, Battiam, Lanier, Bideford, Shackleton, Sask.; Ames, Hayter, Whittla, Raymond, Magrath, Travers, Cowper, and Kirriemuir, Alta.

Thirty new section houses will be built.

Additional yard tracks will be built at Swift Current, Sask., and at Ogden, Camrose and Coronation, Alta.

Large stockyards will be built at Swift Current and Moose Jaw, Sask., and small ones at 12 other points.

Icehouses will be built at Regina and Moose Jaw, Sask., Alyth and Kamloops, B.C.

The machine shop and boiler room at Weyburn, Sask.; the boiler house at Swift Current, Sask., and the car shops at Moose Jaw, Sask., will be extended; the passenger car shop at Vancouver will be extended and repaired; mastic floor will be laid in the Winnipeg locomotive shops, and boiler washing plants will be built at Kenora, Ont., and Moose Jaw, Sask.

The outward freight sheds at Regina, Sask., will be extended.

Coaling plants will be built at Broadview, Man.; Moose Jaw, Sask., and Lethbridge, Alta.

A new water supply will be installed at Gull Lake, Sask., and 12 existing pipe lines at various points will be relaid.

Automatic protection signals will be installed at Rosser, Poplar, Bradbury, Winnipeg Beach and Whytewold, Man.

Approximately 1,600 ft. of the Connaught tunnel will be lined.

A new transfer slip will be built at Vancouver.

It is said that the various betterments on the western lines this year will cost about \$6,000,000.

**Manitoba District.**—Tenders are under consideration for the erection of 13 No. 4 section houses at various points on the Manitoba District, and 1 standard station building at Oakbank, Man.

**Alberta District.**—A press report states that arrangements are being made to continue construction of the line from near Manyberries, Alta., easterly to Alta-

wan, on the Saskatchewan-Alberta boundary, 32 miles. This is the only unconstructed section of what has been spoken of for years as the Weyburn-Lethbridge line.

The transfer track connecting the C.P. R. at Stettler, Alta., with the Canadian Northern Ry., was reported completed Jan. 31.

**British Columbia District.**—The Vancouver City Engineer, in a report to the Mayor, Feb. 20, said: "If the C.P.R. should prove its right to maintain a bridge at Kitsilano, Vancouver, when they obtained this right, the question is did it carry with it the proviso that it must meet in the future the requirements of navigation as at present existing." The Kitsilano bridge is provided with a swing span, and as the Dominion Government has provided a 21 ft. channel from the bridge, it is desired to complete the channel under the bridge, and the question is who is to meet the cost. If the C.P.R. was to take care of navigation as it developed, the city claims the C.P.R. has to put in a new swing span sufficient to meet the present needs of navigation.

## Canadian Northern Railway Construction, Betterments, Etc.

A press dispatch states that one of the first pieces of construction work which the Dominion Government will undertake in connection with the C.N.R., will be to establish a connection between this line and the National Transcontinental Ry. This connection would start from Longue Lac, at 673 miles from Toronto, and extend to the National Transcontinental Ry. at Kowkash, 871 miles from Quebec.

The new station at Fort William, Ont., was opened Feb. 20. It is built of brick, with Tyndall stone trimmings and concrete foundations. The main portion, 41 x 57 ft., is two stories-high with basement. The balance of the building is 30 x 80½ ft., and one story high. This portion is taken up by the baggage and express departments. On the ground floor of the main portion are a large general waiting room, women's waiting room, ticket office, men's and women's lavatories, a hall and stairway and a vestibule between the street entrance and general waiting room. The first floor contains office accommodation and agent's quarters. The floors throughout are of maple and the finish of oak. The building is steam heated and electric lighted.

The St. Boniface City Council special bridge committee has approved of the changes proposed to be made to the C.N. R. Provencher St. bridge. The new structure will be 14½ ft. higher than the level of the traffic approach. It is expected that the work will be completed by July 1.

A Munson, Alta., press dispatch, states that the company purposes to lay out at an early date a terminal yard, and to erect divisional buildings, and that tenders for the erection of a 4-stall locomotive house are under consideration. Munson is at mileage 303 on the line from Saskatoon to Calgary, near the junction with the line from Vegreville to Calgary. Surveys are reported to have been made for laying of a second track between Munson and Wayne, 19 miles, to provide sufficient track accommodation for the development of the colliery traffic from the Drumheller mining area. The present

track, it is stated, is to be relaid with 85 lb. rails. The running of about 30 freight trains a day is stated to be necessary in order to take care of the present traffic, and with the opening up of additional collieries between Munson and Wayne, this traffic is expected to increase considerably.

The Board of Railway Commissioners has authorized the building of a spur line to the Northwest Biscuit Co.'s factory at Edmonton, Alta.

Officers of the company in Vancouver, B.C., are reported to have stated that satisfactory progress is being made with the completion of the terminal station on False Creek flats. It is expected that trains will be operated into the station early in the spring.

It was expected that the freight sheds at False Creek, Vancouver, would be completed by Feb. 28. The connecting tracks from the Great Northern Ry. over the fill, to the C.N.P. Ry. sheds is reported as about finished.

The filling on the reclaimed area of the False Creek flats, Vancouver, is being rapidly gone on with, and is now almost up to the permanent grade for at least half the distance from the south end of the bridge to what was the former shore of the upper False Creek basin.

The bascule bridge over the Selkirk Water, Victoria, connecting with the terminal areas being developed on the old Songhees Reserve, was reported completed Feb. 7. The bridge, when open, gives a clear span of 70 ft. (Feb., pg. 57.)

## Stand for Engineering Instruments.

All the trouble and waste of time in removing surveying instruments from their tripods and placing them in their boxes at the end of the day's work can be avoided if an office is provided with an instrument stand such as is shown in the accompanying illustration. This inexpensive expedient has been used by the

writer on several jobs, and has been found satisfactory in every case. The construction is very simple. Slots cut into a 1½ x 10-in. plank provide recesses into which the tripods and levels may be set. The tripods are then held in the slots by metal latches hinged at one side and fitting over a nail at the other. The feet of the tripods and the lower ends of level rods fit into holes cut in another plank set lower.—G. W. McAlpin, Junior Engineer, N.S., Engineers' Field Office, Mayville, Ky., in Engineering News-Record.

**Canadian Government Railway Employees Killed.**—The latest information available shows that in the Halifax, N.S., explosion disaster of Dec. 6, 58 employees of the Canadian Government Railways were killed, and also 15 ex-employees who had retired on pension. Details of the non fatal casualties among the employees, which were numerous, are not available.

G. J. Desbarats, C.M.G., Deputy Minister of Naval Service, is announced to have been appointed a member of an international board to settle outstanding questions between Canada and the U.S. in connection with fisheries.

# The Work of the Canadian Railway Association for National Defence.

A. E. Warren, Chief Operating Officer, Railways Department, Ottawa, has been added to the association's administrative committee.

## Canadian Transportation Conditions and the War.

The following is the association's first bulletin:—Every traveller and every shipper affects, one way or another, the two main problems of the Canadian railways: fuel consumption and freight car economy. In asking the support of the public for its work, the association offers the following summary of conditions leading to and arising out of its formation: The crisis in the American coal situation had made it necessary to assure the United States that coal supplied to Canada was being used for necessary purposes only. To reduce Canadian coal consumption, the railways had been asked to coordinate their services so as to prevent any overlapping or duplication of service which still might exist in Canada. The formation of the association resulted, in Oct., 1917. To that date the Dominion's domestic traffic had been kept moving expeditiously, despite war conditions, with the exception of one brief period due to an unprecedented period of cold weather and heavy snowstorms in the winter of 1916-17. The international freight train traffic had been satisfactory up to the time when certain organizations outside of Canada broke down owing to the special difficulties under which they were operating.

Meantime Canadian railways had made progress as follows, in meeting war conditions in their own sphere before the formation of the association. They had carried 400,000 troops from recruiting points to concentrating centres and from concentration centres to training grounds, and training grounds to ports of embarkation. These men had been fed and "slept" better than were the troops of any other belligerent nation mobilizing over such an extended area. Over 70,000 laborers for Europe had been carried across the continent. These also had been fed and "slept" under railway management. The colossal new burden of coal carrying, due to the taking of coal vessels from the St. Lawrence and the lakes for ocean service, had been assumed. The reduction of staffs to furnish army recruits had been met, in part, by adapting women to certain forms of work and leaving some in abeyance—a step which has contributed largely to the present urgent need for extra labor for the season's work on the railways. The sudden shiftings and reversals in the tides of traffic—in their general direction and character—had been dealt with successfully. First, the onset of a northbound movement of raw materials inbound for Canadian munition factories; second, the development of inter munition plant traffic in partly finished shells; third, the increased volume of food stuffs for export; fourth, the hundreds upon hundreds of cars of remounts; fifth, the sudden task of focusing all this traffic in two Canadian ports, in such a way as to meet Admiralty requirements; and, sixth, the cessation of northbound traffic due to the reduction in munitions trade, and the flow of Canadian raw materials, some of them never before exported from Canada into the United States. Meantime, the passenger train service had been reduced to the extent of 10,000,000 passenger train miles a year, a yearly saving of some 500,000 tons of coal. The volume

of grain handled out of Western Canada in the autumn of 1917 was 12.1% higher than the volume for the same period in 1916. This was the record up to Oct., 1917, when this association was formed.

The chief reason for creating the association was the necessity for conserving fuel during the winter. The desirability of embodying in concrete form the co-operative spirit which up to this time had been casual and informal among the Canadian railways, was secondary. In both respects the association has made progress. First, as to fuel; the speed of all trains has been so regulated as to give the maximum of tractive effort from a given amount of coal. Passenger train service has been reduced still further, so as to effect a saving of another 2,000,000 passenger train miles a year, making the total Canadian economy in this respect such that the U. S. railways, to equal it, would have to cut off proportionately 110,000,000 passenger train miles, instead of the 20,000,000 which, at the time of writing, is their record in reductions. The Canadian reduction means a saving of approximately 100 pounds of coal per mile, or on 12,000,000 miles—600,000 tons per annum. Further reductions are under way.

Second: As to further co-ordination of railway service, the association took charge, in a supervising way, of all traffic difficulties and worked out the speediest relief of any congestion or shortage that threatened. Potato cars were loaned from one road to meet the shortage on another road in the Maritime Provinces. Calls for refrigerator cars, apple cars, locomotives, box cars—all kinds of equipment—were met through the association's direction. Weather conditions on the line leading from some of the Western coal fields caused temporary embarrassment which was energetically dealt with by the co-operation of all roads through the association. A special officer was sent to supervise coal handling at the Niagara frontier, with excellent results. Meantime, a campaign for economy in the ordering of cars and in using their space has been promoted. The surplus of Canadian freight cars in the U. S. is being steadily reduced through pressure applied.

Up to Jan. 15, the association has succeeded in having 5,300 empty and overdue Canadian box cars started back for Canada. Of these already 2,893 were received empty and 1,300 came in loaded with anthracite to relieve the coal shortage in this country. Others are being released by the U. S. and being received at frontier points every day. These numbers are in addition to the normal reciprocal exchange in Canadian and U. S. cars, which goes on very much as usual at the various points of interchange.

These are first things accomplished by the Canadian railways working through their association. Other matters, even more important, remain to be dealt with. The car shortage, which has been ameliorated, will it is hoped, be entirely relieved by persuading shippers to load cars to their maximum capacity instead of to less than half their capacity as has been the practice in the past. Steps will be taken also to impress upon shippers and consignees the seriousness of holding cars longer than necessary. In all these things, and in future work which cannot now be anticipated, the sympathetic co-operation of the Canadian people—shippers, consignees and the travelling public—is a prime necessity. The association

asks for public support for a work vital alike to the individual Canadian and the safety and triumph of nation and empire in the world war.

Although it is true that Canadian railways are organized as nation-wide enterprises, and so have escaped the difficulties experienced by the U. S. lines; that they are large and yet few in number and so are able to work together successfully under the association; that Canadian freight in Canada is moving constantly by the most direct routes; and that surpluses of equipment on any one road are being used to make up any shortage on other Canadian roads: nevertheless—congestion on lines outside of Canada, labor shortage and extreme weather conditions, coupled with abnormal traffic demands, make it necessary to remind Canadian shippers and consigners to load cars to full capacity; to load them promptly and quickly; and in the case of consignees, to release cars at the earliest possible moment.

## How Canadian Shippers are Helping Canada.

The following is the association's second bulletin:—If one steel rail in a transcontinental line could be allowed to move out of place just because its share of the responsibility seemed trivial in comparison with the whole line, then the Canadian shipper, using even so few as two freight cars or one freight car a year, might be justified in supposing that the way he handled his shipments could make no difference to the tremendous problem of car shortage in Canada. But that one rail would wreck a train; and that one shipper, failing to understand his share in smoothing out the traffic problems of Canada, reduces the efficiency of the entire transportation system of the Dominion.

The average freight car, carrying your goods, Mr. Canadian Shipper, goes only half-filled—this is a fact. Government statistics show that Canadian cars are loaded to an average capacity of only 46% of their weight-carrying capacity. You may perhaps be loading a little better than that average. You may think it is nobody's "funeral" but your own, since you pay the railways the legal rate and should be allowed to waste space if you like. But the fact is that all Canada is vitally concerned with your treatment of the freight car. The waste of car space is not your "funeral" but the country's "funeral." The point is: There are fewer freight cars in Canada than are needed every day. Munitions shipments, shipments of most essential materials such as food, coal, raw materials, are being held up for lack of cars. Yet if you would see to it that your shipping department filled its cars to full cubic or weight carrying capacity, you could release at least half the cars you now require. You would be helping to double the freight car equipment of Canada at a time when cars are almost priceless. Furthermore: with our Canadian winter comes the danger of snow blockades, reduced locomotive efficiency due to cold weather; congestion at frontier points owing to possible interchange difficulties with foreign lines, a shortage of labor for clearing the right-of-way or terminals. With your assistance these dangers are reduced to a minimum. Full filled cars mean shorter trains. Shorter trains mean faster handling. Faster handling means better business for all concerned. Please have a personal

interview with the men who handle your shipping. They will remind you, of course, of the convenience of loading one order to a car. They may say there is additional labor cost for packing a car beyond a certain point. They may indicate that your shipping methods would thus have to be altered, or that your customer's convenience would not be as suitably met. Possibly not. But since orders for freight cars cannot always be filled; since munitions of war are often held up for want of cars; and since your prosperity depends upon the prosperity of the whole country and our successful conduct of the war—you will surely see the importance of making your allotment do maximum service in minimum time.

By an appeal for heavier loading the Director of Overseas Transport has succeeded in making 1,000 cars do the work of 1,200 which had previously been considered full cars. One implement concern in Canada found that by a skilful packing of parts and the building of a rough deck in each car, it was able to save 12 cars on a shipment of 800 waggons; 32 cars on a shipment of 3,000 riding ploughs; 52 cars on a shipment of 1,200 binders! A flour shipper told us he could not afford to load cars to full capacity because of the high labor cost involved. On investigation it was found that he had been trying to load each row of bags to the top of the car while the loaders were still working from ordinary floor level. Naturally the lift was heavy and awkward. When his shippers were shown the simple little trick of laying the bags in steps, running down from the ends of the car to the door the difficulty was solved. Instead of completing the end rows first, these rows were piled only about half or two-thirds the height of the car. Then the men laid a few bags in the next row and by standing on these bags were easily able to place the top layers on the end row. They now built up the second row to half or two-thirds the full height, until, with a few bags started on the third row it was easy to finish the second. And so on.

Like a body, this country of ours has nerves and arteries. Unlike a body, it has not one brain, but many brain centres: not one heart, but many thousands of hearts. Your plant, Mr. Canadian shipper, is a "heart." The railways are the veins and arteries, leading to that heart and away from it. Through these channels comes the stream of traffic vital to you, just as you are vital to the railways. As the heart takes in one thing and pumps out another, so your plant takes in one material and ships out another. Day and night, night and day, the thousands of "hearts" in Canada, keep pumping the vital stream of traffic over the great steel arteries of trade. Now if your body—like your nation—were engaged in some tremendous feat of strength—if there was a maximum of strain on your powers, would not that be a poor time for your heart to slow up, or your arteries to develop disease? Of course! For you would want your heart to handle his load with quiet, steady efficiency; and your arteries to carry his pulses smoothly and with speed. Canada's "arteries" became congested last year, owing to the severity of the winter, the heavy snow-fall, the scarcity of labor to meet emergency loads, the blockade of the frontiers due to the foreign congestion. It hurt you. It hurt the railways. It hurt Canada! This winter we are determined to keep Canada's traffic rolling smoothly and with speed, even though last year's conditions repeat themselves—giving and taking the current of commercial life from the "hearts" of Canadian

business—feeding and being fed at the same time. But without you "hearts" our preparations are useless. You must help the "arteries" and yourselves and the body politic, in this time of great strain by beating quicker and steadier than ever. On your behalf Canada's Railway War Board is watching the car supply, speeding up repairs, conserving traction power, perfecting the road beds, co-ordinating staffs. On the country's behalf, as well as on your own, when a car—like a pulse in the nation's veins—arrives on your siding, unload it quickly: when an empty arrives to be packed—pack it promptly and pack it full. You have heard of men with leaky valves in their hearts? . . . Well, the leaky valve in a nation's "heart" is a half-filled freight car—a weak "pulse." Make it a big pulse, a strong pulse, a full freight car!

#### Indirect Routing on Canadian Railways.

Much is written in Canadian newspapers about the necessity of making all Canadian traffic move by the shortest possible routes. This obviously is a most important point in times such as the present. Nevertheless this observation by Canadian newspaper writers is not quite as pertinent to the Canadian railway situation as might at first appear. Indirect routing was an evil with which the U. S. and British Governments were compelled to deal vigorously. As a matter of fact it is practically non-existent in the Dominion. Anyone who will study the railway maps of Canada, the U. S. and Great Britain will be impressed at once with the fact that the great majority of Canadian towns and cities are linked together by lines running east and west. He will be sure to observe how few north and south connections there are. This, as any one knows, is due to the peculiar geography of our country. The British Isles and the U. S. are comparatively square countries. They have depth as well as breadth. Their cities are often linked together by railway companies whose lines form right-angles, or broken circles. Although Canada has a great many miles of railway in proportion to her population, they are widely spread. With one or two possible exceptions there are not, in Canada, those areas of closely-packed population and keenly-competitive railway organizations that exist in England and in the United States.

Canadian companies have not had to fight so bitterly, and to carry goods by roundabout lines merely in order to capture trade from rivals. As a matter of fact, the volume of trade offering to Canadian roads since the war began has been so great as to make each road content to carry the goods which it could naturally carry the best, without trying to take from its competitor traffic lying naturally in the sphere of that competitor. It may be of general interest to the Canadian public to know, however, some examples of the way in which their railways, through the association, are exchanging traffic in the interests of efficiency.

In one case the C.P.R. diverted by way of the "Soo" line 1,000 cars of freight so as to relieve the company's main line along the north shore of Lake Superior. These cars passed south from Winnipeg to Minneapolis and by way of Sault Ste. Marie into Ontario. They consisted chiefly of grain for domestic consumption in Canada. One hundred cars of freight a day are being diverted from the C.P.R. at Quebec and travelling by the National Transcontinental to Halifax. While there is no saving in mileage, this, in the interest of the country, relieves the C.P.R.

main line to St. John for classes of export freight more urgently required there. In Toronto an arrangement was successfully carried out whereby 120 cars of freight eastbound for Montreal were turned over from the C.P.R. to the C.N.R. every day. The Grand Trunk during the winter has been diverting 150 cars of coal a day to the C.P.R. and T.H. & B., in order to lessen the congestion on the G.T.R. from the Niagara frontier to Toronto and other points. The Grand Trunk has also diverted 50 a day to the C.N.R. at Toronto. In Western Canada the Canadian Northern has on several occasions transferred surplus traffic to the sister railways in the west. These are not examples in which indirect routing is involved. They are cited as illustrating the operation of the association and the spirit actuating the Canadian railways.

#### Surplus of Canadian Cars in the United States.

The association directed attention recently to the fact that on Jan. 1 there were 61,124 Canadian cars on U. S. railways, and 41,766 U. S. cars on Canadian railways, a balance due Canada of 19,358 cars. On Jan. 15 there were 63,083 Canadian cars on U. S. railways, and 42,424 U. S. cars on Canadian railways, a balance due Canada of 20,659 cars. The adverse balance against Canada increased in the two weeks by 1,301 cars. In view of this, the association issued the following notice to Canadian railways:—"The demand for cars for movement of foodstuffs and other war supplies to Canadian ports is increasing and will become greater during the remainder of the winter season. Continued decrease in the supply of Canadian owned cars would result in serious interference with the transportation of both war supplies and necessary domestic traffic. Therefore, it is imperative that Canadian owned box cars be retained exclusively in service between points on Canadian lines until such time as the return movement of cars from foreign lines increases. Please issue instructions to all concerned accordingly and make such arrangements as will ensure compliance therewith."

On Feb. 15 there were 61,083 Canadian cars in the U. S., and 44,879 U. S. in Canada, a balance of 16,204 cars due Canada.

#### Full Loading of Box Cars.

The following circular has been issued to all railways:—"The continued shortage of box cars and the growing demand for equipment for the movement of food stuffs and other supplies for overseas make it more imperative than ever that waste of cars through light loading be avoided. It has been drawn to the association's attention that many box cars having a carrying capacity of 94,000 lb. are arriving at the seaboard with shipments of export flour weighing much less than the car is capable of carrying. It has been demonstrated at several flour shipping points that cars can easily be loaded to capacity with export flour, and some shippers are following that practice. In the circumstances, it is felt that all shippers of export flour should arrange for capacity loading of cars. We are advised that export flour is shipped principally in sacks of three sizes, namely, 220, 140 and 80 lb., and tests which have been made show that 40 ton cars can be loaded as follows:—

220 lb. sacks	400 sacks	88,000 lb.
140 lb. sacks	671 sacks	93,940 lb.
80 lb. sacks	1175 sacks	94,000 lb.

It is urged that railways serving shippers who are forwarding export flour call upon such shippers to load all 30 ton box

cars to full carrying capacity, namely, 66,000 lb., and 40 ton box cars in accordance with foregoing statement. The car situation is so acute that it may become necessary for the railways to place an embargo on the acceptance of cars of export flour except when they are loaded to full capacity as above.

### The Location of Cars.

The association has issued the following circular, referring to supplement 1 to general order C.S. 1 of the Commission on Car Service of the American Railway Association, dated Nov. 28, 1917, reading as follows:—"Inasmuch as cars are now being successfully relocated in accordance with regulation 6, regulation 4 of general order C.S. 1, which reads: 'An empty car at junction point with the home road must be delivered to the home road at such point, either loaded or empty' is hereby cancelled. It must be understood that this in no way abrogates the requirements specified in emergency rule 1, or regulation 2 of general order C.S. 1."

As the box car pooling arrangements of the American Railway Association do not apply in Canada, and present traffic conditions in this country are such as to render the above regulation undesirable, members of the Canadian association are notified that the above quoted ruling is not effective on railways operating in Canada, and member lines are directed that until further notice an empty car at junction point with the home road must be delivered to the home road at such point, unless special arrangements made otherwise between duly authorized officers of the interested roads.

### Shipments of Seeds, Fertilizers, Animals, Food, etc.

The association has issued the following circular:—"Prompt and current movement of all shipments of field and garden seeds, fertilizer, food for animals, including corn from U. S., agricultural implements, required for spring planting, and commodities used in the preparation of disinfectants for spraying trees or plants, is essential in order that the Dominion and provincial governments' campaign for increased food production during 1918 may be wholly effective. It is desirable, therefore, that any railway having in effect an embargo issued by it, curtailing the movement of the above mentioned commodities, immediately modify such embargo to permit of the free acceptance of such shipments originating at or destined to a point in Canada. Similar exceptions should be made to any further embargoes that may be issued by Canadian railways during the period of movement of the above mentioned commodities. All concerned should be notified of the importance of avoiding delay in transit to all such shipments.

### Sailing Days for Shipments.

The association has issued the following circular:—"As an indication of the saving in number of cars used in the handling of less than carload freight, through the adoption of the "sailing day" system of forwarding shipments, or similar methods, the following figures are taken from summary of reports furnished by member lines:—

	Number of cars l.c.l. freight loaded	Average load per car.
Nov., 1917 .....	45,829	11,442
Dec., 1917 .....	29,647	12,407
Number of cars that would have been required in December had average load per car been same as November, 3,214.		
Number cars saved through increased loading, 2,502.		

On U. S. railways during Oct., 1917, average load per car of l.c.l. freight was

14,821 lb., compared with 12,402 lb. during Oct., 1916. On one Canadian railway, the average load per car of l.c.l. freight during Dec., 1917, was 15,826 lb., compared with an average of 11,069 lb. during Nov., 1917, the increase of load per car thus obtained being generally attributable to the inauguration of the system of holding cars for second or third day forwarding. In view of the great opportunity for saving cars through revision of l.c.l. freight handling methods recommended by this association, and at the same time improving the handling of the freight, it is urged that all member lines continue to give the matter close attention.

### Capacity Loading of Cars With Export Freight.

The association has issued the following circular:—"This will confirm telegram of Feb. 8, reading as follows:—"In view continued acute car shortage and urgent necessity saving coal in every way possible, Canadian railways are requested to notify all shippers of export freight routing via ports served by Canadian railways that, effective Feb. 12, export freight for overseas will not be accepted unless cars loaded to full weight carrying or cubical capacity."

Circular 46, concerning capacity loading of cars with export flour, specifies 671 140 lb. sacks for a 40-ton car. While it has been demonstrated that this number of sacks of the dimensions mentioned can be placed in the larger cars of 94,000 lb. weight carrying capacity, subsequent tests indicate that more economical practice calls for the loading of 650 140 lb. sacks in a car of 94,000 lb. capacity, and the latter, therefore, may be accepted as capacity carload.

### Loading of Cars to Axle Carrying Capacity.

To Railways Operating in Canada:

In order to fully utilize freight car equipment, instructions limiting the loading of cars to 10% over marked capacity should be amended to permit of loading to axle carrying capacity all freight cars of forty tons stencilled capacity and over. A number of railways have already altered their loading instructions to conform to the foregoing, and in order that the full benefit may be derived from the arrangement, it is desirable that member lines which have not already done so amend their regulations to permit of the loading, and acceptance of cars loaded to axle carrying capacity in accordance with M.C.B. Association rules, when such cars have a marked capacity of 40 tons or over, and conditions other than the carrying capacity of the car will permit. Axle carrying capacity is arrived at from the following basis:—

Marked Capacity.	Size of axle.	Total weight car & loading.	Limit load.
80,600 lb.	5 x 9	132,000 lb.	132,000 lb. less light weight of car
100,000 lb.	5½ x 10	161,000 lb.	161,000 lb. less light weight of car
140,000 lb.	6 x 11	210,000 lb.	210,000 lb. less light weight of car

Cars of less than 40 tons capacity may be loaded to 10% in excess of their marked capacity. The Official Railway Equipment Register continues to bear notation, "limit of load allowed to pass over this system in excess of marked capacity, 10%," in the case of a number of the roads. This notation should be amended to conform to new regulations.

**Canadian Transfer Co.**—The following have been re-elected directors for this year:—C. Cassils, Hugh Paton, G. R. Starke, F. W. Molson and Sir H. Montagu Allan. F. M. McRobie was re-elected General Manager and Secretary.

### Railway Finance, Meetings, Etc.

**Canadian Pacific Ry.**—Dividends have been declared payable Apr. 1 as follows: for the half year ended Dec. 31, 1917, on the preference stock 2%; and for the quarter ended Dec. 31, 1917, on the common stock 2½%, being at the rate of 7% per annum from revenue and 3% per annum from special income account.

**Guelph Junction Ry.**—The report for 1917, presented at the annual meeting of directors at Guelph, Ont., Feb. 6, shows that the earnings were \$45,544.40, an increase of \$2,583.20 over 1916. Payments were made to the city during the year, amounting to 25½% of the stock owned by the city, or \$43,380, in addition to \$904.25 for taxes, and \$250 as a subscription to the Patriotic Fund. A dividend of 7¼% was declared. The line is operated by the C.F.R. under lease.

**Salisbury & Albert Ry.**—At a public meeting in Hillsboro, N.B., Feb. 15, the member representing the district in the Dominion Parliament is reported to have said that the government had fixed the price to be paid for this railway, that the transfer would be arranged during the year, and that the line would be operated as an Intercolonial Ry. branch.

**Timiskaming & Northern Ontario Ry.** Passenger receipts for December, \$54,374.86; freight receipts, \$110,142.03; total receipts, \$164,516.89, against \$64,407.08 passenger receipts; \$111,494 freight receipts; \$175,901.08, for Dec., 1916.

**White Pass & Yukon Route.**—Gross earnings from Jan. 1 to Oct. 14, 1917, \$1,791,585, against \$1,779,406 for same period 1916.

**Change in British Railway Officials.**—W. F. Jackson, General Manager, North British Ry., has retired, and has been succeeded by Jas. Calder, heretofore Assistant General Manager. Jno. Walker, heretofore District Traffic Superintendent at Edinburgh, has been appointed Assistant General Manager. Wm. Andrew, Chief Goods Manager, has retired under the age limit and has been succeeded by Jno. Wilkinson, heretofore Assistant District Goods Manager. J. C. Christie, heretofore District Superintendent at Glasgow, has been appointed Assistant Chief Goods Manager, and M. S. Strang, heretofore Superintendent, Fife District, has been appointed District Superintendent at Glasgow.

**Grain Shipment via Vancouver.**—A Vancouver dispatch says that the first bulk shipment of grain from there has arrived safely at a British port. A steamship which was loaded at the Dominion Government elevator at Vancouver early in November with 100,000 bush. of wheat from the prairies, made the journey to Great Britain via the Panama Canal, and word is awaited anxiously as to the condition in which the grain in this test shipment reached its destination. The shipment was accompanied by A. W. Alcock, an official of the Board of Grain Commissioners at Winnipeg, to observe the condition of the grain at all stages of the voyage.

**Halifax Disaster Information.**—The very complete information published in Canadian Railway and Marine World, about damage done by the Halifax explosion, on Dec. 6, to the Canadian Government Railways and the Nova Scotia Tramways & Power Co.'s properties, has attracted considerable attention. The Director of the Halifax Disaster Records Office has written that the articles referred to have been of very great value to him.

## Canadian Transportation Men, Engineers, Etc. in the War.

Canadian Railway and Marine World is desirous of publishing all the information possible about the war work of Canadian transportation men, engineers, etc., and invites its readers to send in information for use in this connection. No doubt a large number of our readers receive many letters from the front, etc., extracts from which would prove of interest in these columns. We would be glad to be favored in this respect.

### Canadian Railway Troops' Activities.

A recent report to the Militia Department at Ottawa says:—"Two companies of Canadian railway troops had a novel and exciting experience when the train on which they were returning to camp was cut off, in the vicinity of Gouzeaucourt, by advanced parties of the enemy, armed with machine guns. The locomotive man and fireman were killed, and as the track was broken by shell fire, the train had to be stopped and abandoned. Several of the men became casualties, through enemy machine gun fire. The battalion in question offered its services to the army commander for pioneer work and the offer was accepted. Eight platoons, under the commanding officer in person, actually served in the front line area for 36 hours."

The report states that during last December several units of Canadian railway troops were employed in the northern sector of the British front. A great deal of the work undertaken was in a country very badly broken up with shell holes, which were full of water. Units were also engaged on the light railway lines, which were built immediately subsequent to the Cambrai offensive. During these operations they were subjected to unusually heavy shelling and several encampments had to be abandoned. The work done on these railways elicited the warm approval of the army commander.

In the Ypres area two battalions were engaged in standard gauge work and a new trestle bridge was completed. Some standard gauge work was also done in the Cambrai region, and it was necessary during these operations to fill one shell crater 20 ft. deep by 50 ft. in diameter. Heavy shelling in the Ypres area made some of the railway work very difficult.

The Dominion Express Co.'s Good Cheer Club at Winnipeg, is continuing its task of sending a monthly parcel of good and useful things to each of the company's employees who are serving in France, and monthly cheques to those who may be in England. Before the employee leaves Canada, the club presents him with a silver wrist watch. The club's officers at present are: W. A. McDonald, President; H. C. Hooley, Vice-President; A. Henderson, Secretary; Miss S. F. Fraser, Treasurer; A. E. Marchant, Purchaser.

The Timiskaming & Northern Ontario Railwaymen's Patriotic Association, up to Oct. 31, 1917, contributed \$16,754.10 to the Canadian Red Cross; \$20,257.13 to the Canadian Patriotic Fund, and \$13,765.16 direct to enlisted employees.

### PERSONAL NOTES.

H. P. Barker, formerly timkeeper, British Columbia Electric Ry., at New Westminster, B.C., is spending a furlough in Ireland, after being in the overseas forces for two years. He is reported to have been on board two vessels that were torpedoed, and to have had several close calls on land.

Temporary Lt.-Col. P. E. Bent, V.C., D.S.O., a recent addition to those granted the posthumous V.C., was a son of F. P. Bent, Superintendent Railway Mail Services, Halifax, N.S. The official record states, in regard to his action: "The coolness and magnificent example shown to all ranks by him, resulted in securing a portion of the line which was of essential importance for subsequent operations. This very gallant officer was killed whilst leading a charge, which he inspired with the call of 'Come on the Tigers.'"

Lieut. H. D. Brydone-Jack, who received the Military Cross recently, while attached to the headquarters staff, 31st Brigade, as reconnoitring officer, was formerly in the Surveying Department, C. P.R.

Major G. A. E. Bury, son of Sir George Bury, Vice President, C.P.R., who held a staff appointment in London, Eng., has returned to Canada owing to ill health. He had only returned recently to England to resume his work, after leave at home on the same ground.

Flight Lieut. J. F. Chisholm, R.N.A.S., son of G. C. Chisholm, General Solicitor, G.T.R., Montreal, has been awarded the Distinguished Service Cross.

Capt. W. M. Everall, A.M.Can.Soc.C.E., who has had two years' service in France, and was formerly Dominion Government Engineer, Port Arthur, Ont., is reported to have been appointed Assistant Engineer, British Columbia Public Works Department, Victoria.

Lieut. J. S. Galbraith, B.A.Sc., S.Can. Soc.C.E., of the Canadian Engineers, son of the late John Galbraith, formerly Dean of Applied Science Faculty, Toronto University, was given the Military Cross, by the King, at Buckingham Palace recently.

Ingolf Hanson, foreman steel car shops, Canadian Government Railways, Transcona, Man., has enlisted in the Railway Construction Corps, for service overseas.

Sir Arthur Harris, Director of Overseas Transport, Montreal, who was created a Knight Commander of the Order of the British Empire recently, for services in Canada in connection with ocean transport during the war, was presented to the King, Feb. 13.

Lt. Col. T. C. Irving, D.S.O., of Toronto, commanding 4th Canadian Divisional Engineers, who was killed in his dugout at the front by a shell on Oct. 29, 1917, left an estate of \$428, which goes to his wife.

Brig.-Gen. A. D. McRae, of Vancouver, of Davidson & McRae, formerly land commissioners, Canadian Northern Ry., who was, with the rank of colonel, in charge of transport and supplies for the Canadian overseas forces at London, General, is reported as having been given an appointment in the Imperial services.

E. Pope, Superintendent, Dominion Government Telegraphs, Quebec, Que., had three sons in the Canadian Expeditionary Force, all of whom were killed in action during 1917.

Capt. Maurice Pope, awarded the Military Cross recently for gallantly in action, was formerly in C.P.R. service at Montreal.

Col. G. S. Rennie, C.M.G., of the Canadian Army Medical Corps, formerly Chief Surgeon, Dominion Power & Transmission Co., and Toronto, Hamilton & Buffalo Ry., Hamilton, Ont., and Lt.-Col. B.

R. Hepburn, formerly President Ontario & Quebec Navigation Co., have, according to a London cablegram of Feb. 13, been gazetted, or brought to the War Secretary's notice, for valuable services.

Lieut. Percy Roberts, Canadian Engineers, mentioned in dispatches recently by Field Marshall Sir Douglas Haig, was formerly on the Montreal Harbor Commissioners' staff.

Brigadier-General H. N. Ruttan, M.Can. Soc.C.E., formerly City Engineer, Winnipeg, has been retired from the command of Military District 10 there, owing to ill health.

Lt.-Col. Geo. A. Walker, R.E., formerly of Kingston, Ont., is reported to have been placed in charge of all British railway construction in Palestine. He is a graduate of McGill University, Montreal, and spent some years in civil engineering in British Columbia.

## Amendment of Rules for Inspection and Testing of Locomotive Boilers.

The Board of Railway Commissioners passed general order 218, Feb. 11, as follows:—Re general order No. 78, July 14, 1911, as amended by general order 106, June 27, 1913, and order 24803, Mar. 16, 1916, prescribing rules and instructions for inspection and testing of locomotive boilers and their appurtenances, to be adopted by railway companies. Upon the report and recommendation of the board's Technical Expert, concurred in by its Chief Operating Officer; and upon reading the submissions filed, it is ordered that general order No. 78 (order 14115), July 14, 1911, be modified as follows:—

Rule 5. Flues to be removed.—All flues of boilers in service, except as otherwise provided, shall be removed at least once in every four years, and a thorough examination shall be made of the entire interior of the boiler. After flues are taken out, the inside of the boiler must have the scale removed and be thoroughly cleaned.

Rule 11. Lagging to be removed.—The date for the removal of lagging for the purpose of inspecting the exterior of locomotive boilers, as provided by rule 11, except where indications of leaks exist, shall be advanced until Dec., 1918.

Rules 16 and 17.—Each time a hydrostatic test is applied, the hammer test required by rules 16 and 17 shall be made while the boiler is under hydrostatic pressure not less than the allowed working pressure, and proper notation of such test made on form 1.

Rule 18. Method of testing flexible staybolts with caps.—All flexible staybolts having caps over the outer ends shall have the caps removed at least once every two years, and also whenever the board's inspector or the railway company's inspector considers the removal desirable, in order thoroughly to inspect the staybolts. The fire box sheets should be examined carefully at least once a month, to detect any bulging or indications of broken staybolts.

The modifications herein provided for shall remain in effect until Dec., 1918.

The Canadian Society of Civil Engineers is applying to the Dominion Parliament for an act to amend its charter, by changing the name of the society to The Engineering Institute of Canada, and by replacing, wherever necessary, the word "society," in the charter, by the word "institute."

# Traffic Orders by Board of Railway Commissioners.

## Standard Passenger Tariffs Approved.

General order 214C. Reg. 25. Re application of the undermentioned railway companies for approval of their standard passenger tariffs of maximum mileage tolls. The said tariffs, issued to take effect Mar. 15, 1918, having been filed on the basis permitted by the board in general order 213, Dec. 26, 1917, it is ordered that, subject to the provisions of order in council P.C. 229, Jan. 30, 1918, and such other order in council as may be issued, the following standard tariffs of maximum mileage tolls for the carriage of passengers be approved; the said tariffs, together with a reference to this order, to be published in at least two consecutive weekly issues of the Canada Gazette: Elgin & Havelock Ry., C.R.C. 5; Northern Pacific Ry., C.R.C. 317.

## Standard Freight Tariffs Approved.

General order 215-B. Feb. 25. Re application of the undermentioned railway companies for approval of their standard freight tariffs of maximum mileage tolls. The said tariffs, issued to take effect Mar. 15, 1918, having been filed on the basis permitted by the board in general order 213, Dec. 26, 1917, it is ordered that, subject to the provisions of order in council P.C. 229, Jan. 30, 1918, and such other order in council as may be issued, the following standard freight tariffs of maximum mileage tolls be approved, together with a reference to this order, to be published in at least two consecutive weekly issues of the Canada Gazette: Elgin & Havelock Ry., C.R.C. 5; Essex Terminal Ry., C.R.C. 457; Northern Pacific Ry., C.R.C. 376.

## Minimum Weights On Peddler Car Traffic.

General order 217. Jan. 28. Re complaints of Canadian Manufacturers' Association and Toronto Board of Trade against proposal of railway companies, by schedules filed to become effective Oct. 15, 1917 (Michigan Central, Nov. 1, 1917), to increase aggregate minimum weight of less than carload shipments of fresh meat, dressed poultry, packing-house products, butter, and eggs, when loaded in refrigerator cars on private sidings in Eastern Canada, from 9,000 to 15,000 lb. a car, the said schedules having been suspended by the order 26634, Oct. 13, 1917, it is ordered that railway companies in Eastern Canada be granted leave to increase the aggregate minimum weight of less than carload shipments of fresh meat, dressed poultry, packing-house products, butter and eggs, when loaded in refrigerator cars on private sidings, from 9,000 to 12,000 lb. a car.

## Embargos Against Traffic.

General order 219. Feb. 9. Re general orders 95 and 160, dated respectively Nov. 2, 1912, and Feb. 24, 1916, requiring railway companies, whenever any such company issues an embargo against any traffic, to file with the board a copy of such embargo within 48 hours thereafter. Whereas the American Railway Association and the Canadian Railway Association for National Defence have adopted general regulations to expedite the transmission and handling of embargoes. Upon reading the said regulations; and upon the report and recommendation of the board's Chief Operating Officer, it is ordered that general orders 95 and 160 be amended to provide that during the existence of the Canadian Railway Association for National Defence and the continuance of the zone divisions under chairmen, as

provided by the said regulations, the zone chairmen shall file copies of all embargo notices to the board's secretary, within the time limited by the said general orders; and that the railway companies be relieved from filing such notices, as required by the said general orders. And it is further ordered that this order shall be and remain effective for the period the Canadian Railway Association for National Defence continues in existence and the regulations covered by the American Railway Association's general order, C.S. 17, and the circular of the Canadian Railway Association for National Defence, dated Jan. 20, 1918, are operative.

## Car Demurrage Code Rule.

General order 220. Feb. 11. Re applications of J. Coughlan & Sons, Vancouver, and the Canadian Retail Coal Association (Ontario), for a ruling in connection with rule 3, Car Demurrage Code. Upon the report and recommendation of the board's Chief Traffic Officer, and reading what is filed, it is ordered that the following clause be added to the said rule:—

"(d) Delays beyond free periods allowed for any two or more purposes under this rule shall be aggregated and charged for in accordance with rule 9; unless reconignment effects actual transfer of ownership of the goods, in which case the charge against the new consignee for delay beyond the free unloading period shall begin with the lowest toll."

## Time for Unloading Grain.

26907. Jan. 14. Re complaint of Montreal Board of Trade's Transportation Bureau, et al, against the proposed limitation by C.P.R. of free time allowed for unloading carloads of grain and grain products at St. John or West St. John, N.B., for delivery to the Seely Line, from 10 days, including Sundays and holidays, to five days, excluding Sundays and holidays. Upon hearing the complaint at Ottawa, Nov. 20, 1917, in the presence of representatives of complainant and the C.P.R., and upon the report of the board's Chief Traffic Officer, it is ordered that the complaint be dismissed.

## Release Re Travelling in Non-Passenger Cars.

26927. Jan. 23. Re applications of Canadian Pacific, Canadian Northern, Grand Trunk, and Grand Trunk Pacific Rys., under sec. 340 of the Railway Act, for approval of a standard form, being a release to be signed by persons who, for special reasons, desire to travel in cars which are not intended to carry passengers, it is ordered that the following form of release of liability in respect of travelling in non-passenger cars, for use by the said railways be approved, namely, as follows:—

"I, \_\_\_\_\_, RAILWAY COMPANY.  
RELEASE OF LIABILITY IN RESPECT OF  
TRAVELLING IN NON-PASSENGER CARS.  
In consideration of the \_\_\_\_\_ Railway  
Company permitting me, at my request, to travel  
between \_\_\_\_\_ and \_\_\_\_\_ or for  
part of this distance, in a car not intended to  
carry passengers, which I am not entitled by law  
to do, I do hereby release and discharge the said  
company of and from all claims and demands of  
whatsoever nature which I may now or at any  
time hereafter have or could maintain by reason  
or on account of any loss, damage, or injury, to  
person or property which I may sustain or suffer  
in getting to or from, on or off any such car, or  
while travelling in any such car, or in any manner  
in connection with or as a consequence of the  
journey so made, whether any such loss, damage  
or injury be caused by negligence or otherwise.  
"Dated at \_\_\_\_\_ this \_\_\_\_\_ day of  
\_\_\_\_\_, A.D. 19\_\_\_\_.  
Witness: \_\_\_\_\_  
And it is further ordered that orders  
25025, 24789 and 24917, dated respectively  
May 31, 1916, March 6, 1916, and April 22,

1916, made herein, be rescinded.

Order 27028, Feb. 25, approved a precisely similar form for the Toronto, Hamilton & Buffalo Ry., and rescinded order 24887, April 11, 1916.

## Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1916, from July 1, 1917:

	Gross Earnings	Expenses	Net Earnings	Decrease
July	\$3,844,900	\$2,940,000	\$ 904,900	\$ 292,500
Aug.	3,405,200	2,812,000	593,200	478,800
Sept.	3,341,700	2,915,800	1,924,000	306,700
Oct.	3,941,600	3,350,500	591,100	629,200
Nov.	4,050,200	3,295,500	754,700	495,300
Dec.	3,273,200	3,207,900	65,300	755,500
	\$21,856,800	\$18,521,200	\$3,335,100	\$2,961,000
Inc. Dec.	\$ 225,300	\$2,735,700	\$2,961,000	

Approximate earnings for January, \$2,715,300, and for three weeks ended Feb. 21, \$1,975,400, against \$2,832,600 and \$1,694,300 for same periods 1917.

## Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, compared with those of 1916, from Jan. 1, 1917:

	Gross Earnings	Expenses	Net Earnings	Increase
Jan.	10,168,307.86	7,726,829.36	2,431,478.50	341,070.27
Feb.	9,084,276.76	7,098,227.96	1,986,048.80	x308,293.94
Mar.	11,846,542.98	7,909,225.16	3,937,317.82	516,987.46
Apr.	12,355,519.60	8,180,541.98	4,174,977.62	441,241.66
May.	14,355,149.63	9,803,426.84	4,551,719.79	179,435.88
June	13,556,976.69	9,641,073.49	3,915,906.20	226,278.09
July	13,377,850.55	9,617,853.33	3,760,007.22	x257,084.51
Aug.	12,414,537.25	8,696,998.76	3,817,538.49	x1,550,248.85
Sept.	12,244,341.69	8,497,190.83	3,747,150.86	x1,382,508.30
Oct.	14,733,774.02	9,679,072.25	5,054,601.77	x 620,037.60
Nov.	15,191,162.91	9,933,270.27	5,257,892.64	x 306,667.50
Dec.	13,070,882.01	9,159,603.27	3,911,278.74	x1,110,149.87
	\$152,389,334.95	\$105,843,316.50	\$46,546,018.45	x\$3,930,480.73
Inc. Dec.	\$12,659,647.69	\$16,500,128.42		
Dec.			\$ 3,930,480.73	

xDecrease.  
Approximate earnings for January, \$10,570,000, and for two weeks ended Feb. 14, \$4,402,000, against \$9,941,000 and \$4,070,000 for same periods 1917.

## Grand Trunk Railway Earnings.

	Aggregate traffic receipts from Jan. 1 to Dec. 31:	1917	1916	Increase.
G.T.R.	\$52,205,158	\$47,826,799	\$4,378,359	
G.T.W.R.	9,795,440	9,191,107	604,333	
D.G.B. & M.R.	3,400,551	3,283,992	116,559	

Totals . . . . \$65,401,149 \$60,301,898 \$5,099,251  
Approximate earnings for January, \$4,083,352, and for two weeks ended Feb. 14, \$1,427,976, against \$4,677,388 and \$1,754,133 for same periods 1917.

## Grand Trunk Pacific Ry. Earnings.

Approximate earnings of the Prairie Section, 916 miles, for January, \$440,209, against \$330,108 for Jan., 1917.

The claim of John Mackay, accountant, Toronto, against the City of Toronto, for \$42,000 in connection with a report on the Toronto Ry. and the Toronto Electric Light Co., when the question of acquiring the companies' properties, was to the fore about three years ago, has again been before the courts on claimant's appeal to set aside a verdict dismissing his claim. It had been previously decided that a good claim could not be made out against the city, as the work was not authorized by the city, and it was suggested as an alternative, that should the city accept a certain responsibility in the matter, \$7,500 would be a reasonable amount. Mr. Mackay's counsel stated that he was prepared to advise his client to accept an offer of \$7,500, leaving the question of liability to the court, but he did not consider that amount was a reasonable one.

# Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

**Canadian Government Railways.**—G. R. JOUGHINS, Superintendent of Rolling Stock, Moncton, N.B., has retired under the pension rules.

W. U. APPLETON, heretofore General Master Mechanic, has been appointed Superintendent of Motive Power. Office, Moncton, N.B.

G. E. SMART, heretofore Master Car Builder, has been appointed Superintendent of Car Department. Office, Moncton, N.B.

W. E. BARNES, heretofore Master Mechanic, Moncton, has been appointed General Master Mechanic, vice W. U. Appleton, promoted. Office, Moncton, N.B.

T. W. McBEATH, heretofore traveling fireman, Moncton, N.B., has been appointed Master Mechanic, District 3, Moncton, N.B.

C. D. BOVARD, heretofore acting Assistant Superintendent, District 2, Intercolonial Division, Campbellton, N.B., has been appointed acting Assistant Superintendent, District 5, Intercolonial Division. Office, Moncton, N.B.

J. H. WILSON has been appointed acting Assistant Superintendent, District 2, Intercolonial Division, vice C. D. Bovard, transferred. Office, Campbellton, N.B.

E. L. DESJARDINS, heretofore Assistant Superintendent, District 1, Levis, Que., has been appointed acting Superintendent, District 5, Eastern Lines, vice A. R. MacGowan, resigned to enter Delaware & Hudson Co.'s service. Office, Edmundston, N.B.

R. P. DOCKETT, heretofore blacksmith, has been appointed Foreman of Steel Car Shops, Transcona, Man., vice I. Hanson, enlisted for military service.

**Canadian Northern Ry.**—A. HECTOR has been appointed Travelling Freight and Passenger Agent, Halifax, N.S., vice A. T. Smith.

C. J. PIPER has been appointed Commercial Agent, Minneapolis, Minn., vice J. T. Whitlaw, resigned, as reported in our last issue.

**Canadian Pacific Ry.**—The following statement by the President has been given out:—"In order to relieve I. G. OGDEN, Vice President, from some of his onerous duties and to enable him to give his entire time to the company's financial department, JOHN LESLIE, Comptroller, has, by resolution of the directors, been placed in entire charge of the company's accounting department in all its branches, effective Mar. 1. Thereafter the officers of the department will report to him."

M. J. BUCKLEY, heretofore Locomotive Foreman, Glen Yard, Montreal, has been appointed Locomotive Foreman, Quebec, Que., vice J. Prendergast, transferred.

J. PRENDERGAST, heretofore Locomotive Foreman, Quebec, Que., has been appointed Locomotive Foreman, Hochelaga, Que., vice J. Miller, transferred.

J. MILLER, heretofore Locomotive Foreman, Hochelaga, Que., has been appointed Locomotive Foreman, Glen Yard, Montreal, vice M. J. Buckley, transferred.

R. C. CHAMBERS has been appointed electrician at Fort William, Ont., vice F. Totten, transferred.

E. L. LANDORPH, heretofore Engineer of Water Service, Winnipeg, has been ap-

pointed Resident Engineer, Kenora, Ont., vice H. H. Tripp, transferred.

T. LEES, heretofore Resident Engineer, Calgary, Alta., has been appointed Engineer of Water Service, Winnipeg, vice E. L. Landorph, transferred.

R. DAWSON, heretofore District Passenger Agent, Calgary, Alta., has been appointed District Passenger Agent, Brandon, Man., vice J. A. McDonald, transferred.

J. A. McDONALD, heretofore District Passenger Agent, Brandon, Man., has been appointed District Passenger Agent, Regina, Sask., vice J. E. Proctor, transferred.

S. T. LEWIS, heretofore transit man, Edmonton, Alta., has been appointed Resident Engineer, Medicine Hat, Alta., vice C. G. Washbon, resigned.

J. E. PROCTOR, heretofore District Passenger Agent, Regina, Sask., has been appointed District Passenger Agent, Calgary, Alta., vice R. Dawson, transferred.

W. H. HARRIS, heretofore Resident Engineer, Calgary, Alta., vice T. Lees, transferred.

F. TOTTEN, heretofore electrician, Fort William, Ont., has been appointed electrician at Calgary, Alta.

H. H. TRIPP, heretofore Resident Engineer, Kenora, Ont., has been appointed Resident Engineer, Edmonton, Alta., vice W. H. Harris, transferred.

**Canadian Pacific Ocean Services, Ltd.**—W. R. SERGENT, who has been associated with the Allan and C.P.R. steamship lines, and C.P.O.S., Ltd., for about 18 years, is reported to have retired from active duties of Chief Superintendent Engineer, but as continuing as an official in a consultative capacity.

KENNETH MCKENZIE, Superintendent Engineer in England, is reported to have been appointed Chief Superintendent Engineer of all the company's fleets, vice W. R. Sergeant, retired. Office, Liverpool, Eng.

**Delaware & Hudson Co.**—A. R. MacGOWAN, heretofore Superintendent, District 5, Eastern Lines, Canadian Government Railways, Edmundston, N.B., has been appointed Superintendent, Pennsylvania Division, D. & H. Co., vice C. A. Morgan. Office, Carbondale, Pa.

**Grand Trunk Ry.**—F. RUTHERFORD, heretofore Trainmaster, Battle Creek, Mich., is reported to have been appointed Superintendent of Transportation, Montreal.

A. M. ADAMS, heretofore agent, Hamilton, Ont., has been appointed Freight Agent, Toronto, vice John Gray, deceased.

T. J. WRENNICK, heretofore General Yardmaster, Hamilton, Ont., is reported to have been appointed Terminal Superintendent for the district covering the International bridge, Fort Erie and Bridgeburg yards, and also Black Rock, and River St. yard, Buffalo, N.Y., vice T. W. Saunders.

J. A. CLANCY has been appointed Trainmaster, Districts 27 and 28, Detroit Division, Western Lines, vice F. A. Rutherford, promoted. Office, Durand, Mich.

The following station agents have been appointed:—St. Jacobs, Ont., J. G. Buchanan; Shakespeare, Ont., R. Middleton; Thedford, Ont., W. A. McGregor; Owen Sound, Ont., G. S. Cline.

**Grand Trunk Pacific Ry.**—The following station agents have been appointed:—Venn, Sask., F. Hues; Lawson, Sask., H. Moe; Tofield, Alta., G. S. Gee; Smithers,

B.C., J. G. Stephens; Pacific, B.C., M. C. Newkirk.

**Grand Trunk Pacific Coast Steamship Co.**—R. BEAUMONT, heretofore Assistant to Manager, Vancouver, B.C., has been appointed Superintendent in charge of operation, and his former position has been abolished. Office, Prince Rupert, B. C.

**Great Northern Ry.**—W. P. KENNEY, heretofore Vice President in charge of Traffic, has been elected President, in place of L. W. HILL, who was also Chairman of the Board, and continues in that position. Offices, St. Paul, Minn.

R. BUDD, formerly Assistant to President, has been elected Executive Vice President. Office, St. Paul, Minn.

**Kettle Valley Ry.**—W. H. LITTLE-JOHNS has been appointed Car Foreman, South Penticton, B.C., vice C. Mitchell, who has left the service.

**New York Central Rd.**—L. C. ANDERSON has been appointed Superintendent Passenger Transportation, lines west of Buffalo, N.Y., vice F. M. Smith, transferred. Office, Cleveland, Ohio.

**Railways Department.**—GORDON GRANT, M.Can.Soc.C.E., Chief Engineer, Quebec & Saguenay Ry., who was mentioned in Canadian Railway and Marine World for February, as having been appointed expert adviser to the Railways Department, has been given the title of Consulting Engineer to the Railways and Canals Department, with such duties as may be assigned to him by the Minister. He will continue to act as Chief Engineer, Q. & S.R., until it has been completed and handed over to the Canadian Government Railways operating department. Office, Ottawa.

**Reid Newfoundland Co.**—F. E. PITTMAN, heretofore Assistant Treasurer, has been appointed Passenger Agent, vice J. W. N. Johnstone, resigned. Office, St. John's, Nfld.

The American Railway Engineering Association's annual meetings will be held at Chicago, Ill., Mar. 19 to 21.

The Great Northern Ry., through J. J. Toomey, has foreclosed a mortgage of \$200,000 on the World building, Vancouver, B.C., under an order of a British Columbia court.

**Theft of Tickets.**—Alfred Housego, a C.P.R. employe at Moose Jaw, Sask., was convicted Feb. 3, of stealing two railway tickets from Moose Jaw to Vancouver, valued at \$78; and the two men who received the tickets were convicted of receiving stolen property.

**Canadian Northern Ry. Taxation** in New Westminster.—Up to the end of 1917, the C.N.P. Ry. owed New Westminster, B.C., \$124,000 odd for taxes, \$68,000 having been paid during the year on account. An agreement was reached for the payment of \$34,897 during Feb., 1918.

**Railway Lands Patented.**—Letters patent were issued during January, in respect of Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres.
Alberta & Great Waterways Ry. ....	47.47
Calgary & Edmonton Ry. ....	955.07
Canadian Northern Ry. ....	4,154.60
Edmonton, Dunvegan & British Columbia Ry. ....	129.69
Grand Trunk Pacific Ry. ....	1.50
Grand Trunk Pacific Branch Lines Co. ....	68.34
Qu'Appelle, Long Lake & Saskatchewan Rd. & Steamboat Co. ....	2,789.00
<b>Total . . . . .</b>	<b>8,145.67</b>

# Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway,  
Marine, Express, and Telegraph, also Railway and  
Canal Contractors' Interests.

Official Organ of various Canadian Transportation  
Associations.

Published on the first of each month.

ACTON BURROWS, LIMITED - Proprietors,  
70 Bond Street, Toronto, Canada.

ACTON BURROWS, A. Can. Soc. C.E.  
Managing Director and Editor-in-Chief.

AUBREY ACTON BURROWS - Secretary and  
Business Manager.

Associate Editors  
JOHN KEIR AND DONALD F. KEIR

United States Business Representative,  
A. FENTON WALKER, 143 Liberty St., New York

Member of  
Canadian Press Association,  
Associated Business Papers,  
Audit Bureau of Circulation.

Authorized by the Postmaster General for Canada,  
for transmission as second class matter.

Entered as second class matter, July 25, 1913, at the  
Postoffice at Buffalo, N.Y., under the Act of Congress  
of March 3, 1879.

SUBSCRIPTION PRICE, including postage any-  
where, \$2 a year.

SINGLE COPIES, 20 cents each, including postage.

The best and safest way to remit is by express money  
order. Where one cannot be obtained, a post office  
money order, or bank draft, payable at par in Toronto,  
may be sent. Cheques or drafts not payable at par in  
Toronto cannot be accepted. Remittances should be  
made payable to Canadian Railway and Marine World.

NOTICE TO ADVERTISERS.

ADVERTISING RATES furnished on application.  
ADVERTISING COPY must reach the publishers by  
the 10th of the month preceding the date of publication.

TORONTO, CANADA, MARCH, 1918.

## The Dominion Government's General Railway Policy.

There is a great deal of speculation as to the policy which will be decided on by the Dominion Government in regard to the general railway situation, and a large amount of matter on the subject has been published in daily papers. The greater portion, if not all of it, has probably little, if any, foundation and is largely speculative. The Ottawa Evening Journal, which prior to the formation of the Union Government was the Conservative organ there, and the proprietor of which is closely in touch with Sir Robert Borden, had the following in its issue of Feb. 23, which may perhaps be more reliable than what has appeared in a number of papers:

"The sub-committee of the cabinet which for the past month has been studying the railway problem has completed its investigations and submitted its report to the Privy Council. It is now being considered by the cabinet as a whole. While nothing official has been given out, it is understood that in the main the recommendations are as follows:

"That the C.P.R. be not now nationalized, but retained as a privately owned and operated system.

"That the Grand Trunk Pacific and G. T.R. be nationalized.

"That negotiations be opened up with the G.T.R. stockholders in England in regard to terms for the disposal of their stock.

"That the G.T.R., Grand Trunk Pacific, Canadian Northern and Intercolonial be operated as one state-owned system.

"That the railway rates be increased as a war measure, with a provision for the taxation of abnormal profits in order to prevent undue earnings from the increase.

"The sub-committee considered from every possible standpoint the possibility of nationalization of all Canadian railways, including the C.P.R. The question of nationalizing the C.P.R. was rejected chiefly for two reasons, viz.: because of the financial burden it would entail at a time of financial stress, and because of a disposition not to hastily interfere with the gigantic and most efficient organization which the C.P.R. has built. Even the most ardent advocates of public ownership in Western Ontario and the prairie provinces hesitated at such an experiment in operation by the state.

"In regard to the G.T.R., it can be stated definitely that the government never had and has not now any intention of taking over the G.T. Pacific and leaving the G.T.R. They will deal with it as one enterprise. The taking over of the G.T.R., however, is a much more difficult proposition than most people appear to think. In the first place there is the difficulty involved in the fact that approximately 2,000 miles of this system are in the United States; and in the second place there is the still greater problem that over 100,000 of the stockholders live in England. It is very easy to talk, as the Hydro Electric Radial Ry. deputation from Ontario talked recently, of taking over this road, as if that could be done by the stroke of a pen, but the truth is that the government will reward handsomely any genius who is prepared to demonstrate to it how such a thing can be done other than by the process it proposes to follow: viz., negotiation and agreement. The truth is that the G.T.R. stock held in England cannot legally be expropriated, and, therefore, it must follow that any sensible or useful arrangement must be

based upon agreement between the stockholders and the government. Of course it is quite true that the government could go ahead and expropriate the physical assets of the system, but such a proceeding is not seriously proposed in any responsible quarter. On the contrary, the Prime Minister made it quite clear in the course of his remarks to the Hydro Electric Radial Ry. deputation that the government was disposed to give the English stockholders just consideration. In a word, the situation in regard to the G.T.R. can be summed up as follows: The sub-committee of the cabinet favors the taking over of the system; the Prime Minister and the cabinet are practically in accord with the proposal; but, owing to the fact that the majority of the stock is held in England, the matter cannot be dealt with hastily, but only after thorough consideration, negotiation and agreement.

"Freight and passenger rate increases are now practically certain to be allowed. The government is convinced that owing to advances in the cost of rolling stock and necessary improvement and maintenance, an increase in rates is absolutely necessary to maintain transportation efficiency. It is probable, however, that the increases will be temporary, granted purely as a war measure to meet extra normal conditions imposed by the war. The advances granted by the Board of Railway Commissioners were more of a permanent character. Taxation of war profits, as already stated, will be devised to look after the possibility of the increase in rates bringing extra normal profits to the C.P.R. It is probable that the Canadian Railway Association for National Defence will be retained in any event. It has achieved splendid results and would undoubtedly render good service under any new conditions that might arise."

## Objectionable Solicitation of Advertising.

The Associated Business Papers, of which Canadian Railway and Marine World is a member, unanimously adopted the following resolution recently.

"Whereas certain associations of business men permit the name and influence of their associations to be used in the solicitation of advertising for their association publications, in a manner that is frequently highly objectionable, it is resolved that the Associated Business Papers in convention assembled in Chicago, on Oct. 13, 1917, hereby condemn such solicitations as an undignified and improper perversion of association influence, far removed from the original purpose of any business organization and equally removed from the methods that should govern the sale of legitimate advertising."

**Freight rates advanced.**—In general order 215-A passed by the Board of Railway Commissioners Jan. 24, the Quebec Railway, Light & Power Co.'s standard freight tariff of maximum mileage tolls, C.R.C. 103, was approved. It is an advance of 15% on the previous tariff. The board did not approve the company's application for a similar advance in passenger rates.

# Electric Railway Department

## The Montreal Tramways Company's New Franchise.

The Quebec Legislature, early in 1917, appointed a commission to draw up a new franchise agreement between the City of Montreal and the Montreal Tramways Co., the Commissioners being Senator J. P. B. Casgrain, Montreal; Senator C. P. Beaubien, Outremont, and F. J. Cockburn, of the Bank of Montreal. Mr. Cockburn resigned, as his engagements did not permit him to act, and A. W. Steverson, accountant, Montreal, was appointed in his place. After considerable investigation and negotiation an agreement for a new franchise was prepared and was executed on Jan. 28, 1918, being signed by the commissioners, by representatives of the city, and by E. A. Robert, President, and Patrick Dubee, Secretary, Montreal Tramways Co. It was also signed on behalf of the National Trust Co., Toronto, and the Harris Trust & Savings Co., of Chicago. The agreement has been ratified by the Quebec Legislature in one of the clauses of the act to amend the city's charter passed recently, and is appended to the act as a schedule. As many of the features are unique and a departure from the usual form of franchise, its provisions are given as fully as possible as follows.

The original bill before the house was in French, and the following translation was made hurriedly and is subject to revision:—

An administrative commission is created which shall be known as the Montreal Tramways Commission and shall exercise the powers and perform the duties assigned to it by the contract. The Commission shall consist of three members who shall be appointed by the Lieutenant-Governor in council immediately after the coming into force of the contract. The president and acting president of the commission shall be similarly appointed.

The members of the Commission shall reside in the territory under the control of the commission. Every member of the commission shall be appointed for 10 years and shall retain office during good behavior; but he may, at any time, be dismissed for cause by the Lieutenant-Governor in council. The city and the company shall have the right to apply, by writ of quo warranto, to the Superior Court for the dismissal of any member of the commission, for fraud, bribery, refusal or neglect to bona fide carry out the powers or perform the duties assigned to him by this contract, or if he becomes incapable. The members of the commission shall not form part of any body charged with the government or administration of the city's affairs or of any other municipal corporation interested, nor be in the employ in any capacity of any of the parties or other municipal corporation interested, nor be shareholders nor bondholders nor holders of the company's bonds or debentures, nor have, directly or indirectly any contract or interest in any contract, with one of the parties or with any other municipal corporation interested, nor in any inventions, apparatus, machinery, processes or patented articles employed or which may be employed by the company, nor be shareholders in any company having a contract or being interested in a contract with one of the parties or with any other municipal corporation interested, nor be members of the Legislative Assembly or Legislative Council of Quebec Province. The quorum for meetings of the commission shall be two and each member shall have but one vote. In the absence of the president, the acting president shall preside at the meeting. Every decision of the commission must be voted for by two members. The remuneration of the members of the commission shall be fixed by the Lieutenant-Governor in council and shall be payable monthly by the company. The commission shall draw up rules for its government and for the disposal of matters brought before it. Such rules shall be obligatory, when approved, after notice given to the city, to the other municipal corporations interested and the company by the Quebec Public Utilities Commission which is authorized to do so. Such rules may be amended from time to time, subject to such approval. Every decision susceptible of appeal, given by the commission shall be notified without delay upon the city, the company and any other party to the case. The commission shall not give any decision before having called upon all parties interested to be heard. The commission

shall hear and decide all complaints or applications made to it verbally or in writing, by any person whomsoever.

Any party to the case, the company, the city or any municipal corporation interested may appeal to the Quebec Public Utilities Commission from any decision of the commission on any question of law or competence relating to the contract, as well as from any decision given by the commission in the cases mentioned in certain articles of the contract which are enumerated. This appeal shall be final except as regards questions of law and shall on pain of nullity, be taken within 15 days from the service of a copy of the decision, by the commission upon the interested parties. Such appeal shall be taken by means of an inscription deposited in the Public Utilities Commission's office, and notice thereof shall be served upon the other parties to the case or upon their attorney. In deciding such appeal, the Quebec Public Utilities Commission may confirm, reverse or amend the decision of the commission and give such decision as should, in its opinion, be given by the commission. The Quebec Public Utilities Commission shall proceed on such appeal brought before it under this contract as if the case or matter had originated before it.

The commission shall have the right to engage a secretary and such employees as it may need, to fix their salaries, to obtain the advice of experts, and advocates and pay such experts and advocates, to provide itself with offices and whatever it may need to enable it to perform its duties. All necessary expenses incurred by the commission in and for the performance of its duties, including the remuneration of its members and the salaries of its employees, shall be paid by the company and form part of its working expenses. The company shall pay such expenses at the request of the commission. The company may, if necessary, by proceeding as in the case of an ordinary appeal, have these expenses revised by the Quebec Public Utilities Commission.

To enable it to exercise all its powers and perform all the duties assigned to it, the commission has the right, at any time to examine any of the company's files or other documents, and to inspect the company's property, but, for the purpose of auditing the company's accounts, the commission shall employ a chartered accountant, if it does not do so itself. The commission shall make a report to the city, every year, on the state of the company's capital account and other accounts in connection with maintenance and renewals, as well as the reserve accounts and those connected with the lowering of tariffs.

The powers conferred by the contract on the commission shall not have the effect of removing the company from the jurisdiction of the Quebec Public Utilities Commission, but, in order to avoid all conflict of jurisdiction, it is agreed that any demand or complaint regarding the commission's jurisdiction and which might be taken before the Quebec Public Utilities Commission against the company, shall be initiated before the commission. In the event of an appeal not being allowed under this contract or of an appeal not being lodged when allowed, if the company neglects or refuses to comply with the commission's decision, the latter must report to the Quebec Public Utilities Commission, which shall take such measure and give such order as it may deem necessary for carrying out the commission's decision in the same manner and with the same effect as if such decision had been given by it. When the Quebec Public Utilities Commission decides upon an appeal from a decision of the commission, its decision shall be carried out by it as if it had decided in the first instance.

**Franchise Rights.** The object of the contracting parties is to assure to the population by the contract a rapid and efficacious system of transport and means of communication. In execution of the laws 1 George V, (2nd session), chap. 77, secs. 14 and 15, and 7 George V, chap. 60, sec. 28, the city grants to the company, on the conditions mentioned in the contract, the privilege of constructing, equipping, maintaining and operating, from the putting into force of the present contract until March 24, 1953, a system of surface cars in the city, such as now exists and such as will later be augmented, and the company obliges itself to construct, equip, maintain, keep up and operate at its costs, the said system of tramways, in accordance with the limitations and during the term of the present contract. Consequently, from the coming into force of the present contract, the privileges, rights and franchises which the company now possesses in the city for the above purposes, and which are the results of the law, of contracts, bylaws, resolutions or other acts, are annulled; and the privileges, rights and franchises which it possesses or will possess in other territories for the same purposes will be annulled by the act alone of the annexation of these territories to the city, which territories will then be subject to the present contract. The company shall not, directly or indirect-

ly, sell, cede, transport or lease, in whole or in part, its system of tramways situated in the city or outside of it, nor the rights conferred upon it by the present contract, nor the rights which it possesses or will possess in virtue of contracts, bylaws or resolutions agreed to or to be agreed to in its favor by the city or by other municipal corporations. The company may, however, enter into new trust deed conditions for the purpose of enabling it to renew or replace the hypothecary obligations created by the trust deed agreements in force on June 30, 1917, and the debentures for \$1,500,000 falling due in May, 1922. The company guarantees the city against all claims that may be made against it and to indemnify it against claims which may be pronounced against it in connection with the construction, existence, the upkeep, the repairs and operation of the system of tramways. The company shall not, either in the city or outside of it, undertake any industrial or commercial operation other than that which is the object of the present contract or which relates thereto. The company shall not circulate or allow the circulation upon its lines in the city or outside of it, of the cars of any other company, nor connect its lines with those of another company without the consent of the commission. This does not affect the arrangement entered into between the company and the Montreal & Southern Counties Ry., relative to that part of the company's road on McGill St. between Youville and Commune Sts. Subject to the provisions of another article, the company's cars in the city and outside of it shall be operated by electricity or by any other motive power other than steam, approved by the commission, and the company will continue, for the present, to use the system known as trolley system. The company's lines and all its accessories, the rolling stock and everything used in operating the said system, both in the city and outside of it, shall be of the best and most modern production, constructed of first class material and in accordance with the latest designs and improvements known to art. The company must always keep its system of tramways, including everything pertaining to it and to its operation, both in the city and outside of it, in a good condition of maintenance and repair, so as to give a rapid, sure and efficacious service in accordance with the intention of the present contract. The corporation must keep account in its operations, of all the ameliorations and improvements to any part whatever of its system, both in the city and outside of it, including the rolling stock, which proves of recognized advantage, and it must effect the same when so ordered by the commission and within the delay fixed by it.

**Extension of Lines.**—The company must construct and operate the following double tracks on or before Nov. 1, 1918:—

On St. Patrick St., from Church St. to Monk Boulevard, and on Monk Boulevard from St. Patrick St. to Allard St., these lines to be connected with those of Church St.

From Westmount Ave. on the company's property and on the Cote des Neiges Road to Queen Mary Road, with connections both east and west to the tracks already on this last mentioned road.

On Park Ave., from Atlantic Ave. to Beaumont St., on Beaumont St., from Park Ave. to Bickerdike St., and on Bickerdike St. to Ball St.

On Kelly St., in Bordeaux Ward, from the Ahuntsic railway station to Tolhurst St., on Tolhurst St. from Kelly St. to Daze St., on Daze St. from Tolhurst St. to Meilleur St., on Meilleur St. from Daze St. to McDuff St., on McDuff St. from Meilleur St. to Poincarre St., on Poincarre St. from McDuff St. to Boulevard Gouin, with the necessary connections to connect this line with that leading to the Bas du Sault. The commission may suspend the construction of this line until the city shall have acquired the necessary right of way. The commission may also change the course of this line if the company can acquire the right of way elsewhere at a lesser cost. Seeing that the municipal underground works have not yet been done under this proposed line, the commission may order the construction of a single line, but it must be replaced by a double one when the works in question have been completed.

On DeFleurmont St. from Christophe Colomb St. to Papineau St., with connections to the existing lines on DeFleurmont St. and with connections to the lines on Christophe Colomb St. and Papineau St. to the north; on Rosemont Boulevard from Papineau St. to Boulevard Pie IX, with connections to the lines on Papineau St. and on Boulevard Pie IX, to the south; on Boulevard Pie IX from Rosemont Boulevard to the present double track of Boulevard Pie IX; on Bellechasse St. from Henri Julien St. to St. Denis St. with connections to the lines on St. Denis St., in both north and south directions; the construction of these lines thus forming a continuous line from St. Lawrence St. to Pius IX Boulevard inclusively, by way of Bellechasse St., St. Denis, DeFleurmont

and Papineau St. and Rosemont and Pius IX Boulevards.

On Iberville St. from Masson St. to Belanger St., with connections with the present lines on Iberville and Masson Sts., and with connections with the lines to be constructed on Rosemont Boulevard, both east and west.

In the cases mentioned, apart from the exceptions contained in it, work must be commenced on or before June 1, 1918, and diligently continued. The commission is, however, authorized to prolong the time for the execution of these works if the company establishes before it, the city having been heard—that it is impossible to complete them within the given time.

The company must construct and operate, both in the city and outside of it, all other new lines asked by it or by the city, or by any other municipal corporation, if, in the opinion of the commission, they are justified by the needs of the population and of traffic and if general financial conditions permit. If in the opinion of the commission the needs of the population and of traffic justify it and the general financial conditions permit it, the company must construct and operate in the city or outside of it all new lines ordered by the commission, even if these lines are not asked by the city, by another municipal corporation or by the company. In each case the commission must fix the delay within which the work must be done or completed. Nothing herein contained will have for effect to deprive municipalities outside the city of the right to exact the routes and frequency of service to which they are entitled by their contracts with the company. No new line shall be constructed by the company within the city or outside of it without the previous authorization of the commission. Outside of the territory where the uniform tariff prevails, the cost of construction of any new line or of the prolongation of any existing line or of their operation, should not be a charge on the revenues of the company, so that the revenues of such new lines should be sufficient to avoid unjustly affecting the passenger and freight tariff on the other parts of the company's system.

No tramway lines shall be constructed in the public parks of the city except on Victoria and Viger Squares, and on these only when it will be absolutely necessary to do so to meet the pressing needs of traffic. The company, on the order and within the delay fixed by the commission, must make modifications, additions, reconstruction, alterations or necessary repairs to its lines, the pavings for which it is responsible, its rolling stock or to anything else pertaining to its system, either in the city or outside of it.

The company must, on the order of and within the delay fixed by the commission, remove at its own cost, all lines or parts of lines, whether situated in the city or outside of it, which the city may judge to have become useless, as well as the poles, wires or cables belonging to the same, and must also replace the paving whence such removals have been made to make it correspond with the rest of the street and of the sidewalks. If the company neglects to do this work within the given delay, the city or the municipal corporation interested, as the case may be, may do it at the cost of the company, with the consent of the commission.

The company, in constructing its lines must keep to the level of the different streets as furnished by the City Engineer, and must make no change in the same. In constructing or reconstructing its lines the company, after having made the excavations and fixed the rails and other apparatus, must remove the surplus earth and other materials taken from the excavations and must reconstruct at its own expense that part of the street excavated by it, so as to leave it in the same condition as it was before the excavation was made, and in so doing it must employ the material which the city may decide upon, provided that it is of the same quality as that employed on the street prior to the excavation having been made. But if the city takes advantage of the work of excavation to substitute another and more expensive paving than that hitherto employed on the said street, the company will then have the right to recover from the city the excess of the cost. The city may itself, however, construct a new pavement of another kind, but it can only charge the company the cost of the work which it could properly be required to do to place the street in the same position in which it found it.

If at any time a new level is established by the city in a street where the company's rails are placed, or if a new permanent pavement including one with an asphalted macadam base is ordered and laid by the city on the street, the company must, at its own cost, do the necessary work to remove its rails to the new level and to renew the paving between the rails and for 15 in. on each side of its track to correspond with the paving ordered by the city.

When the city make a new permanent pavement, including one with a base of asphalted macadam on any street where the company uses T rails, the latter must, within the delay fixed by the commission, and in a reasonable time, so as not to delay the city's works, replace at its own cost, these T rails by grooved rails or by any other model approved by the commission, and to do all the necessary work upon its tracks to make them correspond with the projected paving. This paving will be done by the city and at its cost.

If the city widens a street, the company, on the

commission's order, must remove its poles and its tracks, if there is space to do so, and replace them in the locality fixed by the commission, at the city's cost. When it becomes necessary to renew a wooden pole the company must substitute an iron one. In the construction of all new tracks the company must use in the city only iron poles.

The company must keep at its own cost in the city free and in a good state of repair the portions of the street and of the paving between the rails and 15 in. each side of them and also between the tracks in the streets where there are double tracks. In default of so doing, the city may do the work at the company's cost with the commission's consent.

When the company does work in the streets it must proceed diligently and without interruption, leaving free space for traffic and so arranging its materials as to interfere with it as little as possible. If in order to permit the city to do any work whatever, either itself or through any other person, upon any street whereon the company has tracks, it is necessary in the commission's opinion to remove and replace the tracks, this work, including the repaving between the tracks, between the rails and 15 in. on each side of the rails will be done by the city at its cost. If the city exacts it, the company must remake the part of the track removed at the city's cost, but the company cannot claim any damages from the city which may result from the interruption of its traffic or from any other cause.

Except in the cases above mentioned, and when it is otherwise provided in the contract, whenever the company makes trenches or openings in the paved streets or sidewalks, the city will remake itself the paving or the sidewalk at the company's cost, and in such case the company must abide by the municipal bylaws.

The company must provide for the drainage of its tracks according to the system approved by the Chief Engineer of the City and no connection with the city drains may be made by it without permit from the city.

Excepting in the case of minor repairs, the company, before doing any work in the streets or public places, whether in the way of constructing or repairing its tracks, poles, conduits, etc., which may affect in any manner the paving, sidewalk or other municipal works, must obtain a permit from the city.

The company cannot change, modify or displace any drain, water course or other subterranean construction belonging to the city, without the consent of the latter, and if such change, etc., is necessary it must be made by the city at the company's cost.

The company must, both in the city and outside of it, use grooved rails or such other model as may be approved by the commission, in permanently paved streets, including those with an asphalted macadam base, but it may use T rails on other streets.

In the city or outside of it, the width of the space between the tracks, the width of the tracks, the radius of the curves at the street curves, the projection of the sleepers outside the rails, the width of the rolling stock, the model of the cars and of their accessories, the type and the placing of the poles, the locating of the tracks on the streets, the weight and type of rails, the indicators signalling the regular stopping places of the cars, the lighting and heating of the passenger cars, the weight of the passenger cars as well as the freight cars and their maximum loads, the numbering of the cars, the maximum number of cars of which train shall be composed will be subject to the commission's approval.

Service. The commission must determine, both in and out of the city, the speed of the cars, the stopping and transfer points, and the service and frequency thereof on each route or circuit by day as well as by night. It is within the commission's power to permit a greater speed than that allowed by law.

The company, both within and without the city must maintain its tramway service on the lines or circuits mentioned in schedule B to the contract, and must regularly maintain on each line or circuit the actual frequency of service indicated in the schedule until it may be otherwise ordered by the commission. The routes or circuits established by this schedule may be modified or changed from time to time by the commission, but no change can be made by the company without the commission's consent.

The company must station an agent at every transfer point that the commission may indicate, whether within or without the city. This agent must perform all the duties that the commission may determine.

The company must not use either within or without the city combination freight and passenger cars without the commission's consent.

It is forbidden both within and without the city to enter or to leave any car unless it has come to a complete stop.

Both within and without the city the conductors and the transfer point officials must speak both languages and announce equally in both languages the names on the routes of the cars.

Both within and without the city each car must be furnished with a gong which will be sounded before the car approaches within 40 ft. of each crossing. Every passenger car must carry in front and on each side a sign approved by the commission, indicating its route and destination in a man-

ner easily read. After sunset these signs will be illuminated. Every passenger car shall be well ventilated and kept always clean.

Both within and without the city the commission will determine the number of passengers that each car may carry. The company must inscribe this number in figures at least 4 in. high on the outside of the car.

Both within and without the city, the company will have the right to run its cars on the rails in preference to all other vehicles, which must leave the road free to them whenever they meet them or when they approach in the same direction, and which must not for any reason obstruct or inconvenience them.

The city will have the right, without any indemnity to the company, to make use of its poles for placing its fire alarm telegraph, patrol or electric lights wires thereon, or for affixing thereto placards conveying information of public interest, in the manner fixed by the commission, provided that no expense is thereby caused to the company and that the city will be responsible for all damages caused to anybody by the use made by it of the said poles.

**Snow Removal.**—The company, in accordance with the city's instructions, must keep its tracks clear of snow and ice, and the city may, if it so desire, remove, as it may decide, from one side walk to the other, the whole or a part of the snow or of the ice in any street or part of a street where the cars will be in operation, including the snow falling from the roofs of buildings, thrown or falling in the street, and that removed from the sidewalks and thrown into the streets with the city's consent, and the company will be required to pay half the cost of this work.

The city may open streets in such localities as it may deem proper, and for this purpose may cross the company's lands used as right of way without paying any indemnity to the company for the possession and use of the lands. The cost of the works executed on the part of the streets situated on the company's land and their maintenance will be at the city's cost.

If the city exacts it, the company must wash, water and sweep the streets or parts of the streets upon which it has tracks, and also transport all garbage, rubbish and other waste matter or snow, at a price which must not exceed the cost of the same to the company, plus 10% of profit, provided that in the commission's opinion this work does not impede traffic.

The company must make connections between its main line and all sidings which the city may require for communicating with its yards or other municipal establishments, and must perform all other work in connection with these sidings, which the city may not judge proper to do itself. These works will be done at the city's cost but at cost price.

All the work provided for by this contract and imposed upon the company will be executed under the commission's surveillance.

**Approval of Contracts.**—All contracts involving an expenditure exceeding \$50,000 either for work or for the furnishing of electricity, the purchase of material, the purchase or sale of immovables, made by the company must be submitted to the commission either before being signed or within days of the same. The commission must approve or disapprove of it within the eight following days. There will be an appeal by the company to the Quebec Public Utilities Commission from the commission's decision. If the commission disapproves the contract and no appeal is made, or if there is an appeal and the decision of the Quebec Public Utilities Commission disapproves the contract, then in either case the contract will be null and of no effect. This article will not apply to contracts involving the expenditure of any sum which the company may distribute to its shareholders or might distribute to them without the restriction hereinafter imposed, concerning the maximum dividend. This article is not to be interpreted as taking from the commission the right of surveillance and of control which it has in virtue of the other articles of this contract.

**Electrolysis.**—The company must employ the necessary means and apparatus to prevent damages being caused by the leakage or discharge of electricity into the soil, to the underground water pipes, conduits, drains or other municipal works. The company will be responsible to the city and to any other interested municipal corporation for all damages which may be caused by the leakage or discharge of electricity into the soil, and the company must guarantee them against it and indemnify them for any condemnation which may be pronounced against them in this connection.

The company's wires may be cut on the order of the Chief of the Fire Department if he believes it to be necessary to permit him to extinguish a fire, and in this case the company will have no right to any claim or indemnity either for damages caused to the wires or for any other cause.

Excepting when otherwise provided by this contract, whenever the city executes works of which the cost is repayable by the company, or whenever the company executes works of which the cost is repayable by the city, these costs will include only the actual expenditure without profit.

**Rates of Fare.**—The tariffs in force at the date of this contract, both within and without the city, which the company is authorized to collect in virtue of the law or of all contracts, bylaws or resolutions will continue in force until they have been modified by the commission. Within 60 days

following the nomination of its members, the commission must, if it is necessary, modify these tariffs so as to give full effect to the present contract, taking into consideration the expenditure upon work done by the company since the coming into force of this contract. The commission must, within the same delay render these tariffs uniform for the territory comprising the city such as it exists at the date of this contract, as well as the towns of Maisonneuve, Westmount, Outremont, Verdun, St. Laurent, Mount Royal, the territory of that part of St. Laurent parish and the territory of that part of the municipality of Cote Saint Luc to the east of the company's track which extends from Snowdon station to Cartierville, including the land occupied by this track. This territory will be known as the uniform tariff territory.

Outside of the uniform tariff territory, the commission may fix different tariffs for the different municipalities, as well for local traffic as for that from one municipality to another, or from a municipality to the uniform tariff territory and vice versa, provided that these tariffs, or any of them do not unjustly weigh upon the rest of the system, and provided further that these different municipalities may, with the commissions consent, agree to pay to the company a part of the cost of their respective services for the purpose of obtaining lower rates.

In the uniform tariff territory, as well as in the other municipalities, the commission may fix different tariffs for all passengers at certain hours of morning or evening, or at certain hours of both morning and evening. It may also fix higher tariffs for night hours from midnight till 5 a.m.

The commission may establish lower tariffs for school children and for apprentices which will only apply to week days. For school children these tariffs will apply only from 8 a.m. to 6 p.m., and for apprentices from 6 a.m. to 7 p.m. Children under five years of age will be carried free. The company must sell passenger tickets of the denomination which will be fixed by the commission, in all its offices and on board its cars.

The commission may, from time to time, as required, modify the tariff which will have been established in virtue of the present article, but in accordance with the provisions of this contract.

No change in the tariffs will come into effect until eight days after a notice published by the commission during two consecutive days, in an English and in a French newspaper published in the city. After the putting in force of a new tariff, passengers will not be able to use tickets previously purchased and which are not in accordance with such new tariff, but the company must redeem these tickets at the price at which they were sold.

**Transfers.**—The rates of passage established by the commission must provide for the issue of transfers, and the following bylaws must be observed: Every passenger in paying the price of his passage will be entitled to a transfer either gratuitously or at the rate fixed by the commission, as the case may be, from one car to another, at the localities where the routes or circuits meet or cross, or at other localities fixed by the commission, in order to enable the passenger to go without interruption from one point to another in the territory covered by the price of passage paid by him.

The payment of the price of passage cannot in any case permit a passenger to return to his starting point. The intention is that the company transport a passenger for a continuous journey over its lines within the limits covered by the price of passage paid, so long as this journey is continued in the same direction. For example, a transfer issued at the west permits a continued journey towards the east, the north or the south. The transfers issued to passengers, indicates the point or the locality of transfer and no transfer is to be utilized except at the locality and within the limit of time indicated by a perforation of the transfer.

It is forbidden to everybody to sell, change or give any transfer; to receive, to offer or to use for a passage on any car a transfer which has not been regularly issued for it; to throw away any transfer without having first destroyed it.

**Free Transportation.**—Save the exceptions provided for in the contract, no person will be transported gratuitously on the company's cars.

The policemen and firemen of the city, or of all other interested municipal corporations, the company's officers and employees, the members and employees of the commission, when they travel in the performance of their functions will be carried gratuitously, provided that they conform to the rules which will be established by the commission.

The company must at the city's demand have special tickets printed, which will only be sold to the city for the use of its employees. These tickets will be sold to the city at the ordinary price. These tickets must be in accordance with a pattern to be furnished by the city.

The company may make any arrangement which the commission believes just, with the Dominion Government for the transfer of letter carriers and mails, and with the Quebec Government for the passage of its officers and for the service of the Bordeaux prison.

**Freight Transportation.** The commission may permit the company to transfer freight in part or in the whole of the city, as it now exists, and as it may be hereafter enlarged, also in a part or in the whole of all territory outside of the city, provided that this transport does not delay or hinder in any manner the transport of passengers nor

the execution of the works nor the transport of garbage, rubbish and other waste matter or snow which the company may be called to do for the city in virtue of the present contract. It will be for the commission to determine, in case it permits the transport of freight, what routes the freight cars will follow and during what hours of the day or the night these freight cars may circulate on the company's lines. The tariff shall be fixed by the commission. The freight tariff must be fair and reasonable and as uniform as possible, so that no person or company shall be favored to the detriment of another, but such tariff must be so fixed as to produce sufficient revenue for the passenger tariff not being affected. The commission may, from time to time, make rules for the transportation of freight, which, when approved by Quebec Public Utilities Commission, shall be binding on the interested parties. The commission shall determine what merchandise or other articles may be transported by the company. The transporting of live animals, carrion, dung or other substance of a nature to diffuse smells or cause nuisances, shall be done only in cars approved by the Superior Board of Health of the province. The company shall have the privilege of transporting as freight all building materials it may use for constructing or repairing its tracks, and also all building materials needed for municipal works by the city or any other municipal corporation where the company has tracks, and any excess quantity taken from excavations made in doing their works. The commission shall not have the right to authorize the company to leave its freight cars standing on the streets for loading or unloading the cars except in the case of work done by the company or by the city or by the said municipal corporations. If the transport of freight is allowed, the commission may order the company to establish loading and unloading stations at various places. This article is subject to the authority of the Board of Railway Commissioners of Canada in cases where such authority may be exercised.

**Workshops.** The company shall establish and maintain its factories, workshops and principal offices within the city limits. The company shall also build and manufacture within the city limits all parts of its plant which can be manufactured there as advantageously as elsewhere.

**Labor Unions.**—The company shall, neither itself nor through any other persons, prevent its employees from organizing themselves into labor unions authorized by law. Each class or category of employees may form a separate union.

The company's employees shall have the right to one day of rest per week, the same to be fixed by the company's rules.

**Autobus System.** If, in the commission's opinion, the needs of the population and of traffic justify and financial conditions permit, the company shall establish and put in operation in or outside the city an autobus system on such streets as the commission may designate and on such conditions as it may determine; provided the establishment and operation of such system shall not be a charge upon the company's revenues in the sense that the revenues from such system must be sufficient so as not to injuriously affect the passenger and freight tariffs on the tramways system.

**Guarantee Fund.** The company, by yearly instalments of not less than \$100,000, and in any case within five years from the coming into force of this contract shall provide out of its own resources, to wit, those beyond the commission's control, a special fund of \$500,000, which shall be used to meet all liabilities and all other debts (except mortgage debts) incurred by the company prior to the coming into force of this contract through the operation of its system, and to provide for the payment in each year of any portion of excess expenditure as hereinafter defined, which shall be found by the commission to have been unnecessary for the payment of penalties imposed on the company and also to guarantee the fulfilment by the company of all obligations assumed by it under this contract. Said fund, when created, shall be maintained by the company at all times at the sum of \$500,000. If shall be deposited by the company in some chartered bank or trust company in such a manner as to remain available at all times. The interest thereon or income therefrom shall be the company's property. Upon the termination of this contract the fund shall be the company's property.

**Disposition of Gross Revenues.**—All revenues derived by the company from the operation of its entire system of tramways, as well as from all other sources whatsoever, whether within or without the city's corporate limits, shall, except as herein otherwise provided, constitute the gross revenues, and shall be disposed of for the following purposes and in the following order:

Within 60 days after the coming into force of this contract, the commission shall, for the first year of operation hereunder, allow the company, out of the gross revenues, a sum for each revenue car mile, exclusive of car house and car yard miles, made by cars equipped with motors, except cars operated to carry materials used in the company's construction and repair work, and other sums for each revenue car mile, for trailers, and for freight cars, always exclusive of car house and car yard miles. Such sums shall be known as the operating allowance, and shall be used for the payment of all operating expenses (exclusive of maintenance, renewals and depreciation), and all taxes levied against the company or its property. Such operating expenses shall include among other things, the commission's expenses, and the actual and

necessary expenses incurred by the company during the year for insurance and for the defence and settlement of claims and suits for damages made during the year, and an amount to be held in reserve estimated by the commission to be sufficient to pay all such claims and suits that have not been settled during the year. The company shall so increase the transportation services, under the commission's direction, that the permissible average car mile density, and in so doing, it shall year of operation under this contract shall not be excessive. Within 60 days after the close of the first year of operation under this contract, and annually thereafter, the commission shall redetermine and fix for the ensuing year the amount of the operating allowance and the permissible average car mile density, and in so doing, it shall base its action upon the actual and necessary expenses for operation incurred during the preceding year, with such adjustments as may be foreseen to be necessary on account of modifications of service, changing costs, or any circumstances tending either to increase or to diminish the necessary expenses of operation. If at the end of any year the commission shall find that the company has kept within the operating allowance or shall not have exceeded the same by more than 2½% of its amount, subject to the conditions imposed as to density of traffic being in the judgment of the commission reasonably observed, then the commission shall permit the company to take out of gross revenues, as a charge prior to all other charges, except operating expenses and taxes, as hereinabove defined, a sum to be known as the operating profit, which shall be equivalent to ½ of 1% on the total average capital value for that year; and such operating profit shall belong to the company. In case the company shall have spent more than the operating allowance, plus the above percentage of 2½% during any year, then the excess over such allowance and percentage shall be known as the excess expenditure, and shall be taken from gross revenues up to an amount not exceeding ½ of 1% on the average capital value for such year, and the operating profit shall be reduced accordingly; and if the excess expenditure shall exceed ½ of 1% on average capital value, then the company shall receive no operating profit, but contrary, shall pay out of the guarantee fund, the amount by which such excess expenditure exceeds said ½ of 1%; provided, that if the company shall during such year, in anticipation of such excess expenditure, or immediately upon the close of such year, submit to the commission a detailed statement and explanation thereof, and if the commission shall find not later than 60 days after the close of such year that the excess expenditure, or any part thereof, was necessary and unavoidable in the rendition of service as required by the commission, then the commission shall permit the company to take out of gross revenues the additional sum required to cover said excess expenditure or such part thereof and shall also award the company the full amount of the operating profit, less any part of such excess expenditure which may be found to have been unnecessary, but if such unnecessary part shall exceed the amount of said profit, the balance shall be paid by the company out of the guarantee fund. The commission in determining the operating allowance for the ensuing year, shall take into consideration the excess expenditure incurred during the preceding year and found to be necessary as above provided. Any portion of the operating allowance which shall not be expended or needed for the expenses of the year, shall at the close of the year, with the approval of the commission, be returned to gross revenues to be disposed of as hereinafter provided.

**Maintenance and Renewals Fund.**—The entire plant and property used and necessary to provide the public transportation service shall at all times be maintained at the highest practicable standard of operating efficiency. For the purpose of maintenance, renewals, replacements and substitution made necessary by wear and tear, age, obsolescence, inadequacy, accidents or other cause, a sum shall be set aside for each revenue car mile, exclusive of car house and car yard miles, made by cars equipped with motors and other sums for each revenue car mile made by trailers and by freight cars, always exclusive of car house and car yard miles. Such sums shall be known as the maintenance allowance and shall be placed in the maintenance and renewals fund. Any items of property contained in the appraisal schedule, or thereafter added to the tramways system, which shall become worn out or which for any other reason shall at any time be deemed no longer useful as a part of such system, shall be disposed of under the commission's direction, subject to the provision of any deed of trust, upon the most advantageous terms obtainable, and the proceeds thereof, with, when required, the consent of any trustee for the company's bondholders, shall be paid into maintenance and renewals fund, or if such consent be not forthwith obtained, then proceeds shall be deducted from capital value. The proceeds from the sale of land and buildings shall not form part of said fund, but shall however be deducted from capital value. Out of said maintenance and renewals fund shall be paid from time to time the actual and necessary expenses of maintenance and renewals, and of replacements and substitutions as hereinafter provided, and any moneys not needed for such purposes during any year shall remain in said fund and be held in reserve until

required for such purposes, or for investment in betterments, additions and extensions as hereinafter provided. Whenever any portion of the plant is replaced or other property substituted therefor, the cost of such replacement or substitution up to the full reproduction cost of the unit or article so replaced or substituted for as fixed by the said appraisal, shall be paid out of the maintenance and renewals fund and any cost in excess of said reproduction cost shall be paid out of moneys supplied by the company as hereinafter provided and the amount thereof shall be added to capital value.

(To be concluded in next issue).

## Application for Increased Fares in London.

The London St. Ry. has sent the following letter to the chairman of the city council's No. 1 committee:—"Owing to the enormous increase in the cost of everything entering into the construction and operation of a street railway, the operating and maintenance charges of the London St. Ry. Co. have increased out of all proportion to the gross earnings. This has been due to the abnormal state of affairs throughout the world, which was entirely unforeseeable when the present arrangement between the city and the company was made. Understanding that your committee has charge of street railway bylaw matters, we beg thus formally to bring before you the fact that the company is forced to request, not only in its own interest, but in the interest of the city also, a modification of the present agreement, either by way of increased fares or otherwise. With the best interest of all concerned in view, the company would respectfully request the council to consider the matter, and confer with the company, and, if thought advisable, obtain information and data for the purpose of enabling the matter to be discussed intelligently from its various standpoints by both the city and the company.

"Our records show that the cost of labor has doubled since the date of the present arrangement, and is still advancing, and that the cost of all the materials used in the construction and operation of the road have increased in price from 100% to 300%, while during the entire period the fare per passenger has remained unchanged. In view of the above state of affairs, we feel some modification should be granted, and particularly so as the rate of fare in London is, we believe, lower than in any other place on the American continent. We would respectfully request prompt consideration, and at the same time may state that it is our intention in the meantime, for the purpose of ascertaining the views of the citizens, to point out, through the public press and otherwise, the conditions which make modification of the arrangement necessary at this time."

The company has contracted for advertising space in the local papers to acquaint the public with the facts.

**Toronto Civic Ry.**—At a meeting of the Toronto Board of Control, Feb. 20, the Works Commissioner estimated \$326,124 for maintenance and operation of the civic railway, an increase of \$68,805 over the previous year. He reported that two of the 13 cars on order had been received, and the estimate was for an increased and better service. Since this report another three cars have been received. The mayor stated that maintenance was costing too much, and that the type of cars used was not modern, and suggested that \$8,000 be provided for an experiment with one-man cars, and that a report be made on a new type of car. The operating expense per car mile was given as 18.37c.

## Toronto Railway Co's Annual Report and Meeting.

Following are extracts from the report for the calendar year 1917:—While the gross income has shown an increase, the net income has been adversely affected, owing to increase in wages and to the abnormal war conditions causing the price of all classes of supplies to advance very materially.

Gross earnings	\$6,291,759.06
Charges for operating, maintenance, etc.	3,815,277.82
Net earnings	\$2,476,481.24
Dividends	\$960,000.00
Bond interest, etc.	146,887.66
Payments to city:	
Percentage on earnings	\$970,512.41
Pavement charges	98,840.80
General taxes	117,678.11
	1,187,031.32
	\$2,293,918.98

The gross passenger earnings were \$6,202,562.67, an increase of \$321,057.39, over 1916. When one has in mind the large number of citizens who are still engaged in the war overseas, the income from the operation of the system must be recognized as satisfactory.

The operating charges have increased, through the large increase in the wages of conductors, motormen and shop hands; and owing to the fact that in nearly every line of material used in the upkeep of the plant, the price has advanced greatly; in some cases the material used has increased over 200%. The operating and maintenance cost for the year was \$3,815,277.82, an increase of 4.5% over 1916. The payments made to the city were \$1,187,031.32, an increase of \$74,021.57 over 1916.

The company's agreement with its employees, under which they were receiving 27½c. an hour, expired in June, 1917. They demanded a new agreement with a maximum of 40c. an hour, and other onerous conditions. After negotiations, and notwithstanding the company's offer to arbitrate, the men went on strike, which lasted for 2½ days. Upon their return to work an arbitration was held under the Lemieux Act, which resulted in a majority award of 37c. an hour maximum rate. In other respects the previous agreement was substantially confirmed. Owing to the scarcity of labor and war conditions, your directors reluctantly decided that they had no other course than to accept the award, although it meant an increase in operating expenses of about \$600,000 a year. The directors feel that this award was not warranted by the weight of evidence submitted to the board of arbitration; that it was not justified by any comparison with the rates of wages paid for similar work in Canadian or U. S. cities, and was not warranted by the company's earnings; that in fact the award was essentially unjust to the shareholders.

The seventh drawing of the company's currency and sterling bonds, under the terms of the mortgage deed dated Sept. 1, 1892, took place on June 21. Under the terms the company draws annually a certain number of bonds issued, thus reducing, during the 10 years mentioned, the outstanding bonds to 50% of the original issue, and all bonds so drawn are to be redeemed on or after Aug. 31 following the date of drawing, from which date no interest is payable on bonds so drawn. There has been drawn to date a total of \$1,592,519.98. Careful attention has been paid to the maintenance of the plant, rolling stock equipment and other properties. The directors declared, and paid out of the accumulated surplus earnings, four quarterly dividends of 2%.

### INCOME ACCOUNT.

Gross earnings	\$6,291,759.06
Operating, maintenance, etc.	\$3,815,277.82
Interest on bonds, etc.	146,887.66
Percentage on earnings	970,512.41
Pavement, taxes	264,271.30
	5,196,949.19
	\$1,094,809.87

### PROFIT AND LOSS ACCOUNT.

Balance from 1916	\$5,408,873.68
Surplus earnings, after payment of all expenses, interest, taxes, etc.	1,094,809.87
	\$6,503,683.55
Dividends, 4 of 2% each, on paid-up capital	\$ 960,000.00
Balance from 1916	\$5,408,873.68
Surplus carried forward	134,809.87
	5,543,683.55
	\$6,503,683.55

It will be noticed that while in the body of the report, under "Payments to City," pavement charges are shown as \$98,840.80 and general taxes as \$117,678.11, a total of \$216,518.91, in the income account "pavement, taxes" are shown as \$264,271.30, a difference of \$47,752.39.

The net earnings for 1917 decreased \$146,022.16 from 1916, the passengers carried were 158,087,984, an increase of 8,558,230, the transfers were 62,301,636, an increase of 958,873, and the percentage of charges, etc., to passenger earnings was 61.5, against 57 in 1916, 57.9 in 1915, 58.4 in 1914, 52.2 in 1913, 53.4 in 1912, 55.2 in 1911, 51.6 in 1910, 51.4 in 1909, 52.9 in 1908, and 53.9 in 1907, an increase in 10 years of 7.6.

The following directors were elected for the current year: Sir William Mackenzie, Sir Henry Pellatt, Senator F. Nicholls, Senator C. P. Beaubien, E. R. Wood, G. H. Smithers and F. W. Ross; Senator Beaubien replacing Sir Rodolphe Forget.

At a special meeting of shareholders, Feb. 26, called to pass a bylaw to increase the board of directors by two, no business was done, owing to the fact that the necessary number of shares were not represented, either by persons or proxies. The total number of shares in the company is 120,000, the number required to be represented being 80,000, and only 76,500 were represented, the directors holding proxies for 64,000. At a subsequent meeting of directors a dividend of 1% for the quarter ended Dec. 31, 1917, was declared, being at the rate of 4% per annum, instead of 8% as hitherto.

**Levis County Ry. Situation.**—The company's directors, including several from Montreal, met in Levis lately, and went over the lines, to consider what could be done to keep the cars operating, and under what agreement this could be accomplished. The company has been operating for some time at a loss, and an increase in the rates of fare has been proposed as one solution of the difficulty. The sale of the property to the municipality has also been spoken of.

**The Ottawa Electric Ry.'s franchise expires in 1923,** and the city's board of control has begun to look into matters connected with it with a view of deciding what action should be taken. The city must give the company a year's notice if it desires to take over the lines. (Feb., pg. 77.)

**The Quebec Ry., Light, Heat & Power Co.** develops 48,000 horsepower and has a surplus of 15,000 h.p. Besides it has about 28,000 h.p. yet unharnessed, and a campaign is about to be begun with a view to inducing western capital to start industries within range of the company's plant at Quebec.

# Cars for Montreal and Southern Counties Railway.

The Montreal & Southern Counties Ry. received recently the first two of three additional motor cars for interurban service, the main features being as follows:

Length over corner posts .....	43 ft. 4 in.
Length over vestibule .....	53 ft. 8 in.
Length over all, about .....	56 ft.
Distance between bolsters .....	30 ft. 8 in.

each two seats.

The car is heated with a hot air heater, located at front end of smoking compartment. There is a toilet lavatory room at front end of main compartment, equipped with standard dry hopper closet, also a 5 gall. water cooler, with faucet in an

and held up with a spring latch when the door is opened. All vestibule doors are equipped with Ottawa Car Mfg. Co. standard hold backs.

The cars are mounted on trucks with steel wheels, and are equipped with a Westinghouse quadruple 206 motor equipment with controls, with train line receptacles at each end for train operator. The cars are equipped with two trolleys on Ohio Brass Co. trolley bases, also O.B. trolley retrievers. The air brakes are Westinghouse type A.M.M., with supplementary reservoirs and governor synchronizing system, arranged for trolley circuit. The cars are also equipped with Westinghouse electro pneumatic signal system, pneumatic sanders, luminous arc headlights, strong locomotive type pilots, also steel snow scrapers; also Tomlinson automatic car and air couplers. The cars are painted green and lettered in gold.

Owing to the limitation in weight due to the Victoria Bridge, over which these cars are to operate, the cars had to be built as light as possible consistent with strength. The weight, completely equipped, is 61,000 lb.

The cars were built by the Ottawa Car Mfg. Co., Ltd., the foregoing information having been furnished by the superintendent of its car department, J. A. Wilson.

The Toronto Ry. and the Queen St. Bridge.—The Toronto Ry. having failed to pay \$80,000, balance of its share of the construction of the Queen St. bridge carrying its tracks over the C.P.R., G.T.

Montreal & Southern Counties Railway Car.

Width over eaves .....	8 ft. 6 in.
Width over side sills .....	8 ft. 1 1/2 in.
Height of top of rail to top of roof .....	12 ft. 8 1/2 in.
Normal seating capacity .....	60 persons

The car sides are straight and sheeted vertically with poplar sheeting, the roof is of monitor type, with ventilating deck sash operated by M. & S.C.R. standard deck sash fixtures, and glazed with opalescent glass. The side sash are of mahogany, the top sash are stationary and extend over two window openings, and are glazed with opalescent glass, set in lead cathedral design. All body side windows are equipped with wire screens of No. 12 gauge wire. The cars are built on a special light weight, all steel underframe, of through platform type. The side sills are of 5 in. x 3 1/4 in. at 11.6 lb. The centre sills are of 10 in. channel at 20 lb., continuous from bumper to bumper, the knees and bumpers are of 6 in. channel, the headstocks are built up of plates and angles, the bolsters are built steel castings; the body is strengthened up of pressed steel sections, plates, and with both top and bottom truss rods, and is also stiffened laterally by diagonal bracing in the underframe. There is also an anticlimber spring buffer at each end of car to take any small collisions. The floors are of Georgia pine, laid double with heavy felt between. The body side framing is of light and strong construction.

The interior of the car is finished in Mexican mahogany, full finish. All metal trimmings are of Ottawa Car Mfg. Co. standard reversible type, upholstered in lacquered. The seats are M. & S.C.R. standard reversible type, upholstered in green pegamoid. The side windows are equipped with national single cam sash locks and national compression cam anti-rattlers; also national spring plug rollers and pantasote curtains. Twelve polished bronze parcel racks are placed between

Montreal & Southern Counties Railway Car. Interior.

alcove reached from main aisle of car. The headlining is agasote painted green. The lights are in 6 circuits, arranged in clusters, along the upper deck, also along each deck rail, cross-over seats. Each vestibule door is equipped with a steel trapdoor to cover step opening when the door is closed. These trapdoors are hinged to the bottom of the vestibule door

R., C.N.R. and Don River, as ordered by the Board of Railway Commissioners, the City of Toronto obtained an execution against the company recently. The company applied for a stay of execution pending an appeal on the question of the Board's jurisdiction, but this appeal was dismissed Feb. 16, and subsequently it was announced that the amount was paid.

## London Street Railway Annual Report and Meeting.

Following are extracts from the report for the calendar year 1917 presented at the annual meeting in London, Ont., recently:—

Earnings—			
	1917.	1916.	
Passenger .....	\$413,241.58	\$426,704.92	
Miscellaneous .....	4,620.78	5,609.85	
Gross earnings .....	\$417,862.36	\$426,314.77	
Expenses—			
Maintenance way and structures .....	\$ 55,411.47	\$ 51,567.22	
Maintenance equipment ..	46,713.80	32,410.21	
Power .....	37,101.88	37,994.08	
Car service .....	155,396.55	138,653.55	
General .....	36,470.65	31,775.59	
Total operating expenses ..	\$331,094.35	\$292,400.95	
Net earnings .....	\$ 86,768.01	\$133,913.82	
Deductions from net earnings—			
Interest on bonds .....	\$ 29,647.97	\$ 32,135.29	
Interest .....	1,760.00	922.85	
Taxes .....	7,561.84	7,241.91	
Miscellaneous .....	221.00		
Total deductions .....	\$ 39,290.81	\$ 40,303.05	
Net income .....	\$ 47,477.20	\$ 93,610.77	
Construction and Equipment Expenditures.			
Track and roadway construction .....	\$ 43,771.32		
Electric line .....	463.04		
Buildings and fixtures .....	671.70		
Cars .....	150.80		
Motor line truck .....	1,588.35		
Real estate (in trust) ex. 1916 suspense ..	5,900.97		
	\$52,576.19		
Net proceeds, sale of scrap .....	5,853.21		
Total .....	\$46,692.98		

tracks was done in 1917, the tracks being relaid with new ties and new rail in concrete foundations, and paved with brick.

The directors, therefore, considered it inadvisable to declare a dividend for the 6 months ending Dec. 31, 1917, on account of the large decrease in the net income for 1917 and of the conditions as outlined in the foregoing statements.

Following are comparative statistics:—

	1917.	1916.
Passengers carried .....	11,374,396	11,518,428
Expenses, per cent. of earnings .....	79.24	68.6
Car earnings, per revenue passenger .....	3.63c	3.67c
Transfers .....	1,703,344	1,792,579
Total passengers .....	13,188,803	13,311,006
Car earnings, per passenger .....	3.13c	3.05c
Car mileage .....	1,933,557	1,938,432
Gross earnings, per car mile .....	21.61c	21.99c
Operating expenses, per car mile .....	17.12c	15.08c
Net earnings, per car mile .....	4.49c	6.91c
Miles of track .....	36.10	36.02
Gross earnings, per mile of track .....	\$11,575.13	\$11,835.46

The officers were re-elected as follows: President, C. Currie, Akron, Ohio; Vice President, T. H. Smallman, London; other directors, P. W. D. Broderick, Toronto; Sir Herbert Holt, Montreal; R. R. Alexander, Cleveland, Ohio; W. M. Spencer and C. H. Ivey, London; Manager, C. B. King; Secretary-Treasurer, L. Tait.

## Electric Railway Traffic in Regina.

In the matter under the above heading, published in Canadian Railway and

## Women Conductors Not Likely for Montreal.

J. E. Hutcheson, General Manager, Montreal Tramways Co., in an interview recently expressed himself as opposed to the employment of women as conductors, giving the following reasons: "It would be extremely hard on a woman to have to tramp through the snow on freezing cold mornings, with a strong blizzard blowing, in order to be at the car yards at 4 o'clock. Nearly all our conductors are French; because most of the French population speak English, but not many English Canadians are conversant with French. This would debar many of the English speaking women of the city from replacing men in this capacity. The crowds at the rush hours are more than many men can handle and would be a most unpleasant, extremely difficult, if not wholly impossible, job for a woman to tackle. There are many aspects of the question of which the general public is ignorant. For instance, when we start a man we start him as a tripper. That means that we just put him on for a few trips morning and evening at the rush hours when we run extra, and we pay him by the hour. It is a couple of years before he takes a regular job. I would not like to see women conductors on in the rush hours. The situation is quite different and much easier to cope with in England. There, the cars are each one al-

Montreal & Southern Counties Railway Car. Floor plan.

Included in 1917 maintenance of equipment is \$10,627.33 for rebuilding cars, compared with \$1,978.33 in 1916. Five new p.a.y.e. cars were contracted for early in 1917, but delivery has been delayed, with the result that they will not be in service until the spring of 1918.

### General Review.

	Jan. 1, 1915.	Dec. 31, 1917.
Road and equipment ..	\$1,326,785.73	\$1,466,328.44
Bonds and capital stock ..	1,133,000.00	1,232,450.00

Difference in investment \$ 193,785.73 \$ 233,848.44

On Mar. 8, 1915, under the terms of the mortgage, the company commenced the redemption of its bonds at the rate of \$35,000 a year, bonds redeemed to date totalling \$105,000. While the company has improved its road and equipment on an average of \$46,514.25 a year, it has not been able to correspondingly increase its bonds and capital stock, with the result that on Dec. 31, 1917, there was invested in the road and equipment \$233,848.44 more than the total outstanding bonds and capital stock. With a surplus of only \$194,541.81 available, the financial operation becomes difficult.

While the gross earnings decreased in 1917, as compared with 1916, this was due in a measure to the large number of soldiers in training camp in the city in 1916, thereby causing an abnormal increase in 1916. The operating expenses show a large increase both in materials and labor, the total operating expenses being 79.24 of gross earnings, compared with 68.6% for 1916. Much reconstruction of

Marine World for February, there were two mistakes, "cash fares" being referred to instead of "cash and ticket receipts," and the word "specials" being used in the tabular statement instead of "transfers." The article is repeated correctly as follows:

A statement prepared by Regina Municipal Ry. officials shows that the traffic is about 65% greater in winter than in summer. Two days were selected for the test, viz., Monday, Sept. 10, and Monday, Dec. 10, both of which happened to be fine days, and typical of the season. The cash and ticket fares received on Sept. 10 were \$474.82, and on Dec. 10, \$795.56. The traffic figures for the two days on the various lines were:

	Sept. 10	Dec. 10	Per cent. increase
Red .....	3,179	5,867	84.6
White .....	2,109	4,013	90.3
Blue .....	3,016	5,196	72.3
Green-red .....	3,038	4,012	32.6
	11,342	19,088	68.3
Transfers .....	1,574	2,212	40.5
	12,916	21,300	65.0

**Fares Raised in Brandon.**—The Brandon, Man., City Council, on Feb. 19, directed that a straight 5c fare be collected from passengers on the Brandon Municipal Ry., starting Feb. 20. Outstanding 6 for 25c tickets will be redeemed; workmen's tickets are now 6 for 25c, instead of 8 for 25c, and good only from 6 to 8 a.m. and 5 to 6.30 p.m.

lowed to contain only a stated number of passengers; they creep along with no confusion and everything runs smoothly and in orderly fashion. We are very short of men now, owing to the fact that very many are engaged in munition work. However, we have not yet taken into consideration New York's or England's solution of the problem. Before we do that we shall try replacing our men who have always had to be between 20 and 40 years of age, with men of from 40 to 60. We think a man over 40 will be quite capable of filling the position of conductor. The reason we did not accept them formerly was that we have a mutual insurance scheme by which the men pay certain sums of money to us and we pay them at any time that they are ill for a week or two. So, for our own protection we took men under 40."

**Electrolysis in Winnipeg.**—A press dispatch says that the long continued dispute between the Winnipeg Electric Ry. and the city over damage to the water mains by electrolysis will be settled, by the company paying the claim in return for an assurance that jitneys will be abolished.

The Hamilton Radial Ry., as a result of the heavy snowstorm at the beginning of the year, only cleared its double track as far as the canal, and one track across Burlington Beach. It was estimated it would have cost \$2,000 to clear the snow off the balance of the track.

## The Winnipeg Electric Railway and Jitney Competition.

In a statement issued Feb. 5, A. W. McLimont, General Manager, Winnipeg Electric Ry., said:—"The time has arrived when the public will have to decide as between the jitneys and the street railway company. In order to furnish the public with better transportation facilities the jitneys must be abolished. The continuation of both systems means inefficient service. Due to the effect of the jitney competition upon its revenues, the company is not in a position to make improvements, but upon the abolition of this competition, the company will be placed in a position where improvements can at once proceed that will provide Winnipeg with a much more adequate system of transportation.

"The company's idea of adequate transportation is to carry all passengers with the greatest degree of safety to the passengers and the public on the street; with the maximum of speed consistent with such safety, and with the maximum degree of regularity and certainty of schedule, with reasonable comfort to the passengers and over the shortest route to serve the maximum number of people.

"Towards accomplishing this, alterations will be made in the present rolling stock which will lower the car body, provide the cars with folding steps, proper front exits, better and easier loading and unloading facilities, improved heating conditions, a double floor, free from the present trap-doors, with a layer of felt between the boarding, suitable doors separating the body of the car from the platforms, the latest type of car lighting and improved route signs, making the rolling stock on the streets of Winnipeg equal in comfort and design to the modern type of cars used in larger cities in America; the remodelled car will also be fitted with every appliance to facilitate both motor-men and conductors in the performance of their duties in the most effective manner. By the adoption of this type of rolling stock the elimination of many unnecessary stops and the accurate designation of stopping points by the white pole system, the company will be enabled to supply a much more rapid and regular service.

"The company proposes to make a special study of the loading and unloading of cars at congested points with a view to moving traffic as quickly as possible and removing any defects that may now exist. It must be borne in mind that there are certain physical conditions existing in Winnipeg which partly account for some of the defects at present existing in the service. For instance, single track bridges cause congestion and irregularity, and at times climatic conditions in winter make regular and continuous operation exceedingly difficult to maintain and tend to cause temporary interruptions. A study is being made of the entire transportation problem, including the unfavorable conditions enumerated above, with a view to supplying the public with adequate transportation.

"If the jitneys are not eliminated, the company will be faced with the alternative of a deteriorated service or applying for a revision of its charter so as to find some means to increase its revenues. If the jitneys are to continue, the two systems must be put upon an equal footing, and the street railway company will have to be relieved of its obligation to pay a percentage of gross earnings, and will have to be put in a position of being al-

lowed to charge the same fares as the jitneys, doing away with all transfers, and will have to be relieved of its pavement obligations and other burdens imposed upon it under its contract with the city."

This statement came up for consideration at a public meeting held on Feb. 8, to discuss transportation matters. One of the speakers was E. Anderson, K.C., representing the Winnipeg Electric Ry., who stated that the success of the city and the success of the company go together. If the one goes to the wall, the other will be seriously affected. If the company goes into liquidation, it will be a black eye for the city, from which it will be very hard to recover. He continued:—"We want to lay before you exactly our position. We are losing \$400,000 yearly by reason of competition and other causes. Our operating expenses have grown very rapidly from \$1,369,000 in 1913, to \$1,762,000 in 1917. There will be a deficit of approximately \$70,000 this year, and therefore not a cent of dividend. The lifting of the competition will remedy the situation. We propose to take the money we would get as a result of the elimination of the competition and put it into the improvement of the service. I want to give you a clear conception of our financial position. The company was nearly going into liquidation on Jan. 15 last, when \$750,000 notes, secured in New York, half of a total of \$1,500,000, had to be met."

Mr. Anderson went on to tell of the refusal to renew the notes when the company's statement was presented. The company had to go to the bankers, and it was only upon the personal guarantee of some of the directors that the bank finally advanced the amount required. Many complaints have been voiced regarding the service. Has it occurred to these people that they are making the strongest argument they can in favor of the abolition of the jitneys? The position that exists as regard my clients, is principally due to the existence of the jitney. In view of our present situation, if the jitneys are allowed to continue on the streets, we have got to adopt some radical policy. We shall not be in a position to give the service that is demanded. We shall, maybe, be forced to either let the service run down to such a point that it will be absolutely inadequate, or ask for a revision of our contract, so that we shall be forced to ask nickel fares and discontinue the transfers. If the jitneys are eliminated then we will not ask for any change in fares."

He contended that the company had a franchise for an exclusive right of transportation on the streets of Winnipeg, with the exception of that provided by animal drawn vehicles. It was his personal view that if the company was permitted to charge a 5c straight fare, and was not obliged to give transfers, it need not fear jitney competition.

A. W. McLimont, the company's General Manager, also spoke. He stated that the local conditions of transportation must be dealt with as they were found. The company could not control the labor and could not control the operating expenses. The cost of supplies had increased by 247%. The payroll could not be paid by tearing up a mile of track or taking down a building. It has to be earned in hard cash. He stated that with

the revenue that is taken away from the company at present by competition, it could inaugurate improvements that would very materially remove the congestion existing.

R. B. Graham, counsel for the jitney men, said until the company has stated the minimum it would accept, or the maximum it would offer, the jitney men would not enter into any negotiations.

There was a good deal of rambling discussion, and nothing definite seems to have been done, the meeting adjourning to a day to be named by the city council's transportation committee.

The object of the committee in calling the meeting seems to have been to bring before the public all the information possible, and to obtain from the public expressions of opinion on the whole question, so that the committee would be in a better position to arrive at a solution of the jitney question.

## The City of Toronto and the Toronto Railway.

The City of Toronto is applying to the Ontario Legislature for the passing of an Act to provide that in default of the Toronto Ry. complying with the provisions of the Ontario Railway and Municipal Board's order set forth as schedule "G" to the act passed in the 7th year of His Majesty's reign, chap. 92, and validated by sec. 17 of said act, the company shall pay the city a penalty of \$500 a day from Jan. 1, 1918, for each car supplied by the company less than the number fixed by the order, and that such penalty shall continue in force from day to day until the full number of cars called for by the order has been supplied and placed in operation by the company.

The City of Toronto is also applying to the Ontario Legislature to pass an act to direct the Ontario Railway and Municipal Board to enter upon and take possession of the Toronto Ry., and to assume and take over all or any of the powers, duties, rights and functions of the directors and officers of the company, and supervise and direct the management of the company and its railway, under the provisions of the Ontario Railway Act, sec. 260.

## Toronto Suburban Ry. Express Service.

An express service has been started on the T. S. R., on the old line to Woodbridge and on the new extension to Guelph. Arrangements have been made to pick up and deliver in Toronto and Guelph by the company's own auto truck, and in Georgetown by a hired carter. There have been many enquiries from traders as to rates and service, and a fair amount of shipment is already offering. In the country districts farmers are pressing strongly for facilities for taking their milk, as the service will save them hours every day, the line passing through a good farming district. At present the milk has to be carted some miles to the steam railways.

The Ottawa Electric Railway's Report for the calendar year 1917, presented at the annual meeting on Feb. 4, is published in full on page 82 of this issue. The number of passengers carried increased from 27,033,798 to 29,347,692, and the net earnings from operation increased \$50,724.71, the most satisfactory feature being the reduction in operating expenses, which were the lowest in the company's history, being 56.8% against 58% in 1916. The directors and officers were re-elected.

## Electric Railway Projects, Construction, Betterments, Etc.

**Brantford Municipal Ry.**—We are officially advised, in connection with recent press reports, that while the Brantford Railway Commission intends to build more track, there is very little chance that anything will be done this year. The difficulty of getting construction supplies and labor stand in the way. (May, 1917, pg. 203.)

**Calgary Municipal Ry.**—It is proposed to build a short section of line in Calgary, Alta., which will have the effect of saving 2,207 ft. on the Ogden line. The cut-off will start near the stockyards and run across the Pearce-Beattie-Walker syndicate's land to near the Canada Malting Co.'s elevator, then alongside the public right of way to the Ogden bridge. Plans for this work have been submitted to the city council by Commissioner Graves. (Oct., 1917, pg. 407.)

**Edmonton Radial Ry.**—We are officially advised in connection with the press report referred to in our last issue, that the extension is along 106th Ave., from 97th to 101st St., and is about 925 ft. long. It consists of a temporary track to connect the two streets named to facilitate the operation of one-man cars. It is desired that the cars may belt around if necessary. (Feb., pg. 77.)

**Hydro-Electric Power Commission of Ontario.**—The Board of Railway Commissioners has authorized the Hydro-Electric Power Commission of Ontario, subject to the terms of an agreement, to build a power development canal and construction railway, under the Michigan Central Rd. on lot 57, Stamford Tp., Welland County, and during the period of construction, to divert the M.C.R. tracks; plans for the work to be approved by the Board of Railway Commissioners' engineer.

**London & Port Stanley Ry.**—The London, Ont., City Council is asking the Ontario Legislature to authorize it to pass a bylaw, without obtaining the ratepayers' consent, to issue debentures for \$138,000 to enable the London Railway Commission to pay for the construction of the switch and bridge to Beatty Bros.' industrial premises, and other works necessary to cope with increasing traffic on the L. & P.S. Ry. (Sept., 1917, pg. 368.)

**Sandwich, Windsor & Amherstburg Ry.**—Complaints were made of the condition of the company's tracks at the Walkerville town council meeting, Feb. 12. The mayor is reported as having said, "These conditions will be remedied this spring, if the town has to do it for them and then send them the bill of costs." (Feb., pg. 77.)

**Toronto Suburban Ry.** has built a barn at the intersection of Bay and Dundas Sts., Guelph, to hold one radial car. It is necessary to house a car overnight and for certain hours during the day time at the Guelph end of the line. The building is 20 ft. x 15 ft., and besides having room for the car, contains a passenger waiting room and a freight platform. The building is 20 ft. high. Provision is made for heating the waiting room, and the lighting is taken from the city system.

The City of Toronto is applying to the Ontario Legislature to validate an agreement made between the city and the company, Oct. 16, 1917, extending the time within which the company may build and put in operation its railway upon the portion of Davenport Road lying east of Bathurst St. to the northern limits of the city as the same existed in 1899. (Jan., pg. 32.)

## Mainly About Electric Railway People.

**E. H. Derricott** has been appointed Accountant, Lethbridge Municipal Ry., vice D. Donald, resigned.

**T. J. Stewart, M.P.**, of Hamilton, Ont., has been elected a director of the Quebec Ry., Light, Heat & Power Co.

**A. H. Foster**, Manager Guelph Radial Ry. was granted an increase of \$200 in salary, Feb. 14, making it \$1,300 a year. He has been appointed Fuel Commissioner for the City of Guelph, Ont.

**Duncan McDonald**, formerly General Manager, Montreal Tramways Co., was reported, Feb. 28, to be seriously ill with pneumonia.

**R. W. Shaw, M.D.**, has been appointed a member of the London Railway Commission, London, Ont., vice M. D. Fraser, K.C., deceased.

**H. C. Nickle**, Superintendent and Purchasing Agent, Kingston, Portsmouth & Cataraqui Electric Ry., has been appointed fuel controller for Kingston, Ont.

**Lloyd Harris**, who has been associated with the British War Mission in Washington, on behalf of the Canadian Government, for several months, and who, among his other activities, is Secretary-Treasurer, Lake Erie & Northern Ry., has been appointed Chairman of the Canadian War Mission to the United States, with office in Washington, D.C.

**Lord Beaverbrook**, who has been appointed Chancellor of the Duchy of Lancaster, under the British Government, and who is undertaking general propaganda work relating to the allied nations' position regarding the war, is a director of the British Columbia Electric Ry. In accordance with the general custom, he will have to resign this position.

**Claude C. Curtis**, who has been appointed Manager, Cape Breton Electric Co., Sydney, N.S., was born at Battle Creek, Mich., Mar. 27, 1883, and graduated B.S. in mechanical engineering from the University of Michigan, in 1907. He entered the Stone & Webster Engineering Corporation service in July, 1907, and has been, to Nov., 1907, inspector on construction of power station, Lowell, Mass.; Nov. to Dec., 1907, in similar capacity at Pawtucket, R.I.; Dec., 1907, to Mar., 1912, Assistant Lighting Superintendent, Lighting Superintendent, and Manager, successively, Ponce Ry. & Light Co., Ponce, Porto Rico; Mar., 1912, to Aug., 1913, secretary to R. Robb and H. G. Bradlee, Stone & Webster Co., Boston, Mass.; Aug., 1913, to July, 1915, Superintendent, Houghton County Electric Light Co., Houghton, Mich.; July, 1915, to Feb., 1918, Superintendent Light and Power, El Paso Electric Ry., El Paso, Texas.

The Toronto Civic Transportation Commission, which was appointed some time ago to carry out preparatory work consequent on the probable taking over of the Toronto Ry. by the city on the expiry of the company's franchise in 1921, held a meeting, Feb. 5, to consider the situation following the vote given by the ratepayers, Jan. 1, in favor of the city taking over and operating the railway. The commission is reported to have decided to make arrangements for the preparation of plans and specifications for a car building plant for the building of cars for use on the civic lines, and also to prepare for the purchase of 250 cars for delivery by Sept., 1921.

## Electric Railway Finance, Meetings, Etc.

**British Columbia Electric Ry. and allied companies:**—

	Dec. 1917	Dec. 1916	6 months to Dec. 31, 1917	6 months to Dec. 31, 1916
Gross	\$555,000	\$496,959	\$2,923,660	\$2,665,385
Expenses	388,222	360,593	2,323,863	2,125,679
Net	166,778	136,366	599,797	539,706

The working expenses for Dec., 1917, as shown, do not include any charge in respect of the cost of repairing damage caused by blizzard; this being estimated at \$150,000, is being charged against the reserve fund.

**Guelph Radial Ry.**—The directors, on Feb. 14, declared a dividend of 3½% on the capital stock, which is owned by the City of Guelph, Ont. This dividend, which will absorb \$6,000, was rendered possible because the city's light and heat commission had refunded the G.R.R. \$2,000 on account of overcharges for power in previous years.

**Hamilton St. Ry.**—The receipts for the fourth quarter, 1917, were \$201,748.21, of which the city's share on mileage and percentage was \$18,019.81. The total for mileage and percentage received by the city for 1917 was \$68,796.47 against \$64,062.97 in 1916.

**London & Port Stanley Ry.**—The City Treasurer reported to the London, Ont., city board of control, Feb. 15, that the amount advanced by the city to the London Railway Commission on account of debentures to date was \$994,905.48; the amount paid from the revenue funds of the L. & P.S.R. to June 30, as shown by the auditors' report, was \$167,189.83, a total of \$1,162,095.31. This expenditure is to be met as follows: Authorized debenture issue of \$1,000,000; further debenture issue asked for by the London Railway Commission, \$131,079.76; surplus earnings, 1915-1917, \$45,055.62, a total of \$1,176,135.38, leaving a balance of \$14,040.07 to meet unfinished work.

**London St. Ry.**—In accordance with the terms of the mortgage trust deed of Sept. 8, 1896, 35 debenture bonds of \$1,000 each were drawn for redemption recently, and are payable Mar. 8, after which they will cease to bear interest.

**Regina Municipal Railway.**—Approximate passenger receipts for Jan., \$21,500. Approximate increase over Jan., 1917, \$1,500.

**Toronto Ry.**—Receipts for January, \$562,707; city percentage \$84,406, against \$510,053 receipts and \$76,508 city percentage for Jan., 1917.

**Winnipeg Electric Ry.**—The Winnipeg Free Press of Feb. 9 said:—"The Winnipeg Electric Ry. has failed, for the first time in its history, to meet its financial obligations to the city on the date fixed under its charter. The company, under its franchise, must pay annually to the city exchequer 5% of its gross earnings. To this end it must, under its agreement, submit to the city treasurer on or before Jan. 15, its financial statement for the year ending Dec. 31, showing the amount of its revenue due to the city, and it must pay over to the city before Feb. 1 the amount represented by 5% of its gross earnings. The financial statement was submitted this year as usual, but the company has failed, so far, to pay over the amount due, which for last year is approximately \$99,000. Financial inability to meet this charge is the only reason the company offers for its failure to pay up. The board of control has instructed the city treasurer to draw the company's attention to the amount owing."

## Electric Railway Notes.

The Nipissing Central Ry. service between Haileybury, Cobalt, and Liskeard, was badly interfered with by snow storms in February.

Guelph Radial Ry. employees asked an increase of 3c an hour in their pay recently. The directors granted 1½c an hour war bonus, at their meeting Feb. 14.

The Nova Scotia Tramways & Power Co.'s conductors and motormen in Halifax, N.S., were stated in a press dispatch of Feb. 23 to have gone on strike.

The Edmonton City Council is asking the Alberta Legislature for authority "to collect street railway fares according to distance travelled, or on a zone system."

Regina, Sask., commercial travellers have asked the city council to direct the putting on of a special car on the Regina Municipal Ry., to meet late trains at the union station.

The Winnipeg City Council completed taking a census of traffic on the Winnipeg Electric Ry., Feb. 11. It is being tabulated and is expected to be presented to the city council early in March.

The Toronto Civic Ry. has received 5 car bodies from Preston Car & Coach Co., out of an order for 13, placed about a year ago. The equipment is being installed in the railway's own barns.

The British Columbia Electric Ry. succeeded in restoring the service on its Fraser Valley line, through to Chilliwack on Feb. 4. The line was badly damaged by a storm at the beginning of January.

The Chatham, Wallaceburg & Lake Erie Ry. was reopened for traffic Feb. 12, after being closed down for some weeks owing to severe snow storms. The branch to Erie Beach, is not yet reported cleared.

Some 200 Montreal Tramways Co.'s employees are stated, in a press dispatch, to have formed a local union, in affiliation with the Amalgamated Association of Street and Electric Employees of America.

Edmonton, Alta., citizens have complained to the commissioners, among other things, about "the very unsatisfactory handling of passengers transferring from the Calder St. car," on the Edmonton Radial Ry.

The Halifax, N.S., Board of Control has recommended to the city council a number of new traffic regulations for adoption in handling street traffic. Among these is one providing that all traffic shall keep to the right, instead of the left as hitherto.

It is stated in Ottawa, that owing to the adoption of liquor prohibition regulations in Quebec, the electric railway traffic between Ottawa and Hull has largely decreased. One paper says most of the cars carry three, four and five passengers, whereas they formerly had standing room only.

The Manitoba Legislature has before it a bill respecting electrolysis, for the purpose of providing a definite recourse for the city of Winnipeg in connection with injury to its water mains alleged to have been caused by the Winnipeg Electric Ry.'s conduit wires, etc. This matter has been the source of considerable controversy between the Winnipeg City Council and the company for some years.

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry., and representatives of the Chicago, Milwaukee & St. Paul Ry. gave a categorical denial, Feb. 15, to a report that the latter company intended taking over any part of the B.C.E. Ry. The C., M. & St. P. Ry.

has an arrangement with the B.C.E. Ry. regarding the hauling of freight into Vancouver.

Several Hamilton St. Ry. conductors were charged with stealing fares and tickets from fareboxes in Dec., 1917. Conductor Rodney was found guilty, but Judge Monk stated a case for the superior courts in which certain questions as to court procedure were submitted for consideration. These matters were argued Feb. 20, and the court reserved judgment. All the other cases were adjourned pending the settlement of the Rodney case.

Vancouver City Council representatives had a lengthy conference with British Columbia Electric Ry. officials, Feb. 12, upon matters connected with the improvement of the service in the city. W. G. Murrin, Assistant General Manager, informed the city's representatives that a new schedule was being operated, and that 10 additional cars had been put on the lines the previous day. It was shown that many of the points raised had been met by the new schedule, and consideration of the others was promised.

The Edmonton, Alta., City Council and its Public Utilities Committee met representatives of the union and non-union street railwaymen Feb. 6. The men did not ask for an increase of wages, but for a revision of the rules governing employment. After discussion it was agreed that a committee of the council and a committee of the men should each draft a set of rules and regulations, and then meet to discuss them, and attempt to agree upon rules for the approval of the council and the men as a whole.

The Toronto & York Radial Ry. car barn on the Metropolitan Division, Yonge St., Toronto, was burned, Feb. 7, about two-thirds of the building proper being a complete loss. Three large type inter-urban cars were totally destroyed, and 1 freight car and 3 other cars had the vestibules burned, while a further 4 cars were blistered. The company is securing information as to what cars are available for immediate service to replace those destroyed, it being considered necessary to use a similar type. The company's car barn on the Scarboro Division, at Kingston Road, was destroyed by fire, Feb. 24, together with one single truck car and 3 double truck cars. The loss, which has been estimated as \$70,000, is covered by insurance.

**Fares Advanced in Regina.**—Several changes were made in passenger fares on the Regina Municipal Ry. on Feb. 10, the only fares remaining unchanged being the straight cash fare of 5c from 6 a.m. to midnight, the night cash fare of 10c. from midnight to 6 a.m., and the children's tickets, good for children up to 14 years of age, which are sold at 10 for 25c. The following changes have been made:—Strip tickets, formerly sold, 6 for 25c., are now 5 for 25c.; book tickets, formerly sold, 25 for \$1, are now 21 for \$1; labor tickets, 8 for 25c., and formerly good from 6 to 8 a.m., and 5 to 7 p.m., are now only good from 6 to 8 a.m., their use from 5 to 7 p.m. being eliminated. The resolution authorizing the changes was passed by the City Council Feb. 8, on the mayor's casting vote. During the discussion it was stated it cost 6.57c. for every passenger carried, while the receipts were but 4.6c. per passenger. The estimated increase in revenue from the increase is put at \$31,700.

## Winnipeg Electric Railway Employees' Wages.

Winnipeg Electric Ry. employees notified the company, Feb. 15, that an increase of wages varying from 2c to 3c an hour was desired, and that the new schedule should become effective May 1. The present rates of pay are as follows: 28c for first six months service, 30c for second six months, 31c for first year, 33c for second year, 36c for third year. The 2c an hour increase is asked for those up to the end of one year service; the 3c for those having more than one year's service. It was stated that this would need an increase of over \$60,000 in the company's pay roll.

A. W. McLimont, General Manager, is reported to have said, Feb. 18, that new terms of pay had been agreed upon, and that a new schedule had been arranged, while on the same day the secretary of the union stated that negotiations upon certain essential matters not affecting the rates of pay were still under discussion.

## Regina Municipal Railway's Annual Report.

A Regina, Sask., paper has published the following figures showing the results of the operation of the Regina Municipal Ry. for the calendar year 1917, and stating that they have been certified by the auditors:

Total receipts .....	\$321,727.45
Operating expenses .....	199,572.98
Operating surplus .....	\$ 32,154.37
Fixed charges, .....	96,066.66
Deficit .....	\$ 63,912.19
1914 deficit .....	\$ 6,034.14
1915 deficit .....	8,205.36
1916 surplus .....	21,430.51
1917 surplus .....	32,154.37

In commenting on these figures, the Regina paper says:—

In 1916, the surplus on operation was \$21,430.51, making last year's surplus an increase of approximately 50% over this figure. In all years since the inception of the system a deficit on operation was shown except in 1913, when there was a surplus of about \$1,000. Since 1915 there has been a steady improvement in the financial showing of the road on operation account as shown by the following figures:

1914 deficit .....	\$ 6,034.14
1915 deficit .....	8,205.36
1916 surplus .....	21,430.51
1917 surplus .....	32,154.37

Editor's Note.—In referring to "operation" above, of course fixed charges are not included. After deducting them for 1917, the deficit is nearly double the operating surplus.

**Underground Railways Proposed for Montreal.**—F. Stuart Williamson, M.Can.-Soc.C.E., formerly Chief Engineer, Central Ry. of Canada, has issued a booklet, "Municipal underground railways for the City of Montreal," in which he advocates the construction of rapid transit underground electric railways in Montreal, to be built by the city, and to be leased to and operated by the Montreal Tramways Co. The routes proposed are from Place d'Armes to Mile End, 2.84 miles; from Place d'Armes to Notre Dame des Graces, 3.98 miles; and from Peel St. to Moreau, 3.12 miles, a total of 9.94 miles. Particulars are given of methods of financing, the construction of subways adopted in Boston, New York, Providence and Philadelphia, together with extracts from various reports and papers relating to transportation in cities.

# Marine Department

## The Shipbuilding Situation and Outlook in Canada.

By Alexander Johnston, Deputy Minister of Marine and Fisheries.

[Considerable doubt is, at times, expressed as to whether shipbuilding is to become a permanent industry in the Dominion, or whether, when the governments cease placing orders on the present basis, the majority of plants which have been got together to cope with the emergency, will be closed and the staffs dissipated. In the situation, as it exists today, there is no room for the pessimist. The opportunity for which Canadian shipbuilders have been waiting is here, and it remains for them to make the most of it. There is no doubt that for several years to come the shipbuilding yards of the whole world will be fully occupied in replacing lost tonnage of all descriptions, as well as in keeping pace with the ordinary requirements of water transportation. Under existing conditions, there is ample opportunity for shipbuilding and allied trades to, at least, lay the foundations for a large and permanent shipbuilding trade on both oceans as well as on inland waters. The whole question is dealt with by the Deputy Minister of Marine in that department's report for the last fiscal year, as follows.—Editor.]

As the war has progressed, and an ever increasing amount of the ocean tonnage of the allied nations (now including the United States), and of the neutral nations, has been sunk, since Germany's declaration of unrestricted submarine warfare, the need of shipbuilding activity throughout the world to supply the wastage has become of paramount importance. This has been thoroughly realized both in the United States and Canada.

In the United States, since the outbreak of the war, 29 new shipyards have been organized, all of large proportions and thoroughly up to date. Of these 15 are on the Atlantic coast, 13 on the Pacific, and 1 on the Gulf of Mexico, and substantial improvements and enlargements have been made to 28 existing yards. Of the improved yards, 14 are on the Atlantic and 2 on the Pacific coast, and of those that have been enlarged, 6 are on the Atlantic, 5 on the Pacific, and 1 one on the Gulf of Mexico. The lake yards, which under normal conditions only build for internal traffic, are now building overseas shipping, a good deal of it for Scandinavian owners.

In Canada, since the beginning of the war, the number of privately owned shipyards has been about doubled. Apart from the introduction of the larger yards, there has been in the Maritime Provinces generally, and in Nova Scotia in particular, a revival of the wooden shipbuilding trade, particularly in the form of small schooners, with or without auxiliary power, which are quickly and cheaply built, and at anything approaching the present abnormally high freight rates should pay handsomely.

All efforts abroad, as elsewhere, are of course, hampered by the shortage of steel, but this shortage is not likely to continue for any length of time after the restoration of peace, as the enormous demands for munitions of war will then cease. The revival of wooden shipbuilding activity in the United States has of late been remarkable, and it would almost seem to be in a fair way to rival in amount of ton-

nage the output of U. S. yards in the days of the clipper ship. The nearness of large supplies of timber has placed the wooden shipyards of Maine, the Southern States, and the Northwest Pacific coast in a position of great advantage. This last condition, of course, applies equally and perhaps even to a greater extent to our own Canadian yards in the Maritime Provinces and on the Pacific coast, and it appears that they are making ample use of it.

It can scarcely be disputed that no new form of industry in Canada affords greater possibilities than that of shipbuilding. The objections usually advanced to the establishment of the steel shipbuilding industry on a large scale in Canada are: that the facilities and experience of Canadian machine shops are not adequate to the production of the engines required for ocean going ships; and that the present high cost of shipbuilding material makes it an expensive venture. Neither of these objections, of course, applies to the building of wooden ships, which industry, owing to the great and immediate demand for freight carriers, has experienced a remarkable revival, both in Canada and the U. S. The first objection has been of late very much lessened, if not altogether removed. The great demand for the output of munitions has given a stimulus to the installation of large machine shops throughout Canada, and work is done on a scale which would have been quite impossible a few years ago. Although there are in Canada as yet no machine shops exclusively devoted to the production of marine engine, there are today in Toronto, Montreal, and Hamilton, and possibly elsewhere, shops able and willing to turn out for an adequate price marine engines for ocean going ships. The second objection, namely, the high cost of building materials and labor is countered by the fact of the abnormally high rate of the price for freighters, which is not only abnormally high now but still mounting, as the following taken from the New York Journal of Commerce of Feb. 27, 1917, show: "The price of steel steam tonnage for immediate delivery ranges from about \$215 to \$220 a ton, but very few prompt boats are available at that or any price. For delivery in 6 months the price at which owners are holding their boats is from \$155 to \$165 a ton."

The question which an intending shipbuilder will naturally put to himself is, will the demand for the products of my shipyard last for a sufficient length of time and at sufficiently high prices to assure me a reasonable return on the necessary outlay? The following considerations may enable him to come to a right conclusion. Since the beginning of the war, and up to Mar. 1, 1917, there had been destroyed by acts of war, and without regard to losses from natural causes, 4,811,100 tons of shipping, and the German submarines are at present sinking ships at the rate of 10% of that total tonnage each month; if continued at this rate for one year, nearly half the mercantile shipping of England will be lost at the end of the year. The Cunard Steamship Co. has actually placed orders in the U. S. for 11 big ships, ranging from 7,500 to 12,000 tons, and is placing additional or-

ders there, amounting in all to 260,000 tons, at a cost of about \$30,000,000. The merchant ships under construction or under contract for construction in the U. S. on Jan. 1, 1917, numbered over 400, with a total tonnage exceeding 1,500,000, and about half of this shipping was on foreign account and included nearly every nationality. The imperative demand of the U. S. Government for the prompt building of over 500,000 tons of war shipping will largely curtail their capacity for turning out merchant shipping for the next three years. Since the beginning of the war, new corporations organized for active shipbuilding operations in the U. S. have been formed with a total capital of \$150,000,000. As against the selling price of \$40 to \$50 a deadweight ton for tramp freighters prevailing before the war, present contracts can be had for \$150 a ton, and this for delivery at some time in the future.

There are some other considerations as well, perhaps, more nearly affecting Canadian output. Ships to the value of \$60,000,000 to be built in Canadian yards this year (1917) are already under contract. Included in this amount are orders for vessels amounting to \$25,000,000 placed on behalf of the Admiralty through the Imperial Munitions Board, 100 others are under construction at plants in various cities throughout the Dominion, as well as certain craft regarding which information cannot be given. In this situation of the shipbuilding industry, necessitated by the demand for tonnage to meet war conditions, the British Controller of Shipping, the British Admiralty, the Imperial Munitions Board, and two Dominion Government departments have had a part. Additional contracts for the building of merchant ships are likely to be placed, and there is also a likelihood that greater activity in the way of building dry docks will be shown by the shipbuilding industry. Negotiations are in progress with a view to introducing the manufacture of steel plates for ships and structural steel in Canadian plants. At present Canadian steel companies produce only lighter forms of structural steel. They have been engaged, however, of late, in filling orders for steel for munitions. However, the munition industry is only a temporary one which will cease to exist at the end of the war. Indeed it is stated an intimation has already been received that the output of large shells may be curtailed, because the great industrial development in Great Britain makes it possible to produce there a sufficient quantity of those projectiles to meet the requirements. If the rolling of ship plates and the making of structural steel is undertaken by Canadian firms, they may become permanent features of the country's industrial activities.

The question of freight rates after the war is, of course, of the utmost importance to the shipbuilding trade. The present scale of freights will not, of course, continue after the war, and the main question to determine is how soon the break in the freight market will take place, following the cessation of hostilities. Some shipping people hold that the break will be sharp and sudden, others

that the very slight additions through new construction now being made to the tonnage of the world will tend to ward off any tendency to a sudden decline when the war is concluded. It is said in support of the latter contention that although some 5,000,000 tons of German and Austrian shipping now immobilized will be released, the shipping already sunk will decrease the world's fleet by 1,000,000 tons, while the 2,000,000 tons of new shipping at present in construction throughout the world is not expected to offset at once the losses due to the war, not to speak of the process of attrition due to natural causes (perils of the sea), which annually removes some 1,500,000 tons of shipping from the register. The prevailing opinion among shipping men seems to be that owing to the depletion of raw materials and foodstuffs caused by the war, not only in belligerent but neutral countries as well, the merchant marine of the world will be taxed to the utmost to make good the shortage, and freight rates will in all probability remain considerably above the normal for some years after the declaration of peace.

In competition with U. S. builders in the construction of steel ships, Canada is faced with the following difficulties: Steel plates for hulls and boilers are not yet produced in Canada in sufficient quantities; steel shapes for the frames of ships, and which are different in section from structural shapes for bridges and buildings, are not now rolled in Canada in sufficient quantities; and the organizing and training of an operating force to successfully establish such an industry requires much time and involves a large outlay. It would be difficult to exaggerate the importance of shipbuilding as a national undertaking to a country that has, like Canada, an extensive coast line both east and west, superb inland communication by lakes and rivers, and whose export trade is chiefly overseas. It is not to be expected that Canadian yards could turn out the enormous profits at present made by the U. S., as these now possess every form of material, from the iron ore and coal, through all the manufacturing processes, to the finished ship, and, save for the increased cost of labor, can turn out as cheaply a ship which today sells at \$150 to \$165 a ton, as one which in pre-war days sold at \$50 a ton; but possibly with the aid of one or other of the methods already adopted by some other governments for encouraging the growth of a merchant marine, it is not unreasonable to suppose that Canadian shipbuilding might be put on a firm, enduring, and profitable footing.

**Order of Coaling Steamships.**—An order in council has been passed under the War Measures Act, 1914, adding sec. 22B to the Defence of Canada Order, 1917, as follows:—"The competent naval authority may prescribe the order in which each vessel shall be supplied with bunker coal, or other fuel, at any port in Canada, and in exercising this power, he shall take into consideration the services in which the several vessels requiring fuel are engaged and their relative urgency."

**The Sullivan-Hall Shipping Co., Ltd.** has been incorporated under the Dominion Companies Act, with \$20,000 capital and office at Winnipeg, to take over the grain and vessel brokerage, and marine insurance business, heretofore carried on there by the Sullivan-Hall Shipping Co., and to act as agents and brokers for railway, shipping and transportation companies, and to own and operate steam and other vessels and other transportation facilities

## Result of the Enquiry into the Mont Blanc-Imo Collision at Halifax.

Mr. Justice Drysdale, of the Nova Scotia Admiralty Court, gave the following judgment on Feb. 4:—"Having been directed by the Minister of Marine to hold a formal inquiry into the cause of the explosion on the s.s. Mont Blanc on Dec. 6, 1917, I have to report as follows:—As directed I had associated with me, as nautical assessors, Capt. Demers, of Ottawa, Dominion Wreck Commissioner, and Capt. Walter Hose, R.C.N., of Halifax. I began the inquiry on Dec. 13, 1917, and having heard all the witnesses that could throw any light on the situation, and having conferred with the nautical assessors, I have reached the following conclusions, and desire to report as follows:—

"The explosion on the s.s. Mont Blanc was undoubtedly the result of a collision in Halifax harbor between the Mont Blanc and the s.s. Imo, caused by violation of the rules of navigation. The pilot and master of the Mont Blanc were wholly responsible for violating the rules of the road. Pilot Mackay, by reason of his gross negligence, should be forthwith dismissed by the pilotage authorities and his license cancelled. In view of the gross neglect of the rules of navigation by Pilot Mackay, the attention of the law officers of the Crown should be called to the evidence taken in this investigation, with a view to a criminal prosecution of such pilot. We recommended to the French authorities such evidence, with a view to having Capt. Lamodec's license cancelled and such captain dealt with according to the law of his country. It appearing that the pilotage authorities in Halifax have been permitting Pilot Mackay to pilot ships since the investigation commenced, and since the collision above referred to, we think they are deserving of censure. In our opinion the authorities should have promptly suspended the pilot. The master and pilot of the Mont Blanc are guilty of neglect of the public safety in not taking proper steps to warn the inhabitants of the city of a probable explosion.

"Commander Wyatt is guilty of neglect in performing his duty as Chief Examination Officer, in not taking proper steps to ensure the regulations being carried out, and especially in not keeping himself fully acquainted with the movements and intended movements of vessels in the harbor. In dealing with the Chief Examination Officer's negligence in not ensuring the efficient carrying out of traffic regulations by the pilots, we have to report that the evidence is far from satisfactory, that he ever took any efficient steps to bring to the notice of the Captain Superintendent, neglect on the part of the pilots. In view of the allegations of disobedience of the Chief Examination Officer's orders by pilots, we do not consider such disobedience was the proximate cause of the collision.

"It would seem that Halifax pilots attempt to vary the well known rules of the road, and in this connection we think Pilot Renner, in charge of the tramp steamer on the morning of the collision, deserving of censure. The regulations governing the traffic in Halifax harbor in force since the war were prepared by the competent naval authorities, but do not specifically deal with the handling of ships laden with explosives, and we have to recommend that such competent authorities forthwith take up and make specific regulations dealing with such subjects. We realize that whilst the war goes on, under present conditions explosives must move, but,

in view of what has happened, we strongly recommend that the subject be dealt with specifically by the proper authorities."

Immediately after the delivery of the judgment, Capt. Lamodec, of the Mont Blanc, and Pilot Mackay were arrested on charges of manslaughter, but were released on bail. Counsel for Capt. Lamodec submitted that as the latter was a French subject the Governor General's consent would be necessary before he could be put on trial. Commander F. W. Wyatt, Chief Examination Officer, who had been suspended and subsequently superseded, was arrested on Feb. 5, charged with unlawfully killing Pilot Wm. Haynes of the s.s. Imo, and was also released on bail.

## The Shipping Situation in Newfoundland.

St. John's Nfld., press dispatch, Feb. 9. So critical has the shipping situation become in Newfoundland that the government has decided to create a ministry of shipping, to exercise control until the end of the war. The constantly dwindling tonnage, due to the requisitioning of vessels for war work and to losses from submarines and storms, has seriously affected the trade of the colony. Matters were brought to a climax recently when the British Admiralty notified the Newfoundland Government that it would be necessary to reduce the tonnage supplied for the colony's needs to one third of what has been available during the last year.

It is planned to place under the jurisdiction of the new ministry all the steamships which ply in and out of the innumerable harbors along the Newfoundland coast. Under the system which has been devised a number of steamships will be withdrawn from this inter-port trade and utilized to carry freight between St. John's, Nfld., Halifax and Sydney, N.S. At the Nova Scotia points connection will be made with the Intercolonial Ry. This will do away with the necessity of sending steamships on the long voyage to U. S. ports to take the colony's exports to that country and to bring in the needed imports. It will also facilitate commerce with all parts of Canada. Other coastal steamships will be diverted to the European trade. Efforts will be made, however, to do away with the necessity of dispatching many vessels across the Atlantic by developing new markets in Canada, the U. S., the West Indies and South America for dried cod fish, which is the most important commodity exported.

**Vessel Construction in Great Britain.**—It was announced in the British House of Commons recently that 1,163,474 tons of shipping were built in Great Britain during 1917, and 170,000 tons were received there from abroad. It was also stated that the official estimate was not realized, as Great Britain had arranged to have a large tonnage built in the U.S., which, when the U.S. joined the Allies, she preferred to take over, and which was quite agreeable to Great Britain.

**Leonard Steam Trawlers Ltd.**, has been incorporated under the Dominion Companies Act, with \$250,000 authorized capital, and office at Montreal, to build, own and operate steam and other vessels, for fishing and general transportation purposes, and to own and operate wharves, docks and other transportation facilities

## Steam and Sailing Ships Under Construction Throughout Canada.

Following are particulars of shipbuilding which was reported in progress Dec. 31st, 1917. The figures given in each case show the gross tonnage:—

### Steamships, Atlantic Coast.

Canadian Vickers, Ltd., Montreal, 2 cargo steamers, 9,400, steel; 1 dredge, 2,360, steel; 12 trawlers, 3,050, steel; 23 drifters, 3,450, wood.

Wm. Crowell, Port Latour, N.S.—1 gas boat, 22, wood.

Davie Shipbuilding & Repairing Co., Levis, Que.—1 car ferry, 5,000, steel.

Grant & Horne, St. John, N.B.—1 cargo steamer, 2,800, wood.

C. A. Ham, Mahone Bay, N.S.—1 gas boat, 25, wood.

D. S. McLaren, Cardigan, P.E.I.—1 gas boat, 40, wood.

Marine Construction Co. of Canada, Ltd., St. John, N.B.—1 aux. schr., 750, wood.

B. W. Melanson, Gilbert's Cove, N.S.—1 general purpose, 276, wood.

C. A. Nickerson, Wood's Harbor, N.S.—2 gas boats, 22, wood.

Nova Scotia Steel & Coal Co., Trenton, N.S.—2 cargo str., 3,000 steel.

Quebec Shipbuilding & Repairing Co., St. Laurent, Que.—2 cargo str., 2,600, wood.

Quinlan & Robertson, Quebec, Que.—1 cargo str., 2,700, wood.

Southern Salvage Co., Liverpool, N.S.—1 cargo str., 2,500, wood.

A. H. Stevens, Tancook, N.S.—1 gas boat, 27, wood.

Wedgeport Navigation & Transportation Co., Wedgeport, N.S.—1 general purpose str., 340, wood.

Total, Atlantic coast, 55 steamships of 38,662 gross tons.

### Steamships, Great Lakes.

Abitibi Power & Paper Co., Montreal—2 tugs (1 gas boat), 151, wood.

British-American Shipbuilding Co., Welland, Ont.—2 cargo str., 4,700, steel.

Collingwood Shipbuilding Co., Collingwood, Ont.—3 cargo str., 7,200, steel.

J. W. Gerow, Rosport, Ont.—1 fishing tug, 37, wood.

Great Lakes Dredging Co., Fort William, Ont.—1 cargo str., 1,700, wood.

Midland Shipbuilding Co., Midland, Ont.—3 cargo str., 6,000, steel.

Polson Iron Works, Toronto, Ont.—6 2,640, steel.

Port Arthur Shipbuilding Co., Port Arthur, Ont.—6 cargo str., 12,091, steel; 6 trawlers, 1,530, steel.

Thor Iron Works, Toronto—1 cargo str., 2,437, steel; 2 trawlers, 540, steel.

Toronto Shipbuilding Co., Toronto—2 cargo str., 6,000, wood.

West, Beachy & Son, Simcoe, Ont.—1 tug, 18, wood.

Total, Great Lakes, 44 steamships of 63,853 gross tons.

### Steamships, Pacific Coast.

T. Atagi, Steveston, B.C.—1 gas boat, 32, wood.

Cameron-Genoa Mills Shipbuilders, Ltd., Victoria—4 cargo str., 6,500, wood; 1 auxiliary schr., 1,500, wood.

J. Coughlan & Sons, Vancouver—3 cargo str., 17,190, steel.

J. A. Croll, Port Alberni, B.C.—1 tug, 35, wood.

Foundation Co., Victoria—3 cargo str., 6,200, wood.

V. Hasegawa, Steveston—1 gas boat, 30, wood.

Wm. Lyall Shipbuilding Co., Vancouver—4 cargo str., 6,500, wood.

S. A. Moulton, Prince Rupert, B.C.—1 gas boat, 21, wood.

New Westminster Construction Co., New Westminster, B.C.—4 cargo str., 6,500, wood.

Pacific Construction Co., Port Coquitlam, B.C.—2 cargo str., 5,600, wood.

Walace Shipyards, Ltd., North Vancouver—4 cargo str., 17,500, steel; 2 frt. and pass. str., 11,000, steel; 1 auxiliary schr., 1,500, wood.

Western Canada Shipyards, Ltd., Vancouver—3 cargo str., 3,900, wood.

Total, Pacific coast, 35 steamships of 84,008 gross tons.

Wooden Sailing Schooners, Atlantic Coast

T. K. Bentley, Advocate Harbor, N.S.—1 schr., 511, wood.

Omer Blinn, Grosses Coques, N.S.—1 schr., 375, wood.

Chester Basin Shipbuilders, Chester Basin, N.S.—1 schr., 135, wood.

Clare Shipbuilding Co., Meteghan, N.S.—1 schr., 350, wood.

Dowling & Stoddart, Port Clyde, N.S.—1 schr., 175, wood.

Ernst Shipbuilding Co., Mahone Bay, N.S.—1 schr., 162, wood.

Falmouth Shipbuilding & Transportation Co., Windsor, N.S.—1 schr., 405, wood.

L. F. Graham, Port Greville, N.S.—1 schr., 360, wood.

W. R. Huntley, Parrsboro, N.S.—2 schrs., 650, wood.

S. St. C. Jones, Little Brook, N.S.—1 schr., 62, wood.

Maurice Leary, Dayspring, N.S.—1 schr., 136, wood.

Dr. McDonald, Meteghan, N.S.—1 schr., 544, wood.

W. C. McKay, Shelburne, N.S.—3 schrs., 480, wood.

W. K. McKean & Co., Liverpool, N.S.—1 schr., 400, wood.

Nova Scotia Shipbuilding & Transportation Co., Liverpool, N.S.—2 schrs., 875, wood.

J. N. Rafuse, Conquerall Bank, N.S.—1 schr., 400, wood.

Robar Bros., Dayspring, N.S.—1 schr., 140, wood.

Smith & Rhuland, Ehrenburg, N.S.—2 schrs., 225, wood.

Southern Salvage Co., Liverpool, N.S.—1 schr., 185, wood.

P. A. Theriault, Belliveau's Cove, N.S.—1 schr., 339, wood.

Wagstaff & Hatfield, Port Greville, N.S.—1 schr., 400, wood.

Yarmouth Shipbuilding Co., Yarmouth, N.S.—1 schr., 175, wood.

### Pacific Coast.

Clarence Hoard, Victoria, B.C.—1 barge, 607, wood.

Total, Atlantic and Pacific coast, 30 sailing schooners and barges, 9,199 gross tonnage.

The steamships *Empress of Asia*, *Empress of Russia*, *Empress of Japan*, and *Monteagle*, owned by Canadian Pacific Ocean Services, Ltd., and operated on the trans-Pacific service, have been transferred from the United Kingdom register, with home port at London, to the Canadian register, with home port at Vancouver, B.C., which name now appears on the sterns of the vessels, instead of London, as heretofore.

## Enquiry into Pilotage in the Maritime Provinces.

Following on the findings of the commission appointed to enquire into the causes which led to the collision of the steamships *Imo* and *Mont Blanc* in Halifax harbor, Dec. 6, and the subsequent explosion on board the latter vessel, the Minister of Marine decided that it was necessary to enquire into the pilotage system in force at maritime province ports, and for this purpose the following order in council was passed Feb. 1:—"The committee of the Privy Council have had before them a report dated Jan. 30, from the Minister of Marine and Fisheries, submitting that he has had under consideration the pilotage system in operation at the ports of Halifax, St. John and Sydney, with a view to taking, at the earliest possible date, such measures for its improvement as may be deemed advisable. The minister observes that to enable him to deal with this matter it is essential that all the material facts of each case should be before him. As the question at issue concerns the conduct of the public business of Canada in respect of shipping at the ports named, the minister is of opinion that the most satisfactory method of eliciting the requisite information on which to base official action is by taking evidence on oath as to the said pilotage system. The minister therefore recommends that under the provisions of part 1 of The Inquiries Act, R.S.C. 1906, chap. 104, Thos. Robb (Manager, Shipping Federation of Canada); Capt. J. N. Bales (Deputy Port Warden, Montreal), and Capt. J. W. Harrison (Marine Superintendent, Furness, Withy & Co., Halifax), be appointed commissioners to enquire into and report upon all matters connected with the pilotage system and its administration at the ports of Halifax, St. John and Sydney, and to recommend to the minister what changes, if any, seem desirable therein."

The first sitting of the commission was held at Halifax, N.S., Feb. 9, Thos. Robb being chairman, and the taking of evidence concluded Feb. 14. Announcement has been made that the commission has reported, recommending that the Halifax Pilotage Commission be abolished, and that pilotage there be placed under the Marine Department.

### Regulations for Chartering Vessels.—

An order in council has been passed providing that a person shall not, without written permission from the Minister of Marine, directly or indirectly, on his own behalf, or in conjunction with any other person, enter into any agreement, or negotiations with a view to an agreement for the charter, whether for time or voyage, of any ship which is not a British ship, or otherwise for the use of any such ship for the carriage of goods to or from any port in the Dominion. Contravention of this regulation, or, in the event of the Minister's permission being obtained, failure to comply with conditions, carry penalties of \$5,000 fine or five years imprisonment, or both fine and imprisonment. The regulation is in force from Feb. 13, to the end of the war.

The first reinforced concrete freight motor vessel built in Germany is reported to have complete its trial trip at Hamburg. It is said to be made of "a new kind of concrete, which only weighs half as much as gravel concrete."

Admiral Sir C. E. Kingsmill, Director of Naval Service for Canada, has been created a Grand Officer of the Order of the Crown of Italy.

# The Necessity for the Establishment of a Canadian Ocean Merchant Marine.

By J. W. Norcross, Vice President and Managing Director, Canada Steamship Lines, Ltd.

The establishment of an ocean merchant marine is the most important domestic question before Canada today, for the continued prosperity of the Dominion will depend very largely upon our ability to ship our products to the markets of the world. This we cannot do unless we have the ships, and it would seem that the only way we can be assured of them is to follow the example of the United States and build them ourselves.

The people of Canada must be awakened to the urgency of this problem, and to its vital bearing on the future prosperity and development of our country. The extraordinary business expansion of Canada in the past year or two has left us somewhat complacent perhaps as to the future. But we must remember that this expansion has been due wholly to our participation in the war on the side of the allies, and is not a normal development. In three years' time we have nation, and our foreign trade balance become a lending instead of a borrowing sheet has turned tremendously in our favor. This happy condition might not have been effected in peace times in 20 years.

But what about the future? It is all very well to be optimistic, but facts are facts, and we cannot overlook them. Personally, I have always been a firm believer in the importance of foreign trade to the prosperity of any country, and I am one of those who are firmly convinced that Canada can develop her export business to enormous proportions, but realize only too well that such development can be possible only if she has the ships to carry that business. Now suppose the war were to end with Canada having made no attempt to establish a merchant marine of her own? What would happen? There would be a demand for tonnage such as the world had never known. Freight rates might be tremendously high, and the markets offering the best returns would get the ships. Ocean transportation in normal times is based on carriage of cargo in both directions; that is to say, the owner wants assurance that if he carries a cargo in one direction he will be able to get a return charter at an accessible point, and not have to run thousands of miles in ballast. Now, Canada's freight is mostly of the bulk variety, the class carried in peace times by the tramp steamship. But an export trade in raw products never made any nation wealthy. We must supply transportation for our manufacturers. We have a certain tonnage now, but only through the grace of the Admiralty. This tonnage probably will not be available after the declaration of peace. Great Britain, through mines, submarines, and marine risks, is losing ships faster than she can build them, even with her yards working night and day to meet the demand. Out of a total tonnage of some 20,000,000, Great Britain has lost at least 5,000,000 tons through the agency of the submarine alone. This represents the result of only one year of submarine frightfulness, and will not take into account the losses in the first two and a half years of the war, when such mighty liners as the *Lusitania* and the *Arabie* were sunk. In making this statement, I am not attempting to predict what the net loss of British tonnage will be when the war is finally concluded, but merely wish to show how a depleted tonnage will affect Cana-

dian interests. Great Britain's foreign trade is world wide, and if she is to retain it she will have to bend every energy toward that end, and this in the face of the greatest competition the world has ever witnessed. In South America, for instance, where before the war Great Britain and Germany had a practical monopoly, the United States will be a sturdy competitor, for she has improved the past few years to splendid effect in that field. This will mean that to retain the trade of the southern half of this hemisphere, so important to her merchants, Great Britain will have to divert a large portion of her merchant fleet to South American waters. And the same conditions will apply also to other countries, especially those supplying the raw materials for British mills, such as the United States and Australia.

What, then, will be the position of Canada? There will be a certain tonnage to the St. Lawrence, of course, but will the available freight tonnage, especially that of the tramp character, to care for the mighty export business of the Dominion be forthcoming? For one, I do not think so.

That is why I think the Dominion Government has a profound duty to establish a merchant marine that will make the Canadian farmer and manufacturer independent to a degree at least of the foreign shipowner for the carriage of his products. This merchant marine, in my opinion, should be built in Canadian yards—for we have yards in Canada sufficiently equipped to build a considerable fleet. This would not only supply work to the existing yards, whose wonderful development in the past two years been due almost wholly to Admiralty requirements, but would afford a new field of endeavor to the manufacturers of munitions, and continued employment to the thousands of skilled workers who have been very largely the product of that great war industry.

The vital need of the Canadian shipbuilding industry today is raw material. At present there are no steel mills in Canada for the manufacture of plates, channels, or angles, the reason being the total inability of the domestic steel industry to compete with its competitor. The Dominion Iron & Steel Co. did attempt to erect a plate mill at Sydney, but finding it absolutely impossible to make it a commercial success was compelled to sell it back to the U.S. The product of that particular mill is now being sold in Canada. The workmen who made the product, however are Pittsburgers, not Nova Scotians. How best a steel industry, to supplement the shipbuilding industry could be developed, I am not prepared to say, but any reasonable subvention would be justified. Perhaps the most effective method would be to order a certain amount of material, over a period of say 10 years, at a figure that would justify a fair profit on output and render the investment in such plants absolutely safe; meaning, in other words, that if a certain plant were not required after 10 years it could be dismantled without financial loss to its builders.

The upbuilding of a Canadian merchant marine is both a national and an imperial obligation, and it is one, in my opinion, that the government should waste no time to put into effect. This can best be done by the establishment of a

commission along the lines of the U. S. Shipping Board, which should be empowered to consider the merchant marine question in all its phases, to construct or purchase ships, and to do anything else that promised to rehabilitate the once important ocean marine of Canada. The ships constructed should be built on a programme that promised continuous activity to existing Canadian yards for at least 10 years, and the fleet established, whether by purchase or construction, should be capable of carrying at least 60% of the foreign trade requirements of the country, which is the percentage of British trade carried by British ships before the war.

Until the declaration of peace these ships should be operated under government control, when they should be sold to private interests at prices determined as equitable to all concerned. For public operation of ocean carriers has never proved practicable, and never will. The reasons for this are self evident. Successful ship operation lies pretty much with the personnel of the company operating. Private enterprise will always reward talent, and talent will go always where its services will be most recognized, except, of course, in times like the present, when many of the biggest men in the various countries at war are lending their services to the public at great personal sacrifice. But in ordinary times big brains cannot be tempted by the moderate salaries that are paid to government officials. And the government of no country can pay large salaries, as the people would not tolerate such a policy for an instant. Government operations of any character always deter private enterprise, as these operations can be carried on at a loss—another reason why the maritime nations have always preferred to encourage private enterprise by preference or subsidy instead of entering the field in their own behalf.

Why should the ships for the proposed Canadian merchant marine be built by the government, when the conditions for shipbuilding at present are so favorable will be, no doubt, a question that will occur to the layman who is uninformed as to the actual conditions. To understand the reason for this we must remember that the shipbuilder and the ship operator are entirely different people, just as distinct, in fact, as the builder of railway equipment and the operator of railways. The intrinsic value of a ship is not the value of the elements that have entered into her construction, but is governed wholly by the earnings she makes on the investment. These are abnormal times, and call for emergency measures. Thus ship construction at present high rates, even though the prevailing high freight rates might seem to justify it, is in a sense speculative. It is impossible to predict for how long the charges on ocean freight will remain high after the war, but it is self evident that even if there is not a sudden break in the market after the declaration of peace, there will be a gradual decline to pre-war levels, particularly if the struggle is prolonged to a date that will witness the consummation of the shipbuilding programme of the allied governments and of neutral nations, such, for instance, as Norway, which last year expended nearly \$200,000,000 in new tonnage and this year has an even more extensive programme.

Thus it is not fair to expect private builders to take such a great chance, especially considering the shortage of labor and material. Certainly, the Canadian owner is in no position to finance ships without some guarantee, as he has neither the money nor the established business to make such an undertaking feasible.

A Canadian merchant marine, built and operated with government assistance, while primarily serving Canada, would be free to trade in any part of the world, thus adding to the wealth of the Dominion by drawing upon the resources of other lands. This fleet would in addition, of course, increase the material prosperity of the country by finding ready and profitable markets for Canadian products and importing the raw materials needed by the manufacturing industries as well as the so-called luxuries that contribute so much to make life worth living. A merchant marine so developed would afford Canadian exporters a decided advantage in rates, as take the case of Japan, which besides retaining all its coastal privileges for the benefit of its own mercantile marine, is the second nation in the matter of marine subsidization. Even with present high rates, Japanese ports have a 50% preference over Hongkong, Shanghai and Manila. It is said, indeed, that because of national subsidization the merchants of Japan are enjoying pre-war rates, while the Philippine Islands and China are paying more than 100% over the old schedules.

Another vitally important reason for the establishment of a merchant marine, and one apart altogether from commercial or mercenary motives, is the creation of a trained organization upon which Canada can draw for the personnel of the navy which, soon or late, she is bound to possess. The most serious problem in creating a navy, or for that matter a merchant marine, is to furnish the necessary complement of officers and men. In this regard Great Britain has been particularly fortunate, but her good fortune can be attributed solely to an unswerving policy of interconnecting the two services. Thus in the present war we find that the fighting forces have had to draw very largely on the Naval Reserve of the mercantile fleets, and to the undying glory of the latter it can be said that they have acquitted themselves with the spirit and sacrifice that are the traditions of the service. But the creation of an organization in Canada will be more difficult than in Great Britain, where seafaring is the recognized avocation for families whose forbears have followed it for centuries. It has been the experience of every nation that the greatest difficulty in establishing a merchant marine is to make the life sufficiently attractive to induce the youth of the nation to follow it as a profession. Going to sea means giving up all the pleasures and comforts of home, and to offset the loss of these the boy must be promised compensating advantages. This condition is especially true of Canada, where the standard of living is very much higher than in any of the old world countries and where the social distinctions are less defined. Such a plan has been adopted on the Great Lakes, with the result that at present nearly all the officers are Canadian born, where only a few years ago the large majority were foreign.

Viewed from whatever angle possible, the importance of a merchant marine to the development of a nation cannot be overestimated. The war has shown that

no country can afford to depend on foreign carriers for the safety of its extraneous trade. Thousands of years of peace have proved beyond a doubt that the nations making the greatest development commercially have been those that have developed their mercantile interests. Cobden, the great English economist, once said: "I shall begin to have hopes for Turkey when I find Turkish ships, built in Turkish dockyards, manned by Turkish seamen, navigated by Turkish officers, and laden with Turkish cargoes, sailing out of Turkish ports." In these days we do not like to point to Germany as an example for anything. But no thinking person can overlook Germany's wonderful record of commercial growth in the 25 years before the war. In 1890 three-fifths of all Germany's mercantile tonnage was built in Great Britain. Ten years later, through a far-sighted policy of benevolent consideration, the German yards were constructing all the tonnage required by German owners and catering to foreign business as well. In the same decade, too, British shipping through the Suez Canal decreased from 90,000,000 to 7,000,000 tons, while that of Germany grew from 1,500,000 to at least 2,000,000 tons.

Before the war it was generally recognized that sea power would be the chief contributing factor to victory. That is why both Britain and Germany were working so feverishly on their naval equipment. But it was from the fighting ships that victory was expected, not the humble merchantman. And yet it is the peaceful cargo carrier that is playing the supreme part in the struggle, giving all due credit to the magnificent fighting ships that on constant vigil are holding the enemy at bay. In the war after the war, so called, the merchantman again will have to lead the van, and in my opinion the only countries that will have an even chance will be those who have the ships to send out on the trade routes of the world.

The establishment of a Canadian ocean merchant marine is a national opportunity and a national obligation.—Canadian Magazine.

**The North Atlantic Conference.** an association of steamship lines operating across the North Atlantic, is reported to have been revived, with the objectionable elements omitted. Mention has been made in a previous issue of the causes which led to the break up of the old association, and the part played by the C.P.R. in uncovering the German methods, whereby the German lines running to New York practically controlled the situation. It is announced that the new association includes all the principal British, Canadian, United States, French and Italian companies, which have united for trade purposes in the North Atlantic.

**Tonnage Losses During the War.**—In order to counteract the exaggerated statements attributed to the enemy as to the tonnage destroyed during war operations, the British Government has authorized the announcement that the total net loss of the world's ocean going tonnage, since the outbreak of war, including the losses from ordinary marine risks, as well as by enemy action, and allowing for enemy tonnage captured, is somewhat less than 3,000,000 tons, or approximately 9% of the tonnage available immediately prior to the war. The enemy claims to have destroyed 9,000,000 tons of allied and neutral shipping, against which it states that only 4,000,000 have been built.

## Changes in Cunard, Anchor and Donaldson Steamships Representation.

Prior to Jan. 1 last the Robt. Reford Co., Ltd., general agents, Montreal, with offices also at Halifax, N.S., St. John, N. B., Quebec and Toronto, had charge of the Cunard Line Canadian services in the territory in Canada east of Port Arthur; and also had charge of the Anchor Line (New York-Glasgow service) in the same territory, as well as supervising the Anchor-Donaldson Line business in Canada from the Atlantic to the Pacific. A separate office for the Anchor-Donaldson Line was maintained in Winnipeg, with H. E. Lidman as General Agent in charge. He also had an office for the Anchor-Donaldson Line in Vancouver, with C. A. Whitelock in charge. Mr. Lidman has resigned. The Cunard Line Canadian services, in the territory, Port Arthur and west to British Columbia in Canada, was handled through the Cunard Steamship Co.'s office in Winnipeg.

Under new arrangements which have been made the Robt. Reford Co. has been given charge of the Cunard Line Canadian services and the Anchor-Donaldson Line from the Atlantic to the Pacific in Canada and of the Anchor Line in Canada east of Port Arthur.

At Winnipeg the Cunard, Anchor-Donaldson and Anchor Lines business will be handled in the present office of the Cunard and Anchor Lines, D. W. Thomas being the manager in charge of the allied lines.

At Vancouver a joint office will be maintained for the Cunard, Anchor and Anchor-Donaldson Lines. A. B. Swzey, who was formerly connected with the Cunard Co. in New York, has been appointed manager of the joint office; and C. A. Whitelock, formerly connected with the Anchor-Donaldson Line at Vancouver, being appointed assistant manager.

The Winnipeg and Vancouver offices are maintained by the Cunard, Anchor, and Anchor-Donaldson Lines and are under the New York office's jurisdiction, where all staff appointments receive approval. The Winnipeg and Vancouver offices represent both the Cunard Canadian services, and the Cunard United States services. While the Robert Reford Co. has no direct control over the staffs at Winnipeg and Vancouver, these offices report to it in regard to the Canadian services.

**U. S. Great Lakes Vessels for Ocean Service.**—A Washington, D.C., press dispatch states that since last summer the U. S. Shipping Board has taken out from the Great Lakes to the ocean, 48 steamships, aggregating 150,000 tons, and that an additional 30 will be taken out on the reopening of navigation. Of the vessels taken out, 4 have met with disaster, the Codorus and G. N. Orr being driven ashore, where they still lie, the Saranac grounding in the gale which swept Halifax, N.S., after the disastrous explosion of a munitions vessel there, and the Tuscarora lost in another gale. A contract for salvaging the Saranac has been let. Twenty-one of these vessels had been in service on the lakes for some years and 27 were new vessels requisitioned from the yards. Of the older vessels, 16 had to be cut in two for the passage of the Welland Canal, but only one of the new ones had to be divided. Of the 30 vessels still to be taken out, practically all of them will have to be cut, and this work is stated to be proceeding now, in order to be ready for the trip when the ice opens.

# Ships Under Construction in Canada for British Government.

**Steamships Ordered in Canada.**—Canadian Railway and Marine World for Aug., 1917, gave particulars of orders placed up to July, 1917, by the Imperial Munitions Board at Ottawa, for the British Government. The accompanying tables contain a complete list of all orders placed to date, viz., 41 steel steamships, total tonnage 202,500; and 46 wooden steamships, total tonnage 128,800, a grand total of 87 steamships with a grand total tonnage of 331,300.

## Steel Steamships Ordered for British Government.

Contractor.	No. of ships.	Individual tonnage, d.w.	Total tonnage, d.w.
British American Shipbuilding Co., Welland, Ont. ....	3	3,500	10,500
Canadian General Electric Co., Toronto, Ont. ....	4	3,500	14,000

Total . . . . .	46		128,800

(1) The 2 vessels ordered from T. M. Kirkwood are being built by the Three Rivers Shipyards, Ltd.

## SUMMARY.

	No.	Total tonnage
Steel Steamships . . . . .	41	202,500
Wooden Steamships . . . . .	46	128,800
Grand Total . . . . .	87	331,300

In addition to the 41 steel steamships mentioned above, two others, which were under construction for private owners, were bought by the board, making a total of steel steamships of 211,300 tons, the cost of the 43 being approximately \$40,000,000. The cost of the 46 wooden steamships, total tonnage 128,000, is approximately \$24,500,000. The total cost for the 89 steel and wooden steamships, with a tonnage of 340,100, is approximately \$64,600,000.

The value of the contracts let in the different provinces is as follows: Nova Scotia, \$1,340,000; New Brunswick, \$1,000,000; Quebec, \$11,600,000; Ontario, \$19,240,000; British Columbia, \$31,434,

000. The contracts by provinces are as follows:

Nova Scotia, 2 steel steamships, 1,800 and 2,400 tons; cost, \$840,000; one wooden steamship, \$500,000.

New Brunswick, 2 wooden steamships, each 2,800 tons, cost \$1,000,000.

Quebec, 4 steel steamships, 7,000 tons each, cost \$5,600,000; 12 wooden steamships, 2,800 tons each, cost \$6,000,000.

Ontario, 25 steel steamships, 2 of 2,900 tons each, 9 of 3,400 tons each, 13 of

The wooden shipbuilding yards are principally new, but a few have been enlarged from their former capacity. It is said that about 25,000 men are employed on the board's orders.

The tremendous increase in shipbuilding in Canada caused by the board's orders for 340,100 tons may be seen by the following figures for previous years. In 1874, when wooden ship construction was at its height, 190,756 tons were built; but subsequently there was much less activ-

Trawler T.R. 7, built for Canadian Naval Service Department.

3,500 tons each, and 1 of 4,300 tons, total \$6,200 tons, cost \$17,240,000; 4 wooden steamships, 2,800 tons each, cost \$2,000,000.

British Columbia, 1 steel steamship, 4,500 tons, cost \$905,651; 2 of 4,600 tons each, cost \$1,679,000; and 9 of 8,800 tons each, cost \$14,750,000; 27 wooden steamships, 2,800 tons each, cost \$14,100,000.

Four steel steamships of 1,800 tons, 3,400 tons, 4,200 tons and 4,500 tons respectively, a total of 13,900 tons, have been completed. Four wooden steamships of 2,800 tons each have been launched and several others are about ready for launching.

New steel shipbuilding plants have been established during the past 12 months at Toronto and Welland, Ont., and Vancouver, B.C., and a number of existing plants have been considerably enlarged.

ity until the war years. In 1880 the tonnage built was 65,441; in 1885, 41,179; in 1890, 52,378; in 1895, 16,270; in 1900, 22,326; in 1905 19,781; in 1910, 22,283; and in 1914, 43,346.

**Additional Wooden Steamships for British Government.**—Vancouver and Victoria papers stated early in February that the British Government had placed contracts direct for building 40 wooden steamships in British Columbia, with an aggregate tonnage of 140,000, that 20 of them would be built by the British-American Shipbuilding & Engineering Co., Ltd., of Vancouver, in which J. A. Sears is principally interested; that this company, which has been incorporated recently, had leased a site on the old Kitsilano Indian Reserve, and that the other 20 would be built in Victoria by a company headed by J. H. Price, President, Cameron-Genoa

Mills Shipbuilders, Ltd., the proposed name for incorporation being the Victoria Shipbuilding Co., Ltd. The papers referred to also stated that Capt. D. L. Jones was sent to British Columbia in July, 1917, by London, Eng., officials, to investigate the shipbuilding facilities, and that he reported the result of his enquiries to the Ministry of Shipping, of which Sir Jos. Maclay is the head, that he then made a second trip to Canada, and that the orders had been placed as a result of his investigations. One of the papers which published the story said Mr. Sears stated "he had no information personally regarding the contracts for the wooden vessels." We have been unable to obtain any verification of these reports and from the best information available, we are inclined to think it is unlikely that the British Government will place any further orders for wooden steamships, but that there are possibilities of orders being allowed to be taken for allied or neutral governments.

ago, but were suspended owing to the elections, have been resumed by a Winnipeg syndicate, for a site on Industrial Island, in Vancouver harbor, for a shipbuilding plant. The property is under the Vancouver Harbor Commission's control, and, it is said, that the Dominion Government's consent must be obtained before a lease can be granted. It is also reported from Winnipeg that E. F. Hutchings, President, Great West Saddlery Co., is at the head of a syndicate which has secured a tentative contract from the Imperial Munitions Board for the construction of 12 vessels on the Pacific coast, that negotiations are proceeding for the acquirement of a site at some point along the B. C. coast, and if a good location can be secured a plant will be established for the construction of steel and wooden vessels. In any case, it is stated, the company's headquarters will be in Vancouver. Vancouver reports on this statement say that the syndicate is endeavoring to lease 11 acres altogether, but at present

erable progress has been made with the second slip alongside the present one. A sister ship of the s.s. War Dog, now in service, is expected to be launched in March, and a keel for a similar vessel laid in her place. The name stated to have been chosen for the new vessel is War Power.

James Cant, late of the Caledon Shipbuilding, Dundee, Scotland, is reported to have been appointed Superintendent, Wallace Shipyards.

**Western Canada Shipyards, Ltd., Vancouver, B.C.**—The hull of the s.s. War Nootka, the launching of which was mentioned in our last issue, had the finishing touches put to her, while moored to the company's wharf, and towards the end of February was taken to the Ogden Point assembling sheds at Victoria, to have her machinery installed.

## Atlantic and Pacific Ocean Marine.

The Eastern Steamship Corporation's s.s. Governor Cobb, which replaced the s.s. North Land on the Boston-Yarmouth route recently, is performing a semi-weekly service between these points.

The Canadian Pacific Ocean Services s.s. Montreal was reported to have been sunk in a collision along the British coast, Jan. 30. She was built at Newcastle, Eng., in 1909, was 8,644 tons gross, and had been engaged in war service for some time.

The Allan Line steamship service between Glasgow, Scotland, and Boston, Mass., which has been in operation for about 25 years, has been discontinued, and employees at Boston, it is reported, have been dispensed with. The Allan Line is now a part of Canadian Pacific Ocean Services, Ltd.

The Great Northern Pacific Steamship Co. has had its authorized capital stock reduced from \$5,000,000 to \$325,000 consequent on the purchase of its two steamships Great Northern and Northern Pacific, by the U. S. Government. It is reported that \$4,244,617.55 was paid for them, in addition to \$9,348, the cost of delivering the vessels at the Government's naval station at Puget Sound.

A St. John's, Nfld., press dispatch states that about 15 sailing vessels carrying Newfoundland fish, are being held at Gibraltar, owing to the British Admiralty's policy of not allowing any sailing vessels to enter the danger zone in the Mediterranean. It is said that the vessels have on board about one tenth of the season's catch of cod, valued at over \$2,000,000, consigned to Italian and Greek ports.

The s.s. Percepsien is reported to have been sunk and her crew landed at Liverpool, Eng., about Feb. 16. She was owned by the Gaspé & Baie des Chaleurs Steam-Glasgow, Scotland, in 1892, and has borne ship Co., Quebec, Que., and was built at the names of Canada and Pro Patria. Her dimensions were: length 185.5 ft., breadth 27.2 ft., depth 19.5 ft.; tonnage 782 gross, 502 register. She sailed from Halifax, N.S., Jan. 31, and for some years was operated between Montreal and Gulf ports, having latterly been placed on overseas service. Details as to the cause of the sinking have not been received, but it is stated that it is certain that she was not torpedoed.

The s.s. Aurora, which sailed from Newcastle, New South Wales, in June, 1917, with coal for Iquique, Chili, has not been heard of since leaving Sydney, June 20, where she had been compelled to put in in a leaking condition, and she has been given up as lost. She was formerly own-

Drifter C.D. 68, built at a St. Lawrence River port for Canadian Naval Service Department.

The British-American Shipbuilding & Engineering Co., Ltd., Vancouver, which has been incorporated recently, is reported to be negotiating for the lease of a shipbuilding site on the old Kitsilano Reserve at Vancouver. This company is stated in B. C. to have contracts from the British Government for the construction of about 20 wooden steamships, but this has not been confirmed. See also Victoria Shipbuilding Co.

**Cameron-Genoa Mills Shipbuilders Ltd., Victoria, B.C.**—The first of the four wooden steamship hulls built for the Imperial Munitions Board, and launched in January, is having her machinery installed at the board's assembly plant at Ogden Point. This is the vessel which was mentioned in our last issue as likely to be named War Tyee, but which is now stated to have been named War Yukon.

**Foundation Co., Victoria, B.C.**—Satisfactory progress is reported on the second of the Imperial Munitions Board's wooden hulls at this yard. Launch is expected early in March.

**Wm Lyall Shipbuilding Co., Ltd., Vancouver, B.C.**—The launching of the second wooden hull for the Imperial Munitions Board was expected to take place toward the end of February, and it was reported that the vessel would be named War Puget.

**Vancouver.**—It is reported that negotiations which commenced several months

desires to secure 4 acres on Industrial Island, where vessels would be launched to the eastward.

**Victoria Assembling Plant.**—W. Luney, of Luney Bros., contractors, Victoria, B.C., is reported to have been appointed Superintendent of the Imperial Munitions Board's assembling plant at Ogden Point there, vice H. A. Bayfield, deceased.

The Victoria Shipbuilding Co., Ltd., is given as the name of a company in course of organization, with J. H. Price, President, Cameron-Genoa Mills Shipbuilders, Ltd., Victoria, B.C., chiefly interested. The company is said to have practically completed arrangements for the construction of about 20 wooden steamships for the British Government, and it is stated that plans and specifications have been prepared by Mr. Price and submitted to the British Government for approval, and that confirmation of the contract was expected by cable almost immediately. It would appear from these reports, which lack confirmation, that any negotiations which may have taken place have been direct with the British Shipping Controller in London, Eng., and not with the Imperial Munitions Board at Ottawa, which is dealing with the shipbuilding situation generally in the Dominion. See also British-American Shipbuilding & Engineering Co.

**Wallace Shipyards, Ltd., North Vancouver, B.C.**—It is reported that consid-

ed by Bowring Bros., St. John's, Nfld., and was built at Dundee, Scotland, in 1876, for the sealing trade. She was utilized in 1882 as a relief vessel for the Greeley Arctic expedition, and was used for Antarctic exploration purposes in 1911-14. In 1914 she was acquired by Sir Ernest Shackleton for further Antarctic work, which was completed in Feb. 1917. She was then sold to Grace Bros. & Co., London, Eng., and later transferred to the New York & Pacific Steamship Co., London, Eng., for the coal trade in the Southern Pacific.

### Maritime Provinces and Newfoundland.

The Newfoundland Government has appointed a Shipping Board under the supervision of Hon. J. C. Crosbie, to supplement the work of the Tonnage Committee in providing shipping facilities.

The s.s. *Acadien*, formerly *Senlac*, bound from Louisburg, N.S., for St. Pierre, Miquelon, was reported, Feb. 22, to have been wrecked on the Newfoundland coast, and her crew of 10 men lost. Later reports state that she was refloated and towed to a Newfoundland port, Feb. 23, but no statement was made as to her crew, or condition. She was built at St. John, N.B., in 1904, and was screw driven, by engine of 66 n.h.p. Her dimensions were: length 182 ft., breadth 33 ft., depth 15.1 ft.; tonnage, 1,011 gross, 615 register.

The Eastern Steamship Corporation's s.s. *North Land*, while en route from Boston, Mass., to Yarmouth, N.S., recently, struck on Signal Rock, denting several plates and loosening rivets on the port side. The accident is stated to be due to the breaking loose of a bell buoy which drifted to the west of its correct position.

The Harbor Grace Railway Dock Co. held its annual meeting at St. John's, Nfld., Feb. 6. The report showed that considerable work had been done during the year, but owing to the high cost of fuel, labor, etc., the surplus revenue only permitted the payment of a dividend of 5%. The directors were re-elected, with the addition of Hon. F. McNamara and Hon. W. J. Ellis.

The Grand Lake Steamship Co.'s s.s. *May Queen* was practically destroyed by fire at Cushing's mill, St. John, N.B., Feb. 5. She was built at Carleton, N.B., in 1869 and was paddle driven by engine of 60 n.h.p. Her dimensions were: length 160 ft., breadth 24 ft. 7 in., depth 8 ft. 4 in.; tonnage, 539 gross, 340 register. She was owned formerly by the May Queen Steamship Co., and was purchased by the Grand Lake Steamship Co. in 1914, and operated on Grand Lake until July, 1917, and since then on the St. John-Fredericton route. She was practically rebuilt, and her machinery overhauled, in 1907, and carried about 500 passengers, with large freight capacity. She was valued at about \$90,000, and was insured for about \$25,000.

The Red Cross Line s.s. *Florizel*, en route from St. John's, Nfld., to New York, ran on the ledges near Cape Race, during a blizzard, Feb. 24, and became a total wreck. There were reported to be 140 persons on board, 78 of whom were passengers, about 100 being reported lost. Among the passengers were J. S. Munn, Managing Director, Bowring Bros., St. John's, agents of the vessel company, with his young daughter. The owning company is the New York, Newfoundland & Halifax Steamship Co. The *Florizel* was 1,980 tons and was specially built in 1909

for heavy work in ice, she having been utilized for sealing voyages. Her sister ship, *Stephano*, was torpedoed and sunk during the visit of German submarines to the U. S. coast some time ago.

### Ontario and the Great Lakes.

The Algoma Central Steamship Line's s.s. *W. C. Franz* is being overhauled at Midland by the Midland Shipbuilding Co.

The Bassett Steamship Co.'s s.s. *Mariska* is being thoroughly overhauled at Midland by the Midland Shipbuilding Co. A steel deck house is being fitted, and the forecabin is being remodelled.

The C.P.R. s.s. *Athabasca*, which received some damage in the late autumn, through ice, is having about 20 plates in the bow replaced at Midland by the Midland Shipbuilding Co.

The City of Toronto is applying to the Ontario Legislature for power to invest its sinking fund in securities issued by the Toronto Harbor Commissioners, to the amount of \$1,725,000.

The Great Lakes Transportation Co.'s s.s. *Glenlyon* is being overhauled and remodelled at Midland by the Midland Shipbuilding Co. A steel deck house is being built forward, with accommodation for the master and mate. A new steel deck house is also being built aft, and a number of minor repairs are being made in the hull.

The Ogdensburg Coal & Towing Co., with head office at Ogdensburg, N.Y., and which has had a Montreal branch for years, was incorporated under New York laws in 1880, Jno. Hannan, Sr., being President. He died in April, 1916, and was succeeded by his son, Jno. Hannan, Jr., Thos. Pratt being Vice-President and R. E. Hannan Secretary-Treasurer.

The United States Lake Survey reports the levels of the Great Lakes for January, in feet above mean sea level, as follows:—Superior, 601.93; Michigan and Huron, 580.76; St. Clair, 574.04; Erie, 571.91; Ontario, 246.07. Compared with the average January levels for the past ten years, Superior was 0.08 ft. below; Michigan and Huron, 0.94 ft. above; Erie, 0.28 ft. above, and Ontario, 0.72 ft. above.

The Collingwood Steamship Co., Ltd., held its annual meeting at Collingwood, Feb. 13, when the report for 1917 was adopted. It was announced that Capt. G. C. Coles, Managing Director, is arranging for the purchase of another steamship of a larger capacity and greater speed than the City of Meaford, to cope with the company's business. The officers for this year are: A. H. Johnson, President; W. G. Smart, Vice President; Capt. G. C. Coles, Managing Director and Secretary; G. T. Foulis, Assistant Manager; J. F. Zimmerman, Treasurer.

### British Columbia and Pacific Coast.

The Dominion Public Works Department has bought the small steam tug *Dorothy Symons*, registered at Vancouver, and has changed its name to *Nakusp*.

The Union Steamship Co. is reported to have purchased the auxiliary steam-powered schooner *Washington* from Seattle interests, for use in the summer trade.

The C.P.R. British Columbia Coast Service has issued its summer schedule for the Alaska route, showing a weekly service from June 7 to Sept. 30, with the steamships *Princess Alice* and *Princess Sophia*, the latter opening and the former closing the service.

The negotiations between the Grand

Trunk Pacific Coast Steamship Co. and the Independent Steamship Co., San Francisco, Cal., for the acquirement of the latter's s.s. *F. A. Kilburn*, are reported to have been called off, owing, it is said, to the vessel's machinery being defective.

An Ottawa press dispatch stated early in February that it was reported on good authority that the Fish Committee of the Food Controller's Department had recommended that the Dominion Government take over the fishing trawlers operating off the Pacific coast and carry on the fishing business there as a national enterprise.

An order in council has fixed the harbor head line of Victoria, beyond which, wharves, breakwaters, piers and other similar structures are not permitted to be built, according to plans deposited with the Public Works Department, Ottawa, and the Department's District Engineer at Victoria. This order amends previous orders on the same matter.

The Seattle Dry Dock & Construction Co., of Seattle, Wash., has been awarded \$87,000 for rent and breach of contract to insure, in connection with the capsizing of a floating dry dock leased to Grant, Smith & MacDonnell, Ltd., contractors for the construction of the breakwaters at Victoria, B.C. The case has been before the courts since the early part of 1915, and the original claim was for \$250,000.

The Marine Department has issued a notice respecting the lighting, etc., of the Canadian Northern Ry. bridge across Selkirk Water to the Songhees Reserve, Victoria, B.C. The bridge consists of two approaches with a bascule span between. The bascule span is of the roller type, having a steel girder leaf with a concrete rest pier on each side of the opening, with a clearance of 77 ft. between piers, the bottom girder being 7 ft. above high water. A fixed white light on each side of the opening, 6 ft. above high water, marks the channel, but as the bridge is not being used at present, the bascule will be kept raised until trains are operated across.

The Union Steamship Co. of New Zealand, operating the Canadian-Australian Mail Line, is said to be negotiating with the Dominion Government for the use of the new government docks at Victoria, owing to the, it is alleged, unsatisfactory wharfage accommodation at times, in the inner harbor. One of the piers mentioned is occupied by the shed for equipping wooden steamships being built for the Imperial Munitions Board, with machinery, so that accommodation cannot be given there, but a local statement says that there is nothing to hinder the use of pier 3 for vessels calling at Victoria, if the Government would authorize the immediate construction of the proposed shed there.

It is reported that some trouble is expected in connection with the Kitsilano Bridge across False Creek, Vancouver, it being claimed that it is a hindrance to navigation. The bridge is owned by the C.P.R. and leased to the British Columbia Electric Ry. The Vancouver Harbor Commission has notified the companies that the span across the fair way will have to be removed in order that the s.s. *Alaska*, just about completed, can pass from the builders' yards to the sea. Taking into account the number of vessels under construction, and to be built at these yards, the removal and replacing of the span each time a vessel may require to pass would cost a large sum. The C.P.R. is said to have claimed that the bridge is there rightly and properly, and desires to know who is to pay the cost.

## Cargo Steamship Building for Dominion Government.

Canadian Railway and Marine World for February contained full particulars of the Minister of Marine's shipbuilding programme, which is already being put in effect, contracts for three vessels having been given and more being under consideration. Following are particulars of the contracts:

Canadian Vickers, Limited, Montreal, one steel cargo steamship:—

Length between perpendiculars ..... 320 ft.  
Breadth moulded ..... 44 ft.  
Depth moulded ..... 25 ft.  
Draft loaded ..... 21 ft. 2 in.  
Dead weight carrying capacity, ..... 4,300 tons  
Sea speed loaded ..... 11 knots

Single deck, poop bridge and forecastle; straight stem; elliptical stern; 5 water tight bulkheads; single screw; triple expansion engines; 2 Scotch boilers, 180 lb. working pressure; forced draft.

Canadian Vickers, Ltd., Montreal, one steel cargo steamship:—

Length between perpendiculars ..... 400 ft.  
Breadth moulded ..... 43½ ft.  
Depth moulded ..... 31 ft.  
Draft loaded ..... 23 ft. 1 in.  
Dead weight carrying capacity, ..... 8,100 tons  
Sea speed loaded ..... 11 knots

Two decks, poop bridge and forecastle; straight stem; elliptical stern; 5 water tight bulkheads; single screw; triple expansion engines; 3 Scotch boilers, 180 lb. working pressure; forced draft.

Collingwood Shipbuilding Co., Collingwood, Ont., one steel cargo steamship:—

Length between perpendiculars ..... 251 ft.  
Breadth moulded ..... 43½ ft.  
Depth moulded ..... 28 ft.  
Draft loaded ..... 22 ft. 2½ in.  
Dead weight carrying capacity ..... 3,750 tons  
Sea speed loaded ..... 9 knots

Single deck, poop bridge and forecastle; straight stem; elliptical stern; 4 water tight bulkheads; single screw; triple expansion engines; 2 Scotch boilers, 180 lb. working pressure; forced draft.

Wallace Shipyards, Ltd., North Vancouver, B.C., was stated by British Columbia papers, early in February, to have received a contract for 4 steel cargo steamships. This was not correct; in fact, up to the time of writing (Feb. 18), no order had been given this company, but negotiations were in progress and we were advised that it was probable they would be successful. The vessels under consideration are as follows:—

Length between perpendiculars ..... 331 ft.  
Breadth moulded ..... 46½ ft.  
Depth moulded ..... 25½ ft.  
Draft loaded ..... 21 ft. 8 in.  
Dead weight carrying capacity ..... 5,100 tons  
Sea speed loaded ..... 11½ knots

Single deck, poop bridge and forecastle; straight stem; elliptical stern; 5 water tight bulkheads; single screw; triple expansion engines; 3 Scotch boilers, 180 lb. working pressure; forced draft.

Wallace Shipyards, Ltd., advised Canadian Railway and Marine World, Feb. 23, that it had secured an order from the Dominion Government for the 4 steamships specified above.

The plans and specifications for all the vessels have been prepared by Charles Duguid, Naval Architect, Marine Department. Alex. Johnston, Deputy Minister of Marine, and Mr. Duguid visited Washington recently, and made arrangements for a supply of sufficient steel plates and shapes for a year's work on these cargo vessels.

Other orders for cargo steamships will be placed as fast as possible, in connection with which the Marine Department has obtained the following information as to what berths will be available in the

different shipyards on the completion of the Imperial Munition Board's and other orders.

British American Shipbuilding Co., Welland, Ont., 1 berth in May, 1 in July, 1 in Sept. and 1 in Nov., 1918.

Canadian Allis-Chalmers, Ltd., Bridgeburg, Ont., expect to be able to start work on 6 steamships before June, 1919.

Canadian Vickers, Ltd., Montreal, will have the following berths vacant for 8,100 tons steamships: 2 in May, 1 in Aug., 1 in Sept., 1918.

Collingwood Shipbuilding Co., Collingwood, Ont., 1 berth in April and 1 in May, 1918, for 3,750 ton steamships.

J. Coughlan & Sons, Vancouver, B.C., no berths available during 1918.

Davie Shipbuilding & Repairing Co., Lauzon, Que., will probably be able to start on two 5,000 ton steamships this year.

Midland Shipbuilding Co., Ltd., Midland, Ont., 1 berth in Oct. and 1 in Nov., 1918.

Polson Iron Works, Ltd., Toronto, 4 berths in Oct., 1918, for 3,750 ton steamships.

Port Arthur Shipbuilding Co., Port Arthur, Ont., 2 berths in July for 3,750 ton steamships.

Tidewater Shipbuilders, Ltd., Three Rivers, Que., a new plant, will be willing to undertake 4,350 tons.

Wallace Shipyards, Ltd., North Vancouver, B.C., will have 1 berth in April, 1918, for a 4,300 ton steamship; one in June, 1918 for a 5,000 ton steamship, and 2 more berths before June, 1919.

The Ogdensburg Coal & Towing Co. is reported to have been acquired by a Canadian syndicate, with the object of dividing the company into two separate corporations, one with \$200,000 capital to carry on the business at Ogdensburg, N. Y., and the other with \$1,000,000 capital to operate from Montreal. It is stated that arrangements have been made to supply coal to Canada Steamship Lines' vessels, and that W. L. McDougall, Montreal, will be President and General Manager of the company. Canadian Railway and Marine World for February contained notice that the Ogdensburg Coal & Towing Co., Ltd., had been incorporated under the Dominion Companies Act with \$1,500,000 capital and office at Montreal.

The Montreal, Ottawa & Georgian Bay Canal Co. is applying to the Dominion Parliament to repeal sec. 5, chap 128, statutes of 1906, which provides the terms and conditions upon which the Dominion Government may acquire possession of the company's works, property and privileges, and to substitute the original provisions enacted for that purpose in the act of incorporation, viz., in sec. 43, chap. 103, statutes of 1894; and also to amend sec. 7, chap. 103, statutes of 1894, to provide that the amount of stock to be subscribed prior to the calling of the first general meeting of the company, shall be 5% instead of 20%. J. A. Ritchie, Ottawa is solicitor for the company.

Tide levels and datum planes in Eastern Canada, from determinations by the Naval Service Department's tidal and current survey, up to 1917, have been issued in booklet form.

"A ship isn't so dependent on her anchor." "Why isn't she?" "Because even if she loses it, she still keeps her hold."—Baltimore American.

## Ship Claimed to be Unsinkable.

New York press dispatches state that W. L. Saunders, Chairman, U. S. Naval Consulting Board, in a public speech there recently, stated that the U. S. Government had equipped its first military transport with a system of air and watertight cells, making it almost impossible to sink it with torpedoes; that the vessel is the former Austrian s.s. Lucia, now remodelled and renamed; that the hull is honey-combed with 12,000 cells or boxes, and that in the event of a torpedo attack, she would not sink, but would have the buoyancy of a lumber-laden, waterlogged schooner. He stated that the bulkhead system of protection for ships had failed in this war. The cells which have been applied to the Lucia are inserted inside the skin of the ship below the water line and are bolted to the frame work. Each unit is claimed to be absolutely air and water tight, and the floating capacity is said to be sufficient to keep the vessel from sinking when loaded and waterlogged. This system is the result of experiments made by a well known marine engineer, and it has also been applied to the lifeboats on the vessel. By the equipment of the vessel in this manner, from 15 to 20 per cent. of the cargo space is taken.

Considerable scepticism prevails in shipping circles as to the reliability of the arrangement, and it is stated that, as the result of tests, a special board reported against the device, and the Lucia was not accepted as a successful, practically non-sinkable vessel.

It was reported in Great Britain recently, that numerous ideas had been offered to the British Government, with the object of making vessels non-sinkable, or of allowing them to remain afloat for a considerable time after being torpedoed, but all of them were practically discarded, for the reasons, either, that the devices utilized too much of the internal space, interfered too much with the speed of the vessel, were too costly and took too much time to install, or were wholly impracticable.

**Radiotelegraphy on Ocean Vessels.**—An order in council has been passed, amending the Defence of Canada Order, 1917, by providing that from Jan. 7, 1918, every British steamship registered in Canada of 1,600 gross tons and upward, sailing to or from any port in Europe, or in the Mediterranean Sea, shall be provided with an efficient radiotelegraph apparatus in good working order, properly installed and maintained, capable of transmitting and receiving messages for at least 100 miles by day or night, with two certified operators in charge. The owner or master of any such steamship sailing without being provided with such apparatus, shall be guilty of violating the provisions of the order.

**Commonwealth Steamship Co., Ltd.**, has been incorporated under the Dominion Companies Act with authorized capital of \$750,000, and office at Toronto, to build, own and operate steam and other vessels and to carry on a general shipbuilding and transportation business.

The Cunard Co. had judgment entered against it recently on a claim for damage to wheat through water entering a port hole on the s.s. Pannonia, whilst en route from New York and Halifax to Great Britain. The court decided that there was no evidence on behalf of the defence that a spy had opened the port hole, but that there was lack of due diligence and ordinary judgment.

## General Shipbuilding Notes.

**Canadian Car & Foundry Co.**—The press dispatch mentioned in our last issue, to the effect that the company had been awarded a contract to build steel steamships to the value of \$10,500,000 for the U. S., is, we are advised, incorrect. No such contract has been given, the only order at present in hand is for 12 mine sweepers for the French Government.

Following are the dimensions of the 12 steel mine sweepers, valued approximately at \$2,500,000, which will be built at Fort William for the French Government:—length over all 143 ft., length between perpendiculars 135 ft., beam moulded 22½ ft., depth moulded to main deck 13¾ ft., and to quarter deck 14¼ ft.

A contract is reported to have been awarded to the Dominion Bridge Co. for the construction of the shipbuilding plant at Fort William, and another one to E. G. Penniman, Fort William, for the excavations, foundations, tracks for trucking the boats and the keel piling supports. The last contract mentioned, it is stated, is to be completed by the third week in March, and the first one early in April.

**J. F. Deveau, Meteghan, N.S.**—A 300 ton schooner was launched recently for Ritcey & Co., Lunenburg, N.S., and named Charles A. Ritcey.

**Dominion Shipbuilding Co., Ltd., Toronto.**—A permit has been granted for the construction of a one, or two, story main building on the company's site, on reclaimed land at the foot of Bathurst St., at a reported cost of \$173,000. The building will be of steel faced with hollow tile. Some details of this company, with a sketch of its site, were given in Canadian Railway and Marine World for Dec., 1917, page 490.

**St. Clair Jones, Weymouth, N.S.**—The tern schooner *Speedway*, of 400 tons, launched recently at Digby, N.S., is stated to have been chartered for a trip from St. John, N.B., to South Africa. It is reported that the builder declined an offer of \$100,000 for her just prior to launching.

**Newfoundland Shipbuilding Co., Harbor Grace, Nfld.**—The keel of a 600 ton auxiliary powered ship was laid early in February, and 4 similar ships of 500 tons each are reported to be under way. Some details of the type of vessel to be built at this plant were given in our last issue.

**Polson Iron Works, Toronto.**—The s.s. *Asp* was launched at Polson Iron Works, Toronto, Feb. 11, for Norwegian interests. Some difficulty was experienced in carrying out the launching owing to the heavy ice, which had to be cut away before the vessel could be sent down to the water. The *Asp* is a sister vessel of the s.s. *Tento*, launched from the same works, for the same interests, Oct. 22, 1917. Her dimensions are: length overall 261 ft., length between perpendiculars 251 ft., breadth moulded 42½ ft., depth moulded 23 ft.; deadweight capacity, 2,500 tons; mean draft, 19½ ft. She is of the *Fredrickstad* type, single deck, on the deep frame principle, with cellular double bottom all fore and aft, and peak tanks. There are 4 water tight bulkheads, 2 masts and 6 steam winches, one at each mast and derrick. She is of steel, to highest class Bureau Veritas, for ocean service, and will have steam and hand steering gear, electric light and evaporating outfit. The propelling machinery will consist of triple expansion engines, with cylinders 20½, 33 and 54 in. diam.

by 36 in. stroke, supplied with steam by 2 Scotch boilers, 14 ft. diam. by 12 ft. long, at 180 lb. working pressure. The launching of the vessel was somewhat delayed owing to the recent fire at the works, when the hull was scorched.

**The Port Arthur Shipbuilding Co., Port Arthur, Ont.**, which has under construction six cargo steamships and six trawlers, is reported to have received additional orders for five Welland Canal size freight steamships, and for eight other vessels. It has about 1,200 men employed, but it is announced that the staff must be considerably augmented to handle the amount of work on hand.

**Prince Rupert, B.C.**—W. P. Hinton, Vice President and General Manager, Grand Trunk Pacific Ry., is reported as having stated at Vancouver, Feb. 8, that a shipbuilding scheme was being considered which might mean a big development for Prince Rupert. We are advised that negotiations for the leasing of the shipbuilding plant and dry dock are going on. Both are being operated to full capacity on repair and overhaul work for the company's own steamships and for fishing vessels.

**J. N. Rafuse & Sons, Bridgewater, N.S.** launched recently a three masted schooner named *Industrial* at W. J. Foley's ship yard at Salmon River, N.S., of the following dimensions: length 113 ft., breadth 30 ft., depth 11½ ft. Arrangements are reported to have been made for the construction of a similar vessel at the same yards.

**Sault Ste. Marie, Ont.**—A deputation from Sault Ste. Marie called upon the Ontario Premier at Toronto recently, to discuss the possibility of establishing a plant at Sault Ste. Marie, for the construction of wooden steamships. The deputation also called on F. H. Clergue, at Montreal, to discuss the matter with him, but no announcement has been made as to the results of the visits. The question of a shipbuilding plant and dry dock at Sault Ste. Marie has been discussed for several years, and a company, in which Mr. Clergue was interested, was formed for the purpose of building the plant but nothing was ever done.

**Tidewater Shipbuilders, Ltd.**—The Sorel Shipbuilding & Coal Co., Ltd., has been granted supplementary letters patent under the Dominion Companies Act, changing its name to Tidewater Shipbuilders, Ltd. The head office is at Three Rivers, Que., and Jas. M. Smith is General Manager. Canada Steamship Lines, Ltd., is interested in it. It was referred to in our last issue as Tidewater Shipbuilding Co., Ltd., that being the name used in a letter heading received in this office.

**Vessels for Foreign Register.**—A Vancouver press dispatch states that the Dominion Government is endeavoring to arrange with the Imperial Government to remove the restrictions placed on the building of vessels for foreign register. It is stated that in the event of this taking place, several French contracts will be placed there, and that construction on such vessels would be commenced immediately.

**The Wallace Shipyards, Ltd., North Vancouver, B.C.**, in addition to its orders from the Imperial Munitions Board, has on order 4 cargo steamships, 2 freight and passenger steamships and 1 auxiliary powered schooner.

## Mainly About Marine People.

**Francis King, M.A., Counsel, Dominion Marine Association, Kingston, Ont.**, has been elected a member of the National Committee of the Anglican Men's Movement.

**James Playfair, President, Great Lakes Transportation Co.**, who has not been very well, left for California early in February and is expected to return to Midland, Ont., in April.

**R. Beaumont, Assistant to Manager, Grand Trunk Pacific Coast Steamship Co., Vancouver, B.C.**, has been appointed Superintendent, in charge of the company's service at Prince Rupert, B.C.

**A. G. Hill, formerly in charge of Babcock & Wilcox, Ltd., Toronto office**, has been appointed production engineer in charge of the production of marine engines and boilers in the Toronto district, for the Imperial Munitions Board.

**Sir George B. Hunter, Chairman, Swan, Hunter and Wigham Richardson, Ltd., Newcastle, Eng., and Sir James McKechnie, Managing Director, Vickers, Ltd., Barrow, Eng.**, are two of the recently created knights of the Order of the British Empire.

**W. H. Thompson, formerly Travelling Passenger Agent, Allan Steamship Line, Toronto, and latterly serving with the Allied Shipping Board in New York**, died there, Feb. 16, from pneumonia, aged 34. He was a son of Wm. Thompson, an officer on the C.G.S. *Vigilant*, and a native of Port Dover, Ont.

**Lord Furness, head of Furness Withy & Co., and intimately associated with Canada Steamship Lines, Ltd., and numerous other shipowning and shipbuilding companies in various parts of the world, and who succeeded to the barony conferred on his father, Sir Christopher Furness, has been created a viscount, in recognition of his own and his companies' services to the Empire in shipping matters.**

**David Seath, formerly Secretary-Treasurer, Montreal Harbor Commissioners, died at Westmount, Que., Feb. 23.** He had been failing in health for some time, and suffered a slight stroke of paralysis in May, 1917. He was born at Montreal, May 9, 1847, and for a number of years was engaged in commercial life. He was appointed Secretary of the Montreal Harbor Commissioners in 1898, and retired in 1917. He joined the Victoria Rifles in 1864, as a private, and was promoted through various grades to Paymaster, with the honorary rank of Major. He held the long service and Fenian raid medals.

**Henry A. Bayfield, who died at Victoria, B.C., Feb. 13,** was born at Charlottetown, P.E.I., and was educated there and at McGill University, graduating in 1896 with the degree of B.Sc. He was for some time engaged in wharf construction at St. John, N.B., and other eastern points, and subsequently went to Vancouver, B.C., where he conducted a private engineering practice. He was later appointed Superintendent of Dredges for British Columbia under the Dominion Public Works Department, and latterly acted as engineer in charge of the Imperial Munitions Board's assembly plant at Ogden Point, Victoria, where machinery is being installed in wooden hulls built on the Pacific coast. He was an associate member of the Canadian Society of Civil Engineers from 1901, and a councillor of the society in 1909.

# Dominion Marine Association's Annual Meeting and Report.

The annual meeting was held in Toronto, Feb. 20, A. A. Wright, President, in the chair. The executive committee's report, as printed below, was presented and adopted, after various clauses had been discussed.

A letter having been read from the Board of Grain Commissioners, announcing the receipt of a notification from the Terminal Elevator Co. that it was not prepared to continue, for the season of 1918, the arrangements in force in 1917 in connection with cargo allowances, the association decided to maintain the attitude taken by the executive committee in favor of a renewal of the 1917 arrangements.

J. T. Mathews, L. Henderson, W. H. Smith and F. King were appointed a committee, with power to add to their number, to interview Marine and Public Works Departments' officials at Ottawa, for the purpose of getting the regulations respecting turning of vessels at Fort William changed to an equitable basis.

A letter having been read from the Secretary and Business Manager of the National Association of Marine Engineers of Canada, enclosing a 1918 minimum wage scale and classification for steamships operating in the Great Lakes district, which it was stated had been sent to all owners, asking an increase in pay, it was decided that, in accordance with previous custom, the question be dealt with by individual owners.

The committee appointed to interview the Marine and Public Works Departments' officials, in reference to the turning of vessels at Fort William, were authorized to urge on the Marine Department the necessity of enacting regulations respecting drinking water on vessels, so that Canadian vessels would thereby comply with U. S. requirements.

The Upper Canada Tract Society was granted \$200, towards the expenses of the Toronto Sailors' Institute for 1918.

The question of dredging at Wolfe Island, in the St. Lawrence River, having been considered, it was decided to recommend to the Dominion Government that the work be done.

The resignation of W. L. Reed, formerly of the Canadian Northwest Steamship Co., as a member of the executive committee, was accepted, the company having gone out of business.

The question of aids to navigation was referred to the incoming committee.

It was decided to protest again the proposed power development work at Rapide Plat, in the St. Lawrence River, by the New York & Ontario Power Co.

The committee named as above, to interview Marine and Public Works Departments' officials, was authorized, in conjunction with J. Donnelly, to ask the Marine Department to amend the boiler inspection regulations, particularly in regard to the pressure allowed and the hydrostatic tests required every year.

The following were appointed a committee on aids to navigation: A. A. Wright, W. J. McCormack, A. E. Mathews, J. F. Sowards, James Bassett, H. N. McMaster, G. E. Fair and W. H. Smith.

The four vacancies on the executive committee, caused by the expiry of the terms of W. E. Burke and A. E. Mathews, Toronto; D. Murphy, Ottawa (deceased), and W. L. Reed, Toronto (resigned), were filled by the re-election of Messrs. Burke and Mathews and by the election of James Bassett, Toronto, and J. F. Sowards, Kingston. The other members of the

committee, whose terms have not expired, are: A. A. Wright, J. T. Mathews, G. E. Fair, C. B. Harris and J. F. M. Stewart, Toronto; L. Henderson and John Waller, Montreal, and W. J. McCormack, Sault Ste. Marie.

J. T. Mathews was elected President, W. J. McCormack, Vice President, and G. E. Fair, Second Vice President.

## EXECUTIVE COMMITTEE'S REPORT.

The following report was submitted, signed by A. A. Wright, President, and Francis King, Counsel:—In preparing the following report of the association's work for the year 1917, the executive committee has made no effort to extend its scope beyond that covered in previous years, and has made reference only to those matters of interest to shipping on Canadian inland waters which have been the subject of consideration or action at meetings of the association or of its committees, or which have been otherwise dealt with by the association's officers during the year. The report is thus somewhat limited in extent, for the number of meetings held in 1917 has been much smaller than usual, and largely owing to war conditions the opportunity to seek or promote reforms by legislation or otherwise has been wanting, while at the same time and for the same reasons the pressing need of opposition to unwise legislation or of scrutiny of exploitations adverse to shipping interests has been correspondingly lessened. The items dealt with may be referred to under separate headings, as follows:—

**Legislation.**—Omitting orders in council and departmental regulations, which have not heretofore been included under this heading, it may be said that the only legislation before the Dominion Parliament in 1917 directly affecting shipping and requiring consideration by the association was the proposed amendment of the Railway Act, designed to bring carriers by water under the Board of Railway Commissioners' jurisdiction. The association's successful opposition to this proposal is reported in the following paragraph:—The Dominion Statutes for 1917 thus contains no general public statute relating to shipping.

**The Railway Bill, Sec. 358.**—In the course of the last few sessions of parliament the association has successfully opposed a number of bills introduced for the purpose of bringing carriers by water under the jurisdiction of the Board of Railway Commissioners. In the session of 1917, however, the argument turned on a section in the general bill to amend and revise the Railway Act, and it was necessary to bring opposition, not to a private bill but to a government measure. The section in the present Railway Act is as follows:—

"The provisions of this act in respect of tolls, tariffs and joint tariffs shall, so far as they are applicable, extend to the traffic carried by any company by sea or by inland water, between any ports or places in Canada, if the company owns, charters, uses, maintains or works, or is a party to any arrangement for using, maintaining or working vessels for carrying traffic by sea or by inland water between any such ports or places."

The bill proposed to amend this by a slight verbal alteration and by the addition of four important lines so that the section would read as follows:—

"The provisions of this act, shall, so far as deemed applicable by the board, extend and apply to the traffic carried by any railway company by sea or by inland water, between any ports or places in Canada, if the company owns, charters, uses, maintains or works, or is a party to any arrangement for using, maintaining or working vessels for carrying traffic by sea or by inland

water between any such ports or places, and the provisions of this act in respect of tolls, tariffs and joint tariffs shall, so far as deemed applicable by the board, extend and apply to all freight traffic carried by any carrier by water from any port or place in Canada to any other port or place in Canada."

A protest was filed against the proposed amendment, and the progress of the bill in committee was carefully watched. Upon learning that those favoring the legislation were relying to some extent upon the supposed existence of similar legislation in the United States, evidence was procured to prove that neither the Interstate Commerce Committee nor the new Shipping Board exercised any such jurisdiction as that proposed over common carriers, and care was also taken to inform the public of the impracticability of the proposal. In due course the matter came up for argument in the House of Commons Railway Committee, and a representative delegation from the association, supported by the leading boards of trade and many mercantile and shipping concerns throughout the Dominion, made a strong case against the amendment of the section. As a result the committee struck out the amending words in bold face type in the second quotation set out above, leaving the section substantially as it had stood heretofore and as first above quoted. The bill has not yet been enacted, but it is assumed that the section will finally appear in accordance with the committee's report.

**Drinking Water on Ships.**—Just prior to the opening of navigation in 1917 your Counsel's opinion that the new U. S. regulations as to pure drinking water would apply to Canadian ships entering U. S. ports, was confirmed by rulings of the officials charged with the enforcement of the law. In the short time remaining before the opening it was practically impossible to comply with these regulations, for they required that unless drinking water was taken on board from an approved source it must be purified by approved means, including among other things the installation of a separate system entirely distinct from the ordinary water piping, and also the installation of an approved plant for sterilizing the water. The Marine Department at Ottawa was consulted, and later a deputation waited upon the Deputy Minister. Full information was supplied to him as to the difficulties in the way, and a day or two later he visited Washington in the hope of making an arrangement in the interests of Canadian ships. He was successful, and the arrangement reached, suspended the regulations in U. S. ports as to Canadian vessels until the spring of 1918, on the understanding that in the meantime regulations of a similar nature would be adopted in Canada, and it was agreed that proof of compliance with these Canadian regulations would be accepted in U. S. ports. Since that time many members of the association, as opportunity arose, have installed plants on their ships approved by the U. S. authorities. Members have also been advised from time to time that, in the absence of Canadian regulations, ships must be prepared to show compliance with those of the U. S. on entering ports of that country; and full information as to approved installations has been circulated. The Department has also been reminded of the arrangement to enact Canadian rules, but up to this date has not sent notice of any action or submitted any proposals for considerations.

**Canadian Regulations regarding Grain**

**Cargo Outturns.**—Early in 1917 the Board of Grain Commissioners submitted to the various interests, enquiries as to the continuance of the regulations in force since 1915, and in due course at a meeting of the grain section it was resolved to ask for the re-enactment of the same regulations for the ensuing season. Some eastern elevators were opposed to this, and the loading houses sought a larger contribution from the carrier. The Commission therefore called a conference at Montreal on April 12, and all parties were represented there. After full argument and after a proposal from the representatives of this association, to meet an important objection, by allowing the ship to contribute a straight 15 lb. per 1,000 bush. on wheat, barley and oats, instead of  $\frac{1}{4}$  bush. per 1,000 bush. as heretofore, the Commission recorded an agreement to the re-enactment of the regulations for another season, with the one amendment above mentioned. The regulations were later promulgated accordingly, but under protest from the loading houses as to their contribution: a protest which has now been renewed in writing as to 1918. At this conference the special committee appointed by the grain commission to devise some permanent arrangement, made recommendations in favor of some plan that would include the shipper of the grain in the contributions towards adjustment. The commission was asked to assist in procuring the necessary amendment of the statute to permit this and also to work out some equitable scheme that could be enforced. The commission reserved any decision.

**Buffalo Grain Clearance Corporation.**—On April 11, 1917, the day preceding the conference with the grain commission at Montreal, a conference of representatives of this association, The Lake Carriers' Association and the Grain Clearance Corporation, was held at Buffalo. It was then resolved at the outset that the Clearance Corporation ought to continue its services if arrangements could be made, and after full discussion of reports a working plan was outlined in the following terms:—

1. That the contribution of the ships shall be on the basis of  $\frac{1}{2}$  bush. per 1,000 bush. from all ports to all ports;
2. That in order to provide funds for operating and for the purposes mentioned in clause 4, the ships shall respectively pay \$200 on first arrival with grain cargo, subject to this contract (majority opinion seems to be that this item should be a fixed amount, but may be on sliding scale, based on capacity of ships or other conditions);
3. The 12c. and 24c. of the former contract may be increased to 15c. and 30c.;
4. Such contribution on first arrival shall be evidenced by receipt showing terms on which contribution is made, substantially that such contributions are to be repaid as soon as practicable after close of navigation, subject to the deduction of such amount from each contribution as may be necessary to give the corporation a sum, including its surplus earnings, sufficient to repay the voluntary contributions already received this year from carriers; to pay the deficit of 1916, excluding capital; and to pay back to the corporation one quarter of its exhausted capital;
5. That this agreement is for one year only and that any surplus earnings over refunds and total deficits shall be credited pro rata to the subscribers of 1917, and new arrangement to be made for 1918.

This proposal was approved by members of this association present at the Montreal conference on the following day and was at once submitted to all members by circular. On April 16th parties met again at Buffalo and settled a form of contract, similar to that previously in use, but containing the amendments above set out. This contract was then printed and upon being sent by the corporation to individual vessel owners for signature was generally adopted and entered into. In the meantime the representatives of the loading houses, who had protested at one-sixth of a bushel, after some consideration agreed to pay on shipments to the

U. S. the same amount as on Canadian shipments, but they continued their protest, and on April 21 met the grain commission at Winnipeg to present their argument for certain lower contributions. The commission, however, quite properly held to the opinion that the arrangement was concluded at Montreal, and in due course the loading houses through C. B. Piper gave the required assent to continue their contributions on the basis of one-sixth of a bushel, and the commission's regulations were then issued as above reported. Nevertheless, the final agreement of the loading houses was made under protest, and notice was served upon this association that readjustment must be made before another season opened. This noticed has just been repeated, as appears from a letter received from the secretary of the grain commission after this report was prepared. The commission invites an expression of this association's views. Unfortunately the reorganized business of the Grain Clearance Corporation again proved unsuccessful, and it was forced to discontinue operations June 30, 1917.

**Shortage in Outturns, generally.**—A fair indication of the outturns of cargoes loaded at Fort William and Port Arthur in the autumn of 1917 is given by the returns sent out periodically by the Board of Grain Commissioners. An appendix to this report is made up from these returns covering periods from Aug. 22 to Dec. 18, 1917. It will be noted that the damaged grain shown in this statement forms part of the reported shortages and that the net shortage during the period mentioned, and excluding damaged grain, amounted to 0.42 bush. per 1,000 bush. of the bill of lading quantities. The detailed returns show that in number the shortages greatly exceeded the overages, only 102 cargoes turning out in excess of the bill of lading quantity, while 432 ran short.

**Grain Bill of Lading adopted by Lake Carriers' Association.**—A proposal for such a bill of lading as this was discussed at the conference in Buffalo, called to consider the winding up of the Grain Clearance Corporation, but in view of the existing regulations in force in Canada it was not considered possible to bring such a bill of lading into general use. At a later meeting of the Lake Carriers' Association a form was tentatively adopted and submitted to the Dominion Marine Association for approval. It was considered at a meeting of the association's grain section in Toronto on Sept. 11, but for the reason above mentioned and because the Wheat Export Co. was not at once prepared to consider the proposal, no action was taken. The new lake carriers' bill of lading was shortly afterwards formally adopted and put in print. A form intended for use on shipments from Canadian ports appears in an appendix to this report. This association is advised that the clause as to general average is allowed by the decision of the U. S. Supreme Court in the *Jason* case, notwithstanding the provisions of the Harter Act; and your Counsel has expressed the opinion that in view of the wording of the Canadian Water Carriage of Goods Act, a similar decision would probably be reached by Canadian courts. The Lake Shippers Clearance Association, by letter from Fort William dated Dec. 31, 1917, advised that this form had not then been used on any of its shipments.

**Control of Grain Trade as a War Measure.**—During the year general supervision has been exercised as to certain designated particulars, by a Board of Grain

Supervisors appointed by order in council; and latterly a corporation known as The Wheat Export Co., Ltd., has been directly charged by the Dominion Government with the export business, and, represented by Jas. Stewart, this corporation has now been in control and in relations with members of this association throughout the autumn trade. On Sept. 11 a joint meeting of this association's executive committee and its grain section met Mr. Stewart at Toronto to consider his proposals to simplify shipment and avoid congestion and delay, and also his further request for the fixing of a maximum freight rate. Members present all expressed the wish to facilitate his work as much as possible, and volunteered to accept the same maximum rate as that agreed upon on the previous day with the Lake Carriers' Association for the Buffalo trade, namely,  $4\frac{1}{4}$ c. No decision was reached and although correspondence ensued, this association was not asked to take action as a body on a matter regarding which no agreement binding members could be made, and the question was left to individual members to be dealt with at discretion.

**Payment of Freight Charges by Railway Companies.**—Upon notification from the railway companies' freight agents that vessels would no longer receive settlement of freight at Georgian Bay elevators, the matter was considered at a meeting of the association's grain section in Toronto in April and it was resolved to notify the Winnipeg Grain Exchange that shippers must prepay the freight or make some other satisfactory arrangement. Notice was given accordingly by wire and by letter. Correspondence ensued and in due course the required arrangements were made to protect the interests of the carrier.

**Clearances at Fort William and Port Arthur.**—In October a suggestion was revived for simplification of the requirements regarding clearances at these ports, and the association asked the Minister of Customs to endeavor to find means to enable a ship to make a single clearance for each voyage, instead of a clearance each time she was moved from one port to the other, and also to enable clearance to be obtained at all hours and even during process of loading. The Minister favored the proposal, particularly with reference to the possible improvement in dispatch, and agreed to send a special officer to the ports to investigate and report. The matter is still under consideration and the question should be revived with the new ministry.

**Coasting Laws.**—On June 26, in view of the war conditions, and after an understanding that reciprocal action would result in the U. S., the Canadian Government proclaimed a suspension of the restrictions relating to the coasting for foreign vessels, on condition that similar privileges were in effect granted to Canadian vessels by the U. S. Government. This proposal was communicated officially to this association, shortly in advance of the passage of the order, but no opposition was offered to it, as previous protests against violation or suspension of the coasting laws had suggested reciprocal abrogation as an unobjectionable measure. Upon the passage of the order in council the various U. S. port authorities were at once instructed from Washington to suspend the enforcement of the law in their country and permit coasting of Canadian ships without imposing penalties, pending the preparation and adoption of the necessary amendment to act of Congress. It was not until Oct. 5, 1917, that the U. S. Senate finally adopted

the House of Representatives Bill 5609 without amendment.

**International Joint Commission.**—Early in the year an application was made to this commission for approval of plans for a ship channel in the St. Clair River, along the Port Huron side, with compensating works in the river lower down to maintain the levels of Lake Huron and Lake Michigan. The proposal came in due course before this association for consideration, and careful investigation was made. The undertaking promised substantial advantages, and relying upon the opinion of the Dominion Department of Public Works engineers, the Dominion Hydrographer and the officers of sister organizations, your committee, after examination of the plans, resolved to allow the application to proceed without criticism, other than comment upon the futility of measure to conserve these waters for navigation at their eastern outflow unless withdrawals at Chicago are placed under effective control. No other question directly affecting this association has come before the commission during the past year, and no notice of any public hearing has been issued; but a proposal of the New York & Ontario Power Co. for works in both channels of the river, in connection with the power development at Waddington, N.Y., will be before the commission at an early date. This is referred to under a separate heading in this report. The final report on the Lake of the Woods investigation has been published, and this, with the printed report of the consulting engineers in four volumes, have been received by the association.

**Shipping Registries.**—The last annual report contained a reference to arrangements made by this association with the sailors' institutes at Port Arthur and Kingston, for the opening of registry books, in which seamen could have their applications for employment recorded and owners could record their requirements. Similar arrangements were reported, more or less satisfactory, in certain other ports. But at Toronto, where no medium was available for this purpose, the negotiations of this association with the Upper Canada Tract Society led to the establishment of a Toronto sailors' rest and this association made a grant of \$400 towards the expense of this institution. Your committee is pleased to report that while the Toronto building is the smallest of the society institutes for sailors it has, however, proved very successful, thanks to the co-operation of owners and men. The report of the society having the institute in charge, records that up to the end of Aug., 1917, there had been over 8,000 visits made to it by sailors and others frequenting the water front and that for the same period, by actual count, 1,232 men had entered their names for employment in the free shipping registry and that of this number over 650 had been supplied with work. The report adds that part crews were also sent to Hamilton, Welland Canal, Port McNicoll, Sarnia, Belleville, Kingston, Cobourg, Thorold and Port Dalhousie. In a recent letter the society has commended the institute to the continued support of this association.

**Wage Schedule.**—No action was taken upon a schedule of wages submitted anonymously to this association early in 1917. The subject was discussed at the annual meeting and deferred for later consideration if necessary. Recently a letter was received from the secretary and business manager of the National Association of Marine Engineers for Canada stating that the organization named proposed to rearrange their classification of boats and wage scale for 1918 and sug-

gesting that a representative from the Dominion Marine Association confer with the writer with a view to making a satisfactory arrangement. The letter was acknowledged and held for consideration, your secretary being instructed in the meantime that the subject is a matter between individual members and their crews. While this report was in preparation a further communication was received from the same source enclosing a printed "wage scale and classification." It is understood that copies have been sent to all owners.

**Extension of Limits of Inland Waters.** In accordance with a resolution of this association's grain section a request was presented to the Marine Department for support in a proposal to amend the Canada Shipping Act, Sec. 72, so as to extend the limits of the Inland Waters of Canada, from Father Point and Point Orient, as far east as the eastern extremity of the Island of Anticosti. It was represented that the present limitation was an old one, dating from a period long antecedent to the development of the pulp and lumber trade from the north shore of the St. Lawrence, and that the new trade was burdened with unnecessary inconvenience and expense through having to employ additional men with coasting certificates; a difficulty accentuated by present war conditions. The proposal did not meet with approval in the department and the Deputy Minister held that the law must adopt a limit for the inland waters corresponding to the natural geographical division, and that the present location of that line is the correct one.

**Pilotage Charges — Montreal to Quebec.**—The association was consulted by the Marine Department regarding a request from the Montreal pilots that the tariff on seagoing and coasting vessels between Montreal and Quebec be increased 25c. a foot. The proposal was submitted by circular to members of this association and no opposition being raised in the meantime, the general consent being expressed by steamship agents at Montreal, a subsequent meeting of this association's grain section approved of the charge, and the amendment asked for was in due course inserted in the regulations.

**Canadian Masters and Crews on U. S. Ships.**—Correspondence at the instance of members of this association, interested in the continued employment of the same officers and crew on ships transferred to U. S. registry, brought information from the Commissioner of Navigation at Washington that following an executive order of the U. S. President, dated July 3, 1917, the Secretary of the Department of Commerce had prescribed regulations which permit Canadians under certain conditions to act as watch officers on ships of the country named. There is no law against the employment of a Canadian crew on such a ship.

**Smoke on Navigable Channels from Burning of Brush, Etc.**—Considerable correspondence took place with the Ontario Lands, Forests and Mines Department with a view of improving the existing legislation designed to prevent forest fires, and to bring about amendments placing further limitations upon the periods during which farmers and settlers may set fire to brush or slash or rubbish. Dr. Zavitz, of the department, gave the question attention and made certain suggestions which were considered at a meeting of your executive committee. It was then decided that it would be unwise to press for any amendment of the law at present and that the matter be held over for later consideration.

**Turning Vessels in the Kaminitikwia River.**—As the result of correspondence and conference following recommendations of this association, sec. 15 of the regulations governing Fort William harbor, established by order in council of February 8, 1916, was amended by order in council of Feb. 2, 1917, by the addition of the following paragraph:—

"Provided, however, that steam vessels exceeding 200 tons gross, but not exceeding 260 ft. in length, may be turned with a tug in that section of the Kaminitikwia River lying between the bend above C.P.R. elevator D and the westerly limit of the G.T.P.R. rail dock and provided further that steam vessels of such tonnage and length may also turn in that section of the Kaminitikwia River lying between C.P.R. slip 1 and elevator C, but the turning of such vessels in the last mentioned portion of this river shall not take place without the use of a tug, unless sanctioned by the harbor master."

This amendment met with general approval from members of this association, and resulting as it did from the action taken at the instance of the association, consultation might have been expected before further amendment took place. Yet on Nov. 7, 1915, without any notice to or consultation with the association another order in council was adopted submitting the following rule in place of that above quoted.

"Sec. 15. Any vessel not exceeding 200 tons gross, or in the case of a package freighter not exceeding 275 ft. in length, may turn in any part of the Kaminitikwia River under her own power; any vessel exceeding 200 tons gross, but not exceeding 260 ft. in length, or in the case of a package freighter not exceeding 330 ft. in length, may be turned with a tug in that section of the river lying between the bend above C.P.R. elevator D and the westerly limit of the G.T.P.R. wharf and may also turn in that section of the Kaminitikwia River lying between C.P.R. slip 1 and elevator C, but the turning of such vessels in the last mentioned portion of this river shall not take place without the use of a tug, unless sanctioned by the harbor master. All other vessels must turn in the turning basin constructed at the head of McKellar channel."

The District Engineer of Public Works, upon whose recommendation the rule first quoted was adopted, was not consulted as to the present amendment and it appears to have arisen in the Marine Department. Objections have now been raised to the new order in council and the next executive committee will require to deal with the whole question.

**Canals.**—No representations have been made by this association to the Railways and Canals Department during 1917, save in so far as pending questions have been the subject of further discussion with one or other official. As in other departments, expenditure has been cut down to a minimum and no special alterations have this year been submitted to the association for consideration. The usual communications have passed with reference to permitted drafts of water, location and marking of obstructions and special navigation regulations, and these have been circulated to members.

**Lake Levels.**—Reference has been made in previous reports to the accentuation of natural fluctuations, particularly in restricted channels, by the withdrawals of water for power and other purposes, for instance by the diversion of the Mississippi River, through the Chicago drainage canal. The low water period, and the consequent loss in the carrying capacity of vessels, was specially commented upon in the 1915 report. Levels were considerably higher in 1917, and for convenience of reference and comparison with future years a table of levels, prepared from the monthly bulletins of the U. S. Survey of the Northern and Northwestern Lakes, is inserted as an appendix to this report.

**Power Development in Navigable Waters.**—The past year has been relatively free from difficulties in this respect. Only two proposals directly affecting navigable

channels on the main St. Lawrence route were noticed during 1917 and they made no progress. One related to the Long Sault Rapids and one to the St. Lawrence River at Coteau. Correspondence took place regarding each and direct investigation was made by members of the association in the departmental offices at Ottawa. It is understood that no formal application is now under consideration, in connection with either of these proposals. The New York & Ontario Power Co., however, is preparing to apply to the International Joint Commission for approval of certain proposed works in the St. Lawrence River, above and below the Rapide Plat, above Morrisburg, in connection with the development of their power at Waddington, N.Y., in the Little River, south of Ogden Island; and just as this report was going into print the president of the company submitted verbally to your secretary an outline of these proposals. Briefly, the company desires to make a rock fill between the foot of Ogden Island and Canada Island, in order to prevent the water of the main channel from flowing across past the foot of Ogden Island, and in order to improve the flow in its tail race; and it also desires to build a submerged dam, by a process of filling in the section of the main channel from the outer bank of the Morrisburg Canal, at its head, to Ogden Island, leaving a navigable depth above this fill of 20 to 25 ft., in order to divert sufficient water for their purposes into the Little River. It is argued for the company that this last mentioned fill will increase levels in the canal, and that the fill at the foot of the island may improve levels further upstream in the Rapide Plat. The Hydro-Electric Power Commission of Ontario is said to desire this development and to have contracted for 15,000 h.p. to be brought across the river from Waddington. These proposals will require very careful consideration and should be specially referred to the executive committee for 1918 for action.

**Harbor and Channel Improvements.**—Suggestions referred to the association, or brought forward by members, have been considered and acted upon at meetings throughout the year. Recommendations have been made by letter and by personal interview, and the various district engineers have very kindly consulted your secretary whenever occasion arose. It would be impossible to relate in detail all the points covered, but mention may be made particularly of the various improvements recommended in the Kaministiquia River, which have been favorably considered and to some extent already made the subject of departmental action; measures taken under the Navigable Waters Protection Act, to block the erection of certain proposed docks which would have encroached on the Mission River turning basin; the improvement of Goderich harbor by dredging and extension of breakwaters; the ship channel in the St. Clair River, along the Port Huron frontage, referred to elsewhere in this report; recommendations as to improvement of the Livingstone channel in the Detroit River; the removal or buoying of wrecks or temporary obstructions in various localities; the cut or channel at the foot of Wolfe Island near Clayton, N.Y.; improvements in Kingston harbor at the mouth of the Cataraqui River; the channels and dredging operations in Lake St. Louis; and various questions relating to the navigation of the canals. As in all other departments, save those immediately concerned with the provision of war materials, expenditure on public works has been cut to a minimum, and at pres-

ent no new projects of importance under this heading can receive any serious consideration.

**Aids to Navigation.**—As usual matters requiring immediate action have been dealt with by your officers as occasion arose, and much correspondence has passed, relating to unlit lights or misplaced marks, and to the better operation of certain aids or their later operation at the close of navigation. In view, however, of the general curtailment of expenditures it has not been possible to expect any substantial additional undertakings. Your committee on aids to navigation has doubtless realize this, and although a call was issued for one meeting to deal with some few pending recommendations, no quorum was obtained and no formal action has been taken. Your president, owing to the pressure of his duties as Assistant Director of Shipbuilding in the Naval Service, has not been able to attend meetings of the Lighthouse Board as often as he would have liked to, but for the reasons first mentioned this disability has not proved serious to the association.

**The Late D. Murphy.**—Your executive must record the great loss the association has suffered in the death of Dennis Murphy, President of the Ottawa Transportation Co., a member of the executive committee since the organization of the association, a past president of the association, and one of its best known, most highly esteemed and most cordially and universally liked members. Mr. Murphy's residence in Ottawa and his genial, generous nature placed the association constantly in his debt, for he never failed to welcome his friends with real hospitality when they were within reach, or to take active measures to help them in their difficulties at every opportunity whether they were absent or present. His warm heart and lovable disposition will always remain a pleasant memory with every member of the association. Upon his death in March last expressions of condolence were sent to his family, and a wreath of flowers from the association was among the many floral offerings. The association was also officially represented at the funeral.

**General Business, Membership and Tonnage.**—In this report the more important questions dealt with by your committees and officers during the year are briefly summarized. The usual general correspondence with representatives of various branches of the government and of sister organizations as well as with members of the association and other parties has taken place. The steam tonnage enrolled in the association in 1917 was 160,418 net registered tons against 166,997 tons in 1916; and the barge or sailing tonnage, 25,808 net registered tons, against 29,469 tons in 1916; a total of 186,226 tons to compare with 196,466 tons in the previous year. This continued decrease results partly from conditions due to the war, which have led to the continued abstraction of tonnage from inland waters, and partly from the fact that considerable tonnage, some of it acquired recently, has not yet been enrolled in the association. Members have continued the enrolment of their ships, irrespective of location, but losses and sales have been continuous and a fair comparison with the tonnage of previous years is therefore impossible.

### Canadian Lake Protective Association's Annual Meeting.

The report presented at the annual meeting at Toronto, Feb. 20, called atten-

tion to the casualties to vessels owned by members of the association in 1917, the record being extremely light, once more demonstrating the effectiveness of the association's work.

Under the association's constitution, its executive committee is the same as that of the Dominion Marine Association, the President of the latter being Chairman of the C.L.P.A., and the executive committee comprises the Dominion Marine Association's two vice presidents, and other members of its executive committee, whose names are given in the report of that association's annual meeting, elsewhere in this issue.

### Dominion Register of Masters, Mates and Engineers.

On the Marine Department's representation as to the desirability of keeping a register of the names and addresses of all persons in the Dominion who hold certificates of competency as masters, mates and engineers of seagoing and other steamships, an order in council has been passed as follows:—"Every person residing in Canada, not more than 65 years of age, who holds a certificate of competency, other than a temporary certificate, as master, mate or engineer, whether for seagoing or other ships, shall, on or before Apr. 30, 1918, send a statement to the Minister of Marine at Ottawa, on forms provided for the purpose, giving his full name and address, nationality, date of birth, and date and number of every certificate of competency held by him. Every such person thereafter changing the nature of his employment or his address shall forthwith notify the Minister. Temporary employment, during winter months, or when ship on which he may be engaged, may be undergoing repairs, need not be notified. Every person knowing, or having reason to believe that any person employed by him, or by any body corporate of which he is manager or superintendent, is under 65 years of age and is the holder of a certificate of competency as master, mate or engineer, whether for seagoing or other ships, shall ascertain if such person is the holder of such certificate, and if he is, and does not produce a certificate that he has reported as required by the first part of this order, shall thereupon send a statement to the Minister, containing the particulars as required, on a form provided for the purpose. Every person when required by the Minister, or by an authorized person, shall post up in a prominent place on his premises, where it can be easily read by employees, a form provided, calling attention to this order, with instructions for obtaining forms, etc.; and every person shall at all reasonable times permit any authorized person to enter his premises and make such enquiries as he may desire for the purpose of ascertaining what, if any, certificates any employees may hold, and other information in connection therewith. Any person refusing or neglecting to make any statement, enquiry or answer under these provisions, or refusing to post up and keep posted up, any notice in accordance with these provisions or refusing to permit any authorized person to enter his premises, or make any enquiry under these provisions, and any person knowingly giving any particulars which are untrue or misleading, in any statement, shall be guilty of an offence and liable on summary conviction to a fine not exceeding \$100, or imprisonment for not exceeding 2 months, or to both fine and imprisonment.

# Specifications of Auxiliary Engine Room Machinery for Standard Wooden Steamships for British Government.

Canadian Railway and Marine World for January contained a very full summary of the specifications for the hulls of wooden steamships being built in Canada for the British Government, under orders placed by the Imperial Munitions Board at Ottawa, together with plans, and the February issue contained the full specifications for the marine engines for these vessels, together with plans. Following are the specifications for the auxiliary engine room machinery:—

**Independent Feed Pumps.**—To be of the long stroke Simplex type, generally known as the Weir type, having steam cylinder 10 in., pump 6 in. diam. by 12 in. stroke, and capable of discharging 20,000 lb. of water per hour, at not more than 12 double strokes per minute, against a boiler pressure of 180 lb. to the sq. in., when driven by steam at the same pressure. The cylinder to be of cast iron, fitted with piston of cast iron, having Ramsbottom packing rings or a single deep packing ring with cod piece. The steam valve gear to be of shuttle or similar type, designed for positive starting from rest and against full load. Piston rods and all valve gear of steam end to be of polished steel of approved design, and to be fitted with adjustable bearings on all principal pins.

Pump end to have cast iron body and valve chest, the valve chest being preferable in separate casting from the body of the pump. Pump cylinder to be fitted with a hard gun metal liner of approved quality appropriately secured. The valve chest to be fitted with suction and discharge valves of the triple disc type, or similar valves fitted with guards and adjusting gear. The whole of these parts, including the seats, to be of gun metal.

The pump should be designed with a suction and discharge branch, provided at either side for convenient arrangement of piping, and must be fitted with a control tank, having float control to steam valve, except in the case in which a filter of the gravity or tank type is fitted, in which event the control float should be attached to the filter. Pump rods to be of rolled brass or Muntz metal.

In cases where two pumps are fitted, they are to be supplied with a discharge valve, manifold box, having connection with the main and auxiliary feed lines on boilers, and so arranged that either pump can work on either line of feed piping. Where a single pump is fitted, this box will consist of a double valve chest arranged in a similar manner. These valve boxes are to be of cast iron, with brass fittings and screw down stop valves. This pump, or pair of pumps, to be fitted with the usual manifold boxes for steam valves, permitting same to be supplied either from the control or direct steam supply pipes, and straight through shut-off valves of gun metal are to be fitted on exhaust.

In these ships fitted with the standard engine supplied by the board, one only of these pumps will be fitted, as the standard engine is already supplied with ram feed pumps driven from the air pump levers. For ships fitted with the Polson engine this pump will be supplied by the Polson Co. For ships fitted with the Inglis engine, a pair of the above pumps will require to be supplied by the board, as this engine is not supplied with the ram feed pumps driven from the air pump levers. Plan of the pump and gear and

specification in detail proposed to be supplied must be submitted by each pump contractor for the approval of the board's technical adviser.

**General Service Pump.**—A vertical duplex pump, having cylinders 6 in. diam., pump 4 in. diam. by 6 in. stroke, or equivalent pump capacity and ratio of cylinder to pump, to be fitted and arranged for general service, which includes boiler feed circulating, deck, fire and sanitary service. This pump is to be of the type generally known as the Worthington, in which the valve gear of the one side is driven by the movement of the engine on the other side.

The cylinders to be of best cast iron. The valves to be of the flat type and arranged with compression valves, to ensure start and continuous working. The piston to be fitted with Ramsbottom rings, piston rod to be of wrought iron or steel and the valve gear of wrought iron or steel; all the part to be of the most substantial design, to approval.

The pump end to have cast iron cylinders and valve chest, fitted with a hard brass or gun metal liner and brass valve seats, valve guards, etc., the valves being of the Kinghorn triple disc type. The pump rods to be of hard rolled brass, or Muntz metal, and the pump pistons to be of brass with water grooves, or of cast iron fitted with brass liners of the same type. These pumps to be fitted with steam and exhaust valves of brass.

**A duplex ballast pump** for low pressure service, capable of pumping about 100 tons of water an hour, and having a steam cylinder 7½ in. diam., pump 9 in. diam., and with stroke of 10 in., to be fitted in the engine room. Cylinder to be of hard cast iron fitted with piston having Ramsbottom rings, piston rod of wrought iron or steel, valve gear of substantial design of wrought iron or steel, having main pins fitted with adjustable bearings. The pump end of cast iron fitted with brass liner and cast iron valve chest fitted with brass valve seats and guards, etc. Valves to be of rubber. Pump rods to be of rolled brass or gun metal and the pump pistons of brass with water grooves or of cast iron with brass liners and water grooves as may be approved. Pumps to be fitted with steam exhaust valves of brass.

Pumps in general are to be of the type specially designed for service at sea, and to be fitted with all necessary drain cocks, pipes, lubricator cocks, etc. In each case full detailed plans and specifications of the article proposed to be supplied, showing the size of the various principal parts are to be submitted for the approval of the board's technical adviser before contract be entered into.

**Auxiliary condenser** to be of the surface atmospheric type, having approximately 400 sq. ft. of cooling surface, to be capable of condensing steam from five 7 x 12 inches, and the electric light plant, at one time. The condenser shell to be of cast iron or wrought iron; the water boxes and covers to be of cast iron; the tube sheets to be of rolled brass, carried out to the edges of the water and flanges. Tubes to be of brass and to be fitted with brass ferules, collared at one end, packed with cotton packing. Condenser to have exhaust pipe led into the main waste steam pipe up funnel, having an area of one and a half times the total area of the exhaust pipes led into the condenser. The

drain from this condenser to lead to the gravity filter, if this type be fitted, or alternately to a small drain tank placed in the engine room, described in the engine specifications.

The feed heater to be of the exhaust surface type, of sufficient heating surface to deal with 25,000 lb. of feed water an hour, from a temperature corresponding to a vacuum of 25 in. to atmospheric boiling point or thereabouts. The heating surface to consist of straight copper tubes arranged in an approved manner, secured to the heads in such a way as to obviate expansion troubles. The heater body to be of cast iron, as also the heads and covers. Heater preferably to be placed horizontally and to be fitted with air extraction pipes, drain cocks, steam valve for cleaning and supplying live steam in case of necessity. Safety valve and pressure gauges to be fitted as required by classification societies.

**Feed water filter** of the gravity type to deal with about 25,000 lb. of feed water per hour. This tank will be placed on the suction side of the feed pumps, on the discharge side of the air pump, and to be fitted with buckets containing coke or coir matting, to extract grease and dirt from the water. The design of this tank to be approved by board's representatives, as also the size. The necessary inlet and outlet, and by-pass valves for feed water, to be fitted and also wrought iron covers. Float to be arranged in a portion of the tank to control the independent feed pumps. Alternately, quotations to be given for a pressure feed filter to be placed between the feed pumps and the main boilers, of a type which consists of cages or discs covered with buck twowelling, or other similar material, to extract the grease from the water. Filter of ample size to deal with 25,000 lb. of feed water an hour. Body to be of cast iron, cages or discs to be of wrought iron. All necessary valves and fittings to be supplied.

**Evaporator.**—Evaporator to be supplied capable of evaporating 15 tons of sea water a day at a pressure not exceeding 10 lb. by gauge. The evaporator shell to be of cast iron; heating surface to consist of copper tubes conveniently arranged for accessibility and removal for cleaning. Vapor valves, steam valve, brine valve and blowdown to be fitted as usual. To be lined with non-conducting composition cleaded with sheet iron.

Full details of the above fittings, including specifications and detail plans of what is proposed to be supplied are to be furnished by the contractors with tender. No tender will be considered which does not give fullest possible details of the appliances which it is proposed to supply. Quotations should be detailed, so that a comprehensive price is quoted for each of the above mentioned items, and the plans should be to scale, so that they may be used by the board's drafting staff for engine room arrangement purposes.

The New York State Barge Canal, from Lake Erie to the Hudson River, will, according to a report by the State Engineer, be opened for traffic by May 15. Some comparatively minor contracts still remain uncompleted, but he states that a carefully prepared statement shows the rate of progress to be maintained up to May 15, which, if adhered to, leaves no doubt as to the opening date.

## Canada Steamship Lines' Annual Report.

A Montreal press dispatch, Feb. 23, stated that the annual statement shows that, while there was a large increase in gross revenue, there was also a large increase in expenses, with the result that the net for 1917 shows a slight decrease compared with 1916.

After deductions of bond and debenture interest and all other charges there was a profit of \$2,178,401. This compares with \$2,391,027 in 1916, making a decrease of \$212,626. The surplus account shows that after adding the balance from last year and allowing for the \$2,479,166 paid on account of current and deferred preferred dividends, there was surplus of \$2,374,754, an increase of \$547,411.

The President, James Carruthers, in his report to the shareholders, says that the company's tonnage was much greater than in 1916, despite the losses that had occurred, and the future could only be considered as promising of development and expansion on the high seas. In speaking of dividends, he stated that the deferred dividends on the preference shares had been paid, and that it has been decided to resume them quarterly. Altogether the company's situation could be summed up as highly satisfactory.

## New Steamships for Canadian Pacific Ocean Services Ltd.

Canadian Railway and Marine World for May, 1917, contained some details of new steamships purchased and ordered by Canadian Pacific Ocean Services, Ltd., for the Atlantic service. One vessel then under construction at Newcastle, Eng., was purchased while on the ways for delivery about Aug., 1917, and arrangements were made with John Brown & Co., Glasgow; The Fairfield Shipbuilding & Engineering Co., Glasgow; and Harland & Wolff, Belfast, for the construction on a cost and percentage basis, of two steamships 605 ft. long between perpendiculars, with a speed of 20 knots an hour, and two steamships 546 ft. long between perpendiculars, with a speed of 16 knots an hour. Owing to wartime restrictions, it has not been permissible to publish particulars of progress on these vessels from time to time, but it is evident that notwithstanding the general pressure in all shipbuilding yards, these orders have been pushed forward. One of these vessels arrived at St. John, N.B., Feb. 14, on her maiden voyage, in charge of Capt. Webster, formerly of the company's s.s. Metagama. Local reports give her dimensions as: length 520 ft., beam 67 ft., depth 42 ft.; tonnage, 15,000 gross. It is also stated that the propelling machinery consists of combined reciprocating and turbine engines, maintaining a speed of 17 knots an hour. Accommodation is provided for about 2,000 passengers.

## Telegraph, Telephone and Cable Matters.

A. Entwistle, assistant agent, C.P.R. Telegraphs, Edmonton, Alta., was presented with a wrist watch by the local stax recently, on leaving for Calgary to report for military service.

The Great North Western Telegraph Co. has opened offices at St. Cyr, St. Ulric and Riviere Blanche, Que., and has closed its offices at Abenakis Springs Hotel and Chaleurs, Que., and Kashbaw, Ont.

The Pacific Cable Board's report for the year ended Mar. 31, 1917, shows receipts of \$1,683,870 and expenditures of \$779,240. After placing \$450,000 to the renewal fund, there was a surplus of \$454,600. There was an increase of \$130,635 in receipts and an increase of \$69,755 in expenses. There were no interruptions nor repairs reported during the year. The special war allowance to employees was increased to 20% of the net salary for the year.

## Among the Express Companies.

C. J. Crawley has been appointed agent, Canadian Northern Ex. Co., Humboldt, Sask., vice H. E. Race, transferred.

LeBaron Coleman, agent, Canadian Ex. Co., Halifax, N.S., who lost his life in the recent disastrous explosion there, entered express service in 1880, as messenger, Intercolonial Ex. Co., and when that company was taken over by the Canadian Ex. Co. in 1890, he continued in the service, and in 1899 was appointed route agent, and in 1905, agent at Halifax.

The Board of Railway Commissioners has refused the application of the Freight and Express Underwriters, Toronto, that the last paragraph of rule 6 of the Canadian Car Demurrage Rules, prescribed by general order 201, Aug. 1, 1917, be changed to read as follows:—"Notice of claim for refund of demurrage under this rule, to be presented to the carrier's agent within 15 days."

The Board of Railway Commissioners has extended the express collection and delivery limits in Windsor, Ont., to include, by the water front from the eastern to the western city boundaries, by the western city limit from the river, London St., McEwan Ave., Martin St., Cameron Ave., London St., Wellington Ave., Elliott St., Dougal Ave. Giles and Howard Aves., Erie St. and the eastern limit to the river; also outside that area, in McDougall St., from Giles Ave. to Tecumseh Road. This order became effective Jan. 28.

Archibald J. Seaton, who was appointed Superintendent, Eastern Division, Canadian Ex. Co., Montreal, recently, was born in Middlesex County, Ont., Nov. 26, 1867, and entered the company's service in 1886, since when he has been, to 1887, clerk, Galt, Ont.; 1887 to 1901, messenger; 1901 to 1908, agent, St. Thomas, Ont.; 1908 to 1912, route agent, Montreal; 1912 to June 15, 1917, Assistant Superintendent, Eastern Division, Montreal; June 16, to Dec. 31, 1917, Assistant Superintendent, Eastern Division, Montreal.

An order in council has been passed providing that every express company carrying imported goods into or through Canada shall provide secure and sufficient sufferance warehouses at the customs port of delivery, for the storage of goods so carried in bond by express, pending entry at the Customs House. The warehouses shall be subject to the approval of the Minister of Customs, and also the scale of fees payable as storage, and he shall also determine from time to time, the rental to be paid by the Customs Department for the space allotted to express companies in the customs examining warehouse, etc. The previous regulations enacted Apr. 10, 1917, have been repealed.

The Dominion Ex. Co. was sued at Montreal recently for \$150, the value of a trunk and contents, lost by the company. The company admitted liability to the extent of \$50, to which it claimed to be limited by the stipulation on the contract,

the sender not having declared the value of the trunk to be greater. The person suing claimed that he could not read the contract, it being in English, and urged that the terms of the contract should have been in both English and French as required by the Quebec law. The judgment declared that the law did not require the use of both languages on the one paper. If, however, the plaintiff had asked for a copy of the contract in French, or asked to have it explained in French, he was entitled to it. As he had not done so, judgment was entered for the \$50 which the company admitted.

The Board of Railway Commissioners has ordered that the express collection and delivery limits in Winnipeg, unless otherwise provided in the express classification, or published tariffs, shall include, in that portion of ward 7 between the east end of Point Douglas railway bridge and the Redwood bridge included within Roland St. and Johnson and Noble Aves. on the one side and the Red River on the other, also in Union and Martin Aves. between Watt St. and the C.P.R., and in Watt and Levis Sts. from Martin to Johnson Ave.; from the Redwood bridge by the west bank of the river, the present northern city limit, Main St., Lansdowne Ave., McGregor St., Machray Ave., Parr St., Burrows Ave., McPhillips St., thence C.P.R. west to Bury St., Quetch St., Alexander Ave., McPhillips St., Lipton St., St. Matthews Ave., Sherburn St., Portage Ave., Midland Ry., north bank of the Assiniboine River to the line of Cambridge St., Academy Road, Oxford St., Haskins Ave., Cockburn St., to the C.N.R. yards, Daly St. from Carlaw Ave., Jubilee Ave., Osborne St., Florence Ave., Fisher St., Morley Ave., Eccles St., and the west bank of the Red River to Redwood bridge; also outside of the said enclosed area, in Notre Dame Ave. from McPhillips St. to the C.P.R. Pembina Branch and the Prairie City Oil Co., and in Winnipeg Ave. from McPhillips St. to the Grain Growers Grain Co. The order became effective Feb. 18.

J. A. D. Vickers, Vice President and General Manager, American Express Co., Chicago, Ill., who died there Feb. 16, after a long illness, was born at Toronto, May 22, 1858, and educated at Upper Canada College. He entered express service at Toronto in 1875, with the Vickers Express Co., of which his father was the founder. From that time to Feb., 1882, he held various positions in that office, and at the latter date was appointed Superintendent, and also acted as Treasurer and Auditor. On the absorption of the company by the American Ex. Co., he was appointed Superintendent of the Canadian Division, and held this position until the National Ex. Co. extended its service over the New York, Chicago & St. Louis Ry. and the G.T.R., to Chicago, and over the Toledo, St. Louis & Western Ry. to St. Louis, Mo., in May, 1891, when he was placed in charge of these lines as Superintendent, with office at Chicago, Ill. He was promoted to General Superintendent, July 1, 1905; General Manager, Western Department, Nov. 27, 1906, which position he held until June 11, 1914, when he was appointed Vice President and General Manager, Western Lines, American Ex. Co., his territory covering 55,000 miles of railways, about 7,000 offices and 18,000 employees. V. G. R. Vickers, Vice President, The Holden Co., Ltd., Montreal, and formerly General Superintendent, Foreign and Money Order Department, Dominion Ex. Co., is a brother. The funeral at Toronto, Feb. 20, was attended by a number of express and transportation officials.

## Locomotive Maintenance and Repairs.

By E. R. Battley, Master Mechanic, G.T.R., Montreal.

Repairing and maintaining running repairs on locomotives are two of the great problems with which railways have to deal. On account of the abnormal conditions and the vast amount of freight waiting to be moved, it is essential that railways keep their locomotives in constant service, which means a special effort must be made by shop forces to complete repair work as quickly as possible. Due to the demand for locomotives in the allied countries, our locomotive builders cannot supply sufficient new ones for export and for home use, therefore it has been deemed advisable to ship a large part of the output abroad, using our present power to its capacity. By so doing we must expect the outlay for repairs will be in excess of that of former years. The wages paid today are high, and in the majority of repair shops, railways are forced to employ mechanics inexperienced in regard to railway work, which necessarily follows repairs take longer and the work requires closer supervision. For the past few years the Government has exercised considerable authority over the railways in regard to the building and maintenance of power, having made rules and regulations concerning standards, defects, etc., and having assigned inspectors to certain districts to see that rules are observed. While these laws added considerable extra work to most roads it has, no doubt, been the means of improving the power and prolonging the life as well. As previously stated, one of the great trials of all railways is to keep up the repairs on their motive power. To accomplish this, we must provide facilities for repairing and handling, at locomotive houses and general repair shops.

**Locomotive Houses.**—It is difficult to do quick work at terminals unless we provide proper facilities, such as suitable locomotive houses and equipment. The key to the power handling situation of the locomotive houses is the ashpit, therefore we must provide large pits, equipped with a sure and quick means of handling the accumulation of cinders. Ample room must be provided on both sides of the pit, so that in rush hours fires can be cleaned or dumped and locomotives moved along out of the way to await their turn on the turntable. If this space is not provided, and after a locomotive or two has been dumped, it means the work on the locomotives following is at a standstill until those ahead have been moved. Conditions of this kind cause ashpit gangs to be idle and at a busy terminal a large waiting list is the result.

In close relation to the ashpit is the turntable and shop leads. The former should be of rigid construction and power operated. The leads should be of sufficient length to accommodate outgoing locomotives, and provided with suitable crossovers and water cranes to facilitate the dispatching of power.

A valuable addition to any roundhouse is good machinery. A great mistake sometimes made by railways is filling up locomotive house machine shops with anti-

quated tools. When a machine job is required in a back shop it is usually a rush order, therefore speed and accuracy is required. If modern tools are used, you get what is desired without delay. All our terminals of importance have been equipped with portable oxy-acetylene welding and cutting outfits, and needless to say they have proved invaluable.

Organization is another valuable asset to the shop. One may have a splendid layout, good tools, etc., but without sys-

E. R. Battley  
Master Mechanic, Eastern Lines, Grand Trunk  
Railway.

tem, efficiency is reduced. We have found by arranging our locomotive house staff in special gangs good results have been obtained. These gangs are grouped as follows: passenger, freight and switch, air brake, spring and brake gear, rod and box packing, lighting up, and, last but not least, the boiler gang. The different gangs are controlled by chargemen, who report to the shop foreman.

Locomotive men upon arrival book the necessary work in a book provided for the purpose. A competent inspector also makes an examination of the locomotive and records defects found. The work is then copied by a man assigned to this work, who distributes the slips to the respective charge hands. When the work is completed, a notation is made in the report book on the opposite page to the one in which the engineer placed his report.

In dealing with locomotive houses, I

may mention an important item that contributes to shop efficiency, but which is sometimes treated lightly, and that is, cleanliness. We have found by experience, that in keeping our premises clean and tidy, better work is produced and time saved, as spare material can be quickly located. Accidents due to employees falling over old material are reduced to a minimum. In addition to these beneficial results, it looks well and gives one the impression that the foreman in charge is master of the situation.

During the busy season, when locomotives are at a premium, the cripples at roundhouses accumulate quickly, unless a close check is kept on the shipment of repair parts. We have a system of checking up and forwarding repair parts to out stations that has proved very satisfactory, and has been the means of keeping our locomotives in service during the past severe winter. Foremen at each station send a joint message to the road and shop master mechanics as soon as he finds he requires repair parts. In addition to this, he sends in a daily report of locomotives undergoing repairs which will take over 24 hours, stating when locomotive was taken out of service, what material is required and on whom ordered. This gives the master mechanic an excellent opportunity of keeping in close touch with the situation on his division. To ensure requisitions being filled promptly, and to avoid delays in shipment, or at transfer points, a material man is appointed by the road master mechanic. His duties are to check requisitions, receive telegrams for material, consult shop master mechanics and subordinates, as to when material can be secured, see that there is no delay in handling, also advise out stations on what train material is going forward so that he can be prepared to have it removed promptly on arrival.

**General repair shops** should be of sufficient size to care for the power assigned to the division and centrally located. When a locomotive is to be shopped and the nature of repairs is mainly controlled by the road master mechanic, any unusual repairs are decided upon, after a boiler inspection and hydrostatic test has been applied. After the locomotive has been stripped, the shop inspector makes out a final report and repairs are made accordingly. Accompanying each locomotive to the shop is the locomotive foreman's report of repairs, which forms the basis from which the shop master mechanic works.

There is approximately 10% of our power under repairs at all times, this is necessary to keep our locomotives in good condition, and also provides sufficient work in advance for the shop staff, who work entirely on the bonus system. Our output and bonus system are so closely related that in speaking of one it is necessary to mention the other. The subject of this paper being repairs, the bonus system will only be mentioned when necessary to show why we handle certain operations in certain ways.

Our methods are practically the same over the entire system, but as the Stratford shop was the first to try this system, we will use it as an illustration. The repairs required are designated by a letter, which is in itself a symbol and indicates what kind of repairs are necessary, also approximately how many days the locomotive will be in the shop. The following are the letters used, with a brief explanation:

B.S.—Boiler to be converted to superheat and will be 24 working days in the shop. (Spare boiler and cylinders are ready before locomotive comes in.)

B.—New firebox to be applied. 21 working days allowed.

C.—Firebox will receive new half side and possibly new flue sheet. 21 working days allowed.

D.—Boiler to be retubed and machinery given a general repair. 18 working days allowed.

D.C.—Same as D, except new cylinder or cylinders will be applied. 21 working days allowed.

E.—Wheels removed, tires turned, boxes and rods repaired. 12 working days allowed.

L.—Light repairs such as replacing broken rods, light patch in firebox, or any work which locomotive house cannot conveniently handle.

S.—Specific repairs. Some special job which is really locomotive house work, but for some legitimate reason is handled in the main shop.

As each kind of repair is allowed a certain number of days in the shop, the list of locomotives turned out weekly has to bear a certain relationship to this, in order that output may be regular, both as to quantity and weight of repairs. The foremen meet in the master mechanic's office each Friday and incoming locomotives are assigned to their proper places on the outgoing list. A new list is issued each week. The locomotives are booked in, in such a manner that each week's output will represent about the same weight of repairs on the whole, although the number of locomotives may be more or less.

As space is limited, I cannot describe the methods as applied in all departments, but will take it for granted the various parts have been repaired and are in the erecting shop. This department was formerly handled with nine regular gangs, consisting of approximately 10 men per gang, controlled by a chargehand, who was responsible for three pits. In addition to the nine gangs we had three or four special gangs, such as shoe and wedge, guide bar, and steam pipe. Our regular pit gangs carried the locomotive through from the time it was stripped, with the exception of the detailed work above mentioned. Under this system we accomplished good work until our forces became depleted through enlistments, and upon looking carefully into the situation we found where a gang usually had five or six mechanics, it would probably have one or two, the remainder being unskilled. It was, therefore, necessary for us to meet the new conditions in order to keep up the repairs. To do this we re-arranged our men into special gangs, mainly to centralize our machinists on work that really required mechanics, and use the unskilled labor on the coarser work. With this arrangement, instead of a gang having three pits on which to work, they have the entire erecting shop, therefore delays were reduced to a minimum. The gangs were arranged as follows:

Stripping gang.—Strip engine complete, with the exception of mountings

and pipes. These are taken off by the strippers of the steam pipe department.

Frame gang.—Main frame applied and rebolted, front frames applying and rebolting complete (when cylinders are not off) back and front deck castings, waste sheet and cross tie casting. Furnace bearers back, front or side renewed or bolted, furnace bearer brackets on frame, friction casting and wedge, lining up boiler when locomotive is rebuilt when the original cylinders are used, steel running boards and brackets with all necessary studs.

Shoe and wedge gang.—Line up, mark off, machine and fit up all shoes and wedges.

Guide bar gang.—Set all guides, face all valve seats, apply steam chests and bore cylinders in erecting shop.

Brake and spring gear gang.—All brake and spring gear complete, fitting up and applying, including brake hangers, brackets, etc.

Motion gang.—Pistons, motion plate and motion plate knees, piston valves, cylinder covers and studs for same, rocker boxes, tumbling shaft and brackets, transmission bars, links, etc., eccentrics, valve rods and other necessary motion work.

Front end gang.—Buffer beams complete, draw casting, coupler and connections, hand railings and columns for same.

Steam pipe gang.—Stripping the mountings and pipes from locomotives and grind throttles, steam pipes, headers and units, and apply same complete.

Trimming gang.—Air pump and other air brake work, inspirators and all small jobs.

Cylinder gang.—Apply all new cylinders.

The foregoing covers practically all operations in the erecting shop. Other work, such as carpentering, tinsmithing and painting, is done by the respective departments.

One special feature of our bonus system, is the key to the success of that system; viz., the demonstrating end of the bonus department. The prices, set by demonstration when possible, are known to be fair and correct. The chief demonstrator and his assistants have charge of this work over the entire system, and travel continuously from shop to shop. These men do not worry a great deal about prices, as this has been efficiently handled by the bonus department of each shop, which sets the prices according to the peculiar conditions surrounding the different plants, but being our most expert men, they concentrate their efforts in bringing each department in all shops to a higher state of efficiency by transferring best methods, and, if necessary, men from one shop to another. As a result of this method, workmen are free from the worry of price cutting, therefore the standard of work has shown a steady improvement. This department also controls the method of applying the bonus system, with the result that the method of application is the same at all shops. It is needless to say the results obtained from this system have been highly satisfactory, and in spite of the unfavorable labor conditions, we have maintained repairs on our locomotives, and in addition to keeping up the ordinary repairs we have been able to convert 57 locomotives from saturated to superheated steam.

The foregoing paper was read before the Canadian Railway Club in Montreal recently.

The Canadian Ticket Agents' Association will hold its annual meeting at Buffalo, N.Y., Oct. 9.

## The Poor Stores Department.

A railway storekeeper writes as follows:—Canadian Railway and Marine World had the following in its February issue:

"Great Northern Ry.—The old frame building on Pender St., Vancouver, B.C., formerly used by the G.N.R. as a passenger station, and which has been closed since the opening of the new building on False Creek, is to be renovated and used for a stores building."

We do not know at this distance how important the G.N.R. stores at Vancouver may be, how many miles of line they must supply, how many and size of shops, etc. But even so, we ask ourselves, "How long, good Lord, how long?"

Since the first railway came into existence in America, with everything provided, except the place to store its supplies, the story has been the same. First the effort to sidestep the question of supply, then failing that, as they must, the makeshift. "It seems we cannot get along without a store. Here is an old building that cannot be used for anything else. Make that a store." And they do, and go on using it, and waste the value of several buildings.

I met a railway storekeeper at a convention some years ago and he showed me a photograph of his store building. It was an old log and board shanty, that the graders had left standing when they had finished their work. He also told me he was in trouble, as his people were after him about his stock figures, which figures showed that he had \$200 worth of supplies per mile of road, and his was a fairly busy road, though poor. He wanted to know what he should do, and I told him to go home and tell his people that they did not know as much about railway stores and stock figures as a dog knows about his father, and point out to them that some of the railways that were railways had good store buildings and their figures were \$1,600 worth of stock per mile of road, and that there was only one other road in America that could equal his figures, and it was about being sold out. I suppose he told them that, or words to that effect, for he had a new job shortly after. And I have always hoped that the gang he left would learn a little about stores and supplies, before they got another unfortunate into that old shack.

It is a wonderful thing to me that it took the world war to teach the people of the world that supply is, was, and always will be, the greatest question in the world. It must have been a fearful shock to people who had always looked on themselves as of the very greatest importance, to learn that the man who planted a few potatoes and dug them was of more importance to their country than they were.

But we learn, at a price, and what a price. Even the railways learn, after paying the price. Today, when big railway people lay out big shops, they lay out the stores, build them first, the boiler shop next, and then build the other units around them. A few do this, anyway, and it always should have been so. And yet we still see now and then such news items as the one at the head of this letter.

Railway Employees Organization.—The Systems Federation of the Mechanical Employees of all Canadian Railways, which is united with the American Federation of Labor, has elected the following as its first officers:—President, R. J. Talton, Calgary, Alta.; Vice President, F. McKenna, Cranbrook, B.C.; Secretary-Treasurer, C. Dickie, Montreal. The headquarters of the new organization is to be at Winnipeg.

Shown on Honor Lists to date: Killed, 592; wounded, 1,326; total, 1,918.

### The Proper Operation of the Superheater Damper.

One of the most important requirements in obtaining the full effectiveness of a superheater is the proper operation at all times of the damper and its rigging. Attention has often been called to the damage done, and the failures caused, because of plugged flues, leaky steam joints and other defects which affect the steaming of the locomotive, and to the fact that these conditions reduce superheat, but very little has been said about the trouble arising from a damper working improperly. It may be just as detrimental to the locomotive as any of the foregoing.

The damper controls the draft, and, therefore, the flow of gases through the large flues. It is located just below the bottom row of large flues, usually on the same level with the table plate, and is operated by a small cylinder bolted on the side of the smoke box. This cylinder is connected either to the steam pipe or blower, as the case may be, by a ½ in. copper pipe, and works automatically upon the opening of the throttle or blower valve. Its operation opens the damper, which is held in the closed position by a counterweight when the throttle is closed. The damper, as thus operated, protects the superheater units from overheating when there is no steam passing through them. Failure of the damper to operate properly materially reduces the steaming

capacity of the boiler, and, consequently, reduces the degree of superheat. For instance, if the damper failed to open, it would obstruct the passage of gases through the tubes and flues above it, thus reducing the boiler evaporation considerably and preventing the effective superheating of the steam passing through the units.

It is also bad practice to wire up or block open the damper. If the damper is kept open continuously it is equivalent to having no damper at all. The firebox gases passing through the large flues and around the units, when no steam is in them, is very likely to burn the ends, warp the units and cause leaks, and generally shorten the life of the units.

Locomotive men have been known to deliberately tie up the damper, although it had proved to be in working condition when the locomotive left the locomotive house. Locomotive house employees have been known to do the same thing when firing up, and it is just such practices as these that lead to locomotive failures.

Dampers and rigging should be given a careful inspection at frequent intervals. This requires but little time. Search for irregularities. One of the first things to ascertain is whether the damper closes tightly, and, also, whether it has its proper opening. See that the damper cylinder piston has a full stroke, and be particular to see that the connecting link between the damper shaft and the cylinder arm is of the correct length and that there is no lost motion in any part of the rigging that would tend to prevent full opening or closing. Keep the small copper steam pipe leading from the steam chest or steam pipe to the damper cylinder well protected against the effects of cold weather. This can readily be done by wrapping it with ¼ in. asbestos rope and covering it with canvas. See that there are no pockets in this pipe, where water can accumulate and freeze. Pipe the drain from the damper cylinder to the exhaust passage of the locomotive cylinders and cover it in the same manner as the steam pipe. See that the cylinder and the connections in the rigging are lubricated. Paint the counterweight white, so that it is easily visible to the locomotive men. If the damper cylinder is so located that the counterweight is not visible, use a small target of any description on the counterweight arm and place it above the running board where it can easily be seen. Bring home to the locomotive man that the correct functioning of the damper is essential, if the hands on the steam gauge and pyrometer are to indicate the correct steam pressure, and temperature, because the proper steaming of the locomotive depends largely on the proper action of the damper.

**G.T.R. Pensioned Employees.**—There are now 1,233 former G.T.R. officials and employees drawing pensions, 79 having been added to the list during 1917. Of the recent additions, 28 had seen 40 years service and over, 9 had seen 45 years service, and 3 had seen over 50 years service. The present pension plan was adopted in 1908, since which the company has contributed \$1,750,000 to the fund, its present rate of contribution being over \$225,000 a year.

**Punished for Fraud.**—A. H. Strickland, a Mountain View, Alta., school teacher, was sentenced to three months imprisonment at Lethbridge, Mar. 5, for attempting to defraud the C.P.R. He made a trip to Cardston, taking with him a trunk, which he secured on arrival, without the station agent's knowledge, and then put in a claim for \$300 for loss of the trunk.

# The Erection of Kettle Rapids Bridge, Hudson Bay Railway.

The Kettle Rapids Bridge, on the Hudson Bay Ry., crosses the Nelson River about 332 miles north of Pas, Man. The Nelson River, at this point, forms a deep, narrow gorge, through which flow swift rapids, directly in the way of the site chosen for the crossing. The banks on both sides consist of solid rock for a considerable distance back of the shores, and were a determining factor in selecting the continuous girder type of truss adopted. The design consists of a single track through truss structure, 1,000 ft. long, continuous over 4 supports. These piers are built on small islets of rock, between

and in place economically, formed one of the chief considerations. The following erection programme was adopted:—

The south arm, between piers 1 and 2 was erected on wooden staging, with an ordinary derrick car, the only unusual features being that L0 was erected 10 in. lower than its normal elevation in order to allow for deflection in cantilevering. The truss, as a whole, was also erected on the permanent pier member rollers, about 5 ins. closer to the shore than its normal position. The main joints were then completely riveted, and the derrick car erected the balance of the south half

ler until L-0 was reached. The traveller was then jacked up, so as to bring the trucks level with the top chord of the span, and the balance of the steel for the north anchor arm completed, going forward from U-2 to U-12. After riveting this anchor arm, the cantilever portion of the truss between panels 12 and 20 was easily completed, with the traveller running out on the top chord.

The whole of the south half of the bridge was then jacked forward on the permanent pier member rollers, and a coupling made at L-20. After this joint was riveted, jacks were applied at the

Kettle Rapids Bridge. The completed structure.

which and the adjacent shores the stream is shallow, with a slow current. The channel span is 400 ft. long, c. to c. of pier members, and the two flanking arms 300 ft. each. The trusses are the Warren type, having 50 ft. main panels, subdivided to form two 25 ft. stringer panels. They are 50 ft. deep, c. to c. of chords, and are spaced 24 ft. apart. All truss joints are riveted throughout. The floor system is the ordinary open floor type, having wooden ties carried on two lines of built up stringers, which frame into the webs of the floor beams. The simplicity of the design greatly facilitated the fabri-

cation and erection of the crossing, as a cantilever, from L-12 to L-20. The riveting followed the erection very closely, so as to take care of the erection stresses.

A cableway tower was then erected on the north shore, materials for it being hauled by team over the ice some distance from the crossing. A short cableway bent was also erected on the completed truss at U-18, and a double cableway made of two 2 1/4 in. diameter cables was erected on these towers and securely anchored at both ends. These two cableways were operated by two double drum hoisting engines, and carried a flexible equalizer

two extreme ends of the bridge, points L-0 north and south ends. These ends were raised until the joint at U-20 was closed, after which the four corners were raised simultaneously until a load of 118 1/2 tons was registered on each of the 4 jacks, which fixed the distribution of the dead load stresses throughout the entire structure.

Work on the piers was started in 1916 by the general contractors for the whole line from Pas to Port Nelson, but owing to floods, but little work was done until February and March, 1917. The entire work was under the general supervision

Kettle Rapids Bridge. General erection diagram.

cation and erection and has many commendable points.

The method of erecting the bridge is of special interest, as it was out of the question to use staging of any kind for the channel span; the channel being of great depth, with a current of 9 miles an hour. Furthermore, the remoteness of the site, being at the end of a long construction line leading from Pas, precluded the possibility of bringing material for the north end in from that side, and the problem of getting this half of the structure across,

designed for lifting fifteen tons. The materials for the north end were then taken out on cars to the extreme end of the cantilever truss on the south side, and materials transferred by means of this cableway to the north side.

The staging for the north anchor arm was erected first and on this a light double boom traveller assembled. The steel work was then transferred and placed with this traveller, starting at L-12, and erecting the lower half of the anchor truss, backing up with the travel-

of W. A. Bowden, M.Can.Soc.C.E., Chief Engineer, Railways and Canals Department, Ottawa. The bridge was designed by W. Chase Thomson, M.Can.Soc.C.E., Montreal. The superstructure was fabricated and erected by Canadian Bridge Co., Ltd., Walkerville, Ont.

Quebec & Saguenay Ry.—A press report states that construction on this railway was resumed Mar. 15, and that it is hoped to complete the section to Baie St. Paul, by the end of May.

### A Bench Clamp.

A very useful and simple form of bench clamp or holdfast came to my notice during a recent visit to a small shop. It is shown in the illustration.

A piece of  $\frac{1}{2} \times 2$  in. steel stock A was set into the centre of the bench, and ran its full length. A series of holes B were drilled to permit the clamp being used at the most convenient places. A few taps with a hand hammer at C made the device secure in the hole where needed, and when it was desirable to change it, a few taps under D released it.

A Bench Clamp.

There is a wide variety of work that cannot be satisfactorily held in a bench vise. This class of work is easily secured to the bench with this device.—C. H. Wiley, in American Machinist.

### Track Section Prize Competition on Eastern Lines, Canadian Pacific Railway.

Canadian Railway and Marine World for January contained general particulars of the above mentioned competition for 1917, and gave the names of the section foremen who won the General Manager's and general superintendent's prizes. We have since been provided with particulars of the awards of the superintendent's and roadmaster's prizes. Following is a com-

Moosehead Subdivision; W. Alexander, section 2, Fredericton Subdivision; T. Gidden, section 2, Shore Line Subdivision; J. H. Bogler, section 6, Shogomoc South Subdivision; S. Tompkins, section 13, Shogomoc North Subdivision; J. Mockler, section 3, Aroostook Subdivision.

Quebec District:—General Superintendent's prize, T. Mattingly, section 3, Chalk River Subdivision. Farnham Division—Superintendent's prize, A. St. Louis, section 8, Drummondville Subdivision; roadmaster's prizes, A. Cloutier, section 21, Sherbrooke Subdivision; P. W. Delaire, section 17, Megantic Subdivision; J. Partridge, section 7, Newport Subdivision; F. Gauthier, section 5, St. Guillaume Subdivision. Montreal Terminals Division—Superintendent's prize, D. Lavoie, Mile End; roadmaster's prize, A. Belec, Montreal West. Laurentian Division—Superintendent's prize, D. Proteau, section 18, Trois Rivières Subdivision; roadmaster's prizes, J. Rochon, section 1, St. Lin Subdivision; O. Geroux, section 8, Ste. Agathe Subdivision; A. Fisette, section 3, Trois Rivières Subdivision; J. Bureau, section 25, Trois Rivières Subdivision. Ottawa Division—Superintendent's prize, R. Re-sauriers, section 5, M. & O. Subdivision; roadmaster's prizes, N. Huno, section 11, M. & O. Subdivision; M. Daly, section 4, Maniwaki Subdivision; P. Cassidy, section 9, Waltham Subdivision. Smiths Falls Division—Superintendent's prize, D. J. McMillan, section 11, Winchester Subdivision; roadmaster's prizes, J. Cochrane, section 14, Chalk River Subdivision; H. Timleck, section 10, Brockville Subdivision; J. Rioux, section 10, Winchester Subdivision.

Ontario District:—General Superintendent's prize, G. Muma, section 11, Galt Subdivision. Trenton Division—Superintendent's prize, W. Lowes, section 7, Peterboro; roadmaster's prizes, R. Crawford, section 7, Kingston Subdivision; J. Dowdell, section 14, Belleville Subdivision; M. Connors, section 8, Oshawa Subdivision; L. Linton, section 12, Peterboro Subdivision; W. Lillie, section 2, Havelock Subdivision; B. Locking, section 5, Port McNicholl Subdivision. London Divi-

section 10, O. & T. Subdivision. Toronto Terminals—Superintendent's prize, L. Francis, section 1, Don; roadmaster's prize, R. Gollinger, section 9, Hamilton.

Lake Superior District:—General Superintendent's prize, J. Purich, section 6, White River Subdivision. Superintendent's prizes—North Bay Subdivision, section 3, H. Gunning; Nemegos Subdivision, section 24, M. Hakkinen; Heron Bay Subdivision, section 12, L. Lerwill. Roadmaster's prizes—Thessalon Subdivision, section 16, A. Archambault; Parry Sound Subdivision, section 18, H. G. Roefs; Cartier Subdivision, section 13, P. Ross; North Bay Subdivision, section 12, E. Morin; Nemegos Subdivision, section 4, C. Asialia; White River Subdivision, G. Kusik; Heron Bay Subdivision, section 16, J. Milani; Nipigon Subdivision, section 19, B. Michaud.

### Cooling a Small Air Compressor.

In a small machine shop with which the writer was connected, considerable difficulty was encountered in maintaining a

Original and rearranged piping.

sufficient supply of air because the compressor persisted in heating up. We had decided that the compressor was too small, and were about to order a larger unit when the writer decided to make a more complete investigation. While going over the water-cooling connections an air compressor erector stopped in, and after a brief inspection explained the

Kettle Rapids Bridge. General erection diagram.

plete list of the successful section foremen: General Manager's prize, H. Hoyst, section 6, Havelock Subdivision, Ontario District.

New Brunswick District:—General Superintendent's prize, \$50, Wm. Hunter, section 12, St. John Subdivision; Superintendent's prize, Brownville Division, \$25, O. Zelkan, section 9, Moosehead Subdivision; Superintendent's prize, Woodstock Division, \$25, A. Peluse, section 4, Aroostook Subdivision; roadmaster's prizes, \$10 each, J. Conley, section 8,

sion—Superintendent's prize, A. Fairbanks, section 4, Windsor Subdivision; roadmaster's prize, T. Wilson, section 7, Windsor Subdivision; G. Muma, section 15, Galt Subdivision; J. Schmidt, section 9, H. & G. Subdivision; E. Allen, section 8, St. Thomas Subdivision; F. Broadbent, section 3, Galt Subdivision. Bruce Division—Superintendent's prize, W. Nealy, section 11, Owen Sound Division; roadmaster's prizes, H. Crowther, section 14, Owen Sound Subdivision; L. D'Angio, section 19, MacTier Subdivision; R. Hewett,

cause of our trouble.

The original water connection was made as per sketch A. With this system of piping, a body of cooling water could not be maintained around the cylinder, but instead merely ran over the cylinder in a thin film, and out to waste. The compressor erector advised revising the water cooling connection as per sketch B, from which it will be observed that the water jacket would be completely filled with water at all times.—W. A. Lailor, in American Machinist.

## Birthdays of Transportation Men in April.

Many happy returns of the day to:—

F. G. Adams, Commercial Agent, G.T.R., and Division Freight Agent, Grand Trunk Pacific Ry., Winnipeg, born at St. John's, Nfld., Apr. 6, 1878.

W. H. Ardley, Comptroller, G.T.R., and Grand Trunk Pacific Ry., Montreal, born at London, Eng., Apr. 24, 1858.

Jas. Black, Freight Claim Agent, C.P.R., Vancouver, B.C., born near Seaforth, Ont., Apr. 19, 1858.

C. G. Bowker, General Superintendent Eastern Lines, G.T.R., Montreal, born at Medford, N.J., Apr. 21, 1871.

G. C. Briggs, Supervisor of Buildings, Eastern Lines, Canadian Northern Ry., Toronto, born at Cockermouth, Eng., Apr. 23, 1886.

A. V. Collins, Travelling Auditor, Canada Steamship Lines, Ltd., Toronto, born at Island Pond, Vt., Apr. 21, 1868.

R. J. Collins, Chief Dispatcher, Edmonton Division, Alberta District, C.P.R., Edmonton, born at Winnipeg, Apr. 30, 1883.

G.T.R., Montreal, born at Uxbridge, Ont., Apr. 22, 1866.

G. W. Lee, Commissioner, Timiskaming & Northern Ontario Ry., North Bay, Ont., born at Renfrew, Ont., Apr. 15, 1871.

J. D. McMillan, acting Superintendent, Belleville Division, Ontario Lines, G.T.R., Belleville, born in Eldon Tp., Ont., Apr. 5, 1858.

J. A. Macgregor, Superintendent, Edmonton Division, Alberta District, C.P.R., Edmonton, born at Dufftown, Scotland, Apr. 5, 1873.

B. R. Marsales, District Freight Agent, Canadian Northern Ry., Calgary, Alta., born at Guelph, Ont., Apr. 13, 1887.

P. Mooney, General Freight and Passenger Agent, Halifax & South Western Ry., Halifax, N.S., born at St. Catharines, Que., Apr. 19, 1871.

Paul J. Myler, President, Canadian Westinghouse Co., Ltd., Hamilton, Ont., born at Pittsburg, Pa., Apr. 24, 1869.

J. H. Norton, Division Freight Agent,

E. W. Smith, Superintendent, Dining and Parlor Car Service, G.T.R., Toronto, born at North Bridge, Mass., Apr. 21, 1869.

David A. Starr, M.I.E.E., General Manager, Clyde Valley Electrical Power Co., Glasgow, Scotland, born at Halifax, N.S., Apr. 11, 1858.

D. F. Thomas, ex-General Manager, Algoma Eastern Ry., now at Sault Ste. Marie, Mich., born in Halton County, Ont., Apr. 20, 1867.

W. S. Tilston, Chief of Montreal Board of Trade Transportation Bureau, born at Manchester, Eng., Apr. 14, 1877.

C. H. Towle, Assistant Superintendent, Brownville Division, New Brunswick District, C.P.R., Brownville Jct., Me., born at Enfield, Me., Apr. 13, 1878.

E. D. Toye, ex-Storekeeper, Ontario Division, Canadian Northern Ry., Trenton, born at Dalston, Ont., Apr. 27, 1891, now on active service overseas.

W. Woollatt, Vice President and General Manager, Essex Terminal Ry., Walkerville, Ont., born at Weedon, Hertfordshire, Eng., Apr. 2, 1855.

### A Spring-Heating Furnace.

The accompanying illustration shows a furnace for heating and tempering the leaves of springs, and by the use of which excellent results have been obtained in the Pennsylvania Rd.'s Renovo shops. The furnace is 6 ft. 2 in. by 15 ft. overall, and the corners are made rigid, and further reinforced by angle irons, which are held by three horizontal sets of bands or strips, extending the length of the sides and ends of the furnace, and connected at the corners. The horizontal strips hold in place vertical plates, which are disposed at suitable points on the sides and ends, and serve to materially strengthen the latter. The side walls of

Kettle Rapids Bridge. South half under construction.

Sir Henry L. Drayton, K.C., Chief Railway Commissioner for Canada, Ottawa, Ont., born at Kingston, Ont., Apr. 27, 1869.

W. A. Duff, M.Can.Soc.C.E., Assistant Chief Engineer, Canadian Government Railways, Moncton, N.B., born at Hamilton, Ont., Apr. 20, 1877.

A. Gaboury, Superintendent, Montreal Tramways Co., Montreal, born there, Apr. 6, 1875.

B. C. Gesner, Moncton, N.B., formerly Air Brake Inspector, I.R.C., now Eastern Sales Agent, Galena Signal Oil Co., born at Cornwallis, N.S., April 23, 1859.

J. Murray Gibbon, General Publicity Agent, C.P.R., Montreal, born at Ude-  
wella, Ceylon, Apr. 12, 1875.

V. A. Harshaw, Manager, Fredericton & Grand Lake Coal & Ry. Co., and New Brunswick Coal & Ry. Co., Fredericton, N.B., born at Mono, Ont., Apr. 26, 1865.

J. H. Johnston, Superintendent of Bridges and Buildings, Eastern Lines,

Canadian Government Railways, Halifax, N.S., born at Shaftesbury, Eng., Apr. 21, 1884.

G. D. Perry, General Manager, Great North Western Telegraph Co., Toronto, born at Whitby, Ont., Apr. 19, 1858.

R. A. Pyne, Superintendent of Motive Power and Car Department, Eastern Lines, C.P.R., Montreal, born at Toronto, Apr. 10, 1874.

Lieut. R. S. Richardson, formerly Superintendent, District 3, Transcontinental Division, Canadian Government Railways, Fort William, Ont., now of No. 13 Light Railway Company, Royal Engineers, British Expeditionary Force, born at Napance, Ont., Apr. 9, 1865.

F. Rioux, Assistant to President, Reid Newfoundland Co., St. John's, Nfld., born at Trois Pistoles, Que., April 18, 1867, now on active service overseas.

W. A. Ritchie, District Superintendent, Pullman Co., Montreal, born at Edinburgh, Scotland, Apr. 13, 1854.

the furnace are further reinforced by the use of 70 lb. steel rails, vertically located at required intervals.

Large pipes for supplying air from the blower enter the sides of the furnace in a straight line, as this has been found more satisfactory than when the pipes are led in on an angle. The furnace can be supplied with air from the compressed air system, by means of a connection entering at the same point as the fuel oil. This arrangement is made to provide against a possible breakdown of the blower system. The blower pipe line is 3 in., and the oil and compressed air lines, each ½ in.

The doors of the compartments, of which there are two on each side and at opposite ends of the furnace, are raised and lowered by pivoted levers having ball weights, and which hold the doors in an open position when raised. Each of the compartments is equipped with an electrical pyrometer.

## Questions About Draw-Bar Pull.

A Canadian Railway and Marine World subscriber wrote recently asking the following questions:

"How much power applied at the draw-bar is necessary to move a train of given weight on a level track?"

"How much more power is required to start this train in motion?"

"How much should be added to the above for variations in the track i.e., if the track has been roughly laid or improperly ballasted?"

We referred the enquiry to Alfred Price, Assistant General Manager, Eastern Lines, C.P.R., who has favored us with the following information:

"The draw-bar pull necessary to keep a train moving at a uniform velocity on straight, level track depends chiefly upon the nature and condition of the track and equipment, the velocity, and the average weight of the cars comprising the train.

"On good track and under favorable quired may vary from  $7\frac{3}{4}$  lb. ton at 5 miles an hour, to  $12\frac{1}{4}$  lb. a ton at 35 weather conditions, the draw-bar pull remains an hour, for an empty flat car weighing 15 tons, and from about 3 lb a ton at 5 miles an hour to 5 lb. a ton at 35 miles an hour, for a loaded car having a total weight of 75 tons.

"The draw-bar pull necessary to start a train is even more variable than that required to keep it in motion. On level track the pull may vary from about  $6\frac{1}{2}$  lb a ton to over 20 lb. a ton for the individual cars. A locomotive will not usually have to start the whole at the same moment, and therefore the starting resistance per ton for the whole train may be somewhat less.

"Poor track may increase train resistance 100%."

H. D. Cameron, Mechanical Engineer, Canadian Northern Ry., to whom the questions were also referred, has favored us with the following replies:—"In order to reply intelligently to these questions it will be advisable to recall the principal factors that enter into the calculation in determining train resistance. Train resistance may be defined as the sum of all resistances which constitute a tax on the adhesion of the locomotive, and may be considered under the following heads:—

"Grade resistance is due to the retarding of gravity, is an invariable factor, and can be calculated exactly by resolving the triangle of forces which act when a train moves up a known incline. This works out to 20 lb. a ton for 1% grade.

"Curve resistance is made up of several different factors, which are difficult to determine exactly, and different authorities give figures which vary from 0.5 of a pound per degree to 1.75. For ordinary purposes we have used 0.8 of a pound as a fair average for resistance on curves.

Speed resistance is comprised of the following variable factors which always act together, and are, therefore, usually considered under the one heading of speed resistance. These factors are:—1, Journal friction, between journal and bearing; 2, Rolling friction, between rail and wheel; 3, Resistance due to weather conditions; 4, Flange friction, due to oscillation and concussion; 5, Resistance due to change in velocity. These variables, with the exception of resistance due to change in velocity, are rather hard to isolate and determine accurately, and for ordinary rough calculation we assume about 6 lb. per ton for speed resistance other than that required for change in velocity. The

latest tables on speed resistance, compiled by the American Locomotive Co., show the resistance of freight cars comparatively constant between 5 and 30 miles an hour, and varying only according to the weights of car as follows:—

Weight of car in tons (tare & contents)	Resistance (pounds per ton)
20	7.84
25	6.62
30	5.78
40	4.65

"To summarize, the power required, in pounds per ton, to move a train on straight level track would have to be sufficient to overcome rolling resistance and resistance due to change in velocity. For example, a train composed of 50 units started from rest, and brought to a speed of 20 miles an hour in a distance of 2,000 ft. requires:—

"Resistance to overcome inertia = $\frac{10 \times 20^2}{2 \times 00}$	20 lb. per ton
"Speed resistance (see table =	4 lb. per ton
"Total power required = ...	24 lb. per ton

Jig for Holding Feed Valve.

The accompanying illustration shows a jig used in the C.P.R. Ogden shops, Calgary, Alta. It allows the valve to be turned in any direction, or to be raised or lowered to suit the workman making the repairs. We are indebted for the drawing to A. T. Shortt, Superintendent Ogden shops, now on leave of absence.

50	3.94
60	3.44
70	3.06
70	3.00

"The resistance due to change in velocity can be determined with reasonable accuracy from the formula  $P = \frac{70V^2}{S}$

where V represents the change in velocity in miles per hour, and S the distance in which it is acquired.

"Referring again to questions 1 and 2. The writer is not very clear as to the difference between power required 'to move' a train on level track and power required 'to start this train in motion.' Probably your correspondent wanted to distinguish between speed resistance, and resistance required to overcome inertia or change in velocity. The other question regarding allowance for variation in track is liable to vary between such wide limits that it is not possible to give a definite answer. In practice it would be determined by experiment.

Railway Lands Patented.—Letters patent were issued during February, respecting Dominion railway lands in Manitoba, Alberta and British Columbia, as follows:—

	Acres
Alberta & Great Waterways Ry.	246.20
Calgary & Edmonton Ry.	2,533.00
Canadian Northern Ry.	3,864.39
Canadian Northern Alberta Ry.	6.00
Canadian Pacific Ry. roadbed and station grounds.	9.70
Qu'Appelle, Long Lake & Saskatchewan Rd. & Steamboat Co.	1,122.00
Total.	7,781.38

Nova Scotia Society of Civil Engineers.—Subject to the approval of both societies, a resolution has been adopted by this society favoring its amalgamation with the Canadian Society of Civil Engineers. It has also been decided to make application for the formation of a branch of the C.S.C.E. in Halifax, N.S.

Ontario Railway and Municipal Board. The Ontario Legislature has voted \$41,200 for the board's estimates for this fiscal year.

# Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

General order 214-C. Feb. 25.—Approving, subject to provisions of order in council P.C. 229, Jan. 30, following Standard Tariffs of Maximum Mileage Tolls for passengers.—Elgin & Havelock Ry. C.R.C. 5, and Northern Pacific Ry. C.R.C. 317.

General order 215-B. Feb. 25.—Approving, subject to provisions of order in council P.C. 229, Jan. 30, following Standard Freight Tariffs of Maximum Mileage Tolls.—Elgin & Havelock C.R.C. 5; Essex Terminal Ry. C.R.C. 457; and Northern Pacific Ry. C.R.C. 376.

General order 221. Feb. 26.—Prescribing minimum carload weights of tan bark, when carried under special commodity tariffs. Schedules filed to take effect by Mar. 11.

26992. Feb. 16.—Recommending to Governor in Council for sanction, rules and regulations for London & Port Stanley Ry. Co. employees.

26993, 26994. Feb. 12, 18.—Approving Bell Telephone Co. agreements with United Telephone Co., Middlesex County, Ont., Jan. 31; East Wakefield Telephone Co., Ottawa County, Que., Sept. 14, 1917, and rescinding previous agreement in latter case.

26995. Feb. 18.—Dismissing application of The Freight and Express Underwriters, Toronto, to change last paragraph rule 6 of Canadian Car Demurrage Rules, prescribed by general order 201, Aug. 1, 1917.

26996. Feb. 16.—Authorizing C.P.R. to discontinue operation of train 35, westbound local, due at Finch 9.35 a.m.; and eastbound local 36, due 5.53 p.m.; no. 19, due 10.46 a.m., and no. 20, due 5.02 p.m., to be operated in lieu thereof; and suspending from Feb. 24 to Apr. 28 inclusive, order 23657, May 4, as amended by order 23738, May 25, 1915.

26997. Feb. 18.—Relieving Canadian Northern Ry. from providing further protection at highway on south boundary of River Lot 7, Fort Saskatchewan Settlement, Alta., mileage 808.6 from Winnipeg.

26998. Feb. 19.—Authorizing C.P.R. to remove station agent at Brora, Sask.

26999. Feb. 18.—Relieving Michigan Central Rd. from maintaining day and night watchmen at second crossing west of Highgate, Ont.

27000. Feb. 19.—Approving Canadian Northern Quebec Ry. plan, showing station to be erected at St. Alexis.

27001. Feb. 18.—Authorizing Canadian Northern Ry. to withdraw train no. 15, leaving Kingston at 7 p.m. and Deseronto at 9.15, arriving at Belleville, Ont., at 9.45; and train no. 18, leaving Belleville 6 p.m., arriving Deseronto, Ont., at 6.35 p.m.; effective until Apr. 28.

27002. Feb. 19.—Approving plan of rearrangement of G.T.R. yard at Central Station, Ottawa; work to commence by May 1, and be completed by Sept. 15.

27003. Feb. 18.—Authorizing Canadian Northern Ry. to build spur for D. Rouleau & Fils, St. Tite, Parish Co.

27004. Jan. 28.—Authorizing Bell Telephone Co. to lay telephone lines in underground conduits, in certain streets in Ottawa, and to attach two iron pipes to Cummings Bridge abutments, and lay 6 conduits across Cummings Island, with manhole in centre.

27005. Feb. 18.—Authorizing Military Hospitals Commission to connect its tracks with G.T.R. at Whitty, Ont.

27006. Feb. 18.—Authorizing C.P.R. to build spur for Pembroke Machinery Co., Pembroke, Ont.

27007. Feb. 18.—Authorizing Canadian Northern Ry. to build spur for M. Lacombe, St. Canut Parish.

27008. Feb. 12.—Authorizing C.P.R. to divert road allowances on eastern boundary of n. e.  $\frac{1}{4}$  Sec. 5, Tp. 22, Range 7, and on west boundary of sec. 35, Tp. 21, Range 8, w. 4th meridian, Alta.

27009. Feb. 18.—Approving Michigan Central Rd. plan V-56, showing changes to be made in interlocking tower at Windsor, Ont.

27010. Feb. 20.—Authorizing Canadian Northern Ry. to cross and divert highway between Secs. 21 and 22, Tp. 38, Range 26, west 2nd meridian, Sask.

27011. Feb. 20.—Authorizing British Columbia Public Works Department to build highway over Esquimalt & Nanaimo Ry. 1 mile north of Colwood, Vancouver Island.

27012. Feb. 20.—Authorizing G.T.R. to build sidings and spurs for Dominion Shipbuilding Co., Toronto.

27013. Feb. 20.—Authorizing Esquimalt & Nanaimo Ry. to build spur for Granby Consolidated Mining, Smelting & Power Co. at mileage 64.8, Victoria Subdivision, Vancouver Island, B.C.

27014. Feb. 20.—Authorizing Canadian Northern Ry. to build spur for Capital Coal & Wood Co., Regina, Sask.

27015. Feb. 20.—Ordering G.T.R. to install facilities at Brockville or Prescott, Ont., for housing and repairing locomotives; plans be filed for approval within 15 days from date; work to be

commenced by Mar. 25 and completed by September.

27016. Feb. 21.—Ordering that telephone be installed by Union Station Co., in Union Station, Toronto, for direct communication between upper waiting room and train sheds, to enable depot master to furnish gateman and train announcer with information as to location and movement of trains and when ready to receive passengers.

27017. Feb. 21.—Ordering C.P.R. to stop all passenger trains on flag, unconditionally, at Blairton, Ont. See also order 27029.

27018. Feb. 20.—Authorizing Canadian Northern Ry. to open for traffic its line from Victoria to Patricia Bay, B.C., 15.49 miles.

27019. Feb. 21.—Approving Bell Telephone Co. agreements with Euphrasia Tp., Ont., Jan. 21, 1910, and June 30, 1916.

27020. Feb. 22.—Approving location and plans of G.T.R. standard enclosed waiting shed at Ellaton, Ont.

27021. Feb. 22.—Relieving Michigan Central Rd. from maintaining day and night watchmen at crossing near Springfield, Ont.

27022. Feb. 21.—Ordering Canadian Northern Ry. to maintain present service of trains 1 and 2, Quebec to Chicoutimi, Que., until further order.

27023. Feb. 22.—Rescinding, for duration of war, par. 8 of order 13605, Apr. 24, 1911, re operation of trains over Canadian General Electric Co.'s crossings at Peterborough, Ont.

27024. Feb. 23.—Relieving Canadian Northern Ry. from providing further protection at highway crossing east of milepost 194, Hartney Subdivision, Man.

27025. Feb. 23.—Approving agreement between Bell Telephone Co. and Nissouri Telephone Co., Oxford County, Ont.

27026. Feb. 23.—Authorizing G.T.R. to operate over Toronto, Hamilton & Buffalo Ry. to National Abrasive Co., Hamilton, Ont.

27027. Feb. 22.—Authorizing York Tp., Ont., to make highway across G.T.R. and Toronto & Niagara Power Co. lines at Eilken Ave.; and reserving rights of seniority of the companies.

27028. Feb. 25.—Approving form of release of liability of travelling in non-passenger cars, for use by Toronto, Hamilton & Buffalo Ry., and rescinding order 24887, Apr. 11, 1916.

27029. Feb. 26.—Ordering C.P.R. to stop trains 35 and 36 on flag, unconditionally, at Blairton, Ont.; and rescinding order 27017, Feb. 21.

27030. Feb. 26.—Authorizing Steel Co. of Canada to erect overhead crane runway and supports across G.T.R. Lachine Canal Branch.

27031. Feb. 25.—Authorizing G.T.R. to build spur for D. S. Bachand, Barnston Tp., Que.

27032. Feb. 25.—Recommending to Governor in Council for sanction, agreement between G.T.R. and Quebec, Montreal & Southern Ry., Sept. 26, 1917, agreement not to continue in force longer than 21 years.

27033. Feb. 22.—Authorizing Toronto, Hamilton & Buffalo Ry. to build freight yard near Bridgeburg, Ont., to cross road allowances between Cons. 4 and 5 and 6 and 6; to divert Michigan Central Rd. Niagara Brch.; change interlocking plant at Niagara Jet.; to connect with M.C.R. near Bridgeburg, and to cross M.C.R., or diverted, per Marquette Ry. lands; work to be done by T. H. & B. Ry.; and reserving right to Bertie Tp., Ont., to apply for protection at crossings.

27034. Feb. 22.—Authorizing Toronto, Hamilton & Buffalo Ry. to build three spurs across Newport St., Brantford, Ont.

27035. Mar. 1.—Authorizing C.P.R. to build extension to spur for T. Eaton Co., Regina, Sask.

27036. Feb. 26.—Authorizing special mileage tariff of Dominion Express Co. for carriage of cream in British Columbia. This order is given fully on another page under "Among the Express Companies."

27037. Mar. 1.—Relieving C.P.R. from providing further protection at 11th Ave. East, Swift Current, Sask.

27038. Mar. 1.—Amending order 26991, Feb. 18, to provide that C.P.R. train 509 leave Montreal for Ottawa at 4.45 p.m. instead of 4.30 p.m.; and that morning train leave Montreal at 8.20 instead of 8.15 a.m.

27039. Mar. 1.—Relieving G.T.R. from providing further protection at crossing between Beaver-ton and Lorneville Jet., Ont.

27040. Feb. 25.—Ordering G.T.R. to lower culvert near St. Francois-Xavier St., Farnham, Que., at expense of Dominion Agriculture Department; to be completed within 60 days from date.

27041. Mar. 2.—Relieving G.T.R. from providing further protection at Edward St., Stirling, Ont.

27042. Mar. 1.—Authorizing New York Central Rd. to rebuild bridge A-46 over Trout River, near Huntingdon, Que.

27043. Mar. 2.—Amending order 27019, Feb. 21, 1918, re Bell Telephone Co.'s agreements with Euphrasia Tp., Ont.

27044. Mar. 4.—Authorizing Hull Electric Co. to build spur for Electric Smelting Co. of Brantford, Ltd., Hull, Que.

27045. Mar. 5.—Authorizing Hull Electric Co. to build Y at Deschenes, Que.

27046. Mar. 4.—Authorizing Canadian Northern Quebec Ry. to build extension to spur on Sixth St., Charlesburg Parish, Que.

27047. Mar. 4.—Authorizing G.T.R. to use bridge 112 across Sauble River, Arran Tp., Ont.

27048. Mar. 6.—Authorizing C.P.R. to cross Sixth Ave., Regina, Sask., with temporary spur for T. Eaton Co. during building construction.

27049. Mar. 6.—Authorizing Alberta Public Works Department to build highway over Edmonton, Dunvegan & British Columbia Ry. on north boundary of n. w.  $\frac{1}{4}$  Sec. 13, Tp. 72, Range 6, west 6th meridian; cost to be paid by rural municipality 740.

27050. Mar. 6.—Amending order 15149, Sept. 8, 1911, re express collection and delivery in Calgary, Alta.

27051. Mar. 7.—Authorizing Canadian Northern Ry. to cross and divert Rosebud River, in n. e.  $\frac{1}{4}$  Sec. 12, Tp. 27, Range 22, west 4th meridian, Alta.

27052. Mar. 7.—Approving form of release of liability in respect of travelling in non-passenger cars, for use by Kettle Valley Ry.

27053. Mar. 6.—Authorizing G.T.R. to build spur for Hunt Bros., London Tp., Ont.

27054. Mar. 7.—Authorizing G.T.R. to rebuild bridge over its tracks at Laurier Ave., Ottawa.

27055. Mar. 8.—Authorizing G.T.R. to rebuild bridge 68, over public road between Lots 28 and 29, Con. 2, Saugeen Tp., Ont.

27056. Mar. 7.—Authorizing Saskatchewan Highways Department, for Harris rural municipality 316, to make highway over Canadian Northern Ry. Goose Lake Branch surveyed road through Sec. 20, Tp. 31, Range 12, west 3rd meridian.

27057. Mar. 8.—Authorizing Canadian Northern Ry. to cross and divert highway between Secs. 22 and 23, Tp. 26, Range 23, west 3rd meridian, Sask., and rescinding order 19968, Aug. 6, 1913.

27058. Mar. 6.—Ordering Alkoma Central & Hudson Bay Ry. to amend special local commodity tariff, C.R.C. 388, applying on cordwood; authorizing it on due notice to cancel special local freight tariff on charcoal wood, C.R.C. 417.

27059. Feb. 10.—Authorizing British Columbia Public Works Department to make highway over Esquimalt & Nanaimo Ry. at mileage 28.12, Vancouver Island.

27060. Mar. 8.—Amending order 27040, Feb. 25, 1918, re changes in culvert at Farnham, Que., by G.T.R. by substituting Central Vermont Ry. for G.T.R.

27061. Mar. 9.—Ordering G.T.R. to build elevated cabin at Barton St., Hamilton, Ont., as per order 24029, July 28, 1915.

27062. Mar. 9.—Dismissing Canadian Northern Ry. application to make certain reductions in passenger service between Quebec and Chicoutimi.

27063. Mar. 15.—Ordering G.T.R. to flag all trains over Toronto St., Port Credit, Ont.

27064. Mar. 15.—Approving agreement, Feb. 25, between Bell Telephone Co. and Boat Lake Telephone Co., Bruce County, Ont.

27065. Mar. 15.—Approving Canadian Northern Pacific Ry. plans of July 11, 1917, showing station layout at Vancouver, B.C.

27066. Mar. 15.—Relieving G.T.R. from providing further protection at second crossing east of Ingersoll station, Ont.

27067. Mar. 15.—Ordering Vancouver, Victoria & Eastern Ry. & Navigation Co. (G.N.R.) to install box car body as shelter at Manning Siding, B.C., to be completed by May 1, and rescinding order 26990, Feb. 16.

27068. Mar. 16.—Ordering Pere Marquette Ry. to file joint commodity tariff applying third-class rates from Wallaceburg, Ont., to Tooronto and Montreal on cut glass.

27069. Mar. 16.—Authorizing Pere Marquette Ry. to cancel Canadian Northern Ry. as party to tariff C.R.C. 2048.

27070. Mar. 15.—Extending, for 30 days from date, time within which New York Central Rd. shall install bell at highway near St. Stanislas, Que.

27071. Mar. 15.—Extending, for 60 days from date, time within which C.P.R. shall install bell at crossing at McAdam Jet., N.B.

27072. Mar. 18.—Extending to Nov., 1919, time within which G.T.R. shall provide suitable accommodation for handling all traffic offered at Summerstown, Ont., as required by order 21549, Mar. 24, 1914.

27073. Mar. 18.—Ordering Great Northern Ry. to rebuild and repair right of way fence and install cattle guards at crossings in use on Victoria & Sidney Ry., from northern boundary of Victoria to McKenzie Ave.; and make necessary repairs between McKenzie Ave. north and Sidney, to be completed by May 31.

27074. Mar. 18.—Authorizing C.P.R. to build spur on Fardee Ave., Toronto, for E. W. Gillett Co.

27075. Mar. 18.—Authorizing Sandwich West Tp., Ont., to build crossings over Essex Terminal Ry. at Manly and Gladstone Aves.

27076. Mar. 19.—Amending order 8408, Oct. 20, 1909, by substituting John McMillan for James Kent, in order.

27077. Mar. 15.—Authorizing Emo municipality, Ont., to build crossing over Canadian Northern Ry. at Jessie St.

27078. Mar. 15.—Authorizing Alberta Public Works Dept. to build crossing over Edmonton, Dunvegan & British Columbia Ry. in River Lot 49, Tp. 77, R. 5, w. 6th meridian, Alta.

27079. Mar. 19.—Dismissing application of R. W. Hannah, Toronto, for cancellation of clause on order bill of lading approved by Board, re inspection of goods covered by bill not permitted unless provided by law or unless permission is endorsed on original bill or given in writing by shipper. The order is given in full on another page.

27080. Mar. 20.—Authorizing Laval Electric Co. to erect wires along C.P.R., at mileage 17 of Lachute Subdivision, Que.

27081. Mar. 21.—Disallowing rates on coal, in carloads, from Buffalo, Black Rock and Suspension Bridge, N.Y., to Preston, Heseler and Guelph, Ont., in G.T.R. tariff, C.R.C. no. E-3766, and M.C. R. tariff, C.R.C. no. 2478, effective Mar. 15, and ordering other following rates in lieu thereof. This order is given in full on another page.

27082. Mar. 21.—Amending order 26219, June 18, 1918, re watchmen's wages at G.T.R. crossing at Winchester Ave., Toronto.

27083. Mar. 20.—Authorizing Bank of British North America, West Toronto, to repay to Gibson, McCormack, Irvin Co., \$400 deposited to board's credit, with interest, if any.

27084. Mar. 19.—Disallowing stop-over charge of \$5 a car for completion of loading of live stock; and ordering Pere Marquette Ry. to file new tariff showing stop-over charge of \$3 a car. This order is given in full on another page.

27085. Mar. 18.—Re transit arrangements at

Montreal applicable to grain from Western Canada handled by C.P.R. via all rail, or lake and rail routes, products of which are reshipped to destinations on or via Intercolonial Ry., or for export via Halifax. This order is given in full on another page.

27086. Mar. 21.—Relieving C.P.R. from providing further protection at Prince of Galles St., at Laval Rapids, Que.

27087. Mar. 23.—Ordering C.P.R. not to exceed 10 miles an hour over highway crossing near station at Lacombe, Alta.; no cars to be left standing closer than 50 ft. from highway on tracks 2 and 3, and 100 ft. on track 1; if trains are cut closer, highway to be protected by employee while train is standing; sign posts to be erected on each side of crossing, showing clearances to be observed.

27088. Mar. 23.—Approving clearances of platform shelter at Manitoba Cold Storage Co.'s spur, Winnipeg.

27089. Mar. 23.—Authorizing Canadian Northern Ry. to build spur for Henderson & Shaw Coal Co. in south ½ sec. 7, Tp. 28, R. 19, west 4th meridian, Alta.

27090. Mar. 23.—Authorizing G.T.R. to change location of spur for Clifton Sand, Grave, & Construction Co., Stamford Tp., Ont.

27091. Mar. 22.—Authorizing C.P.R. to build two spurs for Polson Iron Works at Toronto.

in wages and in the cost of the materials of every description.

Subject to your approval, your directors have authorized expenditures on capital account during the present year of \$8,200,000, apportioned to the following works, viz.:—Replacement of temporary structures on branch lines by permanent work, \$512,000; transfer slip at Vancouver, additional coaling plants, small stations and section houses, \$815,000; interlocking and protective signal apparatus, \$160,000; additional terminal and side track accommodation, \$450,000; and a variety of additions and improvements to the property designed to secure greater convenience and economy, \$1,263,000.

The undermentioned directors will retire from office at the approaching annual meeting. They are eligible for re-election. J. K. L. Ross, Lord Shaughnessy, Sir Thos. Skinner.

## Canadian Northern Railway Construction, Betterments, Etc.

The passenger station on Lagauchetiere St., Montreal, is practically completed. This building is for temporary use only, pending the erection of the permanent station on the Dorchester St. side of the block. It is expected that trains will be run through the tunnel into the new station in the autumn.

The Toronto, Niagara & Western Ry. is applying to the Dominion Parliament for an extension of time for the construction of its projected railway from Toronto to Hamilton, and an extension from Hamilton, via St. Catharines, to the International Boundary, with a branch to Port Colborne, Ont.

The Canadian Northern Ontario Ry. is asking the Dominion Parliament to extend the time for building its projected railway from some point on its line between Port Arthur and Sudbury, near Long Lake, northerly and westerly to a junction with the National Transcontinental Ry. east of Lake Nepigon, Ont.

A delegation waited on the Alberta Government, Mar. 12, and urged that steps be taken to have the company lay track on the branch line from Onoway, from the present rail head at Robinson's Crossing to Rochford, 3.5 miles, at once, and the early construction of an extension to the Peace River. The Premier advised the delegation to apply to the Minister of Railways at Ottawa, and stated that the Alberta Government had \$3,000,000 of the proceeds of guaranteed securities lying in a bank for the completion of certain partially constructed lines in the province.

The British Columbia Railways Department report states \$1,864,808 were spent on the company's projected terminals during the year. The amount of work completed on each terminal at the date of the report was: Vancouver, 59%; New Westminster, 80%; Port Mann, 93%; Stevenson, 81%; Patricia Bay, 98%.

In connection with the provincially owned bridge over the Fraser River at New Westminster, an extension of the interlocking system had been arranged for and will be installed during April. The cost, \$3,043, will be borne jointly by the B.C. Government, the C.N.P. Ry. and the Great Northern Ry. During the year 26,745 passenger cars, 48,231 freight cars, and 9,230 cars in mixed trains crossed the bridge. (Mar., pg. 102.)

Timiskaming & Northern Ontario Ry. The Ontario Legislature has voted \$686,711.82 to defray the expenses of the T. & N.O.R. Commission.

## Canadian Pacific Railway Company's Annual Report.

Following are extracts from the report for the year ended Dec. 31, 1917. The accounts show the following results:—

Gross earnings .....	\$152,389,334.95
Working expenses .....	105,843,316.50

Net earnings .....	\$46,546,018.45
Deduct fixed charges .....	10,229,154.43

Surplus .....	\$36,316,875.02
Contribution to pension fund .....	500,000.00

\$35,816,875.02

Deduct net earnings of Pacific Coast steamships, commercial telegraph, and news department, transferred to special income account .....	1,968,682.56
---	--------------

\$33,848,192.46

From this there has been charged a half-yearly dividend on preference stock of 2%, paid Oct. 1, 1917 .....	\$1,613,638.42
And three quarterly dividends on ordinary stock of 1 3/4% each, paid June 30, 1917, Oct. 1, 1917, and Dec. 31, 1917 .....	13,650,000.00
	15,263,638.42

\$18,584,554.04

From this there has been declared a second half-yearly dividend on preference stock, payable April 1, 1918 .....	\$1,613,638.42
And a fourth quarterly dividend on ordinary stock of 1 3/4%, payable April 1, 1918 .....	4,550,000.00
	6,163,638.42

Leaving net surplus for the year .....	\$12,420,915.42
--	-----------------

In addition to the above dividends on ordinary stock, 3% was paid from special income.

### Special Income Account.

Balance at Dec. 31, 1916 .....	\$12,872,451.54
Less dividend paid Mar. 31, 1917 .....	1,950,000.00

\$10,922,451.54

Net revenue from investments and available resources .....	2,010,911.76
--	--------------

Interest on deposits, and interest and dividends on other securities .....	2,697,087.20
--	--------------

Net earnings ocean and coastal steamship lines .....	3,724,720.27
--	--------------

Net earnings commercial telegraph and news department, rentals and miscellaneous .....	2,250,580.09
--	--------------

\$21,635,750.86

Less payments to shareholders in dividends, 1917 .....	5,850,000.00
--	--------------

\$15,785,750.86

From this a dividend has been declared payable April 1st, 1918 .....	\$1,950,000.00
--	----------------

The working expenses for the year were 69.46% of the gross earnings, and the net earnings 30.54%, as compared with 63.88 and 36.12%, respectively, in 1916.

The sales of agricultural land in the year were 789,055 acres for \$14,330,811.

an average of \$18.16 an acre. Included in this area were 58,681 acres of irrigated land which brought \$45.99 an acre, so that the average price of the balance was \$15.92 an acre. Before the adoption in 1913 of the policy of selling lands to settlers only, considerable areas had been bought by land companies and others for speculative purposes. Nearly all of these purchasers were in default and nothing was being done with the lands. To remedy this your directors negotiated the cancellation of the contracts and the restoration of the lands to the company. Some of these have already been resold to settlers, and through the company's agency, purchasers will be found for the balance at prices somewhat better than those specified in the cancelled contracts. The cancellations have been adjusted in the accounts submitted.

Besides the substantial amount already invested in the securities of, and loans to, Great Britain, Canada and the allies, your company subscribed to \$10,000,000 of the recent Canadian Victory Loan. A sufficient amount has been set aside to meet the instalments of the allotment payable in the current fiscal year.

The arrangement for the creation by the company of collateral trust bonds to be loaned to the Imperial Treasury was abandoned for the reasons given at the last annual meeting. As stated by the President in his address to the shareholders, the company did, however, with due authority, issue and deposit by way of loan with the nominees of the Imperial Treasury, \$40,000,000 currency 4% consolidated debenture stock. The loan is for 5 years from Jan. 1, 1917, but the Lords of the Treasury reserved the right to return the stock to the company at any time after Jan. 1, 1919, on giving three months' notice, or to purchase the stock in whole or in part at 80% of its face value in New York funds or their equivalent. The annual premium of 1 1/2% resulting from this transaction was not taken into the revenue of the year, but was written off against the face value of the security. Apart from this, the capital account remains unchanged, all capital expenditures during the year having been met from surplus revenue.

The gross earnings of your transportation system in the fiscal year 1917 exceeded those of the previous year by \$13,000,000, but the net earnings were less by \$4,000,000. This large addition of \$17,000,000 to the working expenses may be attributed almost entirely to the advance

# Railway Rolling Stock Notes.

The Timiskaming & Northern Ontario Ry. has received 100 box cars from Canadian Car & Foundry Co.

The G.T.R. received the following additions to rolling stock during February: 3 snow ploughs from Russell Snow Plow Co., and 34 box cars, 80,000 lbs. capacity, from American Car & Foundry Co.

The C.P.R., between Feb. 14 and Mar. 14, received the following additions to rolling stock from its Angus shops, Montreal: 59 steel underframe coal cars, 1 steel underframe stores supply car, and 2 decapod locomotives.

The Timiskaming & Northern Ontario Ry. has been voted by the Ontario Legislature as follows:—\$50,000 for betterments to locomotives, superheaters, brick arches, etc., and \$10,000 for betterments to passenger cars, etc.

New York reports indicate that the U. S. Government will place some large rolling stock orders during the current year, probably covering 300,000 cars, and that the first instalment of about 60,000 will be placed during April. It is stated that master car builders have been devoting their time to the standardization of

bataan or Mexican mahogany. The window screens, sash locks, heating system, trap doors, steel vestibules, platforms, trucks and two-piece berth curtains, are all of the Pullman standard type. Following are other details:—

Length over end sills.....	73 ft. 6 in.
Length between truck centres.....	57 ft. 6 in.
Length over buffers.....	82 ft. 4½ in.
Hoppers.....	Duner Co.
Lighting.....	Electric and gas
Train connector.....	2 finger type, 30 voltage
Brakes.....	Westinghouse clasp type
Brake beams.....	Simplex clasp
Trucks.....	6 wheel
Journals.....	5 x 9 in.
Journal boxes.....	McCord

The illustration on this page shows one of the 10 consolidation locomotives being built for the Canadian Northern Ry., by Canadian Allis-Chalmers, Ltd., Toronto, some details of which have been given in previous issues. Four of these locomotives have already been delivered and the balance is expected to be delivered shortly. Following are the chief details:

Total weight.....	220,000 lb.
Weight on drivers.....	195,000 lb.
Tractive effort.....	39,684 lb.
Boiler, type.....	Extended wagon top
Boiler pressure.....	180 lb.
Firebox.....	64¼ by 110 13/16 in.
Grate area.....	49 sq. ft.

truck with McCord tender boxes, Simplex high speed tender brake beam, Westinghouse ET 6 brake with cross compound air pump and special air strainer. Other details are as follows:—

Weight on drivers.....	213,500 lb.
Weight, total.....	283,000 lb.
Wheel base of engine, rigid.....	16 ft. 6 in.
Wheel base of engine, total.....	35 ft. 1 in.
Wheel base of engine and tender.....	68 ft.
Heating surface, firebox.....	242 sq. ft.
Heating surface, tubes.....	3,398 sq. ft.
Heating surface, total.....	3,640 sq. ft.
Driving wheels, diar.....	63 in.
Journals, main.....	11 x 20 in.
Journals, others.....	10 x 20 in.
Cylinders, diar. and stroke.....	27 x 30 in.
Boiler, type.....	Extended wagon top, radial stay
Boiler pressure.....	180 lb.
Tubes, no. and diar.....	240—2 in.; 32—5½ in.
Tubes, length.....	20 ft.
Grate area.....	56.5 sq. ft.
Weight of tender loaded.....	166,000 lb.
Water capacity.....	9,000 U.S. gall.
Coal capacity.....	12 tons
Tank, type.....	Water bottom with vestibule connections

Truck wheel diar.....	34 in.
Journals.....	6 x 11 in.
Brake beam.....	High speed, M.C.B. heads

## Dominion Government Orders for Rolling Stock.

The Minister of Railways has been devoting considerable time recently, to se-

Consolidation Locomotive for Canadian Northern Railway

freight cars, and that eight different types, known as M.C.B. cars, have been agreed upon, with a view to evolving one standard type of car suitable to all roads. The average price of the standard type agreed upon at present, is given as \$3,000 each.

The Canadian Government Railways dining cars, 7 of which have been ordered from the Pullman Co., will be of steel, underframe, superstructure and exterior, and the interior finish will be of quarter cut oak with steel plates in the pantry and kitchen, and there will be seating capacity for 30 persons. Following are the chief details:—

Length over end sills.....	73 ft. 6 in.
Length between truck centres.....	57 ft. 6 in.
Length over buffers.....	81 ft. 10½ in.
Heating system.....	Pullman standard
Lighting.....	Electric and gas
Platforms.....	Pullman standard
Brakes.....	Westinghouse clasp type
Brake beams.....	Simplex clasp
Trucks.....	6 wheel Pullman standard
Journals.....	5 x 9 in.
Journal boxes.....	McCord malleable

The Canadian Government Railways sleeping cars, 14 of which have been ordered from the Pullman Co., as mentioned in our last issue, will contain 10 sections and 2 drawing rooms. They will be of steel, underframe, superstructure and exterior, and the interior finish will be of

Tubes, no. and diar.....	262-2 in.; 26-5½ in.
Tubes, length.....	15 ft. 3 in.
Heating surface, firebox.....	180 sq. ft.
Heating surface, tubes.....	2,946 sq. ft.
Superheater type.....	Locomotive Superheater
Co.'s top header.....	
Driving wheel base.....	16 ft. 6 in.
Wheel base, engine and tender total.....	60 ft. 2½ in.
Length, engine and tender over all.....	68 ft. 7½ in.
Cylinder, diar. and stroke.....	24 x 32 in.
Driving wheels, diar.....	63 in.
Journals, main.....	10 x 14 in.
Journals, others.....	5½ x 10 in.
Coal capacity.....	10 ton
Water capacity.....	6,500 imp. gall.

Canadian Government Railways have recently received 34 Mikado (2-8-2) locomotives from Canadian Locomotive Co. These are a portion of an order for 50 placed in the autumn, and some of them are being rented to the C.N.R. and G.T.R., to relieve the pressure on these companies motive power. The illustration given on pg. 145 is from one of those recently delivered, and the type built includes a number of the latest devices, covering, the Locomotive Superheater Co.'s latest type of superheater, Tate flexible staybolts, brick arch, vanadium steel frames, metallic packing, Walschaert valve gear, power reverse gear, Franklin hard grease cellars, Franklin fire door, radial buffers, extended driving box, vestibule cab, detroit lubricator, incandescent headlight, side boiler checks, pedestal type tender

curing extra rolling stock necessary, not only for the Canadian Government Railways, but also for the Canadian Northern Ry., which is now owned by the government. The latter road, owing to its financial difficulties, has not been in a position to make any purchases for some time past, and is in fact more in want of rolling stock than the Canadian Government Railways, so that the bulk of the orders placed recently, and to be placed in the near future, are for the C.N.R. Early in March, a series of conferences were held in Ottawa between the Minister and various officials, the Railways Department being represented by G. A. Bell, Assistant to the Minister; A. E. Warren, Chief Operating Officer; and L. Lavoie, Purchasing Agent; the Canadian Northern Ry., by D. B. Hanna, Third Vice President; A. J. Mitchell, Assistant to Vice President; S. J. Hungerford, General Manager, Eastern Lines; and A. L. Graburn, Assistant Superintendent of Motive Power, and the Canadian Government Railways, by W. U. Appleton, Superintendent of Motive Power, and G. E. Smart, Superintendent of Car Department. W. D. Robb, Vice President, G.T.R., also attended, as that company is to lease some of the locomotives to be ordered. Since then, a large number of orders have been

placed and others are being put through. Under the system in vogue at Ottawa, the Minister decides on the orders to be given, subject to ratification by the Privy Council, and no official announcement is made until the passing of the necessary orders in council.

We are officially advised that up to Mar. 20 orders in council had been passed authorizing the following orders:

Canadian Car & Foundry Co., Montreal, 5,000, forty-ton, standard, steel frame, single sheathed, box cars, \$2,750 each, total \$13,750,000.

Eastern Car Co., New Glasgow, N.S., 750, steel underframe, 41 ft., 40 ton, flat cars, \$2,370.40 each, total \$1,777,800.

Eastern Car Co., 650, fifty-ton, enterprise composite coal cars, \$3,179.50 each, total \$2,066,675.

Hart-Otis Car Co., Montreal, 250 ballast cars, with side dump only, \$3,040 each, total \$760,000.

Hart-Otis Car Co., 200 ballast cars, with side and centre dump, etc., \$3,125 each, total \$625,000.

National Steel Car Co., Hamilton, Ont., 1,000, forty-ton steel frame box cars,

that, expeditiously. Full details of what we propose will be given at a later date."

### Meritorious Services by Canadian Pacific Railway Employees.

The educational bulletins issued by the general superintendents of the company's various districts, record the following meritorious services performed by employees recently:—

Conductor F. V. Perry ran a snow plough during a heavy storm recently, when the regular man deserted the plough. His action is commendable.

Conductor Knapp, while in charge of a freight train recently, discovered 10 in. broken off switchpoint at Spicer siding. He immediately reported it to the section foreman and dispatcher in order that special attention could be given.

Locomotive man P. McLaren, Kenora Division, while running locomotive on passenger train, observed on opposite track what seemed to be a broken rail. He slowed down an approaching train, which he met, and told the crew to look

man Lyons, when approaching Tompkins station, noticed coal shed opposite station on fire. On arrival in yard, locomotive was cut off train and with assistance of conductor Simmons and trainman MacDonald, coupled on to flat car and dump car of coal that were standing in front of shed and they were hauled out of danger. A hole was chopped in the side of the building and locomotive spotted with blow-off cock opposite, blow-off cock opened, and this, together with aid of squirt hose and by shoveling snow on the roof, fire was brought under control, and almost extinguished before the citizens arrived to assist. It is almost certain that the building, as well as the two cars and contents, would have been completely destroyed had it not been for the prompt action on the part of the locomotive and train crew, as with the wind that was blowing at the time it would have been impossible for the citizens to have extinguished the fire.

**False Creek Seawall Suit.**—The Imperial Privy Council, according to a press cable of Mar. 20, has dismissed the Van-

Mikado Locomotive for Canadian Government Railways

\$2,750 each, total \$2,750,000.

Pressed Steel Car Co., New York, 50 tank cars, 8,000 imp. gal., with 50-ton trucks, etc., 25 for general service, \$3,926 each, total \$98,150, and 25 for water service, \$3,770 each, total \$94,250.

The orders above mentioned aggregate \$22,603,175.

The Canadian Car & Foundry Co. has an order for 250 standard, all wood, refrigerator cars, with metal draft arms, at \$4,097 each, and further orders are to be placed for both freight and passenger cars.

Canadian Locomotive Co., Kingston, Ont., has orders for 60 Mikado freight locomotives at \$62,000 each, and 10 switching locomotives at \$40,500 each.

Montreal Locomotive Works has orders for 50 consolidation freight locomotives at \$58,000 each, and 30 Pacific passenger locomotives at \$60,000 each.

The consolidation locomotives will be assigned to the Canadian Northern Ry., and the Mikado locomotives will be rented to the G.T.R., with the option of buying them.

Sir Robert Borden, in speaking in the House of Commons, on Mar. 19, said: "The Minister of Railways has had under very serious consideration the provision of rolling stock and equipment for railways. We are confronted with the immediate acquisition of some 10,000 miles of railway, which will bring the total state railway mileage of this country up to about 15,000. It is useless for us to have that railway unless it is properly equipped. The great crops that we hope for during the present year and next year, which are so essential for war purposes, must be transported—and, more than

out for the spot indicated. They did so and found a broken rail. His judgment and interest are commendable.

Conductor R. F. Nixon, Woodstock Division, while walking over the top of his train, noticed a car badly canted. He went down the side ladder of the car to investigate, and upon finding an arch bar broken, immediately stopped the train, removed the brake and rigging, and had the car moved carefully to the next siding, where it was set out. His vigilance and prompt action doubtless prevented an accident.

Conductor C. R. Rupp, Brandon Division, noticed corner of baggage car take a slight drop when train moving. He pulled the air and on examination it was found that bolt which holds spring hanger had broken, and allowed sand board to drop to rail. With the assistance of locomotive man W. L. Glendenning, the sand board was jacked up and car taken through to terminal. If the conductor had not been attentive and had not taken prompt action, a serious derailment might have occurred.

The valve crank and rod on low pressure side broke accidentally at noon hour, resulting in compressor getting beyond control (or in common terms, running away). The 8 ft. fly wheel was turning 500 revolutions a minute (normal 80 revolutions a minute). The noise, which was terrific, attracted Geo. Singleton, aged 18, formerly call boy, now hostler's helper at Schreiber, Ont., who immediately ran to the engine room and had to face the large fly wheel and turned off the steam, thus avoiding the possible loss of life of others and also the destruction of compressor, engine, dynamos and building.

Locomotive man Jas. Wilks and fire-

cover City Council's petition for leave to appeal the Supreme Court of Canada's decision in the action by Champion & White relative to the False Creek flats site. This was an action in which the Supreme Court held that the building of the sea wall by the Canadian Northern Pacific Ry. on an area granted by the city, had cut off entrance to plaintiffs' wharf. The reclamation work at this point was held up during the hearing of the action, and will be stopped entirely unless some arrangement can be made.

**Railways & Canals Department Salaries.** The estimates submitted in the House of Commons recently provided for the following increases in salaries, among others: Graham A. Bell, C.M.G., Assistant to Minister, and Financial Comptroller of Department, from \$4,500 to \$5,000; E. E. Fairweather, Solicitor, from \$4,500 to \$5,000. Alex. Ferguson, Inspecting Engineer, has been transferred from the outside to the inside service, at his previous salary, \$4,000.

**U. S. Exports through Canada.**—A St. John, N.B., press dispatch of Mar. 14 states that it is reported that the U. S. Government has asked the C.P.R. if it will be able to handle 200,000 tons of export freight a month during the coming summer, and haul it to St. John for shipment. The C.P.R. is stated to have replied in the affirmative.

The Northern Ex. Co. has been registered under the British Columbia Companies Act, as an extra provincial corporation, to carry on business within that province, with head office at Vancouver, and H. Swinford, General Agent, Northern Pacific Ry., Vancouver, as its attorney.

# Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

**Alaska Ry.**—Since the United States Government undertook the build a railway in Alaska, the railway mileage of that district has been considerably increased. The Susitna route, which has been adopted, extends from Seward, on Resurrection Bay, to Fairbanks, on the Tanana River, 471 miles. This route includes the existing Alaska Northern Ry., which runs from Seward through the Kanai Peninsula, for 71 miles, to Turnagain Arm. The Alaska Northern Ry. has been purchased by the government for \$1,150,000. From Turnagain Arm, the route extends through the Susitna Valley and across Broad Pass to the Tanana River, and from there to Happy Station, at mile 460, where it connects with the Tanana Valley Rd., and from there on to Fairbanks. The Tanana Valley Rd. is being operated by the government under lease, pending its purchase. The work done to date includes the renovation of the old railways, and the construction of additional mileage, bringing the total mileage in operation after three years' work, to 299.5. In addition, 51 miles is completely graded and ready for track-laying, and 107 miles are partially graded, making altogether 457.5 miles completed or under construction. About 14 miles of a gap remains between the present end of construction and the Tanana River. (Oct., 1917, pg. 395.)

**Calgary & South Western Ry.**—The Alberta Legislature has incorporated a company with this title to build a railway from Calgary to the western boundary of the province, in Tp. 18, 19 or 20, with a branch to the C.P.R. Calgary-Edmonton line at Okotoks. It is also given power to acquire by purchase, lease or otherwise, the portion of the right of way of the projected Alberta-Hudson Bay Ry., covering generally the authorized route of the C. & S.W. Ry., together with any plans of surveys, and any authorization of the Government for the building of any line owned by the A. & H. B. Ry. The company's authorized capital is fixed at \$2,500,000; its office is at Calgary, and its provisional directors are: A. L. Smith, W. C. Robertson, R. E. Manning, all barristers of Calgary.

When the measure was before the legislature Mar. 5, it was stated that the route of the projected railway would be from Calgary via Priddis, to Millarville, thence through the oil fields district to Black Diamond, and from there westerly to the anthracite coal fields, the leases for which were held by P. Burns; that in order to avoid unnecessary duplication of railways in the vicinity, it was proposed to purchase the rights of the Alberta-Hudson Bay Ry. where the two routes coincided, or to arrange for the joint use of tracks; that it was not desired that any provincial aid be given the line; that the money for construction was already available, and that the line would be built as speedily as possible.

P. Burns is reported to have stated in Calgary, Mar. 8, that the coal areas would be definitely opened during the summer, and the railway located; that during next winter the rock work and side hill cuts on the right of way would be done, so as to have things ready for finishing up the grading and track laying in the spring of 1919. The coal mines which would be first opened up would be those at the head waters of Sheep Creek. (Mar., pg. 98.)

**Canadian Niagara Bridge Co.**—The Dominion Parliament is being asked to

incorporate a company with this title to construct a railway and general traffic bridge across the Niagara River, with the necessary approaches and terminal facilities. The proposed starting point of the bridge in Canada is not more definitely located, than from some point in Bertie or Welland Townships. Cahill & Soule, Hamilton, Ont., are solicitors for the applicants.

**Canadian Government Railways.**—Tenders are under consideration for the construction of a frame station building at Belledune, N.B.

A press report states that some additional siding facilities are to be provided at Sackville, N.B., to take care of mail, express and baggage traffic to and from Prince Edward Island by the car ferry route.

It is reported that during this year about 130 miles of light rails on the line are to be taken up and will be replaced with 80 lb. rails at present on the St. John & Quebec Ry. The rails taken up from the I.R.C. will be relaid on the St. J. & Q. Ry., which is owned by the Province of New Brunswick, and operated by Canadian Government Railways.

Tenders were received to Mar. 26 for building 51 section houses at various points between Moncton, N.B., and Winnipeg, Man. (Jan., pg. 12.)

**Central Canada Ry.**—A press report of Mar. 18, stated that the work on the piers of the bridge at Peace River Landing had been completed, and that everything was being got ready for the starting of the steel superstructure. (Mar., pg. 98.) See also Edmonton, Dunvegan & British Columbia Ry.

**Central Vermont Ry.**—The Board of Railway Commissioners has directed the company to lower a culvert on its line near Farnham, Que., upon the application of the Department of Agriculture to promote the cultivation of land in the vicinity.

**Eastern Maine Rd.**—W. H. Manfield, Bangor, Me., President, was in Fredericton, N.B., Mar. 9, in consultation with the New Brunswick Government with, it is said a view of building a branch line from his projected line to the St. John & Quebec Ry. The report states that the government did not look favorably on the proposal.

**Edmonton, Dunvegan & British Columbia Ry.**—J. D. McArthur, President, is reported to have said in Vancouver, B.C., Mar. 8, that no new construction will be gone on with this year, on the E.D. & B.C.R., nor on the Central Canada Ry. and Alberta & Great Waterways Ry., but that it is intended to finish up all work in hand, and to proceed with betterments and the development of traffic. (Mar., pg. 98.)

**Grand Trunk Pacific Ry.**—The Dominion Government has granted to the G.T.P. Branch Lines Co., lot 11, north side 16th St., east of Central Ave., Battleford, Sask., for terminals for the company's Cutknife Branch. (Feb., pg. 57.)

**Grand Trunk Ry.**—The company has completed its new brick freight shed at the corner of Sandwich St., and Marentelle Ave., Windsor, Ont., and has begun the tearing down of the old shed at Brock St., on the river front. This old building was erected in 1853, by the old Great Western Ry., and was first used for traffic Jan. 31, 1854, it being the company's original passenger station in Windsor. (Feb., pg. 57.)

**Great Northern Ry.**—The company's new cut off along Brunette Creek, near Vancouver, B.C., has been completed, and a train service has been operated over it since Mar. 1. The work included the strengthening of the tracks along the creek, and the building of a steel and concrete bridge to carry the north road at Coquitlam. The cut off eliminates a level crossing and saves half a mile between Vancouver and New Westminster. (Feb., pg. 57.)

**International Bridge & Terminal Co.**—The Dominion Parliament is being asked for power to construct railway lines, not exceeding 6 miles in any one case, to connect the company's projected bridge with the works and railways of other companies. It is also desired that power be given to issue bonds for \$40,000 a mile in respect of the lines to be built. Maccraken, Henderson, Green and Herridge, Ottawa, are solicitors for applicants.

**Kettle Valley Ry.**—The question of taxation is said to be holding up the development of the Copper Mountain district. The matter is now before the B.C. Legislature, and if a satisfactory settlement can be made, the development will, it is said, go on. The works include the building of a branch line from Princeton to Copper Mountain. A Vancouver press report of Mar. 21 said a contract for building the branch had been let to a Vancouver man. (Mar., pg. 98.)

**Lacombe & Blindman Valley Ry.**—A delegation of residents of Rimbey and vicinity waited upon the Alberta Government Mar. 11, to urge the completion of this partially constructed railway. The grading has been finished to Rimbey, and ties have been placed thereon. Track has been laid to Bentley, from Lacombe, but the remaining 17 miles still requires the rails and ballasting in order that the line might be operated. (Oct., 1917, pg. 393.)

**Montreal, Joliette & Transcontinental Jet. Ry.**—The Dominion Parliament is being asked to incorporate a company with this title to build a railway from Montreal northerly through the counties of Hochelaga, L'Assomption and Montcalm to Joliette, thence northerly and westerly to St. Michel des Saints, in Berthier county, and thence to the National Transcontinental Ry., a distance of about 180 miles. L. J. Kehoe, Ottawa, is solicitor for applicants.

**Port Canada Docks Ry. Co.**—The New Brunswick Legislature is being asked to extend for two years the time within which this company may build its projected railway. The company was originally incorporated in 1907 as the Canadian Terminal Ry. Co., to build a line from L'Etang Harbor to St. Croix, with branch lines. In 1912 an extension of time for construction was granted to a new set of provisional directors, of whom G. W. Marsh, St. George, N.B., was the most active. A further extension of time for construction was granted in 1915, and the name of the company was changed to Port Canada Docks Ry. (Mar., 1915, pg. 84.)

**Prince Edward Island Ry.**—C. A. Hayes, General Manager, Eastern Lines, Canadian Government Railways, with a number of other officials, returned to Moncton, N.B., Mar. 7, after a trip of inspection over the P.E.I.R. and the car Tormentine. A Charlottetown press report, Mar. 7, stated that Mr. Hayes made a statement there for publication to the effect that some preliminary steps would

be taken this year towards standardizing the gauge of the railway, but he could not say when the main work would be started. Ditching machines would be provided and the whole of the lines on the island would be ditched. The branch line from Emerald to Borden, which now carries the bulk of the traffic, would be practically rebuilt. The shortage of ties and rails would delay the widening of the gauge. (Oct., 1917, pg. 394.)

**St. John & Quebec Ry.**—The Lieutenant Governor in his speech at the opening of the New Brunswick Legislature, Mar. 7, said:—"The construction of the St. John & Quebec Ry. between Gagetown and Westfield has proceeded during the year as rapidly as labor conditions and scarcity of material would permit. On account of the extraordinary demand for steel rails for use overseas, as well as in this country, the Canadian Government Railways were unable to carry out their undertaking to provide the rails necessary for the completion of this section, but arrangements have recently been made preliminary to the taking up of the steel rails upon the Northern New Brunswick & Seaboard Ry., authority for which was given at the last session of the legislature. Construction of the road is at such a stage that with the assurance of steel for the track-laying, the company is able to look forward to completion of the railway, ready for transportation for the next fall and winter."

A press report Mar. 8, stated that arrangements have been made with the Dominion Government, under which 130 miles of the heavy steel rails on this line between Gagetown are to be taken up and handed over for use as relaying rails on the Intercolonial Ry., and that the rails taken up from that line will be laid on the St. J. & Q. Ry. (Jan., pg. 12.)

**Timiskaming & Northern Ontario Ry.** A deputation from the Gowganda district waited on the Ontario Government, Mar. 1, and asked for a grant of about \$7,000 a mile, towards the building of a 50 mile railway from Elk Lake to the Gowganda mining area. The deputation said if the government would not build a branch of the T. & N.O. Ry., it might be possible with such a grant to finance the undertaking privately. It was reported that possibly a grant of \$100,000 could be arranged. The legislature, however, was prorogued without any provision being made.

**British Columbia's Railway Liabilities.** British Columbia's financial statement for 1917, shows its railway liabilities financing under two heads, the first consisting of amounts paid for interest and on loan account, and the second showing the authorized and issued securities for which the province is liable both for principal and interest. The first section shows a total of \$267,056.93, of which are termed "deferred assets," made up as follows:—Nakusp & Slocan Ry., paid for interest, \$296,374.80; Pacific Great Eastern Ry., paid for interest, \$1,053,826.27; P.G.E. Ry., loan account, \$1,319,366.86. The second section comprises the following:—Canadian Northern Pacific Ry., securities due April 2, 1950, authorized \$47,975,000, issued \$40,157,524; Pacific Great Eastern Ry., due July 15, 1942, authorized and issued, \$20,160,000; Nakusp & Slocan Ry., due July 1, 1918, authorized and issued, \$647,072.

The annual tours of circuses round the country will not take place this year, the United States railways having issued notices that they will not handle circus trains.

## Increases in Freight and Passenger Rates Approved by Dominion Government.

The following order in council, P.C. 632, was passed at Ottawa, Mar. 14:—The Governor General in council, pursuant to the provisions of sec. 56 of the Railway Act, chap. 37, Revised Statutes of Canada, 1906, has had under consideration the petitions referred to in the order in council P.C. 229, of Jan. 30, 1918, and other petitions appealing from the Board of Railway Commissioners order, dated Dec. 26, 1917, providing for a general advance in freight and passenger rates, and has heard counsel for the petitioners and others, and has heard a further argument advanced at the adjourned hearing of such appeal on Mar. 1, 1918, and has considered all cases filed and all replies and rejoinders, and is pleased to order that the said order of the Board of Railway Commissioners be amended, by providing that it shall cease to operate one year after the declaration of peace following the present war.

The Governor General in council is further pleased to order that the going into effect of the said order as herein amended be not further postponed. Whereof the Board of Railway Commissioners and all other persons whom it may concern are to take notice and govern themselves accordingly. Certified copies hereof shall forthwith be transmitted to the Board of Railway Commissioners to counsel for the petitioners and other interested parties.

## Freight Rates on Clay, Sand, Gravel and Crushed Stone.

The Chief Railway Commissioner's judgment in the so-called 15% rate case, published in Canadian Railway and Marine World for February, on pg. 51, contained the following paragraph:—"Common clay and sand, gravel and crushed stone are commodities which cannot, in my view, stand a 15% increase. I would, however, permit the companies to increase their rates on these commodities both in eastern and western territories, by adding to existing rates not more than 5c a ton."

A circular issued by the board's secretary says:—"The reference to common clay and sand, gravel and crushed stone . . . was intended to be understood in the collective and not the particular sense; that is to say, the specific increase of not more than 5c a ton is to be understood to apply to all the commodities which have hitherto been carried under the special mileage scale, or under specific commodity items of the tariffs, at the same rates as those particularized in the judgment. Any tariffs in conflict with this announcement which have already been filed to take effect on Mar. 15, 1918, or which, bearing an earlier effective rate, were postponed in compliance with the order in council, must be amended in accordance herewith."

## Special Taxation of Canadian Pacific Railway.

The following order in council, P.C. 661, was passed at Ottawa, Mar. 14:—The Governor General in council, on the recommendation of the Prime Minister, is pleased, under the authority of the War Measures Act 1914, to order as follows:

The Canadian Pacific Ry. Co. shall pay to the Government of Canada, the following special taxes:—

One-half of its net earnings from railway operation, in excess of 7% on its common stock (after paying fixed charges, appropriation for pension fund, and dividends on preferred stock).

Income tax on its special income (inclusive of all its income, except earnings from railway operations), under the provisions of the Income War Tax Act, 1917, or any amendment thereof, hereafter enacted.

Provided, that the total amount to be paid each year by the company shall not be less than its net earnings in such year from railway operations, and from special income as defined above, in excess of 10% on its common stock (after paying fixed charges, appropriation for pension fund and dividends on preferred stock) up to \$7,000,000, or the amount by which its net earnings from railway operations exceed the net earnings from railway operations for the fiscal year ended Dec. 31, 1917, due to the increase in freight and passenger rates granted by the Board of Railway Commissioners order, dated Dec. 26, 1917.

The Governor General in council may make such regulations to provide for the full and effective carrying out of the provisions of these orders and for the collection, periodically, of the taxes herein imposed as to the Governor General in council may seem fit.

Payment in full of special taxes under this order shall in respect of earnings from and after Jan. 1, 1918, relieve the company of liability under the Business Profits War Tax Act, 1916, and any other Dominion act of like nature hereafter enacted, and (save as hereinbefore provided), under the Income War Tax Act, 1917.

This order shall be deemed to have come into force and effect on Jan. 1, 1918, and to continue in force and effect during the present war, and until further ordered.

## Railway Finance, Meetings, Etc.

**Greater Winnipeg Water District Ry.** Following is a report of operations for 1917:—Earnings for carrying freight, etc., \$396,402; cost of operation of railway, \$231,235; interest charges on capital invested in railway construction, \$90,855, and railway equipment, \$11,876, a total of \$102,731. Net credit on operating for the year, \$62,437. The debit balance on Dec. 31, 1916, was \$14,584, and the credit balance at the end of 1917, after paying all costs of operation, maintenance and interest on cost of railway equipment, \$47,851. For the period to Mar. 9, 1918, receipts from freight and passenger traffic are reported to have been \$11,845, and operating expenses \$5,715. There were 878 passengers carried east, and 842 west.

**Lacombe & Blindman Valley Electric Ry.**—The Premier of Alberta is reported to have informed a delegation Mar. 12, that this light railway from Lacombe towards Rimbey was paying operating expenses, and that as soon as it was completed to Rimbey, a profit might be expected.

**Timiskaming & Northern Ontario Ry.** Revenue from passenger traffic for January, \$44,130.48; from freight traffic, \$116,511.24; total revenue, \$160,641.72, against \$44,958.79 passenger, \$101,717.52 freight, and \$146,676.31 total revenue for Jan., 1917.

There was a further rearrangement and reduction of passenger trains on the principal lines Mar. 3 and 10, under the direction of the Canadian Railway Association for National Defence.

# Traffic Orders by Board of Railway Commissioners.

## Minimum Weights of Tan Bark.

General order 221, Feb. 26. Re Canadian Manufacturers' Association's application for an order disallowing increased carload minimum weights of tan bark, published in Supplement 8 to the C.P.R. Tariff C.R.C. no. E-3225, and Supplement 1 to G.T.R. Tariff C.R.C. no. E-3477, heard at Ottawa, Nov. 20, 1917: It is ordered that the minimum carload weights of tan bark, when carried under special commodity tariffs, be as follows: For cars not over 30½ ft. long, inside or platform measurement, 21,000 lb. For cars over 30½ ft. and not over 34½ ft. long, inside or platform measurement, 23,000 lb. For cars over 34½ ft. and not over 36½ ft. long, inside measurement for box and stock cars, and not over 36 ft. 10 in., platform measurement for flat cars, 28,000 lb. The schedules to give effect to this order to be published and filed to take effect not later than Mar. 11, 1918.

## Oleomargarine as a Packing House Product.

General order 222, Mar. 19. Re Canadian Manufacturers' Association's complaint, on behalf of the packing industry, that railway companies refuse to accept oleomargarine as part of minimum weight of packing house products, loaded in so-called pedlar cars on private sidings. Heard at Ottawa, Mar. 19, the Canadian Manufacturers' Association, Canadian Freight Association, Toronto Board of Trade, Pere Marquette Ry. and the Canadian Pacific, Grand Trunk, and Canadian Northern Railways being represented: It is ordered that the tariffs of the said railway companies, providing for the transportation of packing house products, fresh meats, and other articles in pedlar cars, be revised so as to include oleomargarine as packing house products.

## Stop-over for Completion of Live Stock Loading.

27034. Mar. 19. Re complaints of Toronto Board of Trade, the William Davies Co., of Toronto, against charge of \$5 a car by Pere Marquette Ry. for a stop-off for completion of loading of live stock. Heard at Ottawa, Mar. 19: It is ordered that the stop-over charge of \$5 a car for completion of loading of live stock be disallowed; and that the Pere Marquette Ry. be required, within one week from date of this order, to publish and file a new tariff showing a stop-over charge of \$5 a car.

## Express Rates on Cream in British Columbia.

27036. Feb. 26. Re complaints of Beechnut Creamery of Nelson, B.C., Nelson Board of Trade, Associated Boards of Trade of Eastern British Columbia, British Columbia Dairymen's Association, Curlew Creamery Co. of Curlew, Wash., C. Powlett, of Cowley, Alta., and Cranbrook Retail Merchants' Mutual Protective Association, against rates charged by Dominion Express Co. on cream in British Columbia. Heard at Victoria, B.C., June 5, 1917; Nelson, B.C., June 16, 1917, and Calgary, Alta., June 18, 1917: It is ordered that the Dominion Express Co.'s special mileage tariff for carriage of cream in British Columbia be extended beyond 75 miles, as follows:

Miles.	5 gal.	8 gal.	10 gal.
Over 75 and not over 100	40c.	45c.	60c.
Over 100 and not over 150	50c.	55c.	68c.
Over 150 and not over 200	60c.	65c.	75c.

The said new rates to be made effective not later than April 1, 1918. And it is

further ordered that the application for a reduction in the rates for the carriage of cream for distances not over 75 miles in British Columbia be refused.

## Cordwood Rates on A.C. & H.B. Ry.

27058. Mar. 6. Re complaint of Lyons Fuel & Supply Co., Steelton, Ont., against rates charged by Algoma Central & Hudson Bay Ry. on cordwood. Heard at Toronto Oct. 23, 1917, the A.C. & H.B. Ry. and the Standard Chemical Iron & Lumber Co. of Canada, being represented: It is ordered that the A.C. & H.B. Ry. forthwith amend its special local commodity tariff, C.R.C. 388, in so far as it applies on cordwood, in carloads, to provide the following rates, viz.: For distances not over 11 miles, 2c per 100 lb.; for distances over 11 miles and not over 20 miles, 2½c per 100 lb. That the said company be permitted, on lawful notice, to cancel its special local freight tariff on charcoal wood, C.R.C. 417, applicable only when the product of the said wood is shipped over the company's railway, and in place thereof and subject to the same application, to publish and file a special tariff to provide the following rates, viz.: Over 20 miles and not over 30 miles, 80c a cord; over 30 miles and not over 40 miles, 85c a cord; over 40 miles and not over 50 miles, 90c a cord. And whereas the C.P.R. and G.T.R., under the board's judgment of Dec. 26, 1917, increased their special charcoal wood rates by 15%; and whereas, by order in council P.C. 229, the time when the said increases were to become operative was extended until Mar. 15, 1918—It is therefore further ordered that, subject to the provisions of the said order in council, and such other order or orders in council as may issue in the premises, the A.C. & H.B. Ry. be permitted, on lawful notice, to increase its rates on charcoal wood as follows, viz.: Over 20 miles and not over 30 miles, to 92c a cord; over 30 miles and not over 40 miles, to 98c a cord; over 40 miles and not over 50 miles, to 103½c a cord.

## Cut Glass Rates.

27068. Mar. 16. Re Wallaceburg Cut Glass Works' application for lower rating than provided in Canadian Freight Classification 15 for cut glassware. Heard at Windsor, Ont., Nov. 22, 1917: It is ordered that the Pere Marquette Ry. publish and file a joint commodity tariff, applying the published and filed 3rd class rates from Wallaceburg, Ont., to Toronto and Montreal on cut glass jars, value not exceeding \$5 a doz., and so receipted for; and on cut glass tumblers, value not exceeding \$1 a dozen, and so receipted for, packed in barrels or boxes, and at owner's risk or breakage, in straight or mixed carloads, minimum weight 20,000 lb. a car. That the said tariff become effective not later than April 8, 1918. That the application for a reduction of the less than carload rating of Canadian Freight Classification of cut glassware be refused.

## Pere Marquette Railway Tariff.

27069. Mar. 16. Re Pere Marquette Ry.'s application for permission to cancel Canadian Northern Ry. as a party to its tariff C.R.C. 2048: Upon reading what is filed in support of the application, the Page Wire Fence Co., and the McGregor, Banwell Fence Co. offering no objections; and upon the recommendation of the board's Chief Traffic Officer, it is ordered that the P.M. Ry. be authorized to cancel the Canadian Northern Ry. as a party to its said tariff.

## Inspection of Goods Covered By Bill of Lading.

27079. Mar. 19. Re application of R. W. Hannah, of Toronto, for cancellation of the following clause on the order bill of lading approved by the board: "Inspection of goods covered by this bill of lading will not be permitted, unless provided by law, or unless permission is endorsed on this original bill of lading or given in writing by the shipper." Heard at Toronto, Feb. 15, 1918, the applicant, the Canadian Manufacturers' Association, Canadian Freight Association, the Toronto and Montreal boards of trade, the Grand Trunk, Canadian Pacific, and Canadian Northern Railways, and the Michigan Central Rd. being represented: It is ordered that the application be refused.

## Coal Rates to Preston, Hespeler and Guelph.

27081. Mar. 21. Re complaints of City of Guelph, the Preston, Hespeler, Kitchener, Waterloo, and Elmira boards of trade, and Hall-Zryd Foundry Co. and R. Forbes Co., that the rates on coal from the frontier gateways are excessive and discriminatory: Upon hearing the complaints at Toronto, Dec. 11, 1916, the City of Guelph, the Preston, Kitchener and Montreal boards of trade, the Dominion Sugar Co., Canadian Buffalo Forge Co., Consolidated Rubber Co., Canadian Manufacturers' Association, and Canadian Retail Coal Association being represented; and upon reading the further written submissions filed, and the recommendation of the Board's Chief Traffic Officer, it is ordered that the rates published on coal, in carloads, from Buffalo, Black Rock, and Suspension Bridge, to Preston, Hespeler and Guelph, Ont., in G.T.R. tariff C.R.C. no. E-3766 and Michigan Central Rd. tariff C.R.C. 2748, which became effective Mar. 15, 1918, be disallowed, and that in lieu thereof the following rates per ton of 2,000 lb. be published: To Preston, \$1.03; to Hespeler, \$1.03; to Guelph, \$1.08.

## Milling in Transit Arrangements at Montreal.

27085. Mar. 18. Re application of Montreal Board of Trade, on behalf of Dominion Flour Mills, Ogilvie Flour Mills, and St. Lawrence Flour Mills, for an order disallowing the portion of the following tariffs: Supplement 33 to C.R.C. no. E-1196; supplement 6 to C.R.C. no. E-3120; supplement 1 to C.R.C. no. E-3137; supplement 1 to C.R.C. no. E-3214, cancelling the milling in transit arrangement on grain milled at Montreal, and reshipped to points on the Canadian Government Railways, also to Halifax, N.S., for export; and re order 25904, Feb. 26, 1917: Upon reading what was filed subsequent to the hearing at Ottawa, Feb. 21, 1917, in support of the application, and on behalf of the C.P.R.; and upon the recommendation of the Board's Chief Traffic Officer, it is ordered that the transit arrangements at Montreal, applicable to grain from Western Canada handled by the C.P.R. via the all-rail or lake and rail routes, the products of which are reshipped to destinations on or via the Intercolonial Ry., or for export via Halifax, which were sought to be cancelled and withdrawn by the C.P.R. by certain supplements to its tariffs appearing in the recital hereto, be continued on a uniform basis of a charge of 2c per 100 lb. for the stop-over services at Montreal; the said charge to be an addition to the published tariff rates from Port Arthur and Fort William, or from the lake ports, as the

case may be, to the destinations of the products of the said grain; and it is also ordered that, upon the publication and filing of the tariffs to give effect to this order, order 25904, Feb. 26, 1917, be rescinded.

### Canadian Pacific Railway Construction, Betterments, Etc.

**Manitoba District.**—Tenders were received to Mar. 27, for the construction of reinforced concrete piles and slabs, rail concrete culverts, concrete arches and bridge piers required on the Manitoba District.

**Automatic Protection Signal Installation.**—We are officially advised, in connection with the installation of automatic protection signals at Rosser, Poplar, Bradbury, Winnipeg Beach and Whyte-wold, Man., referred to in Canadian Railway and Marine World for March, that the signals are to be three position, upper right hand quadrant, top of mast, low voltage electric, of the permissive type, designated by pointed end blades and staggered lunar white marker lights. The control will be by continuous track circuits extending through the station limits. The current for each track circuit will be supplied from three cells of primary battery connected in multiple, with a resistance unit in series with positive side of battery and rail, each circuit averaging about 3,000 ft. long. All track relays will be wound to 4 ohms resistance and uniform to Railway Signal Association specifications. Switch boxes at switches will shunt at the relay side of the track circuit and break the continuous circuit when the switch is thrown. No. 9 solid R.C.S.D. copper of the Railway Signal Association's specifications will be used for all leads from battery to track, track to relays, track to switch boxes and battery to signals; No. 14 wire as above will be used for cable from pole line to functions; no. 10 copper clad double braid weather proof wire will be used for line work.

**Saskatchewan District.**—Tenders are under consideration for the erection of a 100 ft. extension to the brick freight shed at Regina; the erection of brick boiler houses at Weyburn and at Swift Current; the erection of frame freight sheds at Varwood and Assiniboia; the extension of the car shops, ice house, and stockyards and the erection of concrete ash pits at Moose Jaw; the erection of a frame locomotive house at Colonsay; the laying of pipe lines at different points in the district, and the construction of three large concrete culverts.

We are officially advised that the present car shop at Moose Jaw is 165 x 65 ft., and that the addition will be a 100 ft. extension at the eastern end, with the necessary additional trackage.

Grant Hall, Vice President and General Manager, Western Lines, was in Regina, Mar. 12, where he was waited upon by a delegation representing various sections of the southwestern part of the province, to urge the construction of a branch line there as a war and greater food production measure. This is the district south of the Weyburn-Lethbridge line, through which a number of surveys have been made, one of them being for a line to the International Boundary.

**Alberta District.**—A press report states that the coaling plant at Lethbridge will be moved to Bow Island. As stated in Canadian Railway and Marine World for March, a new coaling plant is to be erected at Lethbridge.

We are officially advised that it is not contemplated to do anything in the way of the completion of the line between Manyberries and Altawan at present. This is the 32 mile uncompleted link of the Weyburn-Lethbridge line.

**British Columbia District.**—We are officially advised that the details of the projected transfer slip at Vancouver have not yet been decided upon; and that the passenger car repair shop to be built at Vancouver will be a leanto, on one side 225 x 12 ft. wide, and 75 x 25 ft. on the end of the present building, and that the necessary track extensions will also be made. (Mar., pg. 102.)

### Freight Rate Increases in the United States.

Washington, D.C., press dispatch, Mar. 10:—Following the recent 15% increase of class and commodity rates in Canada, the Interstate Commerce Commission has authorized a proportionate increase in rates from points in the U.S. to Canada on the leading railways. The lines affected directly are the Grand Trunk, Minneapolis, St. Paul and Sault Ste. Marie, Great Northern, Canadian Northern, Canadian Pacific and Duluth, Winnipeg and Pacific.

Washington, D.C., press dispatch, Mar. 15:—A general increase of 15% in commodity rates was granted today by the Interstate Commerce Commission to railways west of the Mississippi and north of the Ohio and Potomac Rivers, supplementing a similar increase allowed last June in class rates. The order applies only to articles shipped in large quantities, such as coal, brick, grain, food-stuffs, oil, stone, cement, lumber and other staple products shipped under the commodity classification. The new rates will go into effect as soon as railways file new tariffs, probably within a few weeks. The action will add about \$58,000,000 to the revenue of the eastern roads, although it will not actually increase their earnings, since the sum will revert to the government under the system of common operation, and railways will be paid on the basis of a fixed compensation outlined in the railway bill, just passed by Congress.

### Grand Trunk Railway Dividends Discontinued.

London, Eng., cablegram, Mar. 17: The Grand Trunk Ry. has issued a statement deeply regretting their inability to pay dividends on guaranteed or preference stocks owing to the exceedingly unfavorable results of the operations in the past year, arising out of circumstances entirely beyond the control of the management, notwithstanding that the company carried by far the largest traffic in its history. The enormous increase in wages, fuel, and all materials due to war conditions caused an immense increase in working expenses. Every effort was continuously made throughout the year to obtain an increase in rates to meet in some measure these serious conditions. Although these efforts were unsuccessful, the directors are hopeful that looking to the precedent established by Great Britain at the commencement of the war for the protection of British railway interests, and proposed in the legislation now under consideration by Congress regarding U.S. railways. The Canadian Government will in the near future take such action as will enable the companies to meet the present unparalleled war conditions.

### Dominion Aid for Canadian Northern and Grand Trunk Pacific Railways.

In the main estimates presented to the House of Commons, Mar. 22, provision is made for a loan of \$7,500,000 to the Grand Trunk Pacific Ry., \$3,000,000 of which is a revote of the unused portion of the loan voted in 1917. This loan is to be repayable on demand and to bear interest, payable half-yearly, at the rate of 6% a year. It is to be used for the payment of interest on G.T.P.R. and G.T.P.R. branch lines bonds, to meet deficits in the operations of the G.T.P.R., and to pay for betterments and equipment for that system. It is to be secured by a mortgage upon the company's undertaking, and it is to be expended subject to the government's direction. The company has agreed that it will constitute its board of directors as may be required from time to time by the government.

Another item provides for a loan of \$25,000,000 for the Canadian Northern Ry. The appropriation is made by way of loan, because, although the government has acquired the whole of the C.N.R. common stock, it has continued the C.N.R. Co. as a corporate entity. The government is thus making a loan to a company which it controls. The loan is to be made on the same terms as to payment of interest and repayment of principal as that to the G.T.P.R., and is to be secured by a mortgage on the C.N.R. The money is to be used to pay interest on debentures and maturing loans of the C.N.R., and to meet the cost of construction, betterments and equipment. Material for betterments and new equipment is being procured by the government.

The House of Commons, without discussion as to details, has voted one-sixth of the total amount of all the estimates.

In connection with the votes above mentioned, a return has been made by the Department of Railways, showing the distribution of the \$25,000,000 loan to the Canadian Northern Ry. in 1917. The return states that \$1,750,000 was paid to the Central Trust Co., New York, in payment of a loan to the C.N.R. The Guaranty Trust Co., New York, was paid \$300,000 in reduction of a loan, and the Columbia Trust Co., New York, received \$1,500,000.

The railway's rolling stock securities demanded a payment of \$4,976,500 for principal of equipment bonds, and of \$1,075,002, interest on equipment bonds. The remainder of the \$25,000,000, amounting to approximately \$15,400,000, was divided between the 13 companies forming the C.N.R. system. The \$25,000,000 was paid as follows:—

Nov. 19, 1917.....	\$12,500,000.00
Nov. 28, 1917.....	2,540,421.97
Dec. 10, 1917.....	54,750.00
Dec. 27, 1917.....	1,983,503.47
Jan. 9, 1918.....	1,250,000.00
Jan. 18, 1918.....	2,000,000.00
Jan. 24, 1918.....	2,000,000.00
Jan. 30, 1918.....	2,017,460.77
Feb. 4, 1918.....	653,863.79
Total .....	\$26,000,000.00

The Grand Trunk Pacific Ry. started a double weekly steamship service between Seattle, Victoria, Vancouver and Prince Rupert, Mar. 17, and announced that the direct service to Alaska would be resumed June 24.

The C.P.R. has been authorized by the Board of Railway Commissioners to start its morning train 509 from Montreal for Ottawa at 8.20, instead of 8.15 a.m., and to start its afternoon train from Montreal for Ottawa at 4.45 instead of 4.30.

# Canadian Transportation Men, Engineers, Etc. in the War.

Canada Steamship Lines, Ltd., honor roll shows 5 employees to have been killed in action, 9 to have been wounded and 111 as being on active service.

**Grand Trunk Pacific Ry. Employees.**—A press report states that 759 G.T.P.R. employees enlisted for military service; of these 87 have been reported killed or died from wounds, 10 are prisoners and 77 have been discharged from various causes.

**The Timiskaming & Northern Ontario Railwaymen's Patriotic Association**, up to Nov. 30, 1917, had contributed \$19,656.75 to the Red Cross; \$24,534.61 to the Canadian Patriotic Fund, and \$13,765.16 direct

worth of British and German shells and hauled them back to the rear on their now famous light railways. Late one afternoon one large dump caught fire through spontaneous combustion, or perhaps a defective shell, and in the first explosion half a score of men were wounded. A young Canadian locomotive man, a sergeant, who in peaceful days used to drive the C.P.R. Imperial Limited from Moose Jaw to the west, in spite of the bursting ammunition, backed his little locomotive into the middle of the dump where the fire was blazing most fiercely. He connected a hose with his main steam

troops declare with confidence that they will."

The young locomotive man mentioned in Roland Hill's dispatch is said to be Sergeant Jack Manahan of Moose Jaw, Sask., who was mentioned in a previous dispatch for gallantry under fire. He comes from Perth, Ont. His wife and family live in Moose Jaw.

**The March Record.**—The Militia Department issued early in March a summary of the work done by Canadian railway troops in France and Belgium in January, as follows:—"Nine miles of broad gauge track were laid and 33 miles of narrow gauge. The average number of miles of broad gauge track maintained during the month was 49, and of the narrow gauge, 141 miles. The men were employed in locating, grading, ballasting, and laying lines. About 6,100 Canadians were engaged on the narrow gauge and 1,100 on broad gauge lines."

## PERSONAL NOTES.

**Lieut. F. P. V. Cowley**, who has been transferred from junior to associate member of the Canadian Society of Civil Engineers, was, prior to enlistment with the Canadian Expeditionary Forces, in the City Engineer's Department, Victoria, B. C., and was at one time a rodman on District F, National Transcontinental Ry., and later, assistant hydrographic surveyor on the Pacific Coast under the Marine Department.

**Lieut. L. I. Easton**, 14th Field Company, Canadian Engineers, C.E.F., who has been transferred from student to junior member, Canadian Society of Civil Engineers, was, prior to enlistment, Resident Engineer, Hudson Bay Ry., and prior to that was engaged as instrument man on harbor survey at Port Nelson, Man., and had also served with the Canadian Northern Ry. and Grand Trunk Pacific Ry., on preliminary location and construc-

On the Western Battle Front.  
Canadian Railway Troops passing through the ruins of a town after laying track. From Canadian official photograph loaned by C.P.R.

to employees of the railway who have enlisted. The commission operating the railway has, in addition to the foregoing, contributed \$20,000 to the funds named.

## Canadian Railway Troops Work.

Roland Hill has sent the following from the war correspondents' headquarters in France to the Militia Department at Ottawa:—"The men who drive the big locomotives of Canada's ocean-to-ocean trains across the prairies and through the mountains are made of stern stuff and have nerves as steady as the steel roads they travel. You meet many of them here at the war.

"There is the story of one of these men—in charge, too, of a built-in-Canada locomotive—whose great hospital train had just complete loading at a siding when the Huns opened deliberate fire on the casualty clearing station. They said it was a reprisal for the 'bombing of German hospitals' by British airmen (British airmen, of course, do not bomb hospitals). The track ahead had been hit, but not broken, by the shells which were ranging closer to the hospital with every shot. Without hesitation the Canadian locomotive man piloted his train safely over the damaged track to a clear line ahead and hundreds of helpless wounded were carried to safety. If the locomotive had ditched it meant certain destruction for the train.

"Another locomotive man, who had charge of a Canadian construction train at Gouzeaucourt when the Huns broke through after Cambrai, stayed with full steam up until all possible men and material had been loaded, and although the enemy were actually on the track behind him, tore down the grade to a safe siding well behind the new British line.

"The Canadian railway troops in their spare time have been assisting the hard-worked salvage corps. After Passchendaele they collected thousands of pounds

pipe and for half an hour pumped a stream into the burning mass, finally getting the fire under control. His little locomotive was pitted with shrapnel holes and his own escape was nothing short of miraculous. Several of the flying fragments tore his clothes. His example rallied other men and the fire was subdued before very great damage had been done. "There was \$200,000 worth of British shells

On the Western Battle Front.

in that dump. We couldn't stand by and see that go up,' he explained afterwards. And when the dump was safe he and his companions gathered the wounded into empty dinky cars and rushed them back along the little line to the safety of a dressing station.

"If the much-advertised German offensive does come there is no branch of the service will be more ready than these little bands of railway pioneers. These seems to be no end to the traffic their lines can carry. For months they have been preparing to play a bigger part than ever on the western front and the fighting

tion, and in the Bridge Department, C.N. R.

**Lieut. J. S. Galbraith**, son of the late John Galbraith, Dean of Applied Science Faculty, Toronto University, who went overseas with the 123rd Battalion, and was awarded the Military Cross, returned to Toronto early in March, with a number of other convalescing officers.

**Sec.-Lieut. R. G. Hall**, Royal Flying Corps, accidentally killed while flying in England recently, was son of the President of the Hall Engineering Works, Montreal, and a nephew of the Minister of Marine.

**Flight-Lieut. Ross Harrison**, who was recently reported to have been killed in a flying accident at Fort Worth, Texas, was at one time an inspector on construction on the Canadian Northern Ontario Ry., and later engaged on munitions work with the Canadian Locomotive Co., Kingston, Ont.

**Sergt. A. Hunter** of the Canadian Railway Troops, was awarded the Distinguished Conduct Medal recently for conspicuous gallantry and devotion to duty. While repairing a light railway line, his party was almost wiped out by heavy shell fire. He removed the wounded, collected another party and returned and repaired the line under heavy fire. He set a splendid example and showed an utter disregard of danger.

**Capt. R. H. Jarvis** of the Royal Flying Corps, who was accidentally killed in England, recently, had seen considerable service in France, having been mentioned in dispatches six times, and received the Military Cross in Nov., 1917. He had been in service at different times with the Grand Trunk Pacific Ry., Canadian Northern Ry. and the Toronto Harbor Commission.

**K. E. McLeod**, City Ticket Agent, Canadian Northern Ry., Victoria, B.C., has enlisted for military service overseas.

**Brig.-General A. D. McRae**, who has been appointed Director of Organization under the recently formed Ministry of Information, in Great Britain, and who was formerly a partner of the firm of Davidson & McRae, Land Agents, Canadian Northern Ry., has been granted a certificate of naturalization by the Dominion Government. He was born in the U.S.

**Sergt. O. Murphy**, Canadian Railway Troops, who has been awarded the Distinguished Conduct Medal for conspicuous gallantry and devotion to duty, took over the work on a light railway under very heavy shell fire when the officer was wounded, and he himself slightly wounded. He carried the line through successfully, so that ammunition could be delivered to the batteries, the wounded evacuated and the working parties disposed where they were required. He has repeatedly shown great skill in his work and an utter disregard of personal danger.

**Lieut. Norman Lowden**, Railway Construction Corps, Royal Engineers, B.E.F., who has been elected an associate member of the Canadian Society of Civil Engineers, was, prior to enlisting in 1916, Assistant Engineer in the City Engineer's office, Victoria, B.C., and was for some time engaged on railway location and construction in Northern Nigeria, as Assistant Engineer of the Public Works Department there. He is at present working on gauge railway construction at the front.

**Lieut. J. Phippen**, son of F. H. Phippen, K.C., General Counsel, Canadian Northern Ry., Toronto, is home on two months leave.

**Lieut.-Col. Blair Ripley**, D.S.O., Officer Commanding 1st Canadian Overseas Railway Construction Battalion, in France, and formerly Engineer of Grade Separation, C.P.R., Toronto, has been elected a member of the Institution of Civil Engineers, of England.

**D. DeC. Ross-Ross**, Assistant Chief Engineer, H.M.C.S. Hochelaga, has been transferred from student to junior member of the Canadian Society of Civil Engineers.

**Sapper G. W. Shanks**, Canadian Railway Troops, was awarded the distinguished conduct medal recently for con-

spicuous gallantry and devotion to duty. When a train load of ammunition had been set on fire by shelling, and severe explosions were taking place, he ran to the burning train, smothered the flames with sandbags, and kept them under control until water was brought, when he completely extinguished the fire. He did this, standing on the burning train, with splendid coolness, and utter disregard of personal danger, and it was due to him that many lives were saved.

**Lieut. J. G. Scott**, R.N.V.R., whose sudden death whilst serving at a Royal Navy depot in England, was reported recently, was educated at St. Catharines, Ont., and Toronto, graduating from the School of Practical Science with honors in 1914. He was subsequently in the office of the Chief Engineer of the Welland Ship Canal for about a year, and then joined the Royal Naval Air Service and took his pilot's certificate at Eastbourne, Eng., in 1916, and transferred to the R.N.V.R.

Major J. J. Sullivan  
Canadian Railway Troops.

**Brig.-General J. W. Stewart**, of Vancouver, B.C., now in the Canadian Railway Troops, gave a dinner in London, Eng., recently while on leave, at which Lord Beaverbrook proposed the health of General Smuts, who was the guest of honor.

**J. J. Sullivan**, formerly Construction Engineer and Roadmaster, C.P.R., who enlisted with the Canadian Railway Troops as a lieutenant, and is now a major, had to leave the front and go to England some little time ago, on account of stomach trouble, and returned to Canada in February on a 10 weeks furlough. Following is an extract from a letter written to his brother, J. G. Sullivan, M. Can.Soc.C.E., Chief Engineer, Western Lines, C.P.R., by a friend at the front:—"Our work is most interesting at times, particularly when the armies are advancing and the Hun is on the run. You can scarcely imagine the situation, and yet our good fellows take up the work just as if they were working on the Canadian prairies, under ordinary conditions. It is

surprising what men will and can do when they make up their minds. There is no one I can speak more highly of than your own brother; he really surprises me, as he is full of energy. Angus was evacuated to England some time ago and was operated on for kidney trouble; he is now in Scotland convalescing. I hardly think that he will be fit to return here any more. Immediately he left, I promoted Jerry to the rank of major and put him in charge of Angus' company. He did splendidly, but owing to the constant strain under shell fire, he broke down later and was evacuated to England about three weeks ago. I called to see him on several occasions and pointed out to him that he was trying to do too much, and told him to let the younger men keep more in the advanced areas, but you know what Jerry is, he wanted to be always at the front, and between shell shock and a general nervous condition, he broke down completely. In his collapse I have no hesitation in saying that Col. Macdonald lost one of his most efficient officers. We hope that with a few months rest he will be fit again, but I am afraid that his age is against him, as this is not an old man's game. I know that I am older than Jerry, but my job is easy, in comparison to the fellows that are constantly under the strain, as I go and come when I like. Barber is another man that has done nobly; I cannot find words that would half tell you of the splendid work he is doing."

**Lieut. J. G. Troup**, M.C., who was recently reported to have been admitted to one of the stationary hospitals in France, was, prior to the war, in C.P.R. service, having been stationed at various places between the Atlantic and Pacific coasts, the latter portion of his service being in the Superintendent's office at Winnipeg.

**G. E. Walkem**, formerly Managing Director, Vancouver Machinery Depot, Vancouver, B.C., received his commission as a lieutenant in the Royal Engineers, July, 1916, and was ordered to Egypt, where he was assigned to work on the railway and water pipe line for the Egypt Expeditionary Force operating in the Sinai desert. He followed up the work of that force and was promoted to captain in 1917, and has now reached the rank of lieutenant-colonel. He is in charge of railway construction with the British force in Palestine. He is a graduate of McGill University, a member of the Institution of Mechanical Engineers, Eng.; the Canadian Society of Civil Engineers, and of the American Institute of Electrical Engineers.

**Fraser River Bridge, New Westminster.** The tolls received by the British Columbia Government as tolls for traffic over the bridge across the Fraser River at New Westminster for the 9 months ended Dec. 31, 1917, were \$32,580.57. The bridge is leased for railway purposes to the Great Northern Ry., and is used also by the Canadian Northern Pacific Ry., those two companies contributing the largest amount of revenue.

**Accident Reports.**—The Board of Railway Commissioners has revised its form, schedule A, of the return required by order 7472, July 8, 1918, and has advised railway companies that the new form is to be used as soon as their existing supply of forms is exhausted.

**Naming of C.P.R. Locomotives.**—It is semi officially announced that the C.P.R. will name a number of its locomotives after locomotive men who have in the management's opinion rendered long and meritorious service.

# Mainly About Railway People Throughout Canada.

R. S. Elsworthy, General Agent, C.P.R., Minneapolis, Minn., has been elected President of the Minneapolis Passenger Association.

John Cameron, who died at Toronto, Mar. 18, aged 88, was in G.T.R. service for about 45 years, as a car builder, and later as a car inspector.

Lord Shaughnessy, President, C.P.R., has presented the Canadian Club, New York, with a number of books, to form the nucleus of a library.

James Hardwell, Chief Traffic Officer, Board of Railway Commissioners, Ottawa, and Mrs. Hardwell, are spending a short time at Atlantic City, N.J.

E. W. Oliver, B.A.Sc., M.Can.Soc.C.E., Assistant Engineer, Canadian Northern Ry., was in the Toronto General Hospital for about a week during March, for a minor operation.

Hon. John Oliver, Minister of Railways, and of Agriculture, for British Columbia, has also been appointed Prime Minister of that province, succeeding Hon. C. H. Brewster, deceased.

A. D. MacTier, General Manager, Eastern Lines, C.P.R., returned to Montreal, Mar. 21, after a brief visit to England and France, where his son is with the Canadian Expeditionary Forces.

James McGeough, chief clerk, City Ticket Office, C.P.R., Toronto, was presented with a purse of money by his associates, on leaving to take up his new appointment as City Passenger Agent, C.P.R., Boston, Mass.

H. Stephenson, shop foreman, Grand Trunk Pacific Ry., Regina, Sask., was presented with a gold watch by the shop staff, Mar. 15, on leaving for Prince George, B.C., where he has been transferred in a similar capacity.

W. F. Tye, M.Can.Soc.C.E., has been awarded, by the Canadian Society of Civil Engineers, the Czowski medal for the best contribution to Canadian engineering literature during the past year, viz.: his paper on Canada's railway problems.

Lord Shaughnessy, who underwent an operation at the Royal Victoria Hospital, Montreal, March 18, for cataract, was reported, at the time of writing, to be progressing satisfactorily, with excellent prospects of saving the sight of the eye affected.

Helen Ham, who died following an attack of appendicitis, and was buried at Whithy, Ont., Mar. 8, was daughter of C. N. Ham, Secretary, Express Traffic Association of Canada, and granddaughter of George Ham, of the C.P.R. headquarters staff, Montreal.

S. C. Stickney, Assistant to Vice President, Erie Rd., New York, who died at Englewood, N.J., towards the end of February, aged 53, was son of the late A. B. Stickney, formerly President, Chicago & Great Western Ry., and first General Superintendent of the C.P.R., at Winnipeg, in 1881.

Herbert R. Yates, C.E., who died at Brantford, Ont., Mar. 25, aged 63, was the only surviving son of the late Henry Yates, C.E., at one time Chief Engineer of the Grand Trunk Ry. He was born at Hamilton, Ont., and was for some time engaged with his father as a railway contractor, chiefly in Michigan.

R. J. Swain, City Electrician, St. Boniface, Man., who was elected an associate member of the Canadian Society of Civil

Engineers, recently, was, at different periods in service with the Toronto Ry., Montana Power & Light Co., Cascade Power & Light Co. in British Columbia, C.P.R. Telegraphs in Manitoba, Bell Telephone Co., and Winnipeg Electric Ry.

W. W. Butler, Vice President and Managing Director, Canadian Car & Foundry Co., Montreal, was taken ill in Ottawa early in March, being threatened with pneumonia, and was laid up at the Chateau Laurier for about a week. He was sufficiently recovered to be able to return to Montreal, Mar. 15, and left there shortly afterwards for Florida, intending to be absent some weeks.

W. P. Brereton, City Engineer, Winnipeg, who has been transferred from associate member to member of the Canadian

Works; designing substructure and superstructure for Grand Trunk Pacific Ry. bridges between Winnipeg and Prince Rupert, and from 1910 in service of Quebec Bridge Board of Engineers.

A. E. Foreman, B.C. Public Works Engineer, Victoria, who has been transferred from associate member to member of the Canadian Society of Civil Engineers, has served with the British Columbia Electric Ry., Vancouver, B.C., the Canadian General Electric Co., Peterborough, Ont., Resident Engineer in charge of the construction of the hydro electric plant at Revelstoke, B.C., Supervising Engineer of the Dallas Road sea wall, Victoria, B.C., and as Assistant City Engineer, Victoria, B.C.

Frederick A. Rutherford, who has been appointed Inspector of Transportation, G.T.R., Montreal, was born at Parkhill, Ont., Sept. 16, 1877, and entered G.T.R. service Jan. 18, 1894, since when he has been, to July, 1894, assistant to agent, Aylmer, Ont.; July, 1894, to July, 1900, telegraph operator, at various stations; July, 1900, to Jan., 1908, dispatcher, London, Ont.; Jan., 1908, to Mar., 1914, Chief Dispatcher, London, and Stratford, Ont.; Mar., 1914, to June 1917, Trainmaster, Battle Creek, Mich.; June, 1917, to Feb. 1, 1918, Trainmaster, Durand, Mich.

Colin D. Mackintosh, who has been appointed Superintendent, Lethbridge Division, Alberta District, C.P.R., Lethbridge, was born at Auckland, New Zealand, Sept. 24, 1882, and entered C.P.R. service in Sept., 1905, since when he has been, to 1906, in junior positions in the engineering department; 1906 to 1909, transit man on location survey; 1909 to 1910, Resident Engineer; 1910 to 1911, Locating Engineer; 1911 to 1913, Assistant Engineer on Construction; 1913 to June, 1915, Division Engineer; June, 1915, to Mar. 1, 1918, Superintendent, Medicine Hat Division, Alberta District, Medicine Hat.

Richard H. L'Hommedieu, formerly General Manager, Michigan Central Rd., who died at Detroit, Mich., Mar. 18, was born at Cincinnati, Ohio, Dec. 29, 1850, and entered railway service in 1870, since when he had been, to 1872, apprentice in locomotive machine shops, Cincinnati, Hamilton & Dayton Ry.; 1872 to 1873, clerk to Division Superintendent, Chicago, Burlington & Quincy Rd.; 1873 to 1887, Trainmaster, Michigan Central Rd.; 1887, chief clerk to Superintendent, same road, Jackson, Mich.; 1877 to 1879, Trainmaster, same road, Jackson, Mich.; 1879 to 1890, Superintendent, Western Division, same road, Chicago, Ill.; Sept., 1890, to Apr., 1896, Assistant General Superintendent, and from Apr., 1896, General Superintendent, and subsequently, to his retirement, General Manager, same road.

J. M. Jones, City Engineer, Port Arthur, Ont., who has been transferred from associate member to member of the Canadian Society of Civil Engineers, was born at Dowlais, Wales, Nov. 18, 1882, and entered C.P.R. service in Apr., 1900, since when he spent two months in the Engineering Department, Winnipeg; two months as clerk and draftsman, Fort William, Ont.; 1903, instrument man on elevators, Canadian Northern Ry., Port Arthur, Ont.; Oct. to Dec., 1903, on renewal of piers, Broadway bridge, Winnipeg; Dec., 1903, to Mar., 1906, in charge of civil engineering work, Winnipeg Electric Ry.; Apr. to June, 1906, in charge of survey party, Manitoba Lines, C.P.R.; and since

G. E. Smart  
Superintendent of Car Department, Canadian  
Government Railways

Society of Civil Engineers, is a member of the Winnipeg and St. Boniface Harbor Commission. He was Assistant Engineer, under Smith, Kerry & Chace, on the construction of the hydro electric power plant for Winnipeg, and has had considerable experience in Canada and the U.S.

A. J. Meyers, until recently Chief Draftsman, Quebec Bridge Board of Engineers, who has been transferred from associate member to member of the Canadian Society of Civil Engineers, has served at different periods, as draftsman, Dominion Bridge Co., Hamilton Bridge Works, Locomotive & Machine Co., now Montreal Locomotive Works, Structural Steel Co., and from 1909 with the Quebec Bridge Board of Engineers.

M. B. Atkinson, until recently assistant chief draftsman, Board of Engineers, Quebec Bridge, who has transferred from associate member to member of the Canadian Society of Civil Engineers, has served at various periods, as follows: in structural department, Locomotive & Machine Co., now Montreal Locomotive

the latter date, associated with municipal engineering at Port, Arthur, Ont.

**Herbert Gates Reid**, who has been appointed Superintendent of Rolling Stock, Canadian Government Railways, Transcona, Man., was born at Pembroke, Ont., Oct. 27, 1863, and entered railway service in 1884, since when he has been, to Nov., 1884, wiper, C.P.R., North Bay, Ont.; Nov., 1884, to Nov., 1887, fireman, C.P.R., North Bay, Ont.; Nov., 1887, to Dec., 1905, locomotive man, C.P.R., North Bay, Ont.; Dec., 1905, to June, 1906, relieving Road Foreman of Locomotives, C.P.R., North Bay, Ont.; June, 1906, to Feb., 1907, locomotive man, C.P.R., North Bay, Ont.; Feb. to Apr., 1907, Locomotive Foreman, C.P.R., Chapleau, Ont.; Sept., 1907 to Oct., 1908, District Master Mechanic, District 1, Lake Superior Division, C.P.R., North Bay, Ont.; Oct., 1908, to Apr., 1915, Master Mechanic, Lake Superior Division, C.P.R., North Bay, Ont.; Apr., 1915, to May, 1916, Master Mechanic, Saskatchewan Division, C.P.R., Moose Jaw; May to Sept. 30, 1916, Master Mechanic, District 3, National Transcontinental Ry., Transcona, Man.; Sept. 30, 1916, to Mar. 15, 1918, Assistant Superintendent of Rolling Stock, Canadian Government Railways, Transcona, Man.

**W. J. Hamilton**, who has been appointed Locomotive Foreman, G.T.R., Brockville, Ont., entered railway service in 1883, since when he has been, to Oct., 1906, laborer, stripper and engine tester, G.T.R., Stratford, Ont.; Oct., 1906, to July 1, 1907, Road Foreman of Locomotives, Central Vermont Ry., St. Albans, Vt.; July 1, 1907, to June 30, 1908, Locomotive Foreman, G.T.R., Palmerston, Ont.; June 30, 1908, to Dec. 31, 1909, Locomotive Foreman, G.T.R., Stratford, Ont.; Dec. 31, 1909, to Oct. 6, 1910, Master Mechanic, G.T.R., Battle Creek, Mich.; Oct. 6, 1910, to Mar. 18, 1911, Master Mechanic, G.T.R., Stratford, Ont.; Mar. 18, 1911, to Dec. 23, 1913, Master Mechanic, Canadian Government Railways, Cochrane, Ont.; Dec. 23, 1913, to Mar. 1, 1914, Night Locomotive Foreman, G.T.R., Stratford, Ont.; Mar. 1 to Nov. 16, 1914, Master Mechanic, Canadian Government Railways, Cochrane, Ont.; Nov. 16, 1914, to May 4, 1915, Machinist, G.T.R., Stratford, Ont.; May 4, 1915, to Aug. 1, 1917, Master Mechanic, Canadian Government Railways, Cochrane, Ont.; Aug. 1, 1917, to Feb. 28, 1918, machinist, G.T.R., Stratford, Ont.

**C. A. Cotterell**, who has been appointed Superintendent, Medicine Hat Division, Alberta District, C.P.R., Medicine Hat, was born at Enden, Eng., Jan. 18, 1877. He entered C.P.R. service as a messenger at Montreal in June, 1888, and in Feb., 1894, was appointed an operator on the Farnham Subdivision, south of Montreal, and until 1898 occupied various positions as operator, relieving agent and station agent on Eastern Lines, after which he transferred to the Crowsnest Subdivision and acted as agent at various points, and as dispatcher at Cranbrook, B.C., until 1901, when he was transferred to Fort William, Ont., as dispatcher, and subsequently served in that capacity at various points on the Western Lines, and as Chief Dispatcher at Fort William, Ont., Regina and Saskatoon, Sask., and Revelstoke, B.C., as Trainmaster at Revelstoke, B.C., Terminal Trainmaster at Vancouver, B.C., acting Superintendent at Revelstoke, Nelson and Vancouver, B.C., until Sept. 1, 1913, when he was appointed Superintendent, District 2, British Columbia Division, Vancouver. From Apr. 1, 1916, to Mar. 1, 1918, he has been Superintendent, Lethbridge Division, Alberta District, Lethbridge.

**John A. Clancy**, who has been appointed Trainmaster, Districts 27 and 28, Detroit Division, Western Lines, G.T.R., Durand, Mich., was born at Walkerton, Ont., June 8, 1884, and entered G.T.R. service June 2, 1901, since when he has been, to Sept. 26, 1901, office boy, Local Freight Office, Toronto; Sept. 26, 1901, to July 1, 1902, stenographer to Terminal Superintendent, Toronto; July 1 to Sept. 23, 1902, stenographer to District Passenger Agent, Toronto; Sept. 23, 1902, to Apr. 6, 1903, stenographer and clerk, Bridge and Building Department, Durand, Mich.; Apr. 6, 1903, to Nov. 21, 1905, chief clerk to Trainmaster, Durand, Mich.; Nov. 21, 1905, to Mar. 1, 1906, clerk to Master of Transportation, Durand, Mich.; Mar. 1, 1906, to July 1, 1910, Car Distributor, Durand, Mich.; July 1, 1910, to Jan. 2, 1911, chief clerk, Car Demurrage Bureau, Detroit, Mich.; Jan. 2, 1911, to Feb. 8,

W. U. Appleton  
Superintendent of Motive Power, Canadian  
Government Railways

1912, Car Distributor, Durand, Mich.; Feb. 8 to Oct. 15, 1912, Travelling Car Service Agent, Detroit, Mich.; Oct. 15, 1912, to Jan. 23, 1913, Assistant Superintendent of Terminals, Detroit, Mich.; Jan. 23, 1913, to Apr. 20, 1914, chief clerk to General Superintendent, Chicago, Ill.; Apr. 20, 1914, to Feb. 1, 1918, Division Agent, Western Lines, Chicago, Ill.

**James Frederick Gildea**, who has been appointed Division Master Mechanic, Pennsylvania Division, Delaware & Hudson Co., Carbondale, Pa., was born at Strood Park, near Horsham, Sussex, Eng., and entered railway service in June, 1900, as an engineering apprentice, Nine Elm Works, London & South Western Ry., and on the conclusion of his apprenticeship, in June, 1904, he was presented by the directors with a special prize for the highest place in the apprentices technical examinations, with 100%. He was, from June, 1904, to June, 1905, fireman, all classes of service, L. & S.W.R., Salisbury, Eng.; June, 1905, to Jan., 1906, on engineering staff, Southampton Docks and R.M.S. Alberta, L. & S.W.R., Southampton, Eng.; Jan. to June, 1906, locomotive

draftsman, Nine Elm Works, L. & S.W.R., London, Eng.; June, 1906, to Jan., 1907, supervising locomotive statistics and operation, same company; Feb., 1907, to Mar., 1909, fitter, Angus Shops, C.P.R., Montreal; Mar. to Oct., 1908, in tests department, Angus Shops, C.P.R., Montreal; Oct., 1908, to July, 1909, Assistant Locomotive Foreman, C.P.R., North Bay, Ont.; Aug., 1909, Assistant Locomotive Foreman, C.P.R., Chapleau, Ont.; Sept., 1909, to Sept., 1912, Locomotive Foreman, C.P.R., Schreiber, Ont.; Sept., 1912, to July, 1914, Locomotive Foreman, C.P.R., Hochelaga, Que.; July, 1914, to Mar., 1918, Master Mechanic, Montreal Terminals Division, Quebec District, C.P.R., Montreal.

## The Work of the Canadian Railway Association for National Defence.

**Bulletin 3.**—The association issued this bulletin to the public Mar. 1, dealing with the following subjects:—Where the Canadian freight car spends its days. What demurrage figures indicate. New methods of handling l.c.l. freight. Re routing and through billing. Cold weather and car movement.

### City and Town Ticket Offices.

The association's attempt to close all city and town ticket offices and to restrict the sale of tickets to station offices, which appears to have been taken somewhat precipitately and without previous investigation, not having been successful, steps are now being taken to consider the question of a reduction in the number of "up-town" offices, with a view to conserving fuel and man power, and the railways have been asked to furnish the following information as to such offices they maintain:—Name of city or town. Population. Railways. Is office joint with express or telegraph company? Is rent paid by railway company or agent? Is remuneration paid agent by salary or commission?

### Guard Rails, Vestibule Doors and Platforms.

The Board of Railway Commissioners having urged that standard regulations be placed in effect on all railways governing the handling of guard rails, vestibule doors and platforms on passenger cars, the association has had a set of rules drafted which have been submitted to all railways, which have been asked to state whether they are agreeable to same being submitted to the board to be made applicable to all railways.

### Advertising On Cars.

In answer to a proposal that railways extend to certain organizations the privilege of displaying advertisements on railway cars, the applicants have been notified that such permission cannot consistently be given.

### Leasing of Freight Cars to Outside Concerns.

In view of the existing severe shortage of railway freight equipment of all classes, it has been suggested that regulations be promulgated prohibiting the leasing the freight cars to outside concerns, for local or intra-plant service. It has been found, furthermore, that in certain cases, in order to ensure their car requirements being filled, shippers having freight for regular movement between points a short distance apart, have leased cars from the railways, thus placing at a disadvantage other shippers who are unable to adopt this practice. In order that the matter may be fully considered, member lines have been asked to submit to the association a statement of all freight

cars leased by them to outside concerns, including the following information:—Number and class of cars leased; name and location of lessee; point or points at which cars being used; rate of rental per car per day; period of lease.

#### Labelling Delayed Freight Cars.

The commission on car service adopted the following resolution recently concerning use of labels on waybills accompanying delayed cars:

"This system of drawing attention to delayed shipments, and calling for preferred movement of such cars, is in vogue on a number of member lines which have submitted samples of labels, used by them. One of the most suitable is that of the New York Central Rd. The label used on this line measures an inch square, printed in red on white paper, as follows: "D. C.—This car has been delayed and must receive preferred attention."

In the commission's opinion, the adoption of a system of this kind should include means of guarding against indiscriminate or unauthorized use of labels, and local officials should examine waybills bearing labels, as opportunity offers, so as to ensure cars accompanied by same receiving the desired attention.

#### Steel Rail Supplies for Railways.

In consequence of the urgent demand for rails, for relaying, by practically all the principal Canadian railways, the Minister of Railways, under the authority of an order in council, has ordered from the Dominion Iron & Steel Co., Sydney, N.S., 1,000 tons, 85 lb. steel rails, Canadian Government Railways standard, delivery to start Apr. 1, and rolling to continue at full capacity of mill until completion of order, the cost of manufacture to be investigated and the price to be fixed at a later date. These rails will be apportioned by the Railways Department as follows: Canadian Government Railways, 140 miles; Canadian Northern Ry., 170 miles; Canadian Pacific Ry., 300 miles; Grand Trunk Ry., 140 miles.

In order to obtain further rails for relaying on the Canadian Government and Canadian Northern main lines, it is proposed to lift about 120 miles of 80 lb. rails from the St. John & Quebec Ry., in New Brunswick, and to replace them with lighter rails, either the Russian ones referred to further on in this article, or other light ones to be taken off the Intercolonial. It is probable that some at least of the heavy rails now laid on the Hudson Bay Ry., between Pas, Man., and the rail head, 340 miles, will be lifted and replaced with lighter rails, probably the Russian ones. A considerable quantity of heavy rails will also probably be lifted from yards and sidings on the National Transcontinental Ry.

The Minister of Railways has bought in the United States, for the Dominion Government, 37,375 tons of steel rails, which were rolled for the Russian Government, but were not delivered to it. They are of a Russian section, 67½ lb. to the yard, and will be sufficient to lay 355 miles of track, at 105 tons to the mile. Delivery is being taken as fast as cars can be obtained. A further supply of some 2,250 tons, sufficient to lay 150 miles, is being negotiated for. The Russian rails will be used on the Canadian Government Railways and the Canadian Northern for relaying branch lines and sidings, from which heavier rails may be lifted for main line purposes, and some may be used to replace heavier rails which may be lifted from the Hudson Bay Ry., as stated above.

#### Death of Sir Collingwood Schreiber.

The death took place at his home, Ottawa, Ont., Mar. 23, of Sir Collingwood Schreiber, K.C.M.G., Hon. M. Can. Soc. C.E., after an illness lasting some months. He was born in Essex, Eng., and came to Canada in 1852. In that year he was engaged on the Toronto & Hamilton Ry. engineering staff, and continued in that service until the completion of the road in 1856. From 1856 to 1860, he was in private engineering practice in the firm of Fleming, Ridout & Schreiber, at Toronto; 1860 to 1863, Superintending Engineer, Northern Ry.; 1863, Division Engineer for the Nova Scotia Government's Pictou Ry., and he remained in charge of that work until its completion in 1867. He was subsequently connected with the Intercolonial Ry., first in charge of the surveys for the route by way of Lake Temiscouata, and then in charge of the Eastern Extension Ry., as Superintending Engineer in 1869, and afterwards as Superintending En-

Sir Collingwood Schreiber, K.C.M.G.  
Consulting Engineer, Dominion Government

gineer and Commissioners' Agent for the entire road; 1873 to 1880, Chief Engineer and General Manager of railways operated by the Dominion Government, succeeding the late Sir Sandford Fleming as Chief Engineer, Canadian Pacific Ry., in 1880; 1892 to 1905, Chief Engineer and Deputy Minister, Department of Railways and Canals. Since July 1, 1905, he was Consulting Engineer to the Dominion Government, and until the completion of the road, Chief Engineer, Western Division, National Transcontinental Ry. He was appointed a member of the Royal Commission on Railways in 1886, and was created a Companion of the Order of St. Michael and St. George in 1893, and a Knight Commander in 1916. He was a member and one of the founders of the Canadian Society of Civil Engineers, of which he was a councillor in 1887 and 1888, and was made an honorary member in 1909. The funeral, which took place at Ottawa, was largely attended by Government officials and members of the engineering profession.

#### Freight and Passenger Traffic Notes.

The Northern Pacific Ry. has arranged with the Campbell Storage Co., Vancouver, to handle its entire cartage and baggage transfer business there.

The Canadian Northern Ry. has been ordered by the Board of Railway Commissioners to continue its present service of trains 1 and 2, Quebec and Chicoutimi, until further order.

The Saskatchewan Commissioner of Labor is reported to have made arrangements with the C.P.R., under which that company will carry farm laborers from Vancouver, New Westminster and Victoria, B.C., to Saskatchewan points at 1c. a mile.

The Newfoundland Government has announced that a passport must be produced, as a condition of entry, by all persons desiring to get into that island. Ticket agents should see that passengers buying tickets to Newfoundland points have the necessary document.

The C.P.R. has been authorized by the Board of Railway Commissioners to discontinue west bound local train 35, due at Finch, Ont., at 9.35 a.m., and east bound local 36, due there at 5.53 p.m., and to operate in lieu thereof train 19, due at 10.46 a.m., and train 20, due at 5.02 p.m.

The Canadian Northern Ry. has been authorized by the Board of Railway Commissioners to withdraw, until April 28, train 15, leaving Kingston, Ont., at 7 a.m., and Deseronto at 9.15 a.m., arriving at Belleville at 9.45 a.m., also train 18, leaving Belleville 6 p.m., arriving at Deseronto at 6.35 p.m.

The C.P.R. train from Montreal to Sault Ste. Marie, Ont., and beyond on the Minneapolis, St. Paul & Sault Ste. Marie Ry., which was taken off Feb. 24, has been again put on the schedule. It was found that no saving was being effected, as the Winnipeg train had to be run in two sections to accommodate the traffic.

The Moncton & Buctouche Ry. announced Feb. 22, that on account of track and other conditions beyond control, the regular movement of trains between Moncton and Buctouche, N.B., 32 miles, had been cancelled. A deputation of residents went to Ottawa early in March, to see if something could not be done to have traffic resumed, and it was reported, Mar. 14, that the Minister of Railways had informed the deputation that the government was working out plans for taking over this line as a branch of the Intercolonial Ry.

Arrangements are said to have been made between the G.T.R. and the Canadian Northern Ry. under which freight originating in Quebec and Ontario and intended for points in the west reached by the C.N.R., will be routed G.T.R. to North, thence C.N.R.; and freight originating on C.N.R. points in the west, intended for G.T.R. points in Ontario and Quebec, will be carried by the C.N.R. to North Bay, and there turned over to the G.T.R. This means that for long distance freight purposes, within certain limits the mileage of the two railways will be calculated as one.

#### Canadian Society of Civil Engineers.

Following are the officers elected for this year for the Montreal branch, which was established recently:—W. J. Francis, Chairman; A. Surveyer, Vice Chairman; F. B. Brown, Secretary-Treasurer; Committee—F. P. Shearwood, W. Chase Thomson, H. G. Hunter, L. G. Papineau, O. Lefebvre and K. B. Thornton.

Canadian Railway  
AND  
Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway,  
Marine, Express, and Telegraph, also Railway and  
Canal Contractors' Interests.

Official Organ of various Canadian Transportation  
Associations.

Published on the first of each month.

ACTON BURROWS, LIMITED - Proprietors,  
70 Bond Street, Toronto, Canada.

### Passenger Meetings at Buffalo.

The annual meetings of the Niagara Frontier Summer Rate Committee and Great Lakes & St. Lawrence River Rate Committee were held at Buffalo, N.Y., Mar. 12, 13 and 14. The rate representatives met on the first two days and arranged the schedules of rates, which were ratified at the general meetings on Mar. 14. H. J. Cudworth, G.P.A., Eastern Steamship Lines, Boston, Mass., was elected chairman, Niagara Frontier Summer Rate Committee, for this year, and Park Robbins, G.P.A., Goodrich Transit Co., Chicago, was elected chairman, Great Lakes & St. Lawrence River Rate Committee. Jas. Morrison, A.G.P.A., Canadian Northern Railway, Montreal, is permanent secretary of both committees.

The retiring president of the Niagara Frontier Summer Rate Committee, G. C. Wells, Assistant to Passenger Traffic Manager, C.P.R., Montreal, was presented with a gavel, the head of which was made from one of the first chairs placed in the Windsor St. station waiting room, Montreal, and the handle from a piece of the desk at which he worked for many years. The inscription plate and metal finishings were made from a cartridge shell manufactured at the C.P.R.'s Angus shops, Montreal, and the gavel was enclosed in a wooden case made from wood taken from a C.P.R. sleeping car.

The International Water Lines Passenger Association also met at Buffalo, Mar. 14. The following officers and committees were elected:—President, M. J. Powers, G.P.A., Champlain Transportation Co. and Lake George Steamboat Co., Albany, N. Y.; Vice President, W. F. Wasley, Manager, Muskoka Lakes Navigation & Hotel Co., Gravenhurst, Ont. Executive committee: W. H. Snell, G.P.A., C.P.R. Steamship Lines, Montreal; H. H. Cudworth, G.P.A., Eastern Steamship Corporation, Boston, Mass.; L. G. Lewis, G.P.A., Detroit & Cleveland Navigation Co., Detroit, Mich. The retiring president, E. W. Holton, G.P.A., Northern Navigation Co., Sarnia, was presented with a gavel, by the St. Louis & Tennessee River Packet Co.

The next annual meetings of the three organizations will be held at Montreal probably in January, 1919.

### St. John & Quebec Railway Investigation.

The report on the investigation into certain charges made affecting the financing by the late New Brunswick Government of the construction of this railway, was presented to the Legislature Mar. 13. The commissioner finds "that while the evidence submitted does not warrant him in coming to the conclusion that any member of the government, or of the legislature, was improperly concerned in the negotiations which were carried on with reference to the two contracts awarded to the Nova Scotia Construction Co., and the sub-contracts awarded to Kennedy and McDonald and Smith and Merrithew, yet he has a suspicion that possibly some members of the government, or persons on behalf of the government, and with its approval, were improperly concerned in these negotiations with a view to raising campaign funds." The evidence as reviewed by the commissioner showed that \$100,000 of prospective profits was paid to Mr. Tennant by the Nova Scotia Construction Co., in connection with the securing of the contract; that there were

financial transactions between Tennant and G. B. Jones, M.L.A., for campaign purposes, and that J. D. Palmer, a director of the company (the directors being the nominees of the N. B. Government) handled campaign funds; and that the advance in price on a certain contract which was followed by a further provision of campaign funds, was not justified.

**Zone Fares for Edmonton.**—The section of the act passed by the Alberta Legislature recently granting the Edmonton City Council power to charge fares on the Edmonton Radial Ry. on the zone system, provides that notwithstanding anything to the contrary, the city shall have authority "to divide the territory along, over or through which any of its tramway lines are operated into zones, and charge separate freight and passenger tolls and fares for each zone into or through which freight or passengers may be transported, or may levy and collect such tolls and fares in accordance with the distance freight or passengers are transported."

**Increased Fares for London.**—In connection with the question of the increase of fares which has been brought before the London, Ont., City Council, the local trades and labor council took the matter up recently and passed a resolution favoring the increased asked, on the ground that the company is not in a position to grant any further increase of wages to its employees (and higher wages should be paid), unless its revenues are increased. The fares now charged were fixed by the agreement of 1895.

The C.P.R. has purchased the s.s. *Daily* from the MacDowell Transportation Co., Seattle, Wash., and she was delivered at Vancouver, about the end of February. There is no berthing accommodation, she being operated as a day boat only. On the passenger deck there is seating accommodation under cover, which runs practically the length of the ship, with accommodation for about 90 passengers, and for excursion traffic on Puget Sound. She was licensed to carry 300 passengers. She is equipped with triple expansion oil burning engine of about 500 h.p., for a speed of about 14 knots under 150 lbs. of steam. Her dimensions are: length 116.2 ft., breadth 25 ft., depth 8.5 ft.; tonnage, 254 gross, 172 register. It is intended to operate her in the Gulf Islands service, and before putting her on the run, she will be thoroughly overhauled and renamed.

**English Channel Car Ferry Service.**—During the war a car ferry service has been put into effect across the English Channel between England and France, for the transportation of loaded cars, thus saving time and expense in loading and unloading cars. For this purpose one or two of the car ferry masters from the Great Lakes were taken across to England, so that their experience might be utilized in getting the service successfully under way. Capt. Isaac Watts, a well known car ferry master, returned to Windsor, Ont., recently, from England, and is reported to have stated that 48 loaded cars, and about 20 guns were, at times, taken across on a trip.

The investigation into the wreck of the s.s. *Florizel*, near Cape Race, Feb. 24, has been held at St. John's, Nfld. The court consisted of Judge Blackwood of the Supreme Court, Capt. A. McDermott, R. N., attached to the Newfoundland station, and Capt. G. Spracklin, of the Reid Newfoundland Co.'s steamship service.

# The Pacific Great Eastern Railway Settlement in British Columbia.

The long drawn out differences between the British Columbia Government and the promoters of the Pacific Great Eastern Ry., were settled, when an agreement between the parties was signed Feb. 22. The history of the project in brief is:—An agreement was entered into in 1911, under which Foley, Welch and Stewart were to build a railway from Vancouver to Prince George, for which D'Arcy Tate had secured a traffic agreement with the Grand Trunk Pacific Ry., upon a guarantee of bonds by the B.C. Government. The Pacific Great Eastern Ry. was incorporated in 1912 to carry the agreement into effect, the members of the company being Timothy Foley, P. Welch, J. W. Stewart, members of the firm of contractors, and F. Wilson, D'Arcy Tate, and others nominated by them. The company acquired Howe Sound & Northern Ry., a short line running from Squamish, in the direction of Pemberton Meadows, which was overhauled, and extended towards Prince George. Construction was also started on a line from North Vancouver to Squamish, it being intended that this should be the last section of the line to be finished. Some years later the company got into financial difficulties, and obtained further assistance from the government. In 1916 additional assistance was asked for, which was granted, but owing to a political revolution in the province, the new government, instead of carrying out the provisions of the act, held an investigation into the company's affairs, which resulted in a finding, that overpayments in contravention of the statutes estimated at \$5,705,316.50 had been made to the contractors, altogether apart from overpayments from excessive profits, or upon wrong classification, and that it would take \$12,000,000 more to complete the line, which the contractors had undertaken to build upon a guarantee of \$20,160,000 of bonds. Certain of the directors and officers declined to answer questions asked by the commission, and were reported to the legislature. One was placed in the custody of the Sergeant-at-Arms, and some of the others went to the United States, from which they returned only recently.

As a result of the commission's report, the government, in May, 1917, issued writs against the P.G.E. Ry., its subsidiaries, the contractors, and against the individual directors, for an accounting; for an injunction restraining them from proceeding further with the work; for specific performance of the original agreement, and for damages for breach of the agreement. Since the date of issue of the writs, negotiations have been in progress for a settlement, which was only reached Feb. 22.

The agreement signed on Feb. 22, is between the B.C. Minister of Railways, who has since become also Premier, T. Foley, P. Welch and J. W. Stewart, doing business as Foley, Welch & Stewart; F. Wilson, D'Arcy Tate, and E. F. White, who together form the Pacific Great Eastern Ry. Co. and its subsidiary companies. The agreement provides that there shall be transferred to the province all shares not held by the province in the Pacific Great Eastern Ry., the Pacific Great Eastern Equipment Co., and the Pacific Great Eastern Development Co.; that the province shall be put in possession of the entire railway, and of all other properties and credits of the three several companies; that all lands and right of way contracted to be sold by the Development

Co. to the railway, and all land at Squamish, including the wharf, at present occupied as a terminal, shall be forthwith conveyed to the province; that a note for \$800,000 given by the railway to the Development Co. shall be delivered to the government for cancellation; that there shall be paid to the government, inclusive of money lying in the Union Bank, \$500,000 at once, \$250,000 additional in four months, and a further sum, subject to an option, of \$350,000; that all claims by the several parties named against either of the companies shall be released to the government forthwith; that upon the performance of these terms the government will release the other parties from their engagements; that the province, at any time during the continuance of the war, and for two years thereafter, may elect to retain all the shares of the Development Co. and all its assets, in which case the several parties will be released from the payment of the \$350,000 in cash mentioned above; that the several parties shall during the continuance of the war, and for five years thereafter, have the right to pay the province \$150,000 and surrender their rights to all the shares of Development Co. and its lands and assets, whereupon they shall be released from the payment of the \$350,000; no interest shall accrue on the \$150,000 if the option is exercised at any time up to within two years after the war, but 6% interest shall accrue if the option is exercised during the last three years of the option. If the province fails to exercise its option, the other parties to the agreement may, upon payment of the \$350,000 without interest, or with 6% interest, at any time within three years thereafter, elect to take over from the province all the Development Co.'s lands, except those specifically deeded to the province as above provided. If at the expiration of five years after the ceasing of the war, none of the options have been exercised by either party, all the shares of the Development Co. shall be retransferred, and all the lands, except certain ones specified, reconveyed to the parties of the second part, who shall then pay to the province \$350,000 with interest from the expiration of two years after the war; as security for the performance of the agreement, a bond of \$150,000 shall be furnished to the province. The several parties bind themselves to execute all documents necessary to carry the various terms into effect. All the rolling stock, equipment, plant and machinery now on the line, or adjacent thereto, or used for construction or operation of the line, or contracted for to be used on the line, are to be transferred to the government. The agreement is not to become operative until ratified by the legislature. The several parties agree, on request of the province, to apply for the necessary legislation. The parties of the second part declare that they have not encumbered the property in any way except as set out in a trust deed to which the province is a party; and it is agreed that the terms are binding upon the successors of the parties of the second part.

Upon the signing of this document, R. T. Elliott, solicitor for the parties of the second part, notified R. S. Thomas, Secretary of the P.G.E. Ry., to assign and deliver to the province the shares of the three companies named, to place the government's representative in possession of these companies' properties, and to advise the directors and employees of the same

companies, that all directions of the government were to be strictly attended to.

The legislature, on Mar. 15, passed a resolution confirming the terms of the agreement given above, and the legislation necessary to give full effect to it is now before the house. In dealing with the matter, Premier Oliver, after detailing the facts surrounding the formation of the company, the course of events during construction, and attending the investigation, and stoppage of the work, said: "In the agreement before you is contained the very best settlement, which after many weary months of effort, I was able to obtain. I do not claim that it is what the province is entitled to. I simply claim that, in my opinion, it is a little the better of the only two courses open to us. This agreement was unanimously concurred in by my colleagues, and was approved by our late Premier by a telegram from Winnipeg when he was on his way home."

As to the working out of the terms of the agreement, Mr. Oliver estimated that the value of the equipment under the agreement was \$722,736; the lands in townsite as worth \$1,608,000; the interest paid on the bonds was \$382,000; the amount paid on the capital stock was \$40,000; the loss in connection with the operation and maintenance of the road was \$441,000; the sum owing to P. Welch for construction was \$1,892,563. These values totalled \$5,087,702, all of which was released to the government. In addition to this, the government was to receive \$750,000 in cash. As the total profit for P. Welch was \$5,705,000, it would be seen that the whole of these profits were wiped out under the agreement and the government was receiving in addition a balance of about \$120,000, which sum P. Welch would lose, without making a cent of profit in any way in connection with the railway.

In conclusion, the Premier outlined the plans which the government had decided upon working out for the future of the railway. The first section of the line from North Vancouver to Whytecliffe, 13 miles, will be placed in good operating condition as speedily as possible, and connected with the North Vancouver lines of the British Columbia Electric Ry. The line will either be electrified or operated by gas-electric engines, and the government will advise the abandonment of the West Vancouver ferry service. He said there is at present no justification whatever for the construction of the section of the line from Whytecliffe to Squamish. The completed line from Squamish to Clinton, 167.7 miles, will have to be put into good condition. A good lift of ballast is necessary, as well as considerable other work. The line from Clinton to Prince George, 185 miles, will be completed as speedily and as economically as possible. An effort will be made to bring the line to the river level at the old town of Quesnel, in order to connect there with the river steamboats; and the pusher grade north of Kelly Lake will be eliminated if possible. If this can be done, it will be advisable to bring the standard of the line up to that of the transcontinental lines. Once Prince George is reached, the line should be carried through to the Peace River as soon as possible. A connection should be made with either the C.P.R. or the Canadian Northern Pacific Ry. near Ashcroft, by a cut off from Clinton. A reconnaissance survey has been made for this cut off. With regard to the future,

the government is of opinion that the line will have to pass either to the Dominion Government or to the C.P.R.

In connection with the reopening of traffic on the line, so far as the North Vancouver-Whytecliffe section is concerned, nothing definite had been settled to Mar. 20. It will be necessary to erect a temporary bridge over the Capilano River, to replace one which has been

washed out nearly a score of times since the line was opened. It was, however, expected to have this section of the line opened as a temporary measure early in April. Soon after the agreement was signed, the B.C. Railways Department put a large force of men on the line from Squamish, cleaning things up so as to restart the operation of trains. The first workers' train started out from Squamish

Mar. 15, and reached Mons. 37.4 miles from Squamish, Mar. 16, and subsequently left for D'Arcy, 86 miles, which was reached Mar. 19. It was arranged to operate a regular train schedule from Squamish as close as possible to the working train until Clinton was reached and the line cleared. The government engineers are preparing plans for starting work upon the line in April.

## Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

**Canadian Government Railways.**—H. B. DRYDEN, heretofore locomotive fireman, has been appointed travelling fireman, vice T. W. McBeath, whose appointment as District Master Mechanic, Moncton, N. B., was announced in our last issue. Headquarters, Moncton, N.B.

H. G. REID, heretofore Assistant Superintendent of Rolling Stock, Transcona, Man., has been appointed Superintendent of Rolling Stock, Western Lines. Office, Transcona, Man.

**Canadian Northern Ry.**—G. CRONN has been appointed news storekeeper, Sleeping, Dining and Parlor Car and News Department, Winnipeg, vice H. E. Hunt, resigned.

**Canadian Pacific Ry.**—W. H. WINTER-ROWD, heretofore Assistant Chief Mechanical Engineer, has been appointed Chief Mechanical Engineer, vice W. E. Woodhouse, resigned. Office, Montreal.

W. J. MOULE, heretofore Auditor of Disbursements, has been appointed Assistant Comptroller. Office, Montreal.

E. E. LLOYD, heretofore Auditor of Stores and Mechanical Accounts, Montreal, has been appointed Auditor of Disbursements, vice W. J. Moule, promoted. Office, Montreal.

W. H. LANGRIDGE has been appointed Auditor of Stores and Mechanical Accounts, vice E. E. Lloyd, promoted. Office, Montreal.

W. WRIGHT, heretofore Division Master Mechanic, Toronto, has been appointed Division Master Mechanic, Brownville Division, New Brunswick District, vice C. Powers, transferred. Office, Brownville Jct., Me.

J. H. TODD, heretofore dispatcher, North Bend, B.C., has been appointed dispatcher, Brownville Jct., Me.

M. MILLER, heretofore Locomotive Foreman, Glen Yard, Montreal, has been appointed Master Mechanic, Montreal Terminals Division, Quebec District, vice J. F. Gildea, resigned to enter Delaware & Hudson Co.'s service. Office, Montreal.

J. PRENDERGAST, heretofore Locomotive Foreman, Hochelaga, Que., has been appointed Locomotive Foreman, Glen Yard, Montreal, vice M. Miller, promoted.

R. JOHNSTON, heretofore acting Locomotive Foreman, Sortin Yard, Montreal, has been appointed Locomotive Foreman, Hochelaga, Que., vice J. Prendergast, transferred.

W. H. CAVERS, heretofore Chief Dispatcher, Chapleau Division, Algoma District, Chapleau, Ont., has been appointed Chief Dispatcher, Laurentian Division, Quebec District, Montreal.

C. POWERS, heretofore Division Master Mechanic, Brownville Jct., Me., has been appointed Division Master Mechanic, Toronto, vice W. Wright, transferred.

W. UNDERWOOD has been appointed chief ticket clerk, Toronto, vice J. McGeough, promoted.

E. P. BARKER, heretofore Chief Dispatcher, Sudbury Division, Algoma District, Sudbury, Ont., has been appointed Chief Dispatcher, Chapleau Division, Algoma District, Chapleau, Ont., vice W. H. Cavers, transferred.

H. BROUGHTON, heretofore fitter, North Bay, Ont., has been appointed Locomotive Foreman, Chapleau, Ont., vice E. Freeman, promoted.

C. A. Cotterell  
Superintendent, Medicine Hat Division, Alberta District, Canadian Pacific Railway

J. L. ABEL, heretofore dispatcher, Smiths Falls, Ont., has been appointed Chief Dispatcher, Sudbury Division, Algoma District, Sudbury, Ont., vice E. P. Barker, transferred.

S. W. CRABBE, heretofore agent, Chalk River, Ont., has been appointed Superintendent, Schreiber Division, Algoma District, vice G. J. Fox, transferred to Western Lines. Office, Schreiber, Ont.

E. FREEMAN, heretofore Locomotive Foreman, Chapleau, Ont., has been appointed Division Master Mechanic, Schreiber Division, Algoma District, vice W. Wells, transferred. Office, Schreiber, Ont.

E. M. SMITH has been appointed Trainmaster, Wilkie Subdivision, Saskatoon Division, Saskatchewan District, vice S. C. Graham, Office, Wilkie.

W. P. CRAWFORD, heretofore Locomotive Foreman, Neudorf, Sask., has been

appointed Locomotive Foreman, Wilkie, Sask., vice R. B. Milne, who has left the service.

W. E. HAYWARD, heretofore machinist, Brandon, Man., has been appointed Locomotive Foreman, Neudorf, Sask., vice W. P. Crawford, transferred.

G. J. FOX, heretofore Superintendent, Schreiber Division, Algoma District, Schreiber, Ont., has been appointed Superintendent, Calgary Division, Alberta District, vice P. F. Weisbrod, on leave of absence. Office, Calgary.

E. J. LEMIEUX, heretofore Division Master Mechanic, Lethbridge Division, Alberta District, Lethbridge, has been appointed Division Master Mechanic, Calgary Division, Alberta District, vice A. E. Dales, Office, Calgary.

C. A. COTTERELL, heretofore Superintendent, Lethbridge Division, Alberta District, Lethbridge, has been appointed Superintendent, Medicine Hat Division, Alberta District, vice C. D. MacKintosh, transferred. Office, Medicine Hat.

C. D. MACKINTOSH, heretofore Superintendent, Medicine Hat Division, Alberta District, Medicine Hat, has been appointed Superintendent, Lethbridge Division, Alberta District, vice C. A. Cotterell, transferred. Office, Lethbridge.

D. M. SMITH, heretofore Road Foreman of Locomotives, Medicine Hat Division, Alberta District, Medicine Hat, has been appointed Division Master Mechanic, Lethbridge Division, Alberta District, vice E. J. Lemieux, transferred. Office, Lethbridge.

J. McGEOUGH, heretofore chief ticket clerk, Toronto, has been appointed City Passenger Agent, Boston, Mass.

**Delaware & Hudson Co.**—J. F. GILBEA, heretofore Master Mechanic, Montreal Terminals Division, Quebec District, C.P.R., Montreal, has been appointed Master Mechanic, Pennsylvania Division, D. & H. Co., Carbondale, Pa., vice J. J. Reid, resigned.

**Grand Trunk Ry.**—F. A. RUTHERFORD, heretofore Trainmaster, Districts 27 and 28, Detroit Division, Western Lines, has been appointed Inspector of Transportation. Office, Montreal.

W. J. HAMILTON, formerly of Stratford, Ont., is reported to have been appointed Locomotive Foreman, Brockville, Ont.

T. H. HAMILL has been appointed General Yardmaster, Hamilton, Ont., vice T. J. Wrennick, promoted.

D. W. HAYES has been appointed agent, Hamilton, Ont., vice A. M. Adams, transferred to Toronto, as announced in our last issue.

H. MACDOUGALL, agent, Stratford, Ont., is reported to have been appointed agent, London, Ont., vice D. M. Hayes.

T. J. WRENNICK, heretofore General Yardmaster, Hamilton, Ont., has been appointed Superintendent of Terminals, Black Rock N.Y., vice T. W. Saunders, resigned to enter another company's service.

Grand Trunk Pacific Coast Steamship Co.—W. H. FOGG has been appointed chief clerk and stationery agent, with general charge of the Manager's office at Vancouver, B.C.

F. R. HUNT, accountant, has been given general charge of accounts and finance, and all correspondence on these matters are addressed to him at Vancouver, B.C.

Grand Trunk Pacific Ry.—W. P. HINTON, Vice President and General Manager, Grand Trunk Pacific Ry., has also been appointed General Manager, Grand Trunk Pacific Development Co., Ltd., which controls the G.T.P.R. hotels, lands, townsites, steamships, etc. Office, Winnipeg.

H. STEPHENSON, heretofore shop foreman, Regina, Sask., is reported to have been appointed shop foreman, Prince George, B.C.

### Timiskaming and Northern Ontario Railway Betterments.

The Ontario Legislature, on Mar. 22, voted \$686,711.82 for new work, betterments, additional rolling stock and other facilities on the steam railway, and on the electric line operated by the Timiskaming and Northern Ontario Railway Commission. The items for expenditures on the electric line are given in the electric railway department on another page of this issue, under the heading Nipissing Central Ry., and the items for Timiskaming & Northern Ontario Ry. rolling stock are given under Rolling Stock Notes on another page. All the other items are for work on the T. & N.O. Ry., and of the \$585,211.82 voted, \$53,555.71 consists of items for which the provision made in 1917-18 has been revoked; \$445,156.11 is for items in respect of which \$332,825.75 was voted in 1917-18, and was unexpended, and \$868,500 consists of new votes. Following are the several works for which votes were made under these headings:—

<b>Revotes:—</b>	
Swastika siding .....	\$20,000.00
Monteith station and freight shed....	6,506.25
Porquosidings .....	8,729.68
Iroquois Falls, sidings .....	476.78
South Porcupine extension .....	2,000.00
Cochrane, sidings .....	979.29
New sidings .....	12,473.21
Improvements, station grounds .....	2,390.69
<b>Total .....</b>	<b>\$53,555.71</b>

<b>Partial revotes:—</b>	
Kirkland Lake Branch .....	\$125,000.00
North Bay car repair shed .....	3,720.00
Cochrane, ice house and track .....	3,000.00
Cochrane, baggage building .....	6,497.04
Replacing timber bridges with steel bridges .....	100,000.00
Fencing right of way .....	12,135.39
Additional road crossings .....	2,674.24
Additional weight rails, etc. ....	8,642.93
North Bay freight shed .....	5,000.00
North Bay coal plant .....	27,000.00
North Bay, rearranging track .....	8,000.00
North Bay, machine shops, etc. ....	15,000.00
Change on line, curve reduction, mileage 63 to 66.5 and 80.8 to 81.2 .....	16,156.11
<b>Total .....</b>	<b>\$332,825.75</b>

<b>New Votes:—</b>	
Connaught, station and agent's dwelling .....	\$ 4,500.00
Cochrane, section houses and agent's dwelling .....	20,000.00
Station buildings at unnamed points .....	5,000.00
Heating, plumbing and electric lighting systems in existing dwellings and stations .....	7,000.00
Ballast crushing and screening plant .....	15,000.00
Extension of water supply and improved equipment .....	15,000.00
Additional yard tracks .....	20,000.00
<b>Total .....</b>	<b>\$86,500.00</b>

### Co-operative Railway Building Proposed in Alberta.

At a meeting of representatives of Alberta rural municipalities recently, a proposition was discussed for the building of short branch lines of railway on the co-operative principle by municipalities. According to the promoters, it would cost \$17,000 to build a mile of good substantial road in normal times. If all the lands within one mile were assessed \$800 a quarter section, within two miles \$700, and so on till eight miles out on either side of the lines was reached, the 16 sections would be assessed at the average rate of \$400 a quarter section, and this would bring in \$25,600 for the 16 sections, and besides certain income would be derived from the disposal of townsites. By making the installments stretch over 20

W. E. Barnes  
General Master Mechanic, Canadian Government Railways

years, it would cost the owner of the nearest quarter sections \$40 a year; the owner of the quarter section eight miles out \$5 a year, and the rest of the owners at a proportionate rate. The saving of the cost of transporting the produce and supplies from the long haul of from 25 to 30 miles now necessary would, it was urged, make this plan appear to be a good one for the farmers. The project was discussed, but no action was taken.

### A Correction.

On page 140 there appears an article, accompanied by an illustration, describing the arrangement of a spring-heating furnace in a railway shop. Owing to an error in make-up, which was not detected until the form containing the matter was printed, the caption placed under the illustration referred to the Kettle Rapids Bridge, Hudson Bay Railway, appearing on another page.

G. A. Skipton, Dominion Ex. Co. agent at Preston, Ont., for the past 12 years, died there, Mar. 18, aged 50.

### Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1916, from July 1, 1917:

	Gross Earnings	Expenses	Net Earnings	Decrease
July	\$3,844,900	\$2,940,000	\$ 904,900	\$ 232,600
Aug.	3,405,200	2,812,000	593,200	478,800
Sept.	3,341,700	2,850,800	1,224,000	306,700
Oct.	3,941,600	3,350,500	591,100	629,200
Nov.	4,050,200	3,295,500	754,700	495,300
Dec.	3,273,200	3,207,900	65,300	758,500
Jan.	2,716,300	3,290,300	x578,000	1,067,100
Feb.	2,691,000	3,171,400	x480,400	688,600
	\$27,263,100	\$24,983,400	\$2,279,700	\$4,606,700
Incr Decr	\$ 440,400	\$5,047,100		

x Deficit.  
Approximate earnings or three weeks ended Mar. 21, \$2,187,600, against \$2,126,400 for same period 1917.

### Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, and increases or decreases, compared with those of 1917, from Jan. 1, 1918:

	Gross Earnings	Expenses	Net Earnings	Decrease
Jan.	\$10,789,818	\$9,621,824	\$1,167,993	\$1,263,485
Feb.	9,674,302	8,983,404	590,898	1,396,161
	\$20,364,120	\$18,605,228	\$1,758,891	\$2,668,636
Inc. Decr.	\$1,121,536	\$3,770,171		

Approximate earnings for three weeks ended Mar. 21, \$7,969,000, against \$7,760,000 for same period 1917.

### Grand Trunk Railway Earnings.

Aggregate traffic receipts from Jan. 1 to Feb. 28:

	1918.	1917.	Decrease.
G.T.R. ....	\$6,014,854	\$6,826,821	\$810,967
G.T.W.R. ....	1,202,851	1,272,560	69,709
D.G.H. & M.R. ....	412,255	437,852	25,597

Totals ..... \$7,629,960 \$8,636,233 \$906,273  
Approximate earnings for three weeks ended Mar. 21, \$3,462,601, against \$3,186,666 for same period 1917.

### Grand Trunk Pacific Ry. Earnings.

Approximate earnings for Feb., \$464,483, against \$295,512 for Feb., 1917; aggregate earnings for two months ended Feb. 28, \$904,685, against \$625,620 for same period 1917.

### COTTAGES AT GRAHAM

Department of Railways and Canals, Canada.  
Canadian Government Railways.

Sealed tenders, addressed to the undersigned and marked on the outside "Tenders for Cottages, Graham," will be received at this office up to and including Twelve o'clock noon, Thursday, April 11, 1918, for the construction of five frame cottages at Graham, Ont.

Plans, specifications and blank form of contract may be seen at the following offices: Chief Engineer, Dept. of Railways and Canals, Ottawa, Ont.; Chief Engineer, Canadian Government Railways, Moncton, N.B.; Resident Engineers at Fort William, Ont., and Cochrane, Ont.; the General Western Agent, Toronto, Ont., and the General Manager Western Lines, Winnipeg, Man.

All the conditions of the specifications and contract forms must be complied with.

Tenders must be put in on the blank form of tender, which may be obtained from any of the offices at which plans are on exhibition.

Each tender must be accompanied by an accepted bank cheque payable to the Honorable the Minister of Railways and Canals for an amount equal to ten per cent. (10%) of the tender.

The lowest or any tender not necessarily accepted.

By order,  
J. W. PUGSLEY,

Secretary,  
Department of Railways and Canals,  
Ottawa, March 26, 1918.

# Electric Railway Department

## The Montreal Tramways Company's New Franchise.

Canadian Railway and Marine World for March devoted over 3 pages to details of the Montreal Tramways Co.'s franchise, which was signed on Jan. 28, after extended negotiations before the commission appointed by the Quebec Legislature and the company's representatives. Below we give the balance of the franchise agreement as ratified by the Quebec Legislature at its last session, our reason for giving so much space to it being that it is a new departure in many ways and will doubtless prove of great interest to electric railways generally. As stated in our last issue, the original bill before the legislature was in French, and the translation we have given was made hurriedly and is subject to revision. The following is the balance of the franchise agreement:—

If at the end of the first year of operation under this contract or at the end of any subsequent year, it shall appear to the commission's satisfaction that the maintenance allowance herein fixed is insufficient, such allowance shall be increased for the ensuing year and from year to year as may be deemed necessary. If at the close of any year the commission shall find that the maintenance allowance is excessive or that the maintenance and renewals fund is greater than prudent management of the tramways system required, then the commission may reduce such allowance to any extent which it may see fit: provided that the maintenance allowance shall never be so reduced as to cause a reduction in the maintenance and renewals fund, except temporarily, below \$500,000, and in case such fund is at the end of any year found to be reduced below such sum, then the commission shall forthwith increase the maintenance allowance in an amount sufficient to restore fund at least to \$500,000. Fund shall be under the commission's control and no monies in it shall be paid out or loaned or invested except with the commission's approval. In case the monies in fund are deposited in bank or invested, the interest or revenues therefrom shall be added to the fund. In case the city shall acquire the property at the termination of this contract, the maintenance and renewals fund as then existing, shall become the city's property, and the amount of the fund shall not be added to the purchase price, and any monies then due by the company to the fund shall be deducted from the purchase price.

**Return Upon Capital Value.**—The capital value of the tramways system is hereby fixed at \$36,286,295, including all physical assets added to the system up to Dec. 31, 1917. As its usual return upon the capital value so fixed, the company shall receive in quarterly payments out of gross revenues a sum equal to 6% on such capital value. From time to time hereafter as money is needed for betterments, additions and extensions of plant required by this contract or approved by the commission, such money except to the extent that monies for such purposes are payable at the time from the maintenance and renewals fund, shall be supplied by the company, and the amounts so supplied and actually expended for such purposes under the commission's supervision shall, plus net interest expenses during construction, be added to capital value,

and the company shall receive out of the gross revenues an annual return of 6% on such amount. For such purposes, however, the company shall be obliged to borrow temporarily from monies in the maintenance and renewals fund, except from monies already in that fund for same purposes and from the contingent reserve fund and the tolls reduction fund to the extent that in the commission's judgment the monies are available for loans, and upon monies so borrowed the company shall pay into such funds interest at 6% per annum. Monies so borrowed shall be reimbursed by the company as ordered by the commission.

Within 60 days after the coming into force of this contract, the commission shall ascertain and determine the amount of money expended by the company for all physical assets added to its system subsequently to Dec. 31, 1917, and the amount so determined shall be added to capital value and the company shall receive an annual return therefrom at the rate of 6% per annum to be taken out of gross revenues.

Upon all monies supplied for capital expenditure by the company, from other sources than the aforesaid funds, during the continuance of the present war, or within two years after its close, the company shall receive out of gross revenues an additional return of 1% per annum, provided such additional return shall not be paid for more than five years beyond the close of the war.

As the capital hereinbefore established at \$36,286,295, does not comprise any working capital, it is agreed that any working capital required shall, when ordered by the commission, be furnished by the company. Upon such working capital so furnished the company shall receive a return at the rate of 6% per annum. Should the commission so order, the company shall be obliged, for the purpose of creating or maintaining such working capital, to borrow from any or all the different funds created by the contract, in the same manner as hereinbefore established for monies borrowed by the company from said funds for betterments, additions and extensions of plant.

For the purpose of covering the expense to be incurred in procuring additional capital, the company shall, out of gross revenues, receive annually \$181,421.47 (being equivalent to  $\frac{1}{2}$  of 1% of \$36,286,295), provided said amount is expended solely for the following purposes: when issuing bonds or debenture stock, for discounts, commissions, printing and engraving, exchange, legal and other expenses incidental thereto; when issuing stock, for printing, engraving, transfer and registration fees and listing on stock exchanges. Any surplus over and above the said expenditure, and the interest or income therefrom shall belong to the company but shall be kept in a special account and shall not be distributed until the termination of this contract.

During this contract the company shall not pay dividends of more than 10% annually on its capital stock.

In procuring any amounts of additional capital required after the coming into force of this contract, the company shall limit its mortgages or issues of mortgage bonds or debenture stock in order that the

same do not aggregate more than 75% of the total additional capital then furnished under this contract, but this restriction shall not apply to securities which the company may issue to renew or replace loans contracted under the trust deeds in existence on June 30, 1917, and also the debentures amounting to \$1,500,000, and maturing on May 22, 1922.

**City Rentals.**—The city shall receive out of gross revenues and above all other amounts to which it may be entitled under this contract or otherwise, \$500,000 a year during the continuation of this contract, payable quarterly.

**Contingent Reserve Fund.**—A sum equal to 1% of the gross revenues shall be paid annually into a contingent reserve fund until such fund with its accretions, shall amount to \$500,000, and thereafter no further payments shall be made to this fund and the accretions thereof shall be paid into and become a part of the gross revenues; provided, that if the fund shall be diminished by any of the contingent payments hereinafter described, the accretions of the fund shall thereafter belong to it and the payment of 1% of the gross revenues into the fund shall be resumed as soon as the percentage is available, and shall so continue until the fund is again restored to the full amount of \$500,000. The fund shall be used whenever it may be necessary to make up any deficiency in the payment to be made as provided, and allowances provided.

Upon the termination of the contract, the company shall repay any monies borrowed from the fund and not previously repaid, and the total amount then in the fund shall be distributed as follows: To the city, 30%; to the company, 20%, and to the tolls reduction fund hereinafter established, 50%.

**Division of Surplus.**—All the portion of the gross revenues remaining after the payment of charges hereinbefore described, shall constitute the divisible surplus, and shall, at the end of each year, be distributed as follows: To the city, 30%; to the company, 20%, and to the tolls reduction fund, 50%. The portions distributed to the city and to the company shall belong to them and may be used or disposed of as they respectively see fit. The tolls reduction fund shall be held in trust for the company's patrons for the reduction of tolls, and shall be administered by the commission as herein provided. Whenever at the end of any year the amount in the tolls reduction fund shall exceed \$1,000,000, the commission may, and whenever the amount in said fund shall exceed \$2,500,000, the commission shall, reduce the fares or tolls on the tramways system. For the purpose of effecting said reduction, an amount not exceeding 25% of the total amount in the fund at the close of the year preceding the year when such reduction is to be made, shall be taken out of the tolls reduction fund and added to gross revenues, and the commission shall thereupon reduce the tolls to an extent that in the aggregate for the year is at least equal to the amount so taken out of the tolls reduction fund, but does not exceed such amount plus 75% of the amount which during the last preceding year flowed from gross revenues into the divisible surplus. Thereafter, at the beginning

of each year an amount shall be taken from the tolls reduction fund and turned into gross revenues equal to the amount so taken from the fund at the time of the reduction of tolls; but when the total amount remaining in the tolls reduction fund at the end of any year is less than the amount taken annually from the fund for the increase of gross revenues as above provided, the appropriation from the fund to gross revenues shall for the time being be discontinued, but the tolls shall remain as previously reduced until it shall be necessary as hereinafter provided, to increase them.

If the tolls reduction fund, in spite of its depletion for such reduction in tolls, shall again increase to an amount in excess of \$2,500,000, the tolls shall be further reduced in the same manner as before. If in any year the gross revenues shall be insufficient to provide for the payment of all sums payable under paragraphs 1 to 5, and if the contingent reserve fund is less than \$300,000, the commission shall forthwith from any monies in the tolls reduction fund, appropriate the amount necessary to bring the contingent reserve fund up to \$500,000, all deficits in the payments provided for under paragraphs 1 to 4 being made up, or if sufficient monies therefor are not available in said tolls reduction fund, then the commission shall forthwith increase the tolls to the extent necessary to provide at least sufficient gross revenues to meet all the payments provided for under paragraphs 1 to 5.

At the termination of this contract the tolls reduction fund shall be the city's property, and any amounts borrowed by the company from the fund and not previously repaid, shall forthwith, upon the city's demand, be paid into the fund by the company, and in case of purchase by the city of the tramways system, any amounts then due from the company to the fund shall be deducted from the purchase price.

Any loans made to the company from the maintenance and renewals fund, the contingent reserve fund or the tolls reduction fund, shall constitute, without registration, a lien upon the company's plant and property, superior to any other lien hereafter created by act of the company and not previously authorized by any mortgage or deed of trust in existence on June 30, 1917, affecting such plant and property; but the company may reimburse said loans for the purpose of replacing or renewing any lien created or authorized in virtue of any deed of trust existing on said date.

No monies taken from earnings, except surplus available to the company, shall be used to redeem any mortgage, lien, or other mortgage indebtedness of the company.

**Expropriation.**—On Mar. 24, 1953, and at the expiration of every subsequent five-years period, the city shall have the right, after six months notice given to the company within the 12 months immediately preceding Mar. 24, 1953, and also after a similar notice of six months and on the same conditions at the end of each subsequent five-years period, to appropriate for itself the company's railway, as well as the immovables and dependencies, plant and cars belonging to it and necessary for the operation of the railway, situate within and without the limits of the city, by paying the value thereof to be fixed by arbitrators and 10% over and above the estimate. Should the city exercise the right conferred upon it by this clause, then it is agreed that the valuation of \$36,386,295 fixed by this contract shall

in no way bind the arbitrators in establishing the purchase price payable by the city. The purchase price shall also comprise all the company's privileges, rights and franchises in any municipality wherein the assets so acquired are situated, and the city shall not pay for the value of such privileges, rights and franchises and shall further have the right to operate the system of tramways so purchased in any municipality wherein the same is located. No municipality other than the city shall have the right to purchase the company's railway system in whole or in part.

Within 30 days after the expiration of each year of operation the company shall furnish to the commission detailed statements of its expenditures made within the preceding year.

All the provisions of the contracts, agreements or arrangements concluded between the company and any municipal corporation outside of the city, incompatible with the provisions of this contract shall remain without effect counting from the putting into force of this contract.

In the event of the company, at any time failing to conform to or contravening any of the conditions or obligations which are imposed on it by this contract, or to any of the commission's decisions or orders, it shall be liable to a fine not exceeding \$40, with or without costs at the discretion of the court, for each and every day it neglects to so conform or contravenes any of the conditions, obligations, decisions or orders.

This contract shall form part of the securities furnished by the company under the trust deed in favor of the National Trust Co. and the Harris Trust and Savings Bank, dated July 1, 1911, and other trust deeds existing on June 30, 1917, to guarantee the loans and the issues of debenture stock made by the company under the authority of the said trust deeds.

This contract shall not take effect until ratified by the Quebec Legislature.

### Halifax Electric Tramway Employees Strike.

The Nova Scotia Tramways & Power Co.'s electric railway employees in Halifax, ceased work Feb. 23. On the same day the management issued a statement to the effect that the men did not give any notice of their intention to stop work, nor any reason for so acting. The wages agreement does not expire until May 20, and for two weeks prior to the date of ceasing work there had been negotiations between the company and the men as to a new agreement. On Feb. 18, the company submitted to the men a new scale of wages representing an advance of 12% upon the scale provided for in the unexpired agreement. There had been some differences with the men, owing to certain alleged acts of insubordination which the company's executive officer had dealt with. One employee, Conductor Zinck, being suspended, and the other, Motorman Lowe, being dismissed. It was stated by the Managing Director, H. R. Mallison, that there had been a good deal of insubordination, and defiance of discipline among the men, and that it was determined to make an example. The employees claimed in the case of Conductor Zinck that, having been injured in the explosion, and being nervous, he felt, when rated as motorman for a new run, that in the best interests of himself and the public he should not undertake it;

that before suspension he was not given an opportunity to explaining to the official who suspended him his reasons for not accepting the run, and that he was not physically fit for it. He was taken off the list as a conductor and rated as a motorman. He had served as conductor and in spare time as a motorman. In the case of Motorman Lowe, dismissed, the employees claimed that when an inspector was posting the run guide, including Zinck's name, Lowe suggested that it should not be left up too long, or it might cause trouble. This remark apparently had been described to the company as Lowe ordering the notice down or that he would make trouble. Lowe claimed to have five witnesses to testify to the exact remark he made, which he claims to have been intended as harmless. The men also issued a statement saying that, after ineffectual attempts to secure the reinstatement of Zinck and Lowe, the men decided, by a 90% vote, to cease work until the two men were reinstated.

The city authorities endeavored to bring about an understanding between the parties, with the result that on Feb. 25, H. R. Mallison, Managing Director, wrote the Deputy Mayor as follows:—"It has been decided to moderate the punishment meted out to Motorman Lowe. If our employees are prepared to return to work in the customary manner tomorrow morning, and, on behalf of the citizens, give the company loyal and faithful support, and observe in a satisfactory manner the reasonable rules and regulations laid down for their guidance, the company's ruling in regard to the dismissal of Lowe will be withdrawn, and he will, instead, be subjected to a suspension of one week; which week terminates Wednesday night next. It is part of this proposal that both the company and the men waive further investigation or inquiry in the two cases in dispute and at once resume the harmonious relations which should exist between employer and employees, in order that the public may be efficiently served and the unfortunate condition which has existed for the past three days be ended at once."

This proposal was accepted by the men and the service was resumed Feb. 26.

**Levis County Ry. Fares Advanced.**—The Levis County Ry. applied recently to the four municipalities in which it operates, viz.: Levis, Lauzon, Bienville and St. Romuald, for permission to increase its passenger fares, which were fixed by franchise and ratified by the Quebec Legislature. The fares which have been in force for 15 years are: Cash fare, 5c.; unlimited tickets, 6 for 25c.; scholars' tickets, 50 for \$1.25. The company applied for the following new rates: Cash fare, 10c.; unlimited tickets, 12 for \$1; workmen's tickets, 16 for \$1; children not in arms and scholars under 16 years of age, 50 tickets for \$1.50. We are officially advised that an agreement has been come to, under which the cash fare is advanced from 5c to 10c. Unlimited tickets will be sold, 8 for 50c or 50 for \$3, instead of 6 for 25c as heretofore. Children, not in arms and under 12 years of age, will be charged a cash fare of 5c or 10 tickets for 25c; scholars will be sold 50 tickets for \$1.50.

Sandwich, Windsor & Amherstburg Ry. employees have refused the terms offered by the company, and on Mar. 21 applied to the Minister of Labor for the appointment of a board of conciliation. The two principal points upon which the parties have disagreed are the amount by which wages should be increased, and the recognition of the union.

## The Toronto Civic Railway's Fares and Deficits.

T. Bradshaw, Commissioner of Finance, and R. C. Harris, Commissioner of Works, the latter of whom has charge of Toronto Civic Ry. construction and operation, presented the following report to the city's board of control recently:—

We deem it our duty to again direct attention to the fast accumulating deficit on account of the operation of civic car lines. Prior to the operation of the first line on Gerrard St. East in the latter part of 1912, the Commissioner of Works made strong and insistent representation to the board of control that the rate of fares charged by the Toronto Ry. Co. should apply to the civic lines. Consent was not given to this, but bylaw 6304, passed Dec. 13, 1912, provided for the following scale of fares from 5.30 a.m. to 12 midnight, viz.:—Single cash fare for adults, 2c, or 6 tickets for 10c; children under 9 years, 1c; infants in arms, free; night fares, from 12 midnight to 5.30 a.m., 5c cash.

On Aug. 22, 1913, the Commissioner of Works again recommended that the fare scale of the Toronto Ry. Co. should be applied to the civic lines. The board of control did not agree therewith, but recommended that the existing rates be continued as a temporary measure, to be adjusted, after determination had been reached, upon the negotiations for the purchase of the Toronto Ry. Co., having in view the possible unification of the systems. This was adopted by council Sept. 29, 1913, and on the same day bylaw 6673 was passed, applying the existing rates of fares on the Gerrard St. line, to the St. Clair and Danforth Ave. sections of the system.

In 1914 Aldermen Whetter and Hiltz moved that the board of control consider the advisability of increasing the rates of fares. The board reported favorably, but the motion was referred back by council.

On Feb. 22, 1915, the Commissioner of Works advised the board of control that instructions had been issued to apply the existing rates to the Bloor St. line, and added, "I am still of opinion, however, that a sum sufficient to pay operating, maintenance and overhead charges should be collected."

On Feb. 26, 1915, the Commissioner of Works recommended to the committee on works that the following fares be charged, viz.:—Adults, 3c cash or 9 tickets for 25c; children, 1c; night fares, 5c. The committee adopted this recommendation; the board of control, however, recommended that it be referred back, and in this council concurred on Mar. 8, 1915.

On April 4, 1917, we made joint report to the board of control, recommending that a straight 3c fare, or 10 tickets for 30c, be charged. This recommendation was rejected. Had it been adopted, the revenue for 1917 would have approximated \$428,056, instead of \$278,147 actually received—a practical loss of \$149,909. The foregoing figures do not provide for the collection of fares from soldiers in uniform, of whom we carried 477,149 free during 1917. The total debenture issue on account of civic car lines amounts to \$2,287,171, the annual charges thereon being \$171,063.80. Since the inception of the system, the total charges of the operating sections have been as follows:—

Operating and maintenance.....	\$560,000.00
Capital charges .....	660,947.00
Total .....	\$1,220,947.00
Total revenue .....	930,259.00
Deficit .....	\$590,688.00

In other words, since the institution of the various civic car lines, the ratepayers at large, up to Dec. 31, 1917, were called upon to pay \$590,688 for special service accorded those in the districts contiguous to the civic lines. As before reported, it cannot be urged that this practice is sound, wise or business like. Every public utility should be made self supporting. It is unfair that the citizens at large should be compelled to make good annually, through the tax rate, the deficit created by reason of preferential treatment accorded a section of the community. Furthermore, it provides one of the most potent and damaging arguments against public ownership.

We have shown that the accumulated deficit to Dec. 31, 1917, amounted to \$590,688, and will under present conditions, increase at a rate approximating \$200,000 yearly. This means that in Sept. 1921, when we obtain possession of the Toronto Ry., the ratepayers at large will have disbursed \$1,340,688 to eliminate a deficit created by special preference accorded favored sections. Nor does it end here. We are now proceeding to acquire the section of the Metropolitan Division of the Toronto & York Radial Ry., located on Yonge St. within the city limits, which, if effected, will mean a considerable increase in annual capital charges, and if rated on the fare scale now existing on our civic lines, will considerably augment the annual deficit. This gives us considerable concern. We should persistently hold in mind the necessity of conserving every financial resource, against the acquisition of the Toronto Ry., 43 months hence, when the citizens may be emancipated from the pretence for service offered by the company, whose delinquency in discharging its obligations, is, unfortunately, aggravating rapidly. We are neither conserving or prudent in furnishing service below cost. In our opinion such policy is unwise and dangerous, inasmuch as it may have some serious collateral bearing upon the 1921 situation.

We recommend that the fares on the civic car lines be 3c cash, or 10 tickets for 30c; children's fare to be 1c cash, as at present; the foregoing rates to apply from 5.30 a.m. to 12 midnight; night fares from 12 midnight to 5.30 a.m. to be 5c cash, as at present. We estimate that the recommended scale of fares will be sufficient to cover the operating, maintenance and capital charges, but not physical depreciation, or municipal taxes, which, in our opinion, should be collected from every public utility, operated municipally or otherwise. If this scale be adopted, the following statement, based upon the number of passengers carried in 1917, and the service provided for in the estimates of 1918, would approximate the situation at the end of this year, viz.:—

Operating and maintenance charges.....	\$325,624.00
Capital charges .....	171,064.00
Total .....	\$496,688.00
Revenue passengers 16,178,391 at 3c,	
a passenger .....	194,351.00
Deficit .....	\$ 2,337.00

We cannot too strongly urge upon the administration to give effect to this recommendation. In our opinion it embraces good finance, sound business and efficient administration, while arguments may be admitted to affect its purport we are convinced that the great outstanding principle which has made public ownership successful, viz., that a high standard of service should be furnished at mini-

mum cost, but that such service should be absolutely self sustaining, will of itself, by its sound logic, confute any such arguments.

The board of control sent the foregoing report on to the city council, advising that the recommendations did not meet with its approval and the city council acquiesced, so the fares remain as they were before and the deficits will continue to pile up.

## Application for Increased Electric Railway Fares in Quebec.

The Quebec Ry., Light & Power Co. is applying to the Quebec City Council for permission to increase its street railway fares and gas rates. Following are particulars of the present street railway fares and of the increases asked:—

Cash fare, 5c., no change asked. Tickets, present rates, unlimited tickets, 6 for 25c. and 25 for \$1; workmen's tickets, 8 for 25c. It is desired to change to 5 unlimited tickets for 25c. and 21 for \$1, and to abolish workmen's tickets.

School children's tickets, present rate, 10 for 25c., no change asked.

Children under 7 years of age, when accompanied by parents or guardians, are now carried free. It is asked that all children, excepting those in arms, shall pay 3c. cash fare, or buy 10 tickets for 25c.

Transfers are now free, and permission is asked to charge 1c. each for them.

After giving particulars of increased fares granted to electric railway companies in the United States, the Quebec Co.'s application gives a statement showing prices of material incidental to the operation of public utility companies in June, 1917, compared with June, 1913, showing an average increase of 109.3%. The application continues: "The larger portion of the material used in the operation of this company's service being manufactured in the United States, we are compelled to pay heavy customs duty, and for this reason alone, railway companies operating in the U.S. have the advantage over Canadian railway companies. Different railways in the United States have, however, found it necessary to ask for, and have been granted increases, in most cases abolishing tickets and charging a straight 5c. cash fare, and in a number of cases charging a 6c. and 7c. cash fare. The operating wages paid the Quebec Co.'s employes for 1917 were \$589,751.90, against \$470,721.43 for 1916.

**Winnipeg Jitneys to be Abolished.**—Winnipeg press dispatch Mar. 26.—Abolition of the jitneys was decided upon by the city council last night by a vote of 12 to 5. The resolution reads that the Winnipeg Electric Ry. Co. shall give adequate service, eliminate the electrolysis that damages the water mains, clear the streets of useless poles, and that if motor busses are put on by the company they shall be under regulation by the city. It was stated Mar. 20 that there were about 200 licenses for running jitneys in existence in Winnipeg, and that they were being issued as usual. The licenses are subject to cancellation at any time, and the bonds given run from month to month.

**Guelph Radial Ry. Officials.**—The officials of this line, which is owned and operated by the City of Guelph, Ont., are as follows: President, J. W. Lyon; Vice President, T. Hall; Treasurer, S. Rundle; Secretary, H. Westoky; Manager, A. H. Foster.

## The London and Lake Erie Ry. and Transportation Co.'s Position.

The London & Lake Erie Ry. & Transportation Co.'s financial position has been dealt with in previous issues of Canadian Railway and Marine World, including the company's offer, in Oct., 1917, to sell the property to the city of London, for 60c. on the dollar, as represented by the bonded indebtedness. This offer was considered by the city and rejected on the report of Sir Adam Beck, Chairman of the London Railway Commission, operating the London & Port Stanley Ry., and who is also Chairman of the Hydro Electric Power Commission of Ontario. He is reported to have stated that he was prepared to advise the city that the road would be self sustaining if purchased at 35c. on the dollar of the bond issue. The company

ventures would take debentures of the municipalities, bearing interest at 6%, in exchange for the total debentures and stock of the company. I do not know to what extent the Hydro Electric Power Commission would assist in the purchase, but as it injured the L. & L.E.R., which was a very valuable asset to London, it should certainly assist. By this proposition the municipalities would become the owners of the road, and it is certain that all the municipalities desire the road to be kept open."

Some further negotiations took place, and on Mar. 20, the President wrote the London City Clerk, as follows:—"Your letter of the 16th inst. was submitted to a meeting of the directors of the L. & L.E.

present company took over the property. Dec. 15, 1909. The company was authorized to issue bonds for \$30,000 a mile of the line built, and these were issued to the extent of \$840,000, bearing with interest at 5% per annum, payable half yearly. No interest has been paid on them since 1915.

The last operating results available are those for the year ended June 30, 1916, which show gross earnings from operation \$82,410; miscellaneous earnings, \$46; operating expenses, \$85,594; taxes, funded debt, etc., \$47,325; net deficit, \$50,463; fare passengers carried, 403,717.

The St. Thomas, Ont., City Council is reported to have decided to notify the L. & L.E.R. & T. Co. that unless it pays up at once arrears of rental for track through the city, amounting to some \$8,000, its running rights will be cancelled.

### Applications for Increase in Electric Railway Fares.

On account of the greatly increased costs of labor, fuel, rolling stock, materials, and everything else that electric railways have to buy, it is self evident that their passenger fares must be advanced, if the companies are to continue in business, and already, following similar action in the United States, there is a considerable movement for the purpose of securing a change in the rates of fare paid in Canada.

The Levis County Ry., Levis, Que., has applied to the four municipalities in which it operates for a change in its franchise, particulars of which are given elsewhere in this issue, and the application has been granted, at least in part.

The London Street Ry. has applied to the London, Ont., City Council for a modification of its franchise "either by way of increased rates or otherwise." Its application was published in Canadian Railway and Marine World for March.

The New Brunswick Power Co., operating the St. John Ry., is applying to the New Brunswick Legislature for authority to increase its passenger fares and electric light rates. It is probable that it will ask for a 6c cash fare, without tickets, and with 1c for transfers.

The Quebec Ry., Light & Power Co. has applied to the Quebec City Council for a change in its franchise, to enable it to advance its fares, particulars of which are given on another page.

Electric Locomotive for Hydro Electric Power Commission of Ontario.

This is the first of 12 electric locomotives for the Hydro Electric Power Commission of Ontario's construction railway, in connection with its Chippewa-Queenston power development, which were fully described in Canadian Railway and Marine World for Dec., 1917, and which were ordered from the C. E. A. Carr Co., Toronto. The cabs and trucks are being built by the National Steel Car Co., at Hamilton, Ont., and the Canadian Westinghouse Co. and the Canadian General Electric Co. are each supplying electrical equipment for 6 locomotives.

declined this offer, and it was then suggested that the company should scrap the portion of the line which parallels the London & Port Stanley Ry., the remaining portion to be linked up and operated with the L. & P.S.R. The various municipalities along the route were asked to consider the question of joint action in taking over the line as a municipal enterprise, but nothing definite has been done in this direction.

The President of the L. & L.E.R. & T. Co., G. B. Woods, of Toronto, in a letter which came before the London City Board of Control, Mar. 8, said:—"You are doubtless familiar with the London & Lake Erie Ry. and the effect on it of the electrification of the London & Port Stanley Ry. Negotiations were opened with Sir Adam Beck for the sale of the L. & L.E.R., and his offer of 35c. on the dollar was considered too small. It was intimated that 60c. on the dollar would be accepted. The value of the railway to London, and all the municipalities through which it runs, is known, and if they could agree on the proportion of the purchase price each should assume, I believe the holders of de-

R. & T. Co. held yesterday, and I was authorized to say, the lowest possible price we will accept is \$420,000, for the bonds and capital stock of the railway. This price is 50c. on the dollar for the bonds. If the city does not desire to pay cash, the company would be willing to accept 6% City of London bonds, with interest payable half yearly, the bonds to be payable at the expiration of a time to be agreed upon, not to exceed 20 years. It is very desirable that an early answer should be obtained, as already the road has been kept open many months longer than was at one time contemplated. This was done in order to give the municipalities an opportunity to keep the road running." The letter was considered by the city's Board of Control, Mar. 22, and ordered to be filed, the Mayor being reported as saying that the city would not buy the bonds at any price.

The line, which runs from London, via Lambeth and St. Thomas, to Port Stanley, Ont., on Lake Erie, is 28 miles long, and was opened for traffic by the Southwestern Traction Co., in 1905. That company went into liquidation in 1909, and the

Hamilton & Dundas St. Ry. Freight Traffic.—The Toronto, Hamilton & Buffalo Ry. is applying to the Dominion Parliament for the confirmation of an agreement dated June 17, 1890, made between it and the Hamilton & Dundas Ry., making certain traffic arrangements or agreements authorized by Sec. 364 of the Railway Act, for 50 years. This is the agreement which was the subject of considerable controversy in the House of Commons in 1917, when it was sought to have it confirmed. The agreement is for the handling of freight from the T. H. & B. Ry. into Dundas by the Hamilton & Dundas St. Ry. As the latter is an Ontario company, and as the Ontario general laws only permit agreements for 21 years, legislative confirmation of the agreement was secured in 1898. The traffic has been handled since that time by the H. & D. St. Ry., and the T. H. & B. Ry. now wishes to secure Dominion confirmation.

The jitney licenses in Vancouver, B.C., will terminate June 30, by which time the city council expects to have secured from the legislature the legislation necessary to prohibit their operation.

## The Toronto Railway and the City of Toronto.

The Ontario Railway and Municipal Board has adjourned to Apr. 12, further hearing of the failure of the Toronto Ry. to comply with the Board's order respecting the addition of 100 new cars to its equipment by Jan. 1. The company, in the meantime, is advised to use every endeavor to obtain additional cars, and to get its orders on the market and obtain the best delivery possible.

On Nov. 9, 1914, the Ontario Railway and Municipal Board, in announcing its conclusions on a special report obtained as to the service furnished by the company, and the requirements of the city, required, among other things, that the company provide, by June 30, 1915, 50 double truck motor cars of a design to be approved by the board. The chief aim of the parties concerned was the elimination of overcrowding on the cars, and of the outside running board on the summer cars. In the early part of 1915 the company equipped one of its cars with cross seats and a centre aisle, and six of its cars with half of the seats on each side arranged across the car and the other half longitudinally, with a cross-over aisle. Owing to the narrow devil strip, the cars used are of necessity about a foot narrower than those on most of the large electric railways in Canada and the U.S. On Apr. 30, 1915, the board held a sitting to consider plans of cars, when it was stated that the company was proceeding to build cars according to the plans, without having received the board's sanction, and that two cars had been built and 18 were in course of construction, to enable the company to have them in service by June 30, 1915. The board's chairman announced that if the company built the cars without the board having approved the plans it did so at its own risk. The matter again came before the board, May 17, 1915, and the city submitted plans of a composite type of car, and for the reconstruction of existing cars. The company desiring time for the consideration of these plans, the matter was left to the board's engineer, the City Engineer and an official of the company. After some consultation, an existing type of car was arranged with cross seats on one side and a longitudinal seat on the other, with the car body being set a little off centre on the trucks, in order to obtain some extra width without endangering passing cars. The board then decided that the company must have 25 of this type of car in operation by Dec. 1, 1915, subject to some slight alterations to the satisfaction of the board's Engineer. This car, however, did not materialize, owing to the unsatisfactory nature of the design, and on Nov. 22, 1915, the board ordered the company and the city to confer within 30 days, as to the best type of car to be used, and if they failed to agree, the city would be given 15 days in which to submit plans. The city declined to confer with the company, and the board, on Jan. 25, 1916, rescinded its order for the composite cars, and ordered that 25 double trucks cars of a type and character of construction as recommended by its Engineer, Jan. 11, 1915, be built and placed in service by Mar. 1, 1916, and a further order was made Feb. 7, 1916, that the balance of 50 were to be built with the greatest possible interior width, and of a design to be approved by the board's engineer, and placed in service by May 15, 1916. Cars were built on this order and placed in service, several months after the date called for by the original order, the delays being

chiefly due to the city's actions in objecting to any type of car proposed without presenting alternative plans of a reasonable kind, having regard to all the circumstances existing.

The outbreak of war in Aug., 1914, caused considerable dislocation of business generally, men, money and material all being affected, and there were increasing difficulties owing to war requirements. Railway rolling stock suffered, perhaps to a greater extent than most other things, as, while the materials entering into their construction were more urgently required for war purposes, cars were also required to transport manufactures from point to point inland, and from inland points to the seaboard. Again in building such rolling stock as could be handled, preference was naturally given to the type most needed, and passenger equipment had necessarily to be put in the background. However, in Mar., 1917, the Ontario Railway and Municipal Board, on the city's application for a re-opening and reconsideration of the order of Nov. 6, 1914, ordered that the company place in operation 100 additional double truck cars by Jan. 1, 1918, and another 100 by Jan. 1, 1919. At the same time, the city was also applying to the Ontario Legislature for legislation to compel the company to place 100 cars in operation during 1917, and 100 during 1918, and in default to pay to the city \$100 a car a day for every car less than the numbers quoted not operated. The legislature's committee struck this item out of the city's bill on the ground that it was a matter within the competence of the Ontario Railway and Municipal Board. At this time, a condition in the agreement between the city and the company, to the effect that all cars operated on the company's tracks must be built by the company, within the city limits, was in force, but this proviso was waived by the city, to enable the company to purchase cars from outside sources, if possible. Since then, the situation regarding the building of electric railway cars has not improved to any appreciable extent, mainly, it is stated, owing to the difficulty in obtaining the necessary equipment as desired. Several hearings have been held relative to the company's failure to have the cars in operation by Jan. 1, 1918, and the difficulties attending the question of getting orders filled, the board considering, that in any event, the company should have shown its bona fides by actually placing an order, at least, for car bodies, and obtaining deliveries of equipment as speedily as possible. A suggestion was made on behalf of the city, that the company had not used every endeavor to obtain the cars, and that one company at least, was in a position to make deliveries. The city asked for a specification of the cars, and arrangements were made to enable this company to quote and state what deliveries could be made. It appeared later, that the company mentioned was the Canadian Car and Foundry Co., and it was stated that the company would possibly be able to make delivery of 60 car bodies in a year, and perhaps the trucks for them also, leaving the railway company to deal with the matter of equipment. This negotiation is still going on, and the adjournment of the enquiry until Apr. 12, is to enable the company to see exactly what arrangement can be arrived at. No doubt there have been great difficulties in the way of obtaining deliveries of rolling stock, but these are now disap-

pearing, and it may be, that the company might have used greater diligence in attempting to carry out the board's order, but, as stated by the chairman, when the matter was before the board some time ago, the company could not be expected to launch into a heavy expenditure cheerfully, when the franchise had so short a time to run. The stand taken by the city in this, and other matters with which the Toronto Ry. is concerned, cannot readily be understood, as its actions are so erratic, and are apparently taken without due regard to the facts of the case, or the conditions surrounding it.

## Fort William Municipal Railway Deficits.

The application of the Fort William City Council to the Ontario Legislature for the confirmation of a bylaw authorizing the issue of \$225,000 of debentures to take care of the deficits in connection with the city's electric street railway, was considered by the Ontario Railway and Municipal Board, which reported to the legislature that "in important particulars the provisions of the Municipal Act respecting finance have for some years been ignored by the Fort William municipal council, in consequence of which a series of annual deficits in the operation of its street railway system have resulted in a large floating debt." The amount of the deficits are mentioned in the bylaw as:—1914, \$29,162.54; 1915, \$64,270.18; 1916, \$64,827.68; 1917, \$65,746.59. The board recommended that the city should be relieved from the floating debt by the authorization of the issue of debentures, as asked for, but that an additional section should be added to the bill in order to prevent the accumulation of deficits in the future, as follows:—"In case there shall be a deficit in the operation of the city's electric street railway in any calendar year subsequent to 1917, the council of the city of Fort William shall include in the estimates of the following year the amount of such deficit and shall in such following year assess and levy on the whole rateable property within the municipality a sum sufficient to pay such deficit and the interests thereon."

The bill, amended as recommended by the Ontario Railway and Municipal Board, was passed by the Legislature Mar. 15.

**Motor Busses for Winnipeg.**—The Winnipeg Electric Ry. is reported to have decided to place a number of motor busses on streets on which there are no street car tracks, to serve outlying districts and act as feeders to the street railway. It is said that the type of bus chosen will be built on a one ton truck chassis, with interior equipment similar to that of the regular street cars, and that each bus will have capacity for 16 passengers.

**The City of Edinburgh.** Scotland, having taken over the sections of its street railways, hitherto run by a private company and operated by cables, has received expert advice in favor of electrifying the system and operating on the overhead trolley system. The main portion of the city's street railways is operated on the underground trolley system.

The Ontario Legislature has passed an act providing, among other things, that the members of the Guelph City Council shall be directors of the Guelph Radial Ry. under the acts relating to the company. Up to the present time the council has nominated the directors annually, while the new provision is that a directorship of the G.R.R. goes with the office of alderman of the city.

## Winnipeg Electric Railway Annual Report and Meeting.

The report for the calendar year 1917 shows the following results:

Gross earnings from operations.....	\$3,339,009.89
Operating charges, exclusive of depreciation .....	2,143,512.73
Net operating revenue.....	\$1,195,497.16
Miscellaneous income .....	47,374.62
Gross income available to meet fixed charges, etc. ....	\$1,243,374.78
From which the following deductions are made:	
Interest charges on debt- ture stock, bonds, etc.....	\$649,950.97
City's percentage, taxes, etc. ....	209,064.45
Other charges .....	31,629.71
	\$89,745.13

Net income, excluding depreciation.. \$353,629.65

The net income, on the same method of accounting, shows a decrease of \$91,621.80, compared with 1916, notwithstanding the fact that the gross revenue for the year under review shows an increase of \$27,840.20 over the previous year.

The net earnings shown above are slightly more than 1% on the \$9,600,000 capital stock. Twelve per cent. was paid in dividends on this stock a few years ago.

Gross earnings for the year showed a gain of \$27,840. Miscellaneous income was also slightly higher, but all the gain was absorbed in increased costs. The city's share of earnings showed but slight variation. There is deducted from 1917 earnings, however, \$201,050 for depreciation, which has no corresponding item in previous statements.

The 1917 form of statement makes the net income transferred to surplus \$152,579, with the year's sinking fund requirements of \$60,000 made a subsequent charge against total surplus. However, as the sinking fund deduction is properly chargeable to the year's income, it has been included in the following table in the list of general deductions, as in the previous year:

	1917.	1916.	1915.
Gross .....	\$3,339,009	\$3,311,169	\$3,663,895
Expenses .....	2,143,512	1,939,041	2,332,158
Net rev. ....	\$1,195,497	\$1,372,128	\$1,331,737
Misc. inc. ....	47,877	26,010	.....
Gross inc. ....	\$1,243,374	\$1,398,138	\$1,331,737
Less:			
Interest .....	\$ 649,050	\$ 643,991	\$ 637,263
City's p.c. ....	195,777	110,227	99,303
Disc. on sec. ....	11,797	22,929	.....
Taxes .....	103,286	91,569	99,068
Misc. exp. ....	5,985	17,503	.....
Other deduc. ....	13,846	6,665	.....
Sinking fund ....	60,000	60,000	.....
Depreciation .....	201,050	.....	.....
Tot. deduc. ....	\$1,150,795	\$ 952,887	\$ 835,635
Balance .....	\$ 92,579	\$ 445,251	\$ 496,101
Dividends .....	.....	.....	855,000
Balance .....	\$ 92,579	\$ 445,251	\$ 358,898
Prev. bal. ....	1,125,526	682,824	1,141,496
Tot. surp. ....	\$1,218,106	\$1,128,075	\$ 782,598

\*—After adjustments. \$ Deficit.

The record of the company's earnings, showing net after expenses but before charges, the amount distributed in dividends and the final surplus left over after all charges, for 11 years, follows:

Year.	Net.	Dividends.	Surplus.
1906.....	\$ 714,341	\$ 248,669	\$214,625
1907.....	946,676	373,137	186,872
1908.....	1,117,222	595,789	149,614
1909.....	1,303,066	600,000	263,406
1910.....	1,629,508	600,000	334,769
1911.....	1,928,782	690,000	420,574
1912.....	1,761,236	720,000	474,463
1913.....	1,826,087	1,070,043	185,461
1914.....	1,685,093	1,080,000	*85,389
1915.....	1,331,737	855,000	*358,898
1916.....	1,398,138	.....	445,251
1917.....	1,243,374	.....	92,579

\*—Deficit.

The annual meeting was held at Winnipeg, Mar. 19. The directors and officers for the current year, who were all re-elected, are: Sir Wm. Mackenzie, Presi-

dent; Sir Augustus Nanton, Vice President; F. Morton Morse, Secretary-Treasurer; Sir Donald Mann, D. B. Hanna, G. V. Hastings, J. D. McArthur, R. J. Mackenzie, Hugh Sutherland.

## Electric Railway Projects, Construction, Betterments, Etc.

**Hull Electric Ry.**—We are officially advised that the company is building a Y at its car shed at Deschenes, Que., to facilitate the movement of single end cars, and that the company proposes to lay at an early date 7,000 ft. of new double track, with 85 lb. C.P.R. rails, on concrete paving, on Montcalm St. and Chelsea Road, Hull, Que. (Feb., 1917, pg. 73.)

**Montreal & Southern Counties Ry.**—A press report states that after some years of intermittent negotiations, an arrangement has been reached under which a loop line will be built on Grey Nun, Youville and Common Sts., Montreal, round the company's station. The report also states that it is proposed to build a new station with freight, express and general offices, on Youville St.; that the building will be three stories high, and that it will be built with steel and concrete frame, finished off with pressed brick.

**Nipissing Central Ry.**—The Ontario Legislature has voted \$2,000 for enlargement of car barns, and \$10,000 for increasing facilities at the harbor at Haileybury, Ont.

**Ottawa Electric Ry.**—The city board of control, on Mar. 1, authorized Controller Kent to make preliminary inquiries concerning the position of the city in connection with the O.E.R. franchise, which will expire in a few years. (Oct., 1917, pg. 407.)

**Windsor, Essex & Lake Shore Rapid Ry.**—We are officially advised that the company requires a number of cedar ties and trolley poles. (Oct., 1917, pg. 407.)

## Mainly About Electric Railway People.

**T. Ahearn**, President Ottawa Traction Co., has been elected President Ottawa Motor Club.

**A. H. Foster**, Manager, Guelph, Ont., Radial Ry., who has also been acting as fuel controller for the city during the winter, has resigned the latter position.

**R. Brunt**, one of the oldest employees of the British Columbia Electric Ry., has retired after 26 years service. When he entered the company's service, it had only four cars in operation.

**J. D. Fraser**, director and secretary-treasurer, Ottawa Electric Ry., has been spending a short time in the Gatineau country, north of Ottawa, recuperating after a heavy cold.

**S. S. Anderson**, heretofore Assistant to General Manager, Sandwich, Windsor & Amherstburg Ry., Windsor, Ont., has been appointed General Manager, succeeding his father, Jas. Anderson, resigned.

**H. A. Dorsey**, promoter and President, Dominion Park Co., Montreal, who also promoted, and was at one time President, of the ill fated Toronto Park Co., the property of which at Scarboro Beach was acquired afterwards by the Toronto Ry. Co., died at Montreal, Mar. 6, aged 57. He was buried at his birthplace, Bridgeport, Conn.

**D. A. Starr**, M.I.E.E., formerly of Halifax, N.S., whose birthday is mentioned

on another page of this issue, has since 1902 been General Manager of the Clyde Valley Electrical Power Co., Glasgow, Scotland, of which the Right Hon. A. Bonar Law, M.P., was chairman for nearly six years before being elected leader of the Unionist opposition in the British House of Commons. The company has now nearly 150,000 h.p. connected to its mains, which is being increased.

**James Anderson**, who has resigned his position as General Manager, Sandwich, Windsor & Amherstburg Ry., Windsor, Ont., has been elected Vice President. He was born near Ayr, Ont., June 20, 1851. At the age of 19 he entered the old Great Western Ry. service, and after serving a few years was appointed a conductor, which position he held until Nov., 1883, when he resigned and went into the grocery business as a member of the firm of Robinson & Anderson, which partnership was continued for 10 years. In June, 1893, he sold his interest to his partner and associated with John Davis, W. J. Tucker, Dr. Coventry, W. J. Pulling, of Windsor, Ont., and Wm. Hendrie of Hamilton, Ont., purchased the Sandwich, Windsor & Amherstburg Ry., which was operated under that ownership for 8 years. When it passed into the hands of the present owners, the Detroit United Ry. Co., in 1901, he was appointed General Manager, and the road has since been extended to Amherstburg and Tecumseh, and now operates 35 miles of line.

**Arthur Gaboury**, Superintendent, Montreal Tramways Co., has been appointed by the French Government as an officer of the Academy. The Consul General, in transmitting the diploma, spoke of it as a mark of the French Government's recognition of Mr. Gaboury's "activity and devotion to the cause of France." The insignia, a silver palm suspended from a purple ribbon, was presented to the recipient, in Montreal, Mar. 22, by Brig.-Gen. Arthur Boucher, of the French Army. Mr. Gaboury was born at Montreal, Apr. 6, 1875, and entered Montreal St. Ry. service, June 4, 1894, since when he has been, to Oct., 1900, conductor and motor man; Oct. to Nov., 1900, assistant inspector; Nov. to Dec., 1900, night clerk, Cote St. barn; Dec., 1900, to Sept., 1903, day chief clerk, St. Denis; Sept., 1903, to May, 1906, Claims Agent; May, 1906, to 1907, Assistant Superintendent, and from 1907 he has been Superintendent, Montreal St. Ry. and its successor, Montreal Tramways Co. He has been a member of the Canadian Electric Railway Association's executive committee, since June, 1915.

## Electric Railway Finance, Meetings, Etc.

**Calgary Municipal Ry.**—A press report states that the operating profit for January was about \$1,650, or about double that for Jan., 1917.

### Cape Breton Electric Co.—

	Jan., 1918.	Jan., 1917.
Gross .....	\$41,428.23	\$38,581.01
Expenses .....	33,256.65	23,208.99
Net .....	8,171.58	15,372.02

### Edmonton Radial Ry.—

Revenue for Jan., 1918.....	\$47,733.83
Revenue for Jan., 1917.....	45,024.48
Passengers carried Jan., 1918.....	991,846
Passengers carried Jan., 1917.....	935,602

A press report of Mar. 12, states that the total revenue for 1917 was \$488,064.46, with a total expenditure of \$651,796.40, leaving a deficit of \$163,731.94. The deficit for 1916 was \$68,890.19, making the deficit for two years \$232,622.13.

## London Street Railway.—

	Feb., 1918	Feb., 1917	2 mths. to Feb. 28, 1918	2 mths. to Feb. 28, 1917
Gross	\$33,853.94	\$31,720.65	\$69,920.21	\$65,956.73
Expenses	25,337.81	23,540.17	53,288.37	46,976.14
Net	8,516.13	8,180.48	16,631.84	18,980.59

**Quebec Ry., Light & Power Co.**—The report of earnings presented to the Quebec City Council by the company, Mar. 15, for the preceding three months, showed a decrease of \$16,639.74, according to a press report.

**Regina Municipal Ry.**—The report of the city auditors on the finances of Regina, Sask., for the year 1917 shows that there was a net deficit on the Regina Municipal Ry. of \$63,898.99; and a net deficit on the electric light and power plant of \$10,494.54, making a total deficit of \$74,393.53. This was taken care of by light and power taxes, \$34,500; net surplus on waterworks account, \$5,734.85; property sales contribution to street railway sinking fund, \$20,574.76, and \$13,583.92 carried to general revenue and expenditure account to be met out of general taxation.

## Toronto Railway.—

	1918	City	1917	City
	Receipts	percent'ge	Receipts	percent'ge
January	\$ 562,707	\$ 84,406	\$510,053	\$ 76,508
February	473,185	88,754	436,725	70,978
Totals	\$1,035,892	\$173,160	\$946,778	\$147,486

## Operation of Interurban Cars in Winnipeg.

Referring to the relationship between the Winnipeg Electric Ry. company and the interurban companies, the City Solicitor said that money that should have been used for the benefit of Winnipeg citizens that had gone into the Winnipeg, Selkirk & Lake Winnipeg Ry., and the Rapid Transit Co., and that was why the Winnipeg Electric Ry. Co. was in its present position.

Winnipeg's City Solicitor reported to the board of control Mar. 7 that it was not feasible to let the interurban cars run to the centre of the city and that the freight cars and the Headingly cars had no right whatever on the city streets. The Winnipeg Electric Ry. objected to the cars coming into the city, because of the congestion of traffic that would be caused in Main St. He advised that no action be taken by the city to bring the cars in until such time as some arrangements had been made between the Winnipeg Electric Railway and the radial companies, and they asked for that power from the city. The city had also to avoid overlapping franchises in view of the possibility of its taking over the street railway service in the city some day.

**Winnipeg Electric Ry. Publicity Department.**—The Winnipeg Electric Ry., with a view to promote good relations with the public, and effect a clearer understanding of the utility problems, has established a publicity department, under the direction of H. C. Howard, formerly on the Manitoba Free Press Staff. The company will issue a pamphlet publication, and distribute it on the street cars, to provide a direct means of communication between the company and its patrons, and it is expected it will also be instrumental in improving relations between the company and its employees, helping them in the discharge of their difficult duties to the public, and that a greater degree of confidence and good will between the company, its employees, and the public will be attained.

## Electric Railway Notes.

The Edmonton Radial Ry. is said to be negotiating for the sale of some of its surplus cars.

The Ontario Legislature has voted \$25,000 for the purchase of two new cars for the Nipissing Central Ry.

Guelph Radial Ry. employees at Guelph, Ont., have formed a local division of the Street Railway and Electrical Workers' Union.

Edmonton Radial Ry. employees are discussing a new agreement with the Edmonton, Alta., City Council's utilities committee.

The Hamilton, Ont., St. Ry. is reported to have notified its men that it cannot give the increased wages asked and suggesting that the matter be arbitrated.

The Toronto & York Radial Ry. has not as yet made any arrangements for replacing the cars destroyed by fire at its Metropolitan and Scarboro car barns recently.

The London & Port Stanley Ry.'s rules and regulations for employees have been approved by the Board of Railway Commissioners, and recommended to the Governor in council for sanction.

Sandwich, Windsor & Amherstburg Ry. employees passed a resolution, Mar. 15, asking for higher pay, recognition of their union, and the installation of air brakes and modern sanders on all cars.

The Montreal & Southern Counties Ry. has received another motor car from Ottawa Car Manufacturing Co., the same as those previously delivered, and which were described and illustrated in our last issue.

The London St. Ry. has received trucks for five p.a.y.e. cars and expects the bodies at an early date. It is converting two double truck cars into p.a.y.e. ones, taking out the bulkheads and eliminating the vestibules.

The Winnipeg Electric Ry. has, since Jan. 1, according to a press report, lost the services of 116 conductors and motormen, including men on trial who could not prove their fitness, and men called up for military service.

It has been suggested that the British Columbia Electric Ry. might take over the section of the Great Northern Ry. between Cloverdale, Hazelmore and Melrose, which that company is asking the Board of Railway Commissioners for leave to abandon.

The British Columbia Minister of Finance stated in the Legislature recently that the cost of the commission which investigated the transportation situation in the coast cities last year was \$2,858.65, of which \$2,054.65 was paid to Adam Shortt, the commissioner.

The St. Thomas-Aylmer Motor Bus Co. is reported as proposing to open additional routes to Lucan, Union and Port Bruce, Ont. The service started between St. Thomas and Aylmer in 1917, and is reported to have been profitable. W. N. Warburton, London, Ont., is Manager.

The City of Windsor, Ont., and the surrounding town, village and township municipalities are making arrangements for a joint meeting to discuss a possible plan for taking over all the electric railway lines centring on Windsor, to be operated as a municipally owned concern.

Montreal Tramways Co.'s employees have formed a union, and have become connected with the Amalgamated Association of Street and Electric Railway Employees of America. The union will not

supersede the benefit association which has been in existence for the past 15 years.

The Winnipeg City Council has been authorized by the Manitoba Legislature to license, control, regulate or prohibit jitneys within the city limits. The existing jitney licenses expire April 30, and it is expected that the city council will have taken definite action under its new powers by that date.

The British Columbia Electric Ry. has applied to the Board of Railway Commissioners for authority to increase its freight rates on the Vancouver-Steveston, New Westminster-Eburne, and Fraser River Valley, and other interurban lines, by 10%. Notice of the application has been given the municipalities affected.

In connection with a proposal to the Calgary, Alta., City Council, to protect itself against claims for damages from accidents on the municipal railway by means of an insurance policy, it was stated that 2% of the gross revenue was set aside to provide a fund to meet these claims. Commissioner Graves stated that this had been sufficient to take care of all claims.

In connection with the passing of the act giving Winnipeg City Council power to prohibit jitney traffic, it is reported that the Winnipeg Electric Ry. will put in service a new type of street car, lighter than the present one, that a wrecking car will be provided; that electric switches will be installed, and that improvements will be made in the schedules, which will prevent bunching and other delays.

Calgary Municipal Ry. employees are asking for an increase of wages to 50c. an hour. Commissioner Graves offered an increase to 46½c., but up to Mar. 15, the men had refused to accept less than 50c. Superintendent McCauley is reported to have said, Mar. 14, that the railway could not be operated on anything like a paying basis if the increase was granted, and that if the men were paid higher wages the fares would have to be increased.

Sandwich, Windsor & Amherstburg Ry. employees are asking for an increase of wages. The present wage schedule is said to be from 29c. to 32c. an hour, and the increases asked are from 45c. to 50c. an hour. The men also ask for the recognition of their union and other concessions. An official is reported to have said, Mar. 15, that an increase would be granted, but that the amount would not be fixed until the meeting of the directors at the end of March.

The Winnipeg City Council's special transportation committee's report on the street railway and jitney traffic questions, presented Mar. 18, contained a review of the whole transportation situation in the city, and concluded: "It is deemed inadvisable by the committee to make any specific recommendations, or findings, and consequently the data is transmitted for the consideration of the council as a whole." The council discharged the committee and decided to take up the consideration of the report at an early meeting.

**Guelph Radial Ry. Wages.**—The conductors and motormen of this line, which is owned and operated by the City of Guelph, Ont., have been given a war bonus of 1½c. an hour, which makes their wages as follows: 1st year men, 23½c.; second year, 25½c.; third year, 27½c.; shopmen average 29c.

# Marine Department

## Cargo Steamship Building for Dominion Government.

As stated in Canadian Railway and Marine World for March, the Marine Department had then placed contracts for three cargo steamships, as follows: Canadian Vickers, Ltd., Montreal, one of 4,300 tons dead weight capacity, and one of 8,100 tons d.w.; Collingwood Shipbuilding Co., Collingwood, Ont., one of 3,750 tons d.w. We also stated that on Feb. 18 no order had been given by the department to the Wallace Shipyards, Limited, North Vancouver, B.C., but that negotiations were in progress for 4 steel steamships, and we added later that the Wallace Shipyards had advised us on Feb. 23 that it had an order for 4. The Wallace Shipyards' management apparently construed as an order, a promise that 4 steamships would be ordered from it under certain conditions, and subject to the government's approval, but up to the time of writing only one vessel of 4,300 tons d.w. has been ordered from this company, the particulars being as follows:

Single deck, poop bridge and forecable; straight stem; elliptical stern; 5 water tight bulkheads; single screw; triple expansion engines; 2 Scotch boilers, 180 lb. working pressure; forced draft.

Canadian Vickers, Ltd., laid the keel of the 4,300 ton steamship Mar. 12, and expect to deliver her before the close of navigation. Its 8,100 ton one is also expected to be delivered this year. The Collingwood Shipbuilding Co. expects to deliver its 3,750 ton vessel in November.

Another order for a 3,000 ton d.w. steamship will probably be given the Collingwood Shipbuilding Co. in April or May, and it is expected to place other orders this year, which will bring the total number up to 30 vessels, the government having decided on an appropriation of \$25,000,000 for this year. The orders are being placed at bulk sums, for vessels fully equipped. The steel plates, angles, etc., which are being procured by the government from the United States, under arrangements with the U.S. Government, will be turned over to the contracting shipbuilders at cost.

Three standard types of steamships have been decided on, one of approximately 3,000 tons d.w., to be built on the Great Lakes, the other two types of 5,100 and 8,100 tons d.w., respectively, to be built on the Atlantic Coast, including the St. Lawrence River up to Montreal, and on the Pacific Coast. The 3,750 ton one ordered from the Collingwood Shipbuilding Co. and the 4,300 ton one ordered from Wallace Shipyards, Ltd., are odd sizes that will not be repeated. The 30 steamships to be ordered this year will probably include 17 of the 3,000 ton type, 5 of the 5,100 ton type and 8 of the 8,100 ton type.

The government does not intend establishing or aiding in establishing any new shipyards, the Minister of Marine believing it to be better policy to confine orders to existing yards. No orders will be placed for wooden steamships.

Sir Robert Borden, in speaking in the House of Commons on Mar. 19, in the debate on the address in reply to the speech from the throne, read the following memorandum, prepared by the Marine Department, which confirms the foregoing information, and also that published in Canadian Railway and Marine World in March.

The intention is to confine at present the awarding of contracts for the construction of steel steamships to yards already established and actually engaged in constructing steel ships. The yards so equipped and at present engaged in constructing, are as follows:—Canadian Vickers, Ltd., Montreal; Davie Shipbuilding Co., Lauzon, Que.; Kingston Shipbuilding Co., Kingston, Ont.; Collingwood Shipbuilding Co., Collingwood, Ont.; Polson Iron Works, Ltd., Toronto; Dominion Shipbuilding Co. Toronto; Midland Shipbuilding Co., Midland, Ont.; Port Arthur Shipbuilding Co., Port Arthur, Ont.; British American Shipbuilding Co., Welland, Ont.; Canadian Allis-Chalmers, Ltd., Bridgeburg, Ont.; Wallace Shipyards, Ltd., Vancouver, B.C.; J. Coughlan & Son, Vancouver, B.C.

The estimated combined capacity of these several yards is approximately 250,000 tons a year. All of these yards, with the exception of the Kingston Shipbuilding Co., are at present fully occupied in constructing steamships for the Imperial Munitions Board or for the Dominion Government. As the ships under contract for the Imperial Munitions Board are completed and the building berths become vacant, they are to be immediately occupied by the government. When the government launched its programme of shipbuilding, two berths only at the yards throughout Canada, were vacant, one of these was at the yard of Canadian Vickers, Ltd., Montreal, and one at the Collingwood Shipbuilding Co.'s yard.

A contract has been placed with Canadian Vickers, Ltd., for the construction of a steel vessel of 4,300 tons deadweight capacity, the keel of which has been laid and considerable construction work begun as well.

A contract has been concluded with the Collingwood Shipbuilding Co. for a ship of 3,750 tons deadweight capacity, the materials for which are in course of delivery. Both of these vessels will be in commission before the close of navigation next autumn.

The next building berth to become vacant will be in May at Canadian Vickers, Ltd. On this berth it is proposed to lay down a ship of 8,100 tons deadweight capacity, which will also be completed and in commission before the end of the year.

Two berths will become vacant at the Collingwood Shipbuilding Co.'s yard at a later date in May. These berths will be at once occupied with ships of 3,000 tons deadweight capacity each, for which the material is under order. While the builders hold out hope that these vessels may be ready before the close of navigation, it is not expected that they will be in commission before the opening of navigation in 1919.

The Wallace Shipyards, Ltd., Vancouver, will also have a berth vacant in May. A contract has been made with this company for laying down a ship of 4,300 tons deadweight capacity. The material has been ordered and the company undertakes to prosecute the work vigorously and complete the vessel ready for commission before the end of the year.

The British American Shipbuilding Co., Welland, Ont., expects to have berths becoming vacant as follows: one in June, one in August, one in October and one in

December. It is proposed to occupy these berths as they become vacant, with the construction of ships of 3,000 tons deadweight capacity for which delivery is promised on the opening of navigation, 1919.

The Midland Shipbuilding Co. of Midland, Ont., will have two berths vacant in November next. These will be occupied with the construction of two ships of 3,000 tons deadweight capacity each, for which delivery is promised early in the summer of 1919.

The Polson Iron Works, Ltd., Toronto, represents that it will have four berths vacant in October next. It is proposed to occupy these with the construction of four steamships of 3,000 tons deadweight capacity each. Delivery of these ships is promised for the summer of 1919.

Canadian Allis-Chalmers, Ltd., Bridgeburg, Ont., will have berths becoming vacant as follows: one in June, two in September and one in November. It is expected to place contracts with this company as berths become vacant, for steamships of 3,000 tons deadweight capacity each. Delivery of the first of these is expected before the close of navigation this year and of the balance during the summer of 1919.

The Davie Shipbuilding Co., Lauzon, Que., will have two berths available in August and two additional before the close of navigation. It is proposed to place contracts for these berths for ships of 5,100 tons deadweight capacity. Delivery of the first of these ships is expected in Aug., 1919, and the others before the close of navigation, 1919.

The Port Arthur Shipbuilding Co., Port Arthur, Ont., will have two berths becoming vacant in July and two before the close of navigation. It is proposed to occupy these berths with ships of 3,000 tons deadweight capacity. Delivery of all of these vessels is expected on the opening of navigation, 1919.

J. Coughlan & Son, Vancouver, B.C., are fully occupied in the construction of ships for the Imperial Munitions Board and are not likely to have any vacant berths during this year. They expect, however, to have some berths become vacant early next year. As berths become vacant, it is proposed to occupy them in the construction of ships of 8,100 tons deadweight capacity.

On this programme of ship construction, the Marine Department is looking forward to have four steamships of the combined tonnage of 23,500 tons in commission before the end of the present year; and, while it is somewhat difficult so far in advance to accurately estimate the work that may be accomplished during the year 1919, it is fully expected that an additional 50 ships with an aggregate tonnage of 235,000 tons will be in commission.

The government programme of construction contemplates the construction of three types of vessels. One type will comprise vessels of 3,000 tons deadweight capacity. Another type 5,100 tons and another type ranging from 8,000 to 10,000 tons. The general features of these various types will be based on the latest types of standard cargo vessels adapted for bulk or general cargo, with loading and discharging facilities in accordance with the best practice. The vessels will

be designed to Lloyds highest class, the steamboat inspection requirements, and will have a sea speed of 11 knots.

All arrangements have been concluded with the United States authorities for purchasing in that country all the steel plates, the boiler plates and sections required for carrying out the government programme up to June, 1919. This steel has been purchased at the price fixed by the U.S. Government for the steel requirements of the U.S. Shipping Board. These prices are substantially lower than the prices Canadian shipbuilders have been obliged to pay from time to time during the past twelve months and represent a very large saving in the construction price of ships. The purchase of the material in the U.S. was made necessary by reason of the fact that plates and shapes required for the construction of ships are not at the present time manufactured in Canada. The manufacture of all materials required for the construction of ships, more particularly plates and shapes is, however, under consideration by the government and it is hoped that the materials for this purpose eventually will be manufactured in Canada.

Sir Robert Borden added:—"I should like to express this government's appreciation of the assistance which was rendered by the U.S. Government, in enabling 80,000 tons of steel to be purchased at the same price as that which is paid by the U.S. Shipping Board. Otherwise there would have been a great increased cost to this country."

**Steel Manufacture in Canada.**—As noted above, the Marine Department has arranged to secure 80,000 tons of steel plates from the United States for use during the next 12 months. The Minister of Marine announced at Ottawa Mar. 26 that he had arranged with the Dominion Iron & Steel Co. to extend its plant at Sydney, N.S., so as to make it capable of producing annually 150,000 tons of steel plates, angles, etc., for shipbuilding. The department has contracted to take 50,000 tons a year, but 75,000 tons may be taken. The company will also be free to take orders from shipbuilders, etc. The expenditure necessary to increase the plant is stated at from \$3,000,000 to \$5,000,000, and it is expected to have the new mill, etc., ready in a little over a year.

**Conference on Shipbuilding Labor Conditions.**—Representatives of steel shipbuilding companies on the Great Lakes etc., together with officers of labor unions, had a conference with the Premier, the Minister of Marine, the Minister of Labor and Senator G. O. Robertson at Ottawa, Mar. 27. There had been some prospect of disagreement on wages, but at the conference all parties expressed a willingness to amicably co-operate in carrying out a plan which is recognized as vital to the allies, while at the same time being a source of great industrial prosperity to the Dominion.

Sir Robert Borden pointed out the great need of shipbuilding to aid in overcoming the allied shortage, and appealed alike to employers and employees to amicably co-operate, so that the product could be turned out with the utmost speed.

The Minister of Marine, after concurring in what the Premier had said as to the need of ships, stated that the government policy was not for the war alone, but contemplated a permanent national industry in shipbuilding. Canada, he said, proposed to be self contained as regards her marine requirements. He referred to the contract made with the Dominion Iron & Steel Co., particulars of which are given above, and said that it was the

government's policy to order ships at a fixed price per ton, and it was therefore very necessary to ship builders to know the rate they would have to pay, particularly as 60% of the cost was labor. He urged strongly that a scale of wages be fixed for at least a year.

P. M. Draper, Secretary, Dominion Trades and Labor Congress, speaking for organized labor, fully realized the national necessity of shipbuilding, and spoke hopefully of employees and employers agreeing. H. B. Smith, President, Collingwood Shipbuilding Co., expressed similar sentiments. There is thought to be little question that any prospective difficulty will be obviated.

### British Vessel Losses During the War.

In a statement by the First Lord of the Admiralty, in the British House of Commons, Mar. 20, it was shown that 6,000,000 tons of shipping were sunk during 1917, while the enemy claimed to have sunk 9,500,000 tons. The merchant tonnage produced in the last quarter of 1914 was 420,000 tons, and this amount had decreased steadily ever since. The total allied and neutral tonnage at present is approximately 42,000,000 tons, including vessels formerly owned by the enemy and now in other hands. The output of tonnage was very low in 1915 and reached its lowest point in 1916. The decline was coincident with the increased output of munitions, and before the intensified submarine campaign, United Kingdom tonnage was 1,300,000 tons to the bad. During the last quarter of 1917, the allied nations were within 100,000 tons monthly of making their losses good, and were then replacing 75% of their lost tonnage.

At present, 47 shipyards, with 209 berths, are engaged on ocean going merchant vessels, and there has been an enormous accomplishment since the early stages of the war. The output for the last quarter of 1917, was 420,000 tons against 213,000 tons for the same period of 1916, and 42,000 tons for the same period of 1915. When the Controller of Construction took over the shipyards there were 50 large merchant vessels in various stages of construction, on which work had been stopped for lack of material, and in many cases these were congesting the yards. He stated that it was well within the capacity of British yards to make good the world's losses, given an adequate supply of men and material. The total foreign output for the last quarter of 1917, was 512,000 tons, making a total output of 932,000 tons, against total losses of 1,200,000, the lowest since the intensive submarine campaign commenced. During the same period, Great Britain lost 260,000 a month, and built 140,000 a month. The output of repair work continued scarce, but increased in February by 80%, as compared with Aug., 1917. The men engaged on repair work might have produced about 500,000 tons of new tonnage had they been engaged on such work.

The three main factors in the shipbuilding problem are:—first, patrol and other craft to destroy submarines and safeguard ships at sea; second, salvage and repair work; third, new merchant tonnage. He contended it would be a great mistake to put all the industries' energies into the building of new vessels. The drop in the merchant shipping losses, he attributed to the efficiency of the patrol and anti submarine craft, and to the valuable convoy of other vessels. He contended that shipbuilding had not been delayed by changes in design of vessel on the stocks,

such changes as were made, were to secure increased speed, greater comfort for crews, to simplify designs and to provide additional heavy gun mountings. Yards had suffered from a shortage of material during the summer of 1917, but now the stocks are more satisfactory than they had been for years. The present need is for skilled labor, and he hoped that within a few weeks it would be only for unskilled labor.

He announced the appointment of Lord Pirrie, Chairman of Harland & Wolff, Ltd., shipbuilders, Belfast, Ireland, as Contoller General of Merchant Shipbuilding, and stated that that company had put more than half of its output into standardized ships, and expected to launch one such vessel every two weeks, shortly. Lord Pirrie was born at Quebec, Que., May 31, 1847, and has been connected with Harland & Wolff's since 1862. He is also associated with several large shipowning companies.

### Chartered Vessels and War Region Risks.

Canadian Railway and Marine World for February contained a report of the appeal of the Dominion Coal Co. against the Canadian Court of Appeal's decision, relative to the operation of the s.s. Maskinonge, under charter from the Maskinonge Steamship Co., Liverpool, Eng., in what is alleged to have been a "war region." The owning company sought to recover insurance premiums paid, under a clause in the charter providing for war insurance should the vessel be operated in a war region, and the recovery of the amounts so paid from the charterer. The vessel was being operated between Sydney, N.S., and Boston, Mass., during the latter part of 1915, and in October of that year, a German submarine appeared off Nantucket, N.Y., and sank some vessels. On this, the owning company insured the vessel, and later claimed the amount of the premiums paid, on the ground that the vessel was being operated in a war region within the meaning of the terms of the charter. The charterer claimed that the appearance of the submarine was merely a sporadic attack, which, of itself would not constitute the region a war zone, and in any case, the appearance was at least 100 miles from the nearest point to which the chartered vessel was being operated.

Since that report was published, judgment has been delivered in the House of Lords, and the Dominion Coal Co.'s appeal has been dismissed. In giving judgment, Lord Dunedin said that in his opinion, the war region must indicate the region where from time to time war affected the risks which ships run. Lords Atkinson, Parker and Sumner concurred, but the Lord Chancellor dissented, and in doing so said, that in his opinion, the waters constituting a war region must be within a region in which hostilities were carried on at the time in point of fact. No apprehension, however reasonable, would make it a war region, if in reality it were not so. One isolated outrage of this description did not constitute a war region. The submarine would appear to have been merely passing through on a return voyage; she did not cruise in those waters, and there were no systematic operations. It might have been a perfectly right and prudent thing for the owners to effect the additional insurance, but they could recover only if the charterer had sent the vessel to what was in fact a part of the war region.

# Coast, Lake and River Steamship Officers for 1918.

For a considerable number of years, Canadian Railway and Marine World, availing itself of its complete records of navigation companies throughout Canada, has annually, in March and April, obtained from them lists of their vessels to be in operation during the ensuing seasons, together with the names of the captains and chief engineers appointed, the procuring of these lists having, of course, entailed considerable correspondence and other work. It has therefore been exceedingly annoying to find during a few years past that exactly similar information was published in another Canadian paper, invariably in issues subsequent to those in which it appeared in Canadian Railway and Marine World, and without any credit being given to us. As the matter was absolutely identical, even our alphabetical arrangements of vessels according to their names being followed, we were satisfied that it was being reproduced from our columns, but we were without what might be termed legal proof, until last season, when one of our associate editors set a trap, which the appropriator (to use a mild term) walked into with both feet. In Mar., 1917, the Great Lakes Transportation Co., Midland, Ont., sent us its list as follows, the first column giving the names of the vessels, the second the names of the captains, and the third the names of the chief engineers:—

Gleneshee	W. A. Lavigne	F. Goodwin
Glenfinnan	W. Lenton	C. A. McWilliams
Glenlyon	A. Hudson	D. Sinclair
Glenlivet	Fred Burke	G. Price
Major	S. Corson	P. Eagles
Mack	Wm. Ferguson	Not appointed
Stewart	J. G. McCarthy	Jas. Wilson
America	A. Monck	Chas. Monroe
Brazil	A. R. McLeod	W. J. Holmes
Glenmavis	(On ocean)	.....
Glenfoyle	(On ocean)	.....

In pursuance of our regular system, our associate editor arranged the above information alphabetically, according to the vessels' names, as follows:—

America	A. Monck	Chas. Monroe
Brazil	A. R. McLeod	W. J. Holmes
Glenfinnan	W. Lenton	C. A. McWilliams
Glenlivet	Fred Burke	G. Price
Glenlyon	A. Hudson	D. Sinclair
Gleneshee	W. A. Lavigne	F. Goodwin
Mack	W. Ferguson	.....
Major	S. Corson	P. Eagles
Stewart	J. G. McCarthy	Jas. Wilson

Before sending the copy to the composing room, to be put in type, our associate editor set a trap for the persons we suspected of appropriating our information, by making several changes. First, he changed the name of the s.s. Brazil to "Breezit," and substituted for the names of its captains and chief engineers the names of those officers on the s.s. Glenfinnan, inserting for the Glenfinnan the names of the Brazil's officers. And so as to leave no chance for an appropriator to escape detection, he gave the name of the America's chief engineer as "C. Doctrine" instead of C. Monroe (Monroe doctrine), and the list thus changed was published in our April, 1917, issue as follows:—

America	A. Monck	C. Doctrine
Breezit	W. Lenton	C. A. McWilliams
Glenfinnan	A. R. McLeod	W. J. Holmes
Glenlivet	F. Burke	G. Price
Glenlyon	A. Hudson	D. Sinclair
Gleneshee	W. A. Lavigne	F. Goodwin
Mack	W. Ferguson	.....
Major	S. Corson	P. Eagles
Stewart	J. G. McCarthy	Jas. Wilson

May, 1917, passed without any evidence of the bait having been taken, but in its June, 1917, issue, Marine Engineering of Canada, published in Toronto, gave a list of Canadian vessels, captains and chief engineers, in which it copied verbatim, without the slightest alteration, the fixed up information we had published two

months before about the Great Lakes Transportation Co., including our transposition of officers' names for the s.s. Brazil and the s.s. Glenfinnan, and the substitution of "C. Doctrine" for C. Monroe as Chief Engineer of the s.s. America. As before stated, the changes we made in the list were a trap to catch a piratical cotemporary, and Marine Engineering of Canada's scissors and paste editor walked blindly into it. This is only one instance of appropriation perpetrated. A comparison of information about other transportation companies shows that our cotemporary took it systematically from our columns. Comment is unnecessary, but we wish to warn our cotemporary to turn from the error of its ways, and not to appropriate matter from our columns, which we collect at considerable trouble, and to attempt to palm it off as its own. We have reserved this exposure for nearly a year, preferring to give it now, when again commencing our annual publication of the navigation companies' returns to us.

In the furnishing of the class of information referred to, as well as in all its other departments, Canadian Railway and Marine World continues to occupy, and will continue to occupy, the leading position which its 21 years of publication has given it, and will maintain its character for originality and accuracy which it values as one of its chief assets.

## Appointments for 1918.

The following appointments made by navigation companies, engaged in Canadian navigation, for their various steamships and tugs, have been reported to Canadian Railway and Marine World. The first column shows the names of the vessels, the second those of the captains, and the third those of the chief engineers.

### ALGOMA CENTRAL STEAMSHIP LINE, SAULT STE. MARIE, ONT.

Agawa	J. D. Montgomery	J. L. Smith
Home Smith	A. McIntyre	Jas. Wilson
J. Frater Taylor	R. H. Boyle	W. T. Rennie
W. C. Franz	W. C. Jordan	L. B. Cronk

### ALGOMA EASTERN RY., SAULT STE. MARIE, ONT.

Valcartier	J. A. Brown	J. G. MacHattie
------------	-------------	-----------------

### AMERICAN TRANSIT CO., SARNIA, ONT.

Frank B. Stevens	F. B. Ely	A. MacIntosh
------------------	-----------	--------------

### CANADA ATLANTIC TRANSIT CO., MONTREAL

Arthur Ott	J. Simons	D. E. Mance
Keatsarge	H. Jaenke	F. Wilke

### CANADIAN MARITIME CO., MONTREAL

Gaspeien	T. E. Filmer	T. H. Angell
J. H. Plummer	S. W. H. Jeffrey	A. Cote
Saskatoon	F. J. Shoemack	M. Parry
Wethersfield	D. R. Davies	H. A. West

### CANADIAN PACIFIC CAR AND PASSENGER TRANSFER CO., PRESCOTT, ONT.

Charles Lyon	W. Henry	L. Black

## Halifax Harbor Regulations.

Following on the enquiry into the causes and consequences of the recent disastrous explosion of a munitions vessel after collision with another, in Halifax harbor, the Marine Department has issued regulations regarding the movements into, within and out of the harbor, the chief points of which are summarized as follows:—Shipowners and agents are advised that as a general rule they should time the arrival of vessels for daylight, to avoid delay in admitting them to the port, and they should communicate the times of all expected arrivals to the Chief Examining Officer. Early notice of the proposed departure of all vessels should also be given to the Collector of Customs. The eastern passage is closed to all traffic, and vessels attempting to enter thereby are liable to be fired on without warning. All vessels other than British ships of war wishing to enter port are required to communicate with the examination steamer, and incoming merchant vessels will be admitted to the examination anchorage at all times of the day, or night, irrespective of whether the port is open or closed, but when the port is closed, no merchant vessel will be permitted to proceed beyond the examination anchorage. Masters must have all way off their vessels on reaching the examination steamer and particularly in foggy weather, or they are liable to be fired on. The port will, as a general rule, be open to merchant vessels arriving at night and such vessels must have ready four efficient allround lights, two red and two white, to be used as directed by the examination officer. Masters must obey the examination officer's directions when approaching port, or their vessels will be liable to be fired on by the battery. Usual signals made by vessels arriving, either by flags, guns, bomb rockets, lights, etc., are not to be made. Masters are specially warned that it may become necessary, in the event of an attack on the port being imminent, to remove buoys or extinguish lights without notice, and vessels should therefore be navigated with extreme caution on approaching port. The use of wireless telegraphy is absolutely prohibited, both in the examination anchorage and in the port.

All vessels must take a pilot both entering and leaving the harbor, with the following exceptions:—Small vessels not exceeding 120 tons engaged in the coastal trade and frequently visiting Halifax; and vessels which are regular traders to the port which may, after sufficient experience, apply to the Chief Examining Officer for permission to leave the harbor without a pilot.

No vessel may change her berth without authority, which must be obtained in writing. Between Bedford basin and no. 2 deepwater pier, vessels are not to proceed in opposite directions at the same time. Masters must comply with the regulations regarding lights, as vessels without lights in the vicinity of the port

at night will immediately be treated as hostile.

If any vessel causes any injury by collision or otherwise to any ship belonging to or engaged in His Majesty's service or to any person on board such ship, or is so managed or navigated or handled as to cause danger of collision, the master or other person in charge shall be guilty of an offence, unless it is shown that such injury or danger was not caused or contributed to by any failure on his part to keep or cause to be kept a proper lookout or to observe any of the orders for preventing collisions at sea or any orders relating to the navigation or mooring of ships in a harbor or approaches thereto.

No vessel is allowed to leave the port at night except under special circumstances. The new regulations cancel all previous regulations, and penalties of \$5,000 fine, or five years imprisonment, or both, are provided for contraventions of the regulations.

## Marine Engineers Wage Scale on the Great Lakes.

The National Association of Marine Engineers of Canada has sent to owners of steamships operating on the Great Lakes the following minimum wage scale and classification for steamships operating on the Great Lakes District, which was adopted by the Great Lakes Executive Committee, representing Port Arthur, Sault Ste. Marie, Collingwood, Owen Sound, Midland, Toronto and Kingston Councils, Jan. 11, 1918, and approved by the National Executive Committee, to be effective during the season of 1918, or until revised or amended by the Great Lakes Executive Committee.

"Conditions of Employment.—This minimum wage scale does not recognize the payment of bonuses in lieu of wages, or restrict additional remuneration in any of the classes. All engineers shall be provided with first-class transportation, board and other legitimate expenses during their employment away from home. All references to tonnage to be construed as gross tons. In all reference to monthly conditions, 30 days to constitute a month. All ratings in all classes to include board and accommodation, excepting passenger ferry steamers. Overtime at the rate of 75c an hour for all time over 12 hours shall be paid engineers on boats carrying only one engineer. Any special conditions of employment not covered by the provisions of this wage scale to be submitted to the Great Lakes Executive Committee through its Business Manager for adjustment.

### Passenger Steamships.

Class 1.—All passenger steamships of 3,000 tons or over, chief engineer, \$2,000 a season; second engineer, \$150 a month.

Class 2A.—All passenger steamships of 1,250 tons and under 3,000 tons, running six months or over, chief engineer, \$1,800 a season; second engineer, \$125 a month.

Class 2B.—All passenger steamships of 1,250 tons and under 3,000 tons, running less than six months, chief engineer, \$1,600 a season; second engineer, \$125 a month.

Class 3.—All lake passenger steamships under 1,250 tons and all passenger steamships confined to river service, requiring second-class engineer, chief engineer, \$1,400 a season; second engineer, \$105 a month.

Class 4.—All passenger steamships from 45 n.h.p. to 25 n.h.p., chief engineer, \$135 a month; second engineer, \$95 a month.

Class 5.—All passenger steamships under 25 n.h.p., chief engineer, \$110 a month.

### Freight Steamships.

Class 1.—All freight steamships of 5,000 tons or over, chief engineer, \$2,000 a season; second engineer, \$150 a month.

Class 2.—All freight steamships of 3,000 tons and under 5,000 tons, chief engineer, \$1,800 a season; second engineer, \$125 a month.

Class 3.—All water bottom freight steamships under 3,000 tons requiring second-class engineer, chief engineer, \$1,600 a month, second engineer, \$110 a month.

Class 4.—All freight steamships not included in classes 1, 2 and 3 and requiring second-class engineer, chief engineer, \$1,500 a season; second engineer, \$100 a month.

Class 5.—All other freight steamships not otherwise classified, chief engineer, \$135 a month; second engineer, \$95 a month.

### Ferry Steamboats.

All passenger ferry steamboats operating from Sault Ste. Marie, Ont., and requiring second-class engineer: chief engineer, \$160 a month; second engineer, \$150 a month, for season of not less than 10 months.

All other passenger ferry steamboats requiring second-class engineer: chief engineer, \$150 a month; minimum season not to be less than \$800.

All passenger ferry steamboats requiring third-class engineer: chief engineer, \$125 a month.

### Tug Steamboats.

Class 1.—All tug steamboats requiring second-class engineer: chief engineer, \$150 a month; second engineer, \$125 a month.

Class 2.—All tug steamboats from 75 n.h.p. to 50 n.h.p.: chief engineer, \$135 a month; second engineer, \$110 a month.

Class 3.—All tug steamboats from 50 n.h.p. to 25 n.h.p. and all tugs over 15 n.h.p.: chief engineer, \$130 a month; second engineer, \$100 a month.

Class 4.—All tug steamboats under 25 n.h.p. and not embraced in class 3: chief engineer, \$120 a month; second engineer, \$95 a month.

In addition to the foregoing, all engineers of tug steamboats operating from Port William and Port Arthur harbors shall be paid 10 per cent. over the rates in the above four classes.

**Registration of Masters, Mates and Engineers.**—The order in council requiring the registration of masters, mates and engineers, was given in full in our last issue. At a recent meeting of the National Association of Marine Engineers of Canada, indignation is said to have been expressed as to the order itself, and especially to the clause which requires them to notify any change in the nature of their employment. A protest is stated to have been sent to the Minister of Marine, with a request for an explanation of the objects of the registration.

**The Ulster Steamship Co.'s report** for the year Jan. 31, shows a balance to the credit of profit and loss account of £55,336 7s 2d, after paying income tax and making allowances for depreciation and excess profits tax. A dividend has been declared free of income tax for the year, of 15%, leaving £16,705 13s 6d to be carried forward to this year's accounts. The report states that the company's vessels (Head Line) are under British Government requisition, which naturally interferes with the earnings and the sailings between Ireland and Canada.

## General Shipbuilding Notes Throughout Canada.

**British-American Shipbuilding & Engineering Co., Vancouver, B.C.**—In connection with the site the company is negotiating for on the old Kitsilano Reserve, plans are to be furnished to the Vancouver Harbor Commission, showing what will have to be done in the way of improvements to place the 300 ft. west of the reserve in a position to commence operations. It was originally proposed to take a site on the eastern portion, but the commission claims that it might interfere with future development at that point. Reports state that the company may abandon negotiations, so far as Vancouver is concerned, and some efforts are being made to have a site selected at Nanaimo. S. Mathieson, who is stated to be one of the heads of the company, is reported to have said that contracts for the construction of 20 wooden steamships have been signed, but that he was not at liberty to mention the name of the party ordering, that the company's plans provided for the immediate laying of 8 keels, and to employ from 600 to 800 men, the completion of the present contracts taking about 2½ years; that the type of vessel to be built, would be quite different from those being built for the British Government under orders from the Imperial Munitions Board, and would be of 3,800 tons deadweight capacity, 280 ft. long, 46 ft. wide, 26.6 ft. deep, capable of 10 knots an hour fully loaded; that they would be of the single deck type with triple expansion, reciprocating engines.

visited Crofton recently, to inspect proposed sites for the location of a shipbuilding plant there.

**Davie Shipbuilding & Repairing Co., Lauzon, Que.**, has filed a description and plan for a proposed wharf and foreshore extension on the shore of the River St. Lawrence on the front of its property at Lauzon, Que.

**The Dominion Bridge Co., Ltd.**, has a contract from the American International Shipbuilding Corporation, for the fabrication of keels, skin and floor plates, and floor girders, for the double bottom of 50 ships of 7,500 tons, and for 35 ships of 8,000 tons, which are being assembled at Hog Island, Pa., for the Emergency Fleet Corporation, United States Shipping Board. The keels, plates and the majority of the floor girders are being fabricated at Lachine and some of the floor girders with vertical frames are being fabricated at Toronto.

**The Dominion Government Shipyard at Sorel, Que.**, has for some months been building steam trawlers and wooden drifters, under orders from the Naval Service Department, and has not had any other vessels under construction.

**Collingwood Shipbuilding Co., Collingwood, Ont.**—The fifth of a number of number of trawlers under construction for the Naval Service Department was launched at Collingwood, Mar. 23. The vessel will be complete and ready to leave for the coast on the reopening of naviga-

ably all of the drifters will be completed by the opening of navigation.

**New Brunswick Shipbuilding.**—A St. John, N.B., correspondent writes:—Although the construction of standardized steamships under contract with the Imperial Munitions Board, now in progress in St. John, is New Brunswick's largest contribution so far towards replacing the tonnage sunk by German submarines, this is only a part of the province's effort to meet the shipping shortage. Up and down the coast, in some places in ancient shipyards whose original purpose had almost faded from the memory of the present generation, vessels of smaller size, but of undoubted usefulness, are being built.

Nowhere is this revival of a once flourishing industry better illustrated than in the county of Albert, where wooden ship building again is engaging the activities of the people. A century ago these shipyards were turning out staunch craft, and as ambition grew with the increasing skill of the builders, larger vessels were undertaken and clipper ships which sailed the seven seas were launched from the yards at the head of the Bay of Fundy. So soundly were they built, of such seasoned timbers and of such finished workmanship, that few of them outlived their usefulness in the ordinary course of their careers, and disaster alone seemed capable of ending their days. The frame of one of them, stranded on the Shepody marshes, still holds together, and stands as a monument to the builders of other days.

It is 46 years since the last vessel was

with Scotch boilers and forced draft. It was at first reported that the vessels were ordered direct from England by the British Government, but, as mentioned in our last issue, no confirmation of this was obtainable. It is, however, said that they are not for the British Government.

**Cameron-Genoa Mills Shipbuilders, Ltd., Victoria, B.C.**, is reported to have an order for the construction of two five masted schooners of a similar type to those built by the company for Canada West Coast Navigation Co., but larger. The report states, "These ships will be of the windjammer class and consequently will rely solely on sails for driving power."

**Canadian Car & Foundry Co.**—With reference to the information respecting the company's shipbuilding plant at Fort William, Ont., given in our last issue, we are officially advised that a contract has been placed with the Dominion Bridge Co. for all the steel work in connection with the building to be erected to complete the shipbuilding facilities. This building will be 200 x 240 ft., divided into six aisles, each 200 x 40 ft., and each served by an overhead travelling crane. This is the only building to be erected at present, and it will be of steel frame construction. A contract has been awarded to E. G. Penniman & Co., Fort William, for building the piers for the plant, and also for certain piling work.

**Crofton, B.C.**—Representatives of Norwegian interests are reported to have

launched in Albert, and the fate of this craft was symbolic of the industry of which it was the last product. Old timers still tell the story of the launching. It was after midnight of an October night, the time being so fixed to take fullest advantage of the flood tides. A full moon made the scene almost as bright as day, and hundreds gathered to watch the vessel take to the water. When the finishing touches were completed, she sailed away, laden with high hopes, in addition to her cargo of sweet smelling spruce. She never returned, and of her end there is no record. After a successful run to the West Indies, she returned to New York, and thence set sail for Caledonia, Cape Breton. Outward bound was the last report and then the curtain fell on her career and on that act of the history of shipbuilding in Albert county.

**International Shipbuilding Corporation, Newcastle, N.B.**—The keel of the company's first vessel was laid at its yards on the Miramichi River, towards the end of February. The vessel will be of the following dimensions:—length over all 168 ft., length over keel 155 ft., beam 37 ft., depth of hold 13 ft.; tonnage, gross 575 tons. She will be a four masted sailing ship, with oil engines for auxiliary power, and will be built of native woods with a finishing of Douglas fir. F. H. McNaught, formerly Manager, Maritime Foundry, Chatham, N.B., is Manager of the company, I. Mashion is Superintendent, and A. S. Morash, Lunenburg, N.S., is master shipbuilder. This is said to be the first ship of over 500 tons to be built at Newcastle, for 50 years.

**The Kingston Shipbuilding Co., Kingston, Ont.**, has another steam trawler for the Naval Service Department ready for launching as soon as the ice clears away, and has also several others under construction.

**Naval Service Vessels.**—As previously stated in Canadian Railway and Marine World, the Naval Service placed orders last year for 12 "steel fishery protection vessels." 60 steel trawlers and 100 wooden drifters to be built at various points in Quebec and Ontario. The 12 "fishery protection vessels" are practically all built. About 30 of the trawlers and prob-

ably all of the drifters will be completed by the opening of navigation.

**The Sandwich, Ont., town council**, it is announced, will petition the Dominion Government to aid in establishing a shipbuilding yard there. It is stated that local financiers would help in building a plant, provided the Government will guarantee orders for merchant ships for service between Canada and Great Britain. It is also stated that water front property between Hill and Brock Sts. has been leased for the purpose.

**The Standard Shipbuilding Co., Vancouver, B.C.**, is reported to have closed contracts with Sir Joseph MacLay, of the British Ministry of Shipping, for the construction of 10 composite steamships.

APRIL, 1918.]

These vessels, it is said, are to be 281 ft. long, 48 ft. beam and 27 ft. deep, with a speed of 10 knots when fully loaded, and with a deadweight capacity of 3,500 tons. The company is said to have secured a site covering 2,200 ft. of frontage on the Fraser River, near the junction with the Stave River at Ruskin, B.C., and that there is a sawmill, machine shop and smithy already in operation there. Designs for the vessels are said to have been approved by the British authorities, and a representative of the company is said to be on his way to London with final plans. P. J. Donohoe, naval architect, who drew the plans, and who is announced to have been appointed Superintendent of the yards, is reported to have stated in an interview, that the vessels will have reinforced steel keelsons, reinforced steel knees, and other improvements which will make them more seaworthy, and give them six years more life, than those of all wood, and that by the method of construction to be adopted, there will be 80 tons more deadweight capacity on a 250 ft. keel, than in the present type of wooden vessels.

**Sturgeon Cove, N.B.**—It is reported that a company at St. John, N.B., already interested in shipbuilding, is negotiating for the purchase of the Sturgeon Cove Lumber Co.'s plant, with the intention of erecting a shipbuilding plant on l'Etang River there, chiefly for the building of wooden steam trawlers.

**The Taylor Engineering Co., Ltd., Vancouver, B.C.**, is reported to be building a number of small vessels to the value of about \$300,000.

**Three Rivers Shipyards, Ltd., Three Rivers, Que.**, the incorporation of which was announced in a previous issue, is stated to be building a 2 story machine and pattern shop, 75 x 175 ft., and two 250 ft. slips on pile foundations, at the 5 acre site which it has acquired on the western side of Three Rivers harbor. The company has a contract from the Imperial Munitions Board for 2 wooden steamships, these appearing in our list of vessels under construction in Canada for the British Government, under the name of T. M. Kirkwood, Toronto, who is President of the company.

**The Vancouver Shipyards & Engineering Works, Vancouver, B.C.**, is reported to have established a shipbuilding yard on Burrard Inlet, and to be prepared to build ships for sale, instead of taking general contracts to build.

**Victoria Machinery Depot, Victoria, B.C.**—This company is stated to be in a position to commence the construction of steel steamships at once, but is reported to have made complaint that its facilities have been ignored by responsible officials of the Canadian Government.

**The Westport Shipbuilding Co.** has completed the establishment of a shipbuilding plant at White's Cove, Digby County, N.S., and is laying the keel of a three masted schooner. H. Boudreau is master shipbuilder.

**Wooden Shipbuilding.**—The Minister of Marine is reported to have announced recently, that on the completion of construction of the six wooden steamships, the order for which was recently placed in Quebec, Que., the ordering of wooden steamships by the Dominion Government would be discontinued.

**Yarrows, Ltd., Victoria, B.C.**, has completed the fourth shallow draft, stern wheel steamboat hull, and it is being dismantled and packed for shipment to the "Far East," by the first available steamship. The company has made a specialty

of this type of vessel for several years, and numbers of them are in use in shallow waters in various parts of the British Empire. The conditions under which warfare is now being waged, make it necessary that vessels of this type be used in certain waters. The hulls are being built at Victoria and the machinery by the parent concern at Glasgow, Scotland.

### Atlantic and Pacific Ocean Marine.

The British s.s. *Turret Crown*, formerly well known on the Great Lakes, was reported during March, to be adrift off the Atlantic coast. A wrecking tug was sent to her assistance, but was unable to locate her.

A Russian steamship has been towed into Halifax, N.S., by an oil tanker, she having been found in a disabled condition, having lost her propeller, some distance south of Sable Island. She is now reported to have been taken over by the naval authorities, and the Russian flag replaced by the British.

### Maritime Provinces and Newfoundland.

An order in council has been passed establishing a permanent harbor head line at Lunenburg, N.S., beyond which line, wharves, piers, breakwaters and similar works shall not in future be built.

The Dominion Coal Co.'s s.s. *Batiscan*, bound from Sydney, N.S., is reported to have been lost with all hands, during a severe storm about Mar. 10. It is reported that she may have struck on the Gannett Ledges. A considerable amount of wreckage of the vessel has been washed ashore near Yarmouth.

### Ontario and the Great Lakes.

The International Transit Co.'s s.s. *Algomah* resumed the ferry service across the St. Mary River at Sault Ste. Marie, Mar. 22.

Navigation for passenger vessels reopened Mar. 25, between Detroit and Cleveland, by the Detroit and Cleveland Navigation Co., and it was announced that the service between Cleveland and Buffalo would be commenced about Apr. 16.

The Canadian Stewart Co. was given judgment at Toronto, Mar. 18, for \$208,000, against the I. H. Hodge Co., Syracuse, N.Y., in connection with piling work done under a sub contract in the Toronto harbor. For the plaintiffs, it was stated that, through faulty work, the piling was not passed by the government engineers, and had to be done over again.

A deputation representing municipalities along the Lake Erie & Northern Ry., waited on the Dominion Government, Mar. 20, to urge the improvement of the harbor at Port Dover. It was shown that these municipalities import about 270,000 tons of coal a year, and they claim that this can be handled more expeditiously at Port Dover by car ferry, provided facilities are provided.

The U.S. Lake Survey reports the levels of the Great Lakes in feet above mean sea level, for February, as follows: Superior, 601.71; Michigan and Huron, 580.82; St. Clair, 574.54; Erie, 571.67; Ontario, 245.98. Compared with the average February levels for the past ten years, Superior was 0.07 ft. below; Michigan and Huron, 0.98 ft. above; Erie, 0.09 ft. above, and Ontario, 0.47 ft. above.

The Toronto Ferry Co.'s ferry steam-

boats *Island Queen* and *Kathleen* were destroyed by fire at their winter berths at Hanlan's Point, Toronto, Mar. 12. The *Island Queen* was built at Toronto in 1905, and was screw driven by engine of 16 n. h.p. Her dimensions were: length 97.8 ft., breadth 20.3 ft., depth 5.4 ft.; tonnage, 129 gross, 88 register. The s.s. *Kathleen* was built at Toronto in 1886 and was screw driven by engine of 35 n.h.p. Her dimensions were: length 84 ft., breadth 18 ft., depth 5.5 ft.; tonnage, 119 gross, 72 register.

Canada Steamship Lines' s.s. *Aberdeen* was burned at her winter quarters, Picton, Ont., recently. She had been withdrawn from the water for repairs, but the work had not been commenced. During last year, she was operated on the lower St. Lawrence. She was built at Picton, Ont., in 1894, and was screw driven by engine of 30 n.h.p. Her dimensions were: length 99.6 ft., breadth 22 ft., depth 8.7 ft.; tonnage, 142 gross, 87 register. She was taken over with other vessels by Canada Steamship Lines, Ltd., on the absorption of the Ontario & Quebec Navigation Co.

H. B. Smith, who in former years operated the s.s. *Olcott* on the Windsor, Wallaceburg and Detroit service, from Windsor, Ont., is reported to be in negotiation with Canada Steamship Lines, Ltd., for the purchase of the s.s. *Thousand Islander* for that service. The *Thousand Islander* is registered in the U.S., and was built at Toledo, Ohio, in 1912. She has a steel hull, steel boiler house, 3 water tight and 2 non water tight bulkheads, electric light, and is equipped with vertical compound engines with cylinders 15 and 30 in. diam. by 20 in. stroke, 700 i.h.p. at 210 r.p.m., and supplied with steam by two Scotch boilers, 12½ x 10½ ft., under forced draft at 150 lb. Her dimensions are: length 164 ft., breadth 32 ft., depth 9½ ft.; tonnage, 355 gross, 241 register.

The Marine Department has issued a notice to mariners that target practice on land and from the air over Lake Ontario by the Royal Flying Corps will begin in the spring at the Beamsville machine gun ranges, about 8 miles west of Port Dalhousie lighthouse. The surface of the lake containing an area of about six square miles in front of part of the first concession of Clinton Tp., forms the danger area for target practice for machine guns and other firearms. Flagstaves have been erected at the extreme east and west boundaries of the danger zone and red flags will be hoisted and kept flying when firing is taking place. Spar buoys have been placed to mark the boundaries, and these are painted white with a red danger sign surmounting. Penalties are provided for any person destroying or tampering with the marks provided.

The Marine Service Transportation Co. of New York, has, under a writ of attachment, seized a large quantity of war supplies, said to be worth \$20,000,000, and stated to be the property of the former Emperor of Russia, on a claim for \$2,615,762 for breach of contract regarding the shipment of supplies to Russia.

**A Halifax Explosion Aftermath.**—The owners of the steamships *Imo* and *Mont Blanc* have each entered an action against the other for \$2,000,000 for damages sustained in the Halifax explosion. The case is before the Supreme Court at Halifax, N.S.

The Australian Government is reported to have completed a scheme which frees all large ocean going ships for the allies' use. A pool, which will control 120 ships engaged in coastal trade, will be formed.

## British Columbia and Pacific Coast.

The Grand Trunk Pacific Coast Steamship Co. has purchased the barges C.C. No. 7 and C.C. No. 9, from U.S. owners, and has changed the names of them to G.T.P. No. 1 and G.T.P. No. 2.

The Minister of Public Works is reported to have stated that an appropriation of \$5,000 is assured for this year, to allow of the commencement of the erection of a shed on pier 3 at Ogden Point, Victoria.

The Victoria Whaling Co. is reported to have purchased the s.s. Elihu Thompson from the Pacific Cold Storage Co., for operation in connection with its plant at Aleutian Islands. The vessel has large cold storage capacity, but will be used chiefly for towing.

The Union Steamship Co. of British Columbia's s.s. Chasina, formerly Selma, it is reported, is to undergo considerable repairs and alterations before being placed on the Powell River run this spring. The freight carrying capacity is to be increased, and the deck houses are to be reconstructed.

Canada West Coast Navigation Co. is now operating 9 of the 12 motor ships which it had built at Vancouver and Victoria recently. Three have been sold to French interests, viz.: Esquimalt, Malahat and Beatrice Castle. The last mentioned has been renamed Stasia. Reports have been current that the entire fleet had been sold to French interests, but this has been denied by the management.

With reference to the opening of the bridge across False Creek at Kitsilano, Vancouver, for the passage of steamships under construction at J. Coughlan & Sons' yards, it is reported that as a result of a conference the C.P.R. has agreed to open the span, and to submit the matter as to the responsibility for the cost, to the Supreme Court of Canada. The bridge is owned by the C.P.R. and leased to the British Columbia Electric Ry.

The B. C. Government is reported to have purchased the C.P.R. s.s. Beaver for the ferry service between Ladner and Woodward's Landing. It is stated that the vessel, which has been out of service for some time, will be thoroughly overhauled and repaired at a cost of about \$5,000. The s.s. Beaver was built at Victoria in 1898, and is equipped with engine of 13 n.h.p., driving a paddle wheel. Her dimensions are: Length 140 ft., breadth 28 ft., depth 5.1 ft.; tonnage, 545 gross, 344 register. The C.P.R. operated the vessel for several years between New Westminster and Chilliwack.

C. T. White & Son, Ltd., Sussex, N.B.—Two schooners with auxiliary power are under construction, and it is expected that the first will be launched in April, and the second in June. They are 143 ft. long, 34 ft. wide and 13 ft. dep, having a draft of about 16½ ft. They will each be about 480 tons register, carrying about 900 tons, and will be fitted with three masts, fully rigged. The auxiliary power will consist of 12 h.p. bull dog engines, with connections for hoisting sails, anchors and cargo, and they will be equipped with patent stockless anchors and full size chains as required by Bureau Veritas.

British Columbia Export Co., Ltd., has been incorporated under the British Columbia Companies Act, with \$24,000 capital and office at Vancouver, to carry on a general merchant and shipping business, and in connection therewith to own and operate steam and other vessels, and carry on a general shipowning business.

## Ships Under Construction in Canada for British Government.

The particulars of steamships ordered by the Imperial Munitions Board for the British Government, with the names and addresses of builders, number of vessels, individual and total tonnage, which were published exclusively in Canadian Railway and Marine World for March, have attracted considerable attention, and we have been congratulated from many quarters on securing the information and presenting it in such convenient form.

Speaking in the House of Commons, Mar. 19, in the debate on the address in reply to the speech from the throne, Sir Robert Borden gave considerable information in regard to shipbuilding, and confirmed the figures published by Canadian Railway and Marine World in March, as to orders placed by the Imperial Munitions Board as follows: 43 steel steamships, 211,300 tons dead weight, approximate cost \$40,000,000; 46 wooden steamships, 128,800 tons d.w., approximate cost \$24,500,000; total, 89 steamships, 340,100 tons dead weight, approximate cost \$64,500,000.

The figures given above show that the 43 steel steamships will cost approximately \$189.31 a ton d.w., and that 46 wooden steamships will cost approximately \$191.42 a ton, though the latter figures may be increased, as at present they are only estimated.

All the orders for steel steamships placed by the Imperial Munitions Board have been at a price per ton d.w. for fully completed vessels. In the case of the wooden steamships, the hulls in Eastern Canada are being built for lump sums agreed on with the builders. For those ordered in British Columbia, the hulls are being built on a cost basis, plus \$16,000 a hull, the board supplying boilers and machinery.

At present, at least, it is not the intention for the Imperial Munitions Board to order any more steel or wooden steamships in Canada, for the British Government, and as the berths in which the vessels now under order are being built, become vacant, they will be taken for cargo vessels to be built for the Dominion Government.

**Launchings of Steamships.**—Following are particulars of steamships ordered by the Imperial Munitions Board for the British Government and which have been launched up to date, with dates of launchings:—

Steel Steamships.			
Date.	Name	Builder.	Tonnage.
May 18, 1917	War Dog.	Wallace Shipyards, Ltd.	4,500
July 9, 1917	War Wasp.	Nova Scotia Steel & Coal Co.	1,800
Aug. 4, 1917	War Fish.	Port Arthur Shipbuilding Co.	4,300
Nov. 3, 1917	War Dance.	Port Arthur Shipbuilding Co.	3,400
			14,000

The first three of the vessels above mentioned have sailed; the fourth is being held during the winter at Sorel, Que.

Wooden Steamships.			
Date.	Name	Builder.	Tonnage.
Dec. 28, 1917	War Songhee.	Foundation Co., Ltd.	2,800
Jan. 4, 1918	War Nootka.	Western Canada Shipyards, Ltd.	2,800
Jan. 24, 1918	War Yukon.	Cameron-Genoa Mills Shipbuilders, Ltd.	2,800
Feb. 16, 1918	War Puget.	Wm. Lyall Shipbuilding Co.	2,800
March 6, 1918	War Selkirk.	Western Canada Shipyards, Ltd.	2,800
			14,000

Since the launching of the first wooden steamship approximate calculations have been made, from the launching weights, showing that the deadweight tonnage of each wooden ship will be approximately 3,050 tons.

## A Silly Attack on the Shipbuilding Programme.

The Toronto Evening Telegram, in one of its rabid attacks on the Union Government, says among other things:—

"Union Government shipbuilding policy will be worked out as a pro-Montreal, anti-Ontario policy that will give as much as possible to Montreal and eastern interests and do as little as possible for Ontario and western interests. . . . Shipbuilding policies that will place contracts east of the Ottawa River, or with the allies of interests east of the Ottawa River, will be worked out without let or hindrance from Sir Robert Borden."

There is no foundation whatever for the charges quoted. Up to date the Marine Department has let contracts for 4 steamships, 2 at Montreal, 1 at Collingwood, Ont., and 1 at Vancouver, B.C. It has under consideration the placing of contracts for all berths that will be available at steel shipbuilding plants throughout Canada this year and which have been reported by the various companies as follows:—Province of Quebec, 7; Ontario, 20; British Columbia, 4.

**Ice Conditions on the Great Lakes.**—Reports as to ice conditions on the Great Lakes during March, indicated that there was about the same amount of ice in Lakes Superior and Michigan, less in Lakes Huron and Erie, and more in Lake Ontario, than at the same period in 1917. The warmer weather in the middle of the month had some effect and ice was reported to be moving out. The average thickness in Whitefish Bay was 30 in. and in St. Mary's River, 26 in. Ice was also moving out in Lake Huron, and the St. Clair River was open to St. Clair. Little ice was reported on Lake Erie at the western end, but was heavy and extensive in the east. The western portion of Lake Ontario was reported clear, but heavy and extensive fields existed from Sodus Point, N.Y., to the outlet of the lake. The ice jam at the mouth of the St. Clair River, broke Mar. 19.

**The s.s. Empress of Ireland Case.**—The Supreme Court's judgment on the appeal of the C.P.R. as to the disposition of the proceeds of the sale of the s.s. Storstad, which was responsible for the loss of the C.P.R. s.s. Empress of Ireland in the Gulf of St. Lawrence, May 29, 1914, provides that the proceeds be divided into two parts of seven and eight fifteenths respectively, the first to be divided amongst the claims for loss of life, and the second pro rata among all claimants. This is a variation of the Admiralty Court's decision that the distribution be made under the law of the United Kingdom.

**Halifax Harbor Regulations.**—An order in council was passed, Mar. 7, rescinding rule 6 of the Rules and Regulations for the Port of Halifax, dated Oct. 23, 1906, and the following has been substituted:—"No steamer entering or leaving Halifax harbor, those of His Majesty and the Government of Canada excepted, shall, while inside of George Island, or in the North West Arm, proceed at a greater speed than 6 knots an hour, under a penalty of \$100, to be paid by the owner, master or agent of the vessel violating the law."

**The U.S. Emergency Fleet Corporation** is reported to have placed a large order with Yarrows, Ltd., Victoria, B.C., for high pressure cylinders for installing in steel steamships now under construction in U.S. yards.

**Manitoba Transport Co., Ltd.,** has been incorporated under the Manitoba Companies Act, with \$100,000 capital and office at Winnipeg, to carry on the business of shipowners, carriers by land and water, shipbuilders, forwarding agents, etc.

## Pilotage at the Port of Halifax, N.S.

As stated in Canadian Railway and Marine World for March, the enquiry into the operations of the Halifax Pilotage Commission concluded Feb. 14. The commission consisted of Thos. Robb, Manager, Shipping Federation of Canada, Chairman; Capt. J. N. Bales, Deputy Port Warden of Montreal; and Capt. J. W. Harrison, Marine Superintendent, Furness, Withy & Co., Halifax, N.S. Considerable evidence was given by port officials, and by representatives of shipping companies concerned, and a report has been made to the Minister of Marine, the main points of which are summarized as follows:—

There was very special reason for investigation in respect of the Halifax Pilotage District, arising from the terrible calamity which had so recently befallen Halifax, and the need there, of a certain reformation, reorganization and improvement was obviously apparent, in view of a succession of serious accidents to vessels in the port, a number of the vessels being in charge of pilots. The records of the pilotage office have been poorly kept, books were audited so far as the total receipts and expenditures were concerned, but details of the actual pilotage earned were only shown summarized. Pilotage collected from vessels where no pilot was supplied, and for movements in the harbor, could not be given in detail, and it was only when the Royal Commission put in an auditor to check the accounts that the Secretary produced monthly statements, which he said did not belong to the pilotage commission, but were records of the division of money and dividends to pilots, expenses of the pilot boats and dividends to the owners of them. These statements contained entries of sums paid to masters of vessels as gratuities, and said to have been paid for the signing of pilotage bills on vessels not paying full pilotage, or not having a pilot, in order to obtain clearance at customs. The Canada Shipping Act forbids customs clearance to any ship liable to pilotage dues, and the evidence showed that it was presumed that the vessels were so liable, all vessels being required to have a certificate from the pilotage authority. The Secretary-Treasurer of the Pilotage Commission has merely clerical duties, and is assisted by a boy who answers the telephone and runs messages. This boy appears to have been acting as an intermediary between the pilotage office and the naval authorities, by the telephone, and has been trusted with reporting the inward and outward movements of vessels to the dockyard, of which no office record has been kept. It has not been possible to get any detailed statement from the Secretary as to the gross earnings of the pilots, certain figures given in evidence being misleading, but the Secretary stated that he considered the gross earnings of each pilot, for 1917, were about \$8,000. The earnings, as they appear in the return, do not include movements, and this appears to be a serious dereliction of duty on the Secretary's part, and it is strongly recommended that immediate steps be taken to have proper and intelligent returns made, giving the entire earnings. Attention is drawn to \$1,976.13 earned by Pilot Gorman, for movements in 1917. This consists chiefly of irregular charges on vessels bound directly to Bedford Basin from sea, or vice versa, and this, it is understood, has been discontinued, as a result of legal advice to the pilotage commission.

Special attention is drawn to the pilotage commission's laxity regarding apprentices. No record of the attendances of apprentices is kept, and their duties seem to have been those of members of the pilot schooners, and while these are in dock they have nothing to do. They never go on board steamships with the pilots, and therefore cannot gain the experience required to handle ocean steamers, and when questioned, some of them were found very deficient in general chart exercises, marks on lead line, etc., but they had a fairly good local knowledge of the soundings at the entrance to the harbor. The only examination for eyesight is when apprentices are entering the service, and is made by two of the commissioners. The total earnings are pooled, after deductions for management and superannuation fund. This system appears to be pernicious and to remove all incentive to individual ambition.

Intoxicating liquors were permitted on pilot schooners, and several instances were recorded of inebriety among pilots. While the pilotage commissioners have dismissed some of these recently, they do not appear to have been strict enough in this respect.

After the pilots have drawn their money, the Secretary prepares a statement dividing the earnings among the pilots, after deducting for schooner store supply, crews' and apprentices' wages, etc., the balance being divided into shares,  $1\frac{1}{2}$  shares being allotted to the owners of the pilot schooners. Included in this statement are certain gratuities paid to masters of vessels, stated to be for compensating the master for signing the voucher, to enable the Secretary to justify the collection of pilotage dues from the steamship agent. This is a very bad feature of the matter. No evidence having been submitted as to the unreasonableness or otherwise of the tariff, it is taken for granted that there are no complaints. The question of movements appears to cause a good deal of irritation, and it is recommended that sec. 462 of the Canada Shipping Act, be strictly applied, as this appears to be fair and reasonable, and defines when a pilot may leave a vessel which he has undertaken to pilot. From the evidence, and from other information obtained, it was gathered that there was a shortage of pilots, and as this required urgent attention, the Royal Commission, not having the power, asked the Pilotage Commissioners to appoint seven pilots from the list of applications from masters and mates.

Recommendations were made, as follows:—That the administration of the service by the present pilotage commission has been found unsatisfactory, and that legislation be enacted appointing the Minister of Marine as the Halifax pilotage authority; that a superintendent, with sea going experience and a clean record, be placed in full charge of the district to reorganize and administer its affairs, and be directly responsible to the Minister, such superintendent not to have been, at any time, a pilot of the district; that a qualified assistant be appointed, so that the office may be kept open day and night; that apprentices be indentured to the Minister, and that public notices be given when there are vacancies; that an eyesight test be made annually, the system adopted being the same as in vogue in the Quebec and Montreal districts, that is, an annual examination for sight and hearing by a medical officer and officer of the

Marine Department; that an oculist be appointed, for an immediate examination of eyes and hearing of all pilots and apprentices of the Halifax District; that a register of pilots be kept at the pilotage office, so that each pilot may be engaged in turn for outward pilots and on the pilot tender for inward pilots; that no pilot or apprentice be allowed to use intoxicating liquors, any infraction being punished by fine or suspension for a first offence and by dismissal for a second offence; that no such liquors be kept in the pilotage office or on board the pilot tender, an offender being punished by instant dismissal; that gratuities by pilots be prohibited and considered as an offence and dealt with accordingly; that no pilot be allowed to perform duties outside his own district; that all information in regard to changes in the aids to navigation, especially during the war, be through the Naval Service, and in ordinary times, through the Marine Department; that the present number of pilots be increased by seven, making 20 altogether, and that it be further increased not to exceed 25, nor to be less at any time, than 20; that a steam pilot tender be provided, and that in order to relieve the situation, masters of Canadian registered vessels trading regularly to the port be licensed by the pilotage authority, by amending sec. 487 of the Canada Shipping Act, and placing Canadian vessels in Canadian ports, on a par with U.S. vessels in U.S. ports. One or two minor matters, relating to the pooling of pilotage earnings, etc., are to be dealt with more fully in the final report, which will also cover the administration of pilotage affairs at St. John, N.B., and Sydney, N.S.

With regard to the recommendation that a steam pilot tender be provided, we are advised that negotiations for a suitable boat are proceeding. An order in council constituting the Minister of Marine as the pilotage authority for the pilotage district of Halifax, has been passed, as follows:—

Whereas the commission appointed to enquire into and report upon all matters connected with the pilotage system and administration at the port of Halifax has recommended that the Minister of Marine and Fisheries be appointed the pilotage authority for the pilotage district of Halifax in place of the Halifax Pilot Commissioners, and that many changes should be made in the pilotage regulations for the said district: Therefore the Governor-General in council, in view of these recommendations and the importance of making immediate provision for improved pilotage facilities for the large number of vessels that are arriving at and leaving the port of Halifax owing to the war, on the recommendation of the Minister of Marine and Fisheries, and under the provisions of the War Measures Act, 1914, makes the following regulations:

The Minister of Marine and Fisheries for the time being shall be the pilotage authority for the pilotage district of Halifax, and all powers and authority, heretofore vested in the Halifax Pilot Commissioners, are hereby vested in and transferred to him. All property, both real and personal, now vested in or under the control of the said commissioners, is hereby transferred to and vested in the Crown to be administered by the Minister of Marine and Fisheries.

The said minister, as such pilotage authority, in addition to the powers heretofore exercised by the pilotage authority

of the pilotage district of Halifax, shall have power to reorganize the pilotage system in the said district, to retire or dismiss any pilots or employees, at present employed, and to appoint such pilots, superintendents, officers and clerks as he may deem necessary for the proper administration of the said district, and to change and amend the pilotage regulations for the said district as he may deem necessary or desirable.

The Minister may defray all expenses in connected with the reorganization and administration of the said pilotage district out of pilotage funds in the said district.

These regulations shall continue in force during the continuance of the present war and for one year thereafter.

Capt. H. St. George Lindsay, a former Dominion Wreck Commissioner, and latterly General Superintendent, River St. Lawrence Pilotage, has been appointed Superintendent of Pilotage at Halifax, for the time being.

### Specifications of Deck Machinery for Standard Wooden Steamships for British Government.

Following are the specifications issued by the Imperial Munitions Board at Ottawa for deck machinery for standard wooden steamships being built in Canada for the British Government:—

The winches to be double cylinder reversing engines having cylinders 7 x 12 in. diameter by 12 in. stroke, fitted with double geared whipping and warping drums. Cylinders to be of hard, close grained cast iron, bolted to a foundation plate of substantial scantling; valves being flat valves and preferably the valve chest to be arranged with a cover in sloping direction in order to facilitate facing the valve seat. Pistons to be fitted with steel rams-bottom rings, piston rods and valve spindles to be of rolled brass or Muntz metal. Valve gears to be of the link motion reversing type, and eccentric to be of cast iron, eccentric straps of gun metal. The gear wheels to be of cast iron, of double helical form, or may be of steel with straight teeth, provided the teeth are machine cut. The main bearings are to be fitted with brass bushes and all other working parts fitted with adjustable brass bushes. The clutches are to be of cast steel, mounted on a squared shaft not on feathers. The winches are to be fitted with valves on both steam and exhaust, with the usual control valve. Reversing gear to have back balancing weights, the cylinders to be lagged and cleaded with sheet iron. All exposed working parts to be carefully guarded to the requirements of the British Factory Acts. This specification is intended to cover a winch of high class design and extra heavy construction, similar to that made by the best known British winch builders, of standard make. One pair of whipping and one pair of warping drums are to be fitted, of shape approved by board. Foot break is to be fitted.

Windlass to be of double cylinder, horizontal or vertical type, windlass fitted with double gypsies with comb lifters and breaks, to be of a size suitable for handling stud link cable 1½ in. diameter and to the full requirements of Lloyd's Register of Shipping. All bearings are to be good extra surface and to be fitted with adjustable brass bushes. All working parts to be protected to the requirements of the factory acts. Devils, claws and stoppers to be fitted, as usual, of cast or wrought iron. Steam stop valve and ex-

haust valve to be fitted. Steering gear to be of steel of the straight machine cut type. This special case is intended to cover a high class steam windlass of a type supplied by certain English makers, and all parts are to be of extra strong construction to the approval of the board's technical adviser.

Steering gear to be fitted amidships and to consist of a double cylinder engine of approved design, fitted with slide valve motion and control valve of approved design, actuating through spare and worm gearing; a single drum will receive the chains from the steering gear aft; control valve to be operated either by rods and gear from the steering wheel on bridge or alternately if this be found impossible, by the tellemotor control gear. The hand steering gear to be arranged on the poop and arranged to operate steering should engine be out of action. Steering wheels to be of teakwood, brass fitted, or in the case of the tellemotor gear, may be a small brass wheel. All to be to the full requirements of Lloyd's Register of Shipping for the highest classification.

Ash winch to be fitted on casing secured to bulk head, of a double cylinder variety, with ropes led to both ventilators; ash buckets to be controlled from the stoke held fore.

The first steamship to carry bulk grain from Vancouver, B.C., for Europe, without breaking bulk, was reported to have arrived at London, Eng., safely, Feb. 16. No particulars as to the condition of the cargo have been received, and considerable interest is felt as to this, as it has always been contended by some, that bulk grain could not be satisfactorily shipped by that route owing to the different temperatures encountered. The vessel carrying the cargo was the s.s. War Viceroy, built at Portland, Ore., for the British Government. She sailed from Vancouver, Dec. 2, 1917.

VESSEL FOR SALE.

Tenders addressed to the undersigned at Ottawa, and endorsed on the envelope "Tender for Dredge Galveston", will be received up to noon of the

Eighth Day of April, 1918,

for the purchase of the steel twin screw suction and hopper dredge Galveston, now lying at Sorel, P.Q. Persons desiring to inspect the dredge should apply to the Superintendent of the Shipyard at Sorel.

Length, 223-0 x 39-0 x 15-6 depth of hold.  
Gross tonnage, 1,332.  
Net tonnage, 838.  
Draft loaded, 14-9 aft and 13-1 forward.  
Dead weight, 1,800 tons.  
Two suction pumps, Dutch type.  
Working capacity, 1,350 cu. yds. in 45 minutes.  
Hopper capacity, 1,500 cu. yds.  
Engines, 15 x 24 x 39 x 34" stroke.  
Propellers solid, 4 bladed 8' 4" dia. x 10' 6" pitch.  
2 Scotch boilers 13' 9" dia. x 11' 0" long x 180 lbs. w. pressure.  
Built in Germany in 1904.

The dredge will be sold as it now stands and no additional equipment or apparel will be supplied by the Department.

All offers must be for cash payment as soon as the tender is accepted, and the vessel must be removed immediately by the successful tenderer.

Each tender must be accompanied by an accepted cheque on a chartered Canadian bank, equal to five per cent. (5%) of the whole amount of the offer, which cheque will be forfeited if the successful tendered declines to purchase the vessel at his tender price. Cheques accompanying unsuccessful tenders will be returned.

The highest or any tender not necessarily accepted.

Newspapers copying this advertisement without authority from the Department will not be paid for same.

ALEXANDER JOHNSTON,

Deputy Minister of Marine.

Department of Marine.

Ottawa, March 21, 1918.

### Mainly About Marine People.

C. Stanton, Assistant Deputy Minister of Marine, Ottawa, is spending a holiday in California.

Capt. John Andrew, an old time master of sailing craft on Lake Ontario, died at Oakville, Ont., recently, aged 73.

H. W. Cowan, director and Operating Manager, Canada Steamship Lines, Ltd., Montreal, has been spending a short time in California.

Miss Alice Ross, daughter of W. G. Ross, President, Montreal Harbor Commission, was married at Montreal, Mar. 19, to H. W. Soper, son of W. Y. Soper, Vice President, Ottawa Electric Ry.

W. I. Gear, Director, Steel Shipbuilding, and also of Wooden Shipbuilding in Eastern Canada, for the Imperial Munitions Board, Ottawa, visited a number of the Ontario shipbuilding yards during March.

J. W. Norcross, Vice President and Managing Director, and F. S. Isard, Director and Comptroller, Canada Steamship Lines, Ltd., have been spending a short time at White Sulphur Springs, Va.

Capt. Robert Fraser, for several years Marine Superintendent, Montreal Transportation Co., Kingston, Ont., died at Long Beach, California, Mar. 10, after a long illness. He retired from active service at the end of 1916 on account of his health. The funeral took place at Kingston.

Capt. J. W. Harrison, master of the s.s. Pictou, has been presented by the British and Foreign Sailors Society, with a salver made of copper from Nelson's flag ship, suitably engraved, for his conduct in clearing his vessel from Halifax harbor at the time of the great explosion there in Dec., 1917.

Capt. C. D. A. Barber, at one time, Manager, Northern Transportation Co., Athabasca Landing, Alta., died at Duluth, Minn., Mar. 5. In the early stages of the war he enlisted with the 202nd Battalion, C.E.F., and went overseas. On his return, he was for some time in Edmonton, Alta., and about two months ago, went into business in Duluth.

William Andrews, who died at Collingwood, Ont., Mar. 12, aged 77, was one of the early wooden ship builders on the Canadian lakes. He first worked at the Andrews shipbuilding yards, established by his father at Port Dalhousie, Ont., and on the acquisition of the property for the construction of the Welland Canal, he moved to Port Robinson and subsequently to Collingwood, continuing shipbuilding with his brother, S. D. Andrews, who was one of the founders of the yards now owned by the Collingwood Shipbuilding Co., and who is now Inspector of Hulls, under the Marine Department, at Collingwood.

Farrar Transportation Co., Ltd.—The report for 1917, presented at the annual meeting at Toronto recently, was considered very satisfactory, a substantial dividend being paid. The officers for this year are:—President, T. I. Thomson, Owen Sound, Ont.; Vice President, W. E. Allen, Toronto; Managing Director, G. E. Fair, Toronto.

Bay of Fundy Tides.—The Naval Service Department has issued, in pamphlet form, "Tides at the Head of the Bay of Fundy," from observations during Admiralty chart surveys, Noel Bay, 1859; tide levels for the Baie Verte Canal, Cumberland Basin, 1870; and measurements by the tidal survey in 1916, in Cobequid Bay, where the highest tides occur.

# Canada Steamship Lines, Ltd., Annual Report and Meeting.

A brief summary of the report for the calendar year 1917 appeared in Canadian Railway and Marine World for March. Following are fuller particulars, as presented at the annual meeting in Montreal Mar. 5. The company had a satisfactory year. While the gross earnings are higher than in 1916, the net earnings are slightly lower. This is accounted for by the enormous increase in the cost of everything that enters into the operation of such an undertaking. The vessel tonnage owned by the company is greater than it was in 1916, despite the losses that have occurred. Directors and management are convinced that the company has a promising field for development and expansion on the high seas. During the year a vacancy occurred in the directorate, through the resignation of R. M. Wolvin, which was filled by the appointment of H. W. Cowan, Operating Manager, to the board. The deferred dividends on the preference shares have been paid, and it has been decided that the quarterly payments of these dividends will be resumed. All the properties have been thoroughly maintained, and the fleet is in a better state of efficiency than it was at any other time.

## Balance Sheet.

### Assets.

Fixed assets—	
Vessels as at Dec. 31, 1916 .....	\$18,797,920.30

Jas. Carruthers, President, in moving the adoption of the report, referred to the company's improved financial position as disclosed by the annual statement, and said: "The company during the last three or four years had gone more extensively into the ocean traffic, and the directors believe there is a good field for development and expansion in this direction, more particularly owing to the fact that the Canadian Government has decided on a policy of building up a Canadian merchant marine. This undoubtedly will prove a great boon to the country and will indirectly help the company. Under the expert guidance and advice of the Vice President and Managing Director,

the directors have done some selling and buying of vessels during the year. They have a certain well defined policy in this connection. Their object is (and they have been successful so far) to establish the fleet on a more modern basis, to meet the changing conditions. Older and smaller vessels, gradually becoming obsolete and costly to operate, are being replaced by larger and newer ships, so that even during the war, but more particularly after the war is over, your fleet will be in a position to meet every requirement and every condition that may arise.

"Now, as to future prospects. There is no doubt that after peace is declared there will be new problems to face. It is generally conceded that the prosperity which flourishes in both the United States and Canada at present may wane. Work will not be so plentiful, the high wages that are now being paid will have to be cut down and a readjustment is bound to take place, so that such conditions as exist today must not be accepted as permanent and the uncertainty as to the future make it incumbent upon us to be both careful and conservative. Your directors believe, however, that the enormous losses in ocean tonnage suffered by all nations will take a long time to replace, even to an extent to partly meet the world wide demand. I feel warranted, therefore, in saying that in all probability present rates will continue until the available tonnage becomes sufficient to meet at least normal conditions. In saying this, I have times in the shipping trade will not return for years.

"We have every reason to expect a large increase in the acreage of grain in our Canadian Northwest this coming season. There is an enormous shortage of foodstuffs the world over and the knowledge that even if peace were proclaimed within six months, the urgent requirements would continue until the supply equalled the demand means that these high prices for all kinds of grain are going to continue for some time to come, so there is every incentive to the farmer to put every acre possible under cultivation, and I believe with favorable weather conditions we will have a largely increased production all over Canada, especially in the Northwest. With the large grain carrying fleet this company has on the upper lakes, the shareholders can understand what a big difference it makes to us if the crop be large or small in our Canadian Northwest. So we hope the crops will turn out as looked for, and I assure you that our company will be in a position to handle a large part of this traffic to the seaboard. The number of our shareholders is increasing every year and I am pleased to report that the last figures show there are 2,250."

J. W. Norcross, Vice President and Managing Director, in seconding the motion for the adoption of the report, said: "As you have been told by the President, we have sold some of our older and more obsolete ships and replaced them by modern tonnage; and while it is true that a number of our smaller vessels have been taken from the Great Lakes for the ocean service, we have augmented our lake fleet by larger ships, which can be more easily and cheaply operated. Our ocean fleet has been increased, and is operating successfully in different parts of the world, and on the whole the property is in good condition. We have had several disasters, including the s.s. Bermudian, which was

sunk, but which is being salvaged, and in the course of a few months, will be in better condition than she was before the disaster. All our losses were fully covered by insurance to the extent of replacement values.

"It is impossible at present to forecast the company's future, but it seems to me that, while industries which are now working to capacity, will receive somewhat of a setback for a period after the declaration of peace, it will be because a large number of factories came into being during the war, and are largely engaged in manufacturing for war purposes. There is, no doubt, a very large percentage of increase in equipment for the manufacture of all sorts of materials, while, on the other hand, there is a very great decrease in water transportation facilities since the war began, and it will take several years to replace the tonnage lost. It will require the best efforts of all trans-

portation companies after the war to meet the demands of European countries, in the matter of food stuffs alone. It is, therefore, with considerable confidence that we look forward to the company's future."

The directors and officers were all re-elected, and are as follows:—Commander Sir A. Trevor Dawson, R.N., Hon. President; Jas. Carruthers, President; J. W. Norcross, Vice President and Managing Director. Other directors:—C. A. Barnard, J. C. Newman, H. B. Smith, E. Bristol, M. J. Haney, Hon. J. P. B. Casgrain, G. H. Smithers, D. B. Hanna, J. P. Steedman, F. S. Isard, H. W. Cowan, W. E. Burke, J. E. Dalrymple. Secretary: F. Percy Smith. London Advisory Committee: Commander Sir A. Trevor Dawson, R.N., Chairman; Sir Vincent Caillard, Albert Vickers, W. Grant Morden, C. G. Bryan, Sir Mitchell Mitchell-Thomson, Bart., Sir H. Montagu Allan, C.V.O.; Secretary, T. J. Fellowes Brown.

## New Regulations Respecting Life Jackets for Vessels.

The following instructions have been issued by the Board of Steamship Inspection, Marine Department, Ottawa, to steamship inspectors:—

1. **Inspection of Life Jackets.**—No life jacket may be accepted after April 1, 1918, as part of the statutory equipment of a vessel unless—(a) it is of a type approved by a certificate of approval issued on or after May 1, 1917; (b) it complies with the specification annexed to the certificate; and (c) it is in good condition and generally fit for the service intended. Makers of life jackets who wish to obtain approval for their life jackets should make application as indicated in paragraph 8.

2. **General.**—Life jackets intended to form part of the statutory equipment of a vessel must be approved material and construction and those intended for use by adults must be capable of supporting lb. of iron in fresh water for 24 hours. Life jackets intended for use only by children must, in general, be capable of supporting 12 lb. of iron in fresh water for 24 hours. The required buoyancy may be supplied by cork, kapok or other approved substance, but no life jackets which depend on air compartments for their buoyancy will be accepted. The cork used in the manufacture of life jackets should not weigh more than 12 lb. a cubic ft. and must be of good quality and cleaned. Pieces of cork for all parts of jackets except for shoulder or other special pockets should, in general, be not less than 20 cu. in., however, smaller pieces may be worked in in pockets with these sized pieces, provided they are securely attached to the larger pieces with proper wooden pins. In no case will cork shavings or cuttings be accepted. Kapok must be pure Java kapok of good quality, free from seeds or other foreign matter and well cleaned. At least 24 oz. of kapok must be in each life jacket whose buoyancy is derived from this material.

3. **Distribution of buoyancy.**—The buoyancy must be so distributed in the life jacket that when worn by a person in the water it will comply with the following conditions:—(a) When the wearer is inert the position of the body should be as near the vertical as possible, and if there is any tendency to depart from the vertical it should be to throw the head backwards. (b) The buoyancy of the jacket should be so arranged that it will keep the wearer's

head clear of the water when floating in the inert position. (c) In the event of the wearer through any cause being rendered unconscious, the head should be so supported that it would not fall forward and the face become submerged. (d) Life jackets for adults must be such that they will fulfil the conditions set out in paragraphs a, b and c of this section when worn by persons whose chest measurement varies from 32 to 50 in., life jackets for children will be required to fulfil these conditions when the chest measurement varies from 24 to 38 in. Jackets intended for both adults and children must be such as will be satisfactory for the whole range of chest measure from 24 to 50 in.

4. **The covers** may be of cotton, linen or other approved material, subject to the following conditions:—Covers of all linen with no admixture of other material must weigh not less than 6 oz. to the yard with a width of 27 in., must have at least 28 threads to the inch in the warp and in the weft, and must be unglazed and unmangled, and free from all dressing. It may be bleached or unbleached, but no artificially colored material is to be used except in covers for children's life jackets. The minimum standard for covers of all cotton with no admixture of other material will be cotton duck 38 double warp and 54 in weft, weighing not less than 6 oz. to the yard, with a width of 29 in. Any other material must be submitted for approval.

5. **The tapes** must be of linen or cotton thread web 1¼ in. wide, and capable of bearing a strain of 200 lb., and must be securely attached to the cover; the ends of the tapes where they are attached to the cover must be doubled, and the ends displayed. The method of affixing and tying the tapes must be simple and easily understood, and capable of being rapidly carried out.

6. **Sewing.**—The tops of the cover must be sewn with doubled material, and must be at least as strong as no. 25a 5-cord Whittemore cord. All other sewing is to be made with linen thread not less than no. 25.

7. **Marking.**—All jackets must be marked "Adult's life jacket," "Child's life jacket," or "Adult or Child's life jacket," as the case may be, and must also be marked in such a manner as will indicate clearly the front and back in bold letters not less than 2 in. deep. The maker's

name or trade mark should be on all life jackets. Life jackets suitable for children only shall be colored red.

8. **Approval of life jackets.**—Application for test and approval of life jackets should be made to the Chairman, Board of Steamship Inspection, Marine Department, Ottawa, by shipowners desirous of adopting any special type of life jacket, or by makers; a sample jacket should be forwarded for a test, arrangements for which may then be made, the makers or their representatives usually being notified so that they may be present. When the test is completed a specification form will be supplied by the department, which must be correctly filled in and duly signed by the maker, who must also submit sample photographs in various positions of adjustment, with instructions for adjustment. The specification and photographs, and report on the test will then be submitted for the board's consideration, the result of which will be communicated to the makers, and if the jacket is approved, they will be requested to supply a number of copies of the specification and photographs for distribution amongst the inspectors, and to undertake to provide with all jackets supplied a minimum number of photographs showing adjustments. All life jackets must strictly comply with the specification and original sample approved by the board, and be inspected at the maker's works or warehouse, or elsewhere, by a representative of the board, when a percentage of each batch will be tested by floating them in fresh water with the required amount of iron suspended from them. If found satisfactory, they should be stamped to show they are approved, with date of examination and initials of the person making the examination. All life jackets found on board ship may be tested by a steamship inspector, whether previously approved or not, and may be tested as to condition, or to ascertain what weight of iron they will support, and if found deficient, will be condemned, and a report will be made to the board, who reserve the power at any time to withdraw their approval of an approved life jacket.

The Ogdensburg Coal & Towing Co., Ltd., the incorporation of which was mentioned in our last issue, has an authorized capital of \$1,500,000 and office at Montreal. It has taken over the business formerly conducted in Canada by the Ogdensburg Coal & Towing Co., Ogdensburg, N.Y., and has formed another company under the name of the Ogdensburg Coal Corporation, with \$200,000 authorized capital, to take over the U. S. business, and which will be controlled by the Canadian company. The officers and directors of the O. C. & T. Co. are:—President, W. L. McDougald, Vice President, Century Coal & Coke Co., Montreal; Secretary-Treasurer, G. P. Morgan, Montreal; other directors, J. W. Norcross, Vice President and Managing Director, Canada Steamship Lines; R. M. Wolvin, President, Montreal Transportation Co.; C. A. Barnard, K.C., director, Canada Steamship Lines, Ltd., and F. S. Isard, Comptroller, Canada Steamship Lines, Ltd.

The Marine Engineers Association of Newfoundland, at a recent annual meeting, passed resolutions of sympathy with the relatives of those who lost their lives in the wreck of the s.s. Florizel. Officers for this year were elected as follows:—C. Puddester, President; John Pollock, Vice President; James Coffey, Secretary-Treasurer; W. Crossman, A. McKinley, T. Crossman, J. Forbes, J. Macfarlane and E. J. Birch, executive committee.

## Notes on Vancouver Shipbuilding Plants.

Some twenty years ago the parts of two or three small steel cargo boats were taken from Great Britain and assembled in Coal Harbor, B.C., but no serious effort was made in shipbuilding until the spring of 1916, by which time the shortage of tonnage was becoming acutely felt, particularly in the export lumber trade. The B.C. Government offered encouragement to the construction of wooden auxiliary

aerial conveyors or travelling derricks to distribute it where required when worked up, and hoists to handle it at the respective ships. In every case the base of the yard is contiguous to railway trackage, with a spur or spurs into the yard. Facing the line of vessels, is a row of machine shops and adjoining these are the compressors, usually three, for furnishing power to the compressed air tools. These consist of boring, drilling and turning machines, a plant for cutting, threading and heading bolts, and another for galvanizing. A model loft, pattern shops, a floor for templates and the drafting office are grouped together. As compared with the plant for building steel ships, that for the construction of wooden vessels is simple. The massive timbers are unloaded from scow, by the travelling derrick on the wharf, and stacked in the space between the lines of the derrick and the overhead conveyors, which carry the material to the band saw shops, where it is cut to the templates and swung over to the second travelling derrick and by it transferred to a third. It is then delivered to the ship cranes and hoisted into position.

Fig. 2 shows the layout by another wooden ship yard, of slightly different

few months ago steel ships in this territory were assembled rather than built, but a complete change is being brought about. Though no steel is rolled in the province as yet, all shaping, cutting, bending, welding, casting, turning, boring, drilling and punching are now done in the shops of the yards. Engines are designed and built complete, instead of being simply imported and set up.

Fig. 1. Wm. Lyall Shipbuilding Co.'s yards at West Vancouver.

steam sailing schooners and a score of them were quickly under construction. They are built to one type, of 2,550 tons dead weight and 1,500,000 ft. of lumber in capacity. Each has twin Bolinder engines of 360 h.p. to give a speed of 8 knots. Many of this first group of ships have been launched and several have made voyages.

Steel steam shipbuilding quickly followed on the first wooden shipbuilding programme, and on May 17, 1917, the first oceangoing steamer built in Western Canada was launched by the Wallace Shipyards, Ltd., at North Vancouver. This was War Dog, a boat of 4,800 tons dead weight, 315 ft. long, 45 ft. moulded beam, 27 ft. deep and 6,750 tons displacement. Engines designed and built in the yards gave her a speed of 10 knots.

The wooden ship yards are, broadly

Fig. 3. Steel shipbuilding at Wallace Shipyards, Ltd., North Vancouver.

layout from the Lyall yard, though the plant contained is practically similar. Where the lumber is taken to the yard on the cars, it is stacked along the rails of the travelling derrick by which it is taken to the shops, the overhead conveyor in this case being dispensed with. This derrick also travels on tracks between the shipways which it controls. Ample space is required for stacking the lumber upon delivery and again when shaped and prepared. A great deal of work is done in the open air by hand, such as the shaping of the massive rudder and bow pieces, and stern posts, scarving, trimming knees, etc., the preparation of the masts, yards and booms.

A much greater space is demanded for wooden shipbuilding, in proportion to tonnage, than for building in steel. In the latter yards, materials require much less space. Plates are placed on edge in racks and passed with the minimum of handling to the punching and boring machines. A

Fig. 4. Wallace Shipyards, Ltd., plant, North Vancouver.

The Wallace shipyard at North Vancouver (fig. 4) is a good example of this type. Here a large runway with overhead crane is placed between two piers. The one to the west is for loading and unloading scows, and the eastern pier has a travelling derrick, but has sheer legs as well, at the pierhead, and the pier is upon a greater scale and is carried out to deep water. Immediately east of the shipway, with its crane, which is shown in fig. 3, is a ship railway of 2,500 tons capacity and parallel with that are the machine shops, smithy, shaping floor, furnace room and galvanizing plant in the order named. The offices and drafting rooms occupy a second story over a portion of the machine shops. Then comes ship railway 2, of 1,500 tons capacity, and more wharfage where an extension of the machine shops

Fig. 2. A typical wooden shipbuilding yard at Vancouver.

speaking, laid out on the same general plan, a typical example of which is the Wm. Lyall Shipbuilding Co.'s yards near Vancouver, shown in fig. 1. There is a wide frontage to the sea or river, with space sufficient for laying down the number of vessels required side by side, with a pier or wharfage for unloading waterborne material and a narrow gauge line or lines to carry it to the workshops,

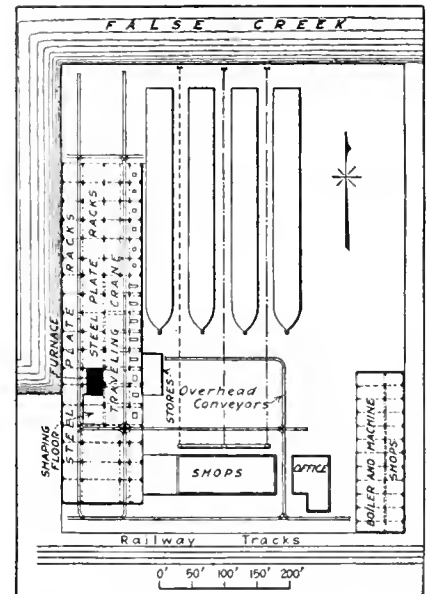

Fig. 5. J. Coughlan & Sons Steel Shipbuilding Yard.

is being made. The crane, it will be noticed from fig. 3, travels on light steel runways braced by overhead trusses. North of the gantry extend the boiler shop sheds, punching and riveting shops, all beneath the same roof. The L-shaped building in the northeast corner contains joiner and carpenter shops and pattern rooms. The forge connected with these yards is on the Vancouver side of the

harbor. The entire capacity of the yard is limited to the construction of one ship of 8,800 tons and the simultaneous docking and repairing of two others, not exceeding 2,500 and 1,500 tons deadweight.

In J. Coughlan & Sons yards on False Creek six steel steamers aggregating 52,800 tons deadweight are in course of construction. The position is ideal, having a wide frontage on sufficiently deep and wide water with a bay and wharfage on the west side. The Great Northern Ry. tracks form the southern base. The building is carried on in the open, but one of the last ships laid down is to be covered in. The plant is arranged on three sides of a square, of which the ships may be said to form the fourth. The buildings facing the railway (see fig. 5) are 2 storied, with a through entrance separating the office block from the machine shops, which extend across the balance of the

front. Above the machine shops are the mold loft and template rooms. The whole of the west wing is devoted to the preparation of the plates, which are unloaded at the wharf on that side and placed in the racks by means of a narrow gauge railway, and distributed thence to the different boring, cutting and punching machines, by means of the same narrow gauge, which is continued around the building. A powerful travelling crane takes the prepared materials to the yard and then they are delivered by the overhead conveyors to the different ships. An extensive shaping floor and furnaces are included in this wing, where the ribs, bearers, beams and stanchions are bent to the templates. A 3-story boiler shop forms the eastern wing, for the engines and boilers are designed and built in the yards.—R. Mackay Fripp in *Engineering News-Record*.

not take a pilot, seems open to question. The fact of his having to pay the charges whether he takes a pilot or not, does not necessarily make him take one, on the ground that he has to pay for it anyway. He takes a pilot for safety. If the clause compelling payment of the charges in the event of a pilot not being taken were deleted, there is no ground for supposing that a master would take chances and navigate the vessel to port without a pilot. It is thought that the situation might be cleared by making the taking of a pilot compulsory; by improving the type of the men engaged in the service; and by strictly defining the pilot's duties, so that both he and the master of a vessel might understand their positions, and the responsibilities of each.

## Responsibility for Damages in Marine Casualties.

In the course of the recent enquiry into pilotage at maritime ports, the chairman of the commission, Thos. Robb, is reported to have stated, in commenting on certain evidence, that "if the law compelled a master to take a pilot, the master was relieved of responsibility."

This is a question which seems to have exercised the minds of various persons who are, or have been, associated, either officially, or through misfortune, with marine casualties, for some time, and not alone on this side of the Atlantic Ocean. So far as one can judge after hunting for the needle of common sense in a haystack of legal verbiage, there are different rules applying in different territorial waters, but so far as Canada is concerned, there appears to be no ambiguity in the law governing the point.

The Canada Shipping Act, R.S.C. 1906, chap. 113, sec. 473, provides as follows:—"No owner or master of any ship shall, in any case, be compelled to employ or to give his ship into the charge of a pilot, either on the ground of his being compelled to pay pilotage dues to any person, or otherwise."

From this, it is clear that pilotage in Canadian territorial waters is not compulsory, even though the payment of pilotage dues may be.

Sec. 474 of the same act reads, as follows:—"Nothing in this part shall exempt any owner or master of any ship from liability for any loss or damage occasioned by his ship to any person or property, on the ground, either of such ship being in charge of a licensed pilot, or such loss or damage being occasioned by the act or default of a licensed pilot, or on any other ground."

It is also equally clear from this, that the master cannot divest himself of responsibility for any damage caused while the vessel may be in charge of a licensed pilot, even if such damage be caused by an act or default of the pilot.

We have been favored with the following extract from Marsden's *Collisions at Sea*, on the matter of compulsory pilotage:—"A pilot, whom the owner or master of a ship voluntarily employs to navigate the ship, is the servant of the owner for that purpose, and the owner is answerable for a collision caused by his fault or negligence. In some waters, and under certain circumstances, the law requires a ship to be placed in charge of, and navigated by, a qualified or licensed pilot, and in such cases, it is a statutory offence on the part of the owner or person

in charge of the ship, not to take a pilot on board. A pilot taken under these circumstances, called 'a compulsory pilot,' is held to be placed in charge of the ship by the law, and to supersede the master in the conduct of the ship so long as she is in pilotage waters. He is not the servant or the agent of the owners, and for a collision caused entirely by his negligence, neither is the owner answerable at law, nor the ship at Admiralty. In such cases the remedy of the injured person is against the pilot alone. Pilotage is held to be compulsory, so as to exempt owners from liability for the acts of the pilot in all British waters, and for all ships in, and for which the employment of a pilot is enforced by penalty, or where the pilotage charge can be recovered against the ship or her owners, whether the pilot is employed or not. In some foreign waters pilotage is compulsory in the sense that payment of the pilotage charge is compulsory, but the shipowner is nevertheless liable for the pilot's negligence."

This argument, in conjunction with the two sections of the Canada Shipping Act, quoted above, leaves the situation thus:—A master is not compelled to take a pilot on board his vessel; he is compelled to pay the pilotage dues, whether he takes a pilot or not; and neither the master, nor the owners, are relieved from responsibility for damages through any act or default of the pilot, should one be taken on board to navigate the vessel.

A well known shipping authority, in giving Canadian Railway and Marine World his opinion, says: "If the law compels the master to take a pilot, the master is relieved of the responsibility, but I would mention that this would only apply in cases where pilotage is compulsory. Here in Canada, a vessel is not obliged to take a pilot, though the master or owner, whether he does or not, is obliged to pay the pilotage dues. This system, I contend, tends to do away with what is the principal consideration, i.e., safety."

Whatever may be the case in other waters, vessels entering Canadian waters are under Canadian laws, and when a pilot is taken on board, he is there merely in an advisory capacity, owing to his presumed knowledge of local conditions, the sole control of the vessel remaining with the master. Though the master is not compelled to take a pilot, it is always advisable for him to do so, and, as a matter of fact it is always done by ocean going vessels; but whether he should be compelled to pay pilotage charges should he

s.s. *Calgarian Torpedoed*.—The Canadian Pacific Ocean Services' s.s. *Calgarian* was reported to have been torpedoed and sunk off the coast of Ireland, Mar. 1. She was built at Glasgow, Scotland, in 1913, for the Allan Line Steamship Co., now absorbed by C.P.O.S., Ltd., and was of the cruiser stern type, equipped with quadruple screw, triple expansion arrangement of turbines. Her dimensions were: length 600 ft., breadth 72 ft., moulded depth 54 ft.; gross tonnage, 18,500. She had accommodation for 220 first class passengers, 500 second class, and 1,000 third class, and quarters for a crew of 470. Since the early stages of the war, she has been used as an auxiliary cruiser and for transport work, but latterly for cruiser work only. It has been suggested that vessels of this type should not be used for auxiliary cruiser operations, as they are stated not to be fitted for the work, and could be used otherwise to better advantage.

**The Unsinkable Ship.**—The Ship Protection Committee of the U. S. Shipping Board, received a number of suggestions recently for making ships practically unsinkable, and has selected several of the devices for tests and experiments.

### Telegraph, Telephone and Cable Matters.

The Public Works Department received tenders during March for the supply of 30,000 lb. of galvanized iron telegraph wire, for early delivery at Nelson, B.C., for the Dominion Government Telegraph Service.

The Great North Western Telegraph Co. has opened offices at St. Prime, Que., Athens, Ont., Dropmore and Hyas, Man., Kelsey, Alta., and has closed its office at Perthuis, Que. The name of the office at Methors Mills, Que., has been changed to Dosquet.

The Public Works Department will receive tenders to Apr. 15, for 12 knots of single conductor submarine telegraph cable, 107 lb. copper and 150 lb. gutta percha per knot, with sheathing of 12 no. 8 s.w.g. iron wires, for delivery at Halifax, N.S., within 8 weeks after placing of order, and also for 5 reels of same on several reels for distribution, to be delivered at Vancouver, B.C.

The Maritime Telegraph & Telephone Co.'s report for 1917 shows receipts of \$813,483.52, and expenses of \$683,978.53. The dividends paid, including one paid Jan. 1, 1918, were \$111,000, leaving a surplus of \$18,504.99. The directors for this year are: S. M. Brookfield, O. E. Smith, G. E. Faulkner, L. B. MacFarlane, C. F. Sise, Jr., G. F. Pearson, A. Mackinlay, J. H. Winfield, and E. L. Macdonald.

### Among the Express Companies.

The Board of Railway Commissioners has extended the express delivery and collection limits for Calgary, Alta., as defined in order 15149, Sept. 8, 1911, by including Rideau Road, from Mission Bridge to the Emery Floral Co.'s green-houses.

The Canadian Ex. Co. announced Mar. 18, that, under instructions by the Ontario Government, no more intoxicating liquors would be carried by it to points on the Timiskaming & Northern Ontario Ry. As the carriage and delivery of intoxicating liquors to and in Ontario, is prohibited by law, after Mar. 31, this was only anticipating the law by a few days.

The Board of Railway Commissioners issued order 27036, Feb. 26, directing that the Dominion Ex. Co.'s special mileage tariff for the carriage of cream of in British Columbia, be extended beyond 75 miles, as follows:—75 to 100 miles, 5 gal. can, 40c; 8 gal. can, 45c; 10 gal. can, 60c; 100 to 150 miles, 5 gal. can, 50c; 8 gal. can, 55c; 10 gal. can, 68c; 150 to 200 miles, 5 gal. can, 60c; 8 gal. can, 65c; 10 gal. can, 75c. The new rates are effective Apr. 1. The application for a reduction in the rates for cream for distances not over 75 miles, was refused.

Consequent on the death of J. A. D. Vickers, Vice President and General Manager, Western Lines, American Ex. Co., Chicago, Ill., the following changes have been announced:—C. D. Summy has been appointed acting General Manager, Western Lines, Chicago; W. E. Beckner has been appointed Assistant General Manager, Western Lines, Chicago. We have also been advised of the following changes:—W. G. Smith has resumed his duties as Manager, Central Department, Western Lines, Cleveland, Ohio; J. H. Gates has been appointed Manager, Northwestern Department, Western Lines, Chicago, and C. L. Chase, heretofore acting Manager, Northwestern Department, Chicago, has been appointed Manager, Southern Department, Western in connection with the death of J. A. D.

Vickers, which was referred to in Canadian Railway and Marine World for March, the American Express Co.'s President, G. C. Taylor, issued the following circular: "With deep regret I record the death of J. A. D. Vickers, Vice President and General Manager of the company at Chicago, which occurred at his home on Feb. 17. He had been continuously in the express service since 1875, a period of 43 years, occupying the position of Vice President and General Manager for the last four years. Mr. Vickers won his high place in the express world by merit. Zealous for the interests of the company he represented, he never allowed his zeal to obscure his keen sense of justice in dealing with both his associates and the public. As an executive he exercised his authority with such kindness and modesty as to win the love and confidence of all those associated with him."

### Printing Express Receipts in English and French.

Mention was made in Canadian Railway and Marine World for March, of a claim against the Dominion Express Co. for \$150 for loss of baggage, on which the company had confessed judgment for its full liability of \$50, the plaintiff refusing same, on the ground that the shipping papers were in English, which he was unable to read, and claiming that they should have been in French. In delivering judgment for the plaintiff for \$50, as admitted by the company, Mr. Justice Archer dealt with the matter of the use of the dual languages on transportation papers, which is of sufficient importance to summarize as follows:—

The plaintiff, in answer to the defendants' plea, alleged that the receipt stating the conditions was in English, notwithstanding the law which obliges the company to publish its contracts and receipts in both languages, that he did not know English and did not understand the matter mentioned on the receipt, that the company's agent did not call his atten-

tion to the conditions and did not ask him to declare the value of the trunk and contents, and that he would have paid extra charges in respect of the value over \$50 had it been brought to his notice. The court considered that plaintiff knew that, besides the name and address which were inserted in lead pencil in the body of the receipt, there was other printed matter, and that therefore he was sufficiently put on his guard, and that if he could not read the document, he should have asked the agent to give him a receipt in French, to which he was entitled. He did not ask for a receipt in French, and it was therefore due to his own fault that he did not know of the special conditions on the receipt, which was a contract between himself and the company.

### CANADIAN PACIFIC RAILWAY COMPANY.

#### Notice to Shareholders.

The Thirty-seventh Annual General Meeting of the Shareholders of this Company, for the election of Directors to take the places of the retiring Directors and for the transaction of business generally, will be held on Wednesday, the first day of May next, at the principal office of the Company, at Montreal, at Twelve o'clock noon.

The Common Stock Transfer Books will be closed in Montreal, New York and London at 3 p.m. on Tuesday, the ninth day of April. The Preference Stock Books will be closed in London at the same time.

All books will be re-opened on Thursday, the second day of May.

By order of the Board,

ERNEST ALEXANDER,

Montreal, March 11th, 1918. Secretary.

Freight and Passenger Steamers, Barges, Tugs, Vessels, Yachts, Lighters, Sand Suckers, Scows, etc., and Marine Machinery For Sale and Wanted. Write for Lists.

## Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

**Lyman Tube & Supply Co., Ltd.**—Second-Lieutenant E. O. Champagne, of the Royal Flying Corps, heretofore salesman, Lyman Tube & Supply Co., Montreal, has sailed for England.

**Marsh Engineering Works, Ltd.**—The name of Marsh & Henthorn, Limited, makers of hoisting machinery, etc., Belleville, Ont., has been changed, by order in council, to Marsh Engineering Works, Ltd.

**Refrigerator, Heater & Ventilator Car Co.**—The Duluth, Minn., Commercial Club passed a resolution recently, urging Director General McAdoo to adopt, for all U.S. railways, the Moore refrigerator car system, which is in operation on the Duluth & Iron Range and the Duluth, Missanabie & Southern Rds., and is being introduced on the Great Northern Ry. and other lines, to conserve perishable food products.

**Franklin Railway Supply Co. of Canada, Ltd.**, the incorporation of which, under the Dominion Companies Act, was mentioned in Canadian Railway and Marine World for March, has taken over the business handled heretofore by the Montreal branch of the Franklin Railway Supply Co., Inc. The new company has exclusive rights in Canada to all the parent com-

pany's products. The officers of the new company are:—J. S. Coffin, Sr., Chairman of Board; J. S. Coffin, Jr., President, and Leland Brooks, Vice President. The Chairman, J. S. Coffin, Sr., spent 14 years in railway work and has been in the railway supply field for 26 years. He began as a machinist's apprentice and became locomotive fireman, locomotive man and road foreman of locomotives, most of his experience being on the Wisconsin Central. He then went to the Galena Signal Oil Co. as mechanical expert, was promoted to manager of that department and several years later was elected Vice President. After two years he resigned the latter position to become Vice President of the American Brake Shoe & Foundry Co., which position he held until 1911. In 1902 he organized the Franklin Railway Supply Co., Inc., of which he was president up to 1916, when he was elected Chairman of the Board. He is also a director of a number of other corporations. The President, J. S. Coffin, Jr., after leaving at the Stevens Institute, went with the Venango Manufacturing Co., Franklin, Pa., and later with the American Locomotive Co. in its erecting shop and as a locomotive inspector. In 1912 he went to the Franklin Railway Supply Co. as a service representative, then into the sales department, and in 1915 was appointed Canadian Sales Manager, which position he held up to the time of his recent election. The Vice President, Leland Brooks, after leaving Stevens Institute, was employed by the New York Central Rd. for seven years in the engineering department, and then by the Franklin Railway Supply Co., Inc. For the past year he has been connected with its Canadian branch as Assistant Manager.

## Transportation Associations, Clubs, Etc.

## Tree Planting for Railway Snow Fences.

By W. C. Palmer, North Dakota Agricultural College.

Tree planting is one of the methods of protecting railway cuts from being filled with snow. The snow fence commonly used is expensive and not entirely satisfactory. In a winter of heavy snowfall it often causes more snow to stop in the cut than if there was no protection. When the snow fall is light the snow fence is all right. Part of the Minneapolis, St.

the north and west sides, and three rows on the south and east sides; the outside row of willows, the second and third rows of cottonwoods and boxelder, and the inside row of green ash. Golden, laurel leaved, white and Niobe weeping willows were tried. Of these the laurel leaved proved the hardiest and it is the one that will be used principally in the future. It

of North Dakota and is very hardy. It is shrubby in growth and very much branched, and produces a fruit that is suitable for jelly making. The artemesia dies back each winter, but the stalks remain standing, and a good many of the leaves stay on, so that it furnishes good protection. It is very hardy and does well in very dry and exposed locations. The second row

Tree planting on Minneapolis, St. Paul & Sault Ste. Marie Railway.

The left hand illustration shows the method of preparing the right of way for tree planting, by discing the sod. The right hand illustration shows the method of cultivating the trees. The common and the orchard disc are run alternately, the one throws the soil out, and the other throws it in. In this way the soil is kept level.

Paul and Sault Ste. Marie Ry. runs through North Dakota prairies where snow can drift for miles. Cuts in that section need good protection. A few years ago the officials decided to use trees in protecting the cuts, and the planting and care of them was assigned to T. A. Hov-erstad, the company's Agricultural Com-missioner, who has had a good deal of

is also less subject to insect attack. The Niobe weeping willow gives some promise of being valuable in this work, but further trials will be needed to establish its usefulness. The plan of planting, as worked out, now consists of planting eight rows of trees on the north and west sides and six on the south and east sides, the out-side row to be planted with a low grow-

will be planted with green ash or cotton-woods, that will be allowed to grow their full height. The third row will be plant-ed with green ash or boxelder, and the remaining rows will be planted with the laurel leaved willow. These willows will be cut back periodically, one row at a time. The aim is to plant some ever-greens in the second and third rows. For

experience in growing trees in southwest-ern and northwestern Minnesota. While tree planting to protect railway cuts is far different from a regular tree planta-tion yet the principles are the same.

The start on the M., St. P. & S. S. M. was made in 1914. Land was prepared and different tree combinations tried. The general plan was to plant four rows on

ing, spreading, branching tree, or shrub, such as the willow, buffalo berry, carra-gana, buckthorn or artemesia. The lau-rel leaved willow will be used the most and will be cut back occasionally. If cut back in the spring, the new shoots will reach a height of from 6 to 7 ft by the autumn, and so furnish protection for the winter. The buffalo berry is a native

North Dakota and Montana the varieties will likely be the ponderosa pine, Black Hills spruce and white spruce.

As the tree planting is to protect cuts, most of it will be on hill tops, hill sides, and ridges, on which the soil is often sandy and gravelly. This means that the trees have to be planted on high dry spots and in the poorer soils, the most

unfavorable conditions for tree growth. The land, if in native prairie sod, is given two years of preparation before the trees are planted. If it has been in crop recently it is given one year of preparation. This might at first seem a loss of time, but it is not, as the preparation given the land stores moisture, and puts the soil in good condition for the trees to make a good start.

A nursery has been started at Drake, N.D., on light sandy soil. The plan is to grow all the seedlings and cuttings needed. Up to the present time a good deal of the stock has been bought from the

puts them down the desired depth, and to a uniform depth. The machine can be set to open a furrow any depth up to 12 in.

The tree planter is made up of a sub-soil plough, to which two vertically mold boards are attached 6 in. apart. This is the furrow opener, that can be set to open a furrow 12 in. deep. Behind this follow two discs, one on each side, set to throw the soil in so as to fill the furrow. Behind the discs follow two press wheels, set at an angle so as to press the soil firmly about the tree roots. Seats are provided for two men, so that they can

time saver. Horses must be brought to camp, the tractor can be left where the day's work ends. A double crew can be worked on the tractor, in two shifts, in that way securing more work from the equipment.

In 1915, 35,000 trees were planted, in 1916, 75,000 and in 1917 500,000. The land has been prepared along 230 miles of right of way and 250 miles have been planted. The plan is to prepare and plant about 100 miles of right of way each year.

In the timbered sections, Mr. Hoverstad advocates securing the additional right

Trees planted in 1915 on the Minneapolis, St. Paul & Sault Ste. Marie Railway.

1st row, green ash; 2nd row, boxelder; 3rd row, cottonwood; 4th row, willow. The right hand illustration is from a photograph taken from the track, looking into the trees.

nurseries, but it has not proved so satisfactory as that raised in the nursery at Drake, which has a good deal the same soil and climatic conditions that the trees will have to grow in when set out on the right of way. The trees are dug while dormant, and are stored. They are conveyed in refrigerator cars to the cuts where they are to be planted. In this way it is possible to keep the trees dormant till July. The early planted trees do the best. In planting the trees are carried on motor cars to the cuts where they are to be set out and are heeled in for a day or two, or until needed. Two or three year old stock has been used. That which has been bought has been secured at \$2.50 to \$6.50 per thousand. The trees are planted 3 to 4 ft. apart in rows 8 ft. apart. This makes a strip of trees 72 ft. wide on the north and west sides, and 56 ft. wide on the south and east sides. The right of way being but 100 ft. wide, it is necessary to buy more land along the cuts so as to have 125 ft. wide on the north and west sides and 100 ft. on the south and east sides.

At first the trees were planted by hand, but this proved slow work, and not very satisfactory, as the laborers did not always set the trees deep enough and in case it was dry the dry soil would run into the holes and come into contact with the tree roots. One man would on the average plant 100 trees in a day. The best record made was the planting of 2,000 trees in one day by 12 men. Mr. Hoverstad set about devising a tree planter. The result is a machine with which three men will average from 5,000 to 10,000 trees a day, depending on the size of the places to be planted. The best record was the planting of 13,022 trees in an 8-hour day by three men. The average consumption of gasoline by the tractor is eight gallons a day. Three men will plant as many trees in a day with this machine as 50 to 100 would by hand. The machine planting, in addition to saving labor, puts the trees in contact with moist soil and

drop the trees to be planted into the furrow as it is opened, and the discs and press wheels immediately fill and press the moist soil against the tree roots. The first tree planter made was pulled by horses, but the last one is built on to a

of way before the land is cleared. It is then cheap and has trees growing on it. After the land is cleared the snow will give as much trouble as on the prairie and the land is then expensive and in addition to that trees will have to be

How the trees hold the snow on the Minneapolis, St. Paul and Sault Ste. Marie Ry.

tractor. A larger percentage of trees set out by the tree planter live than of those planted by hand. It was difficult to secure and keep enough men to do the tree planting by hand; the planter has solved this problem too. A good deal of the cultivating is done with the common disc and the orchard disc. They are used alternately, so as to keep the soil level. The weeds in the tree row are taken out by a hoe. The tractor is proving to be a

planted and cared for. In 1918 trees will be planted along some of the company's line in Wisconsin, on right of way that was once wooded.

Tree planting, when properly done, is a more effective protection against snow than the panel fences in common use, and tree planting also costs less. A 16 ft. snow fence panel costs at least \$2.50, and it takes 640 of them to furnish protection for a mile, or a total cost of \$1,600. The

depreciation is 20% a year, or \$320. The cost of setting up and taking down the snow fence is about 20c a panel, or \$128 a mile. Interest at 6% makes \$96 a year, or a total of \$544 as the annual cost per mile for the common snow fence. When the snow fence proves ineffective, as is often the case in winter of heavy snow, the loss in traffic may be more than that, to say nothing of the loss due to the name the railway gets for being blockaded. Planting eight rows on one side of the track and six on the other, will require 25,000 trees for a mile. These at \$5 a thousand will cost \$125. The cost of planting will be less than \$50. These trees will be set out on 15 acres; if the cost of preparation is \$15 an acre it will amount to \$225, or a total of \$400. There will have to be some replanting, and the trees will need to be cultivated for three or

four years and from then on there will need to be some cutting back of them. But such a plantation will offer protection in a winter of the heaviest snow, as well as in a winter of light snow. It will be a permanent affair.

In the prairie regions, tree planting along the right of way furnishes a good demonstration to the farmers as to what can be done in tree growing. Many are planting trees as a result. The tree planting machine is one of the big factors in the success of tree planting. It has cut out the need of big crews, cutting the cost to less than one tenth what it cost to do it by hand. It insures planting the trees the proper depth, and it puts the roots in contact with moist soil and the soil is packed firm about the roots. The machine is not patented, so that anyone can make it. Tree planting when proper-

ly done is one of the cheapest and most effective means of protecting railway cuts from snow.

[EDITOR'S NOTE. Canadian Railway and Marine World would like to obtain particulars of tree planting for snow protection on Canadian railways. Conditions on railways in Manitoba, Saskatchewan, and Alberta are very similar to those in Dakota and Minnesota, and it is hoped that some of our readers will send in particulars of anything that has been done. Some facts about tree snow fences on C.P.R. western lines were published in Canadian Railway and Marine World in Sept., 1913, and June, 1917. Later information is now desired. At one time some tree planting for snow fences was done on the Intercolonial Ry. Particulars in regard to this, or to similar work on any other railways, would be acceptable.]

## Progress in Locomotive Building and Repairing.

By I. C. Newmarch, Superintendent of Shops, New York Central Railroad, Collingwood, Ohio.

In thinking over the progress made in locomotive repairing and machine shop practice, I am carried back to my boyhood days, when I started to serve my apprenticeship in the Grand Trunk shops at Montreal. The experience that I received then has been beneficial to me throughout my railway career. When I think of the crude methods and means we employed for handling the different classes of work at that time, I realize the wonderful improvements we have made in machinery of all kinds and in all departments used for manufacturing and repairing locomotives.

In 1885, the majority of our machine shops knew but little about high speed steel, consequently carbon steel was used throughout the world on all machines that required cutting tools. From this it can be realized that the output of the shops was limited to a considerable extent. Tungsten, as an alloy of steel, had been known and used for a long period of time, it having been employed in the Damascus steel, but its actual effect was not known until Robert Mushet, after much experimenting, brought out the Mushet high speed steel. This caused radical changes in treating the crucible steel, and much progress and great improvement has been made along this line up to the present time. Prior to the use of high speed steel, it would take on an average of 18 to 20 hours to turn one pair of locomotive driving wheel tires. In 1885, in some shops, they were able to turn out one pair of driving wheels in nine hours. This gain in time was also true with other machines used in the general machine shop.

In 1900, with high speed steel much improved, the machines in operation were found to be almost useless. The machine builders realized what was required, and consequently, they at once began the building of machines to meet the requirements made necessary by the use of high-speed steel. Wheel lathes, engine lathes, boring mills, planing machines, etc., came on the market and greatly accelerated the output of the shop throughout the different departments. In 1909, we ran a test on a new wheel lathe that we received from the Niles people, and turned 14 pairs of driving wheel tires in 10½ hours. On other improved machines, the output has more than doubled. This is true in the average machine shop. This was all brought about by the use of high speed steel and improved machinery, without

which it would be impossible to build or take care of the heavy motive power that we have in this day and age.

About 1885, air drills, air hammers and air compressors were made and being experimented upon. A comparatively limited number of the drills and hammers were placed in shipyards and boiler shops, but their introduction to railway shops did not occur until some years later. In 1893 a pneumatic tool company was organized and began actively to introduce its hammer in railway shops. The air drills on the market at that time were made in Philadelphia and called the Phoenix rotary air drill. They were light in construction and did not have much power. However, a piston drill was brought out, and at that time was considered almost perfect.

Several companies have come to the front with piston air drills having roller bearings, which are considered strong and durable, and which will meet the requirements of any department. They revolutionized drilling, reaming and tapping in locomotive shops. Previous to the use of air drills, ratchets were used. In many instances flues were rolled by hand. The flue holes were reamed by hand, and in a great many cases all work had to be done by hand. This has all been eliminated by the use of air drills or motors. The pneumatic tools have been the means of reducing the number of men that were usually required to do certain kinds of work to about one third.

The bulldozer and forging machines in our blacksmith department are great labor savers in the way of producing forgings of all kinds. Before these tools came on the market, forgings of all descriptions were made on the anvil. Today, it is only a question of the making and manufacturing of dies to take care of the various kinds of work in our blacksmith shop. In fact, hundreds of forgings, usually made by hand, are turned out on this machine, and the output has been increased one half.

In 1885 the work in our boiler shop was crude compared with the improvements of the present day. At that time, the boilermaker was obliged to do all of his work by hand, such as the removing of side sheets, staybolts, etc. They were cut out with the hammer and chisel. The holes were drilled in the fire box, with ratchets and flat drills. The tapping of staybolts holes and similar work was done by hand. Later on, I recollect that

we had what was known as a flexible shaft which was used for the tapping of staybolts. This has all been changed in every sense of the word. Removing of firebox sheets today is done by the use of the torch, which is also used for cutting off staybolts in quite a number of shops.

The locomotives were being built larger from time to time to the present day, and consequently new methods of handling work became necessary and have been adopted. As the material in boilers is getting heavier, it is necessary to have up to date machinery, such as shears, punches, and rolls. The flanging of today in quite a number of our shops is done by hydraulic pressure. All rivets are driven by hydraulic pressure or with air hammers. This has increased the output in the boiler shop to a great extent.

At one time the welding of flues was done with a charcoal fire. As the flue was heated a man tapped the flue end with a tapper, and when brought to a welding heat, it was welded in a roller machine. The flue was then put back into the fire and swaged with a hand-swaging tool. Today, in quite a number of our shops, flues are welded with electricity, and in other shops they are welded by the use of oil furnaces, and under what is known as a Draper hammer.

In 1903 and 1909, oxweld acetylene welding was adopted for boiler work. This brought about a complete revolution in the method of boiler repairing. By the oxweld acetylene method we are welding all horizontal seams in the fireboxes, doing away with the troublesome leaky seams. Patches of all kinds in the fireboxes are also welded. I believe today that the welding process has been adopted all through the country for many different classes of work throughout the locomotive departments. About the same time electric welding came into vogue. This was used extensively for the same class of work as the oxweld acetylene welding, it being used extensively in the way of flue work, the welding of flues, beads and back flue sheets. By doing this, we get two or three times the amount of mileage from them over the old method of merely prossering and beading flues.

There has also been a radical change in the brake equipment on locomotives. In 1885 we had a vacuum brake. Today, we have a Westinghouse air brake. The makers adopted the 6-in. air pump and ET equipment. (American Machinist).

# A Few Thoughts on the Treatment of Railway Ties.

By Edwin Winfield, Transportation Student, Canadian Pacific Railway.

In Canadian Railway and Marine World for November the writer saw a statement to the effect that it was not considered economical to chemically treat ties until they cost a certain amount. As he has been somewhat interested in the subject, particularly since seeing the experimental plant at the Forest Products Laboratory in Montreal, this statement set up a train of thought which will find expression in this brief analysis of the matter. It is hoped the views presented may prove of interest to the railway community.

It is evident that there is one big question in the matter, and that concerns dollars and cents. We have before us a tie, and what we want to know concerning it is, if the tie were treated before being put in the track, would we be further ahead financially, in the final analysis, than if it were put in untreated? In order to answer this question in such a way that we can feel our answer to be correct and based on good reasoning, we have to make a study of all the contributing factors; then, having done so and summarized the results of our enquiries along different lines, we are in a position to answer it.

Before proceeding, let us examine this treating proposition and see just what the treating is supposed to accomplish and how it does it. It is not supposed to add strength to resist mechanical wear, or make the tie physically stronger; it is supposed to make the tie better able to resist decay. Decay of wood is but the work of bacteria and fungi, which low forms of life, with a few exceptions, are unable to attack the living tree, but certainly thrive on the dead timber. They eat away the wood fibre, and the wood becomes rotten; it has decayed. Heat, air, food and moisture are necessary for the fungus to keep on living. If moisture could be kept out of the wood entirely, the fungus would die, but this is a difficult matter. If a poisonous substance is injected into the wood, the fungus dies. The ideal tie preservative, then, is one wherein a poisonous substance can be made to penetrate far into the wood. Having thus penetrated, it should adhere closely to the wood fibres and cells, act to the exclusion of moisture, and be not easily washed out of the wood, with cost right in proportion to results.

It is well known, particularly to those of us who have made a study of the thing from behind a track shovel or tamping bar, that ties in the track are rendered useless in one of two ways. These are: (1) Failure caused by the tie starting to decay, which softens it and renders its powers of resistance to wear and tear less. (2) Failure caused by wear and tear, as "rail-sawing," re-driving of spikes, splitting, crushing of fibres, etc., without decay having set in.

Our first line of enquiry deals with the causes necessitating the removal of the tie from the track. It will be at once appreciated that there will be many factors contributing to the result of our enquiry along this particular line, among which may be mentioned the kind of ballast, spacing of ties, volume of traffic, drainage, climatic conditions, etc. Just at this point, though, let us assume that in a stretch of track where conditions as above are similar, we have ties made from two or three kinds of wood. On observation, it will likely be found that one kind of

tie has always to be taken out, not because it is smashed and crushed through the effects of the wear and tear of traffic in itself, but because it has become so badly decayed that it could not stand this wear and tear at all. On the other hand, another kind may have a tendency to split and sliver, while quite sound as to decay; a third kind may be so crushed and cut, while not decayed at all, that its removal is imperative.

Suppose a tie which we may designate as tie A, is always found to fail from wear, and it thus fails before decay has set in. Evidently, it would not pay to treat that tie; treating it would not prolong its life, as it is worn out before it decays anyway. But suppose tie B is always found to have its failure due to decay in the first instance. We are not in a position to state that it would pay to treat that tie; we are able to say that it might pay to treat it. On the testimony of the roadmaster and some of the section foremen, it is determined that tie B has an average life of seven years in the piece of track we are considering. Another man comes along and produces facts and figures to show that if that tie had been treated with creosote, it would not have decayed, under identical track conditions, for 14 years. It is agreed though, as the result of experience, that the tie, (thus treated or not) would wear out, under those track conditions, in 12 years, 2 years before it would have to be removed because of decay. It is stated that it would cost to treat the ties, in the quantity we want them, 36c each, and we are then in a position to find out if it would pay to treat the tie as follows, also knowing the untreated tie costs 80c in the track.

There is a hole in the track where a good tie must be placed and a good tie must be kept there. Our object is to keep a good serviceable tie in that hole in the track, forever, at the least expenditure in dollars and cents. In order to find out what tie is going to do the business most economically, there must be considered: (a) First cost of the tie in the track; (b) life of the tie; (c) interest value of money; (d) cost of renewal, assumed equal first cost. Now suppose that, having put in a tie, we start a little sinking fund, such that, when it comes time to renew the tie, the accumulation of our contributions to this little sinking fund will pay for the new tie and the cost of putting it in. The yearly expense attached to keeping that hole in the track properly filled, then, will be, first, the yearly interest on the first cost of the tie, and second, the yearly contribution to this sinking fund. The tie which does the business satisfactorily, and for which this sum is the smallest, will be the best tie to use.

Let  $S$  be the first cost of a tie.  $R$  the amount of \$1 in one year; if the interest rate is 5%,  $R$  equals \$1.05.  $A$  be the amount of our annual deposit in the fund.  $n$  the number of years the tie lasts.

The yearly interest on first cost is

$$SR - S. \quad A \text{ is equal to } S \left( \frac{R-1}{R^n-1} \right)$$

The total yearly expense, equal to yearly interest on first cost plus the yearly contribution to sinking fund, is  $S \left( \frac{R^{n+1}-R^n}{R^n-1} \right)$

and the tie, treated or untreated, for which this sum is a minimum, is the most economical tie. The cost of treating, of course, is figured into the first cost of the tie.

Interest per year =  $SR - S$ . Amount of 1st payment in sinking fund at end of  $n$  years =  $AR^n$ ; amount of second payment =  $AR^{n-1}$  and so on, and the accumulated amount of all our yearly payments

$$= A \left( \frac{R^n-1}{R-1} \right) \therefore A \left( \frac{R^n-1}{R-1} \right) = S.$$

$$\text{or } A = S \left( \frac{R-1}{R^n-1} \right)$$

and total yearly expense = yearly interest + yearly contributions to sinking fund,

$$= SR - S + S \left( \frac{R-1}{R^n-1} \right) = S \left( \frac{R^{n+1}-R^n}{R^n-1} \right)$$

These calculations, of course, do not take into consideration the changes in price which will doubtless take place between renewals, but on the assumption that increasing values will be approximately proportional, this appears as good a way to investigate the subject as any.

The tie above mentioned costs 80c in the track untreated. It lasts seven years and fails because of decay. It costs 36c to treat it, making its first cost \$1.16. It then lasts 12 years and has to be removed because it is worn out. By making use of the above formula we see that the annual expense of keeping the untreated tie in the track is 13.6c, and the annual expense of keeping the treated tie in the track is 11.6c, and hence it is evident that the treatment of the tie in question would be an economical proposition.

Now suppose that we have another tie, of the same wood, but this time a no. 2 tie, instead of a no. 1. Untreated, its life is seven years, it still being rendered useless through decay, and not wear. At first sight it would appear good business to buy no. 2 ties, but more will have to be used and handled. The creosote treatment, with the same amount of creosote injected per cu. ft. of timber, will keep decay away just as long, but the tie will wear out in nine years. Say the first cost untreated is 70c in the track. If the tie were treated, its first cost would be 70c plus 36c, or \$1.06. The annual expense for keeping the hole in the track filled with untreated ties will be 11.9c, and with treated ties it will be 15.4c, so that it would evidently be poor policy to treat this tie as the no. 1 tie was treated.

Suppose that experience has indicated that the use of suitable tie plates would add two years to the life of such a no. 2 tie; that the tie plates cost 30c a pair, and are worth 20c when the tie is done. Would it be economical to treat such a tie with tie plates on it? The net cost of the plates adds 10c to the first cost of the tie, but the annual interest on the tie plates is 5% of 30c, or 1.5c. First cost untreated is 70c plus 10c, or 80c. Its life untreated is still seven years, as it fails through decay; it might last a little longer because of the tie plates, but once it begins getting rotten, nothing will help it much. The annual expense of keeping the hole in the track filled with untreated ties is 13.6c plus 1.5c, or 15.1c. First cost treated tie is 70c plus 36c, or \$1.16, and annual expense is 14.7c plus 1.5c or 16.2c.

Evidently, it would not be economy. But this degree of treatment will keep the tie from rotting for 14 years; the time it takes to wear it out is only 11 years, and it may be that a treatment which will keep decay away for 11 years can be secured for 26c a tie. The annual expense of the untreated tie, we saw, was 15.1c. First cost of treated tie is 70c plus 10c plus 26c or \$1.06, and the annual expense figures out to 13.4c plus 1.5c or 14.9c, so it seems that it would be a small saving to so treat that class of tie when used with tie plates.

Calculations concerning all kinds of ties can be made as above, the basis of such calculations must be the long experience of practical trackmen, combined with the knowledge of processes, results, and costs of men in the wood preserving business. The difference of a couple of cents as above shown may appear paltry and insignificant, but when the difference amounts to 5c or so on a single tie, and we are considering some millions of ties, the potential value of reasoning along the above lines is evident. The above method of analysis could of course be used as between two kinds of ties, both of which it is intended to use untreated, for example, to choose between a 60c tie good for six years and a 75c tie good for eight years. It may also be combined with considerations of safety and those other factors which go to make up general desirability, in such a case as the question of the plating on tangents. Ties without plates may, as indicated by experience, be good for five years, and for eight years with them, and the above method of calculation, modified as required, would serve to demonstrate the existence or non-existence of an economy.

The line of enquiry just concluded, then, shows us a good way to calculate as to whether it will be a paying proposition to treat a certain kind of tie which is going to be used under a certain set of conditions, as regards traffic, ballast, drainage, use or non use of tie plates and so on. But in order to thus calculate, we assumed the possession of a lot of information concerning the performance of the tie treated and untreated; our next line of enquiry will deal with the securing of the requisite information upon which to base calculations.

It is evident that the first knowledge that it is necessary to secure concerns the past performances of untreated ties under all the varying track conditions, and it would seem that a systematic series of questions and answers, covered by reports from section foremen to roadmasters, and from roadmasters to the man in charge of the matter, would lay clear the records of different classes of ties. A compact and simple series of questions concerning ties removed from track could be drawn up for each section foreman to answer, through observation, and a summary of these reports, covering the different classes of ties in service, with a striking of averages, would provide the required information. It is clear that better means of determining when each tie that has to be removed was put in the track would have to be provided than at present; also, to the eyes of many, the general impression given by observing an old tie is that it just naturally got decayed, dirty, worn out and generally undesirable and was therefore taken out. A little further examination of parts of the tie, however, will disclose just how far the process of decay was responsible for its failure, if at all, and what part mechanical wear had to play in the matter, and it is probable that the methods of making these

observations would have to be brought to the attention of some. In this country, the greater part of our ties are made from jackpine, cedar, spruce, tamarac, hemlock, fir and oak. It is evident that all of these will not make the same showing or fail from the same causes. It is evident that it will not pay to chemically treat ties which are worn out before decay sets in. It is evident that before it can be intelligently determined just what ties it will pay to treat, we must have all the information obtainable concerning the performance of all kinds of untreated ties under all kinds of conditions, and it seems that a carefully planned and simple systems of reports covering personal observations would supply that information.

The second line of information which it is necessary to secure will deal with the treating processes, costs, methods, degree of treatment, variations of cost and efficiency with degree of treatment, results of different treatments with different woods, under different conditions, and so on—a large order, truly. It would seem that the records of the results of past efforts would have to be collected and systematically arranged to as great an extent as possible; experimental test sections of track, wherein ties of different kinds, treated to varying degrees by different methods, would be the subject of the tests, would apparently be requisite, and the services of expert chemists would be required. Then, having secured information concerning the effect of the treatment of different woods used under differing conditions; having combined this with information concerning the same tie untreated, and having calculated on the basis of our complete information, we are then, and not till then, in a position to say whether, by treating our ties, we are effecting an economy in the interests of the railway and in the interests of the nation.

It is not the intent, in this paper, to discuss the relative efficiency of various methods of chemically preserving ties, but rather to indicate that there is a great deal to be taken into consideration before we can be sure that we are right in applying any of these methods. It may be of interest to state, however, that creosote oil is rapidly taking the place of zinc chloride as the most used preservative—has taken it, rather—and in some cases the two are used in combination. Similar treatment will not benefit different kinds of wood to the same degree; in fact, the age at which the tree was cut, the method and length of time used in seasoning, and the time of year the tree was cut, all have their effect on the internal structure of the cells and fibre of the timber, and therefore on the degree of success attending the chemical treatment. In Europe, it is estimated that over four-fifths of the wooden ties in use are treated with some kind of chemical preservative.

The thing most worthy of notice is that our timber resources are not what they are popularly supposed to be, or anything near it, and that it is in the interests of the community at large that what remains should be conserved as much as possible. But in that attempt to conserve, it is necessary to proceed correctly. The whole thing is a matter of dollars and cents; if by chemically treating a tie which lasts only half as long now as it can be made to last, and if it will pay the railway to do so, it is certainly in the interests of the community at large that this be done. But if by going ahead and indiscriminately treating all ties over a certain value, and thereby throwing

away the cost of the treatment in many cases, the loss is one borne not only by those individuals directly concerned, but through them, by the country at large.

## Service Department for Railways Recommended.

L. C. Fritch, formerly General Manager, Eastern Lines, Canadian Northern Ry., Toronto, and now General Manager, Seaboard Air Line Ry., Norfolk, Va., has written the Railway Age Gazette as follows:

For some time I have considered suggesting the creation of a new department on railways, to be known as the "department of service." Service is of paramount importance in an organization and my past experience leads me to believe that if the railways made it the business of some one department to see that service of the highest order was rendered, much criticism directed against the carriers would disappear.

The present organization on most lines does not provide a clearing house where important matters can be sifted and reduced to concrete form for the information of the president and the board of directors. A department with a competent, responsible head, therefore, would fill this need and result in a saving in expense and in added efficiency in service to the public, which cannot be over estimated. After 30 years experience in railway work I am firmly convinced of the need of the further application of business principles to the operation of our railways, and to this end I suggest the creation of a business department the organization and duties of which are outlined as follows:

### DEPARTMENT OF SERVICE. Organization.

#### Executives—

- 1 Vice President.
- 1 Assistant to Vice President.
- 1 Chief clerk.
- 6 Clerks.
- 3 Stenographers.
- 1 File clerk.
- 1 Assistant file clerk.
- 1 Messenger.

#### 16

#### Inspection Bureau

- 1 Chief inspector.
- 1 Inspector, maintenance of way.
- 1 Inspector, maintenance of equipment.
- 1 Inspector of transportation.
- 1 Chief clerk.
- 3 Clerks.
- 3 Stenographers.
- 1 File clerk.
- 1 Messenger.

#### 13

#### Statistical Bureau

- 1 Statistician.
- 1 Assistant statistician.
- 4 Clerks.
- 3 Stenographers.
- 1 File clerk.

#### 10

#### Labor Bureau—

- 1 Negotiator.
- 1 Assistant negotiator.
- 1 Clerk.
- 1 Stenographer.

#### 4

#### Summary

- 16 Executives.
- 13 Inspection bureau.
- 10 Statistical bureau.
- 4 Labor bureau.

43 Total number of officers and employees.

### OUTLINE OF WORK.

1. Expenditure supervision—
  - (a) Allotments to departments and sub-departments on monthly expenditure.
  - (b) Supervision over all new-work expenditures.
  - (c) Audit of vouchers and payrolls.
2. Efficiency methods—
  - (a) Analysis of present practices and methods.
  - (b) Improvements in methods and practices.
  - (c) Reduction in waste and non-essential methods and operations.

3. Vital Statistics—
  - (a) Elimination of all except important statistics.
  - (b) Issue of vital set of statistics to each department and sub-departments.
  - (c) Comparative statistics of other roads.
4. Organization outlines—
  - (a) Establishment of organization and lines in various departments and sub-departments.
  - (b) Co-ordination of organizations in various departments.
  - (c) Co-ordination in all departments.
5. Reports and records—
  - (a) Establishment of standard reports and records.
  - (b) Elimination of unnecessary reports and records.
  - (c) Use of reports and records.
6. Labor adjustments—
  - (a) Analysis of schedules and comparison with other lines.
  - (b) Grievance adjustments.
  - (c) New schedule matters.
7. Analysis of results—
  - (a) Concrete analysis of operating results.
  - (b) Comparative analysis with other lines.
  - (c) Fixed standard to be attained in operation.
8. Foreign relations—
  - (a) Cultivation of friendly relations with connecting lines in all departments.
  - (b) Analysis of methods used on foreign lines.
  - (c) Co-ordination of operation at common points with other lines to eliminate waste.
9. Publicity matters—
  - (a) Determination of extent of advertising and its results.
  - (b) Co-operation with federal, state, municipal and other officers to create friendly relations.
  - (c) Education of the public on railway matters.
10. Recommendations—
  - (a) Resume of past month's operations with comments and explanation.
  - (b) Monthly reports for all departments on program for succeeding month with recommendations on important operating matters.
  - (c) Monthly meetings of heads of departments and sub-departments for general discussion of vital matters relating to company's interests.

## Rates on Grain Milled at Montreal in Transit.

The following report by Jas. Hardwell, Chief Traffic Officer, Board of Railway Commissioners, has been adopted by the board as its decision in the matter therein referred to:—This is an application of the Montreal Board of Trade, on behalf of Ogilvie Flour Mills Co., Dominion Flour Mills Co. and St. Lawrence Flour Mills Co., for the maintenance of the arrangement whereby the C.P.R. carried western grain, either all rail or ex lake, to products destinations on the Intercolonial Ry. via Ste. Rosalie Jet., with the milling in transit privilege at Montreal. The company sought to restrict the arrangement to its own destinations in Quebec and New Brunswick by cutting out Intercolonial stations from Mar. 3, 1917, by supplements to the various tariffs applicable. These cancellations were suspended and necessary provision made by order 25904, Feb. 26, 1917, following the hearing on Feb. 21, 1917, at Ottawa. The tariffs referred to in the order have since been superseded by others to give effect to the judgment of July 17, 1917, in the application of the railway companies for a general increase in rates on grain and grain products east of Fort William, supplementing the judgment in the Eastern rates case.

The stop over or transit charge added to the through rates was 1c per 100 lb. on the all rail grain, whether the products were for domestic consumption, or for export from Halifax, and on the ex lake grain 1c for export and 2c for domestic consumption. By order 26642, Oct. 16, 1917, the last mentioned 2c charge was reduced to 1c, so that this is now the uniform charge so far as the C.P.R. is concerned. The C.P.R. takes the position that this traffic to Intercolonial points is unremunerative, because of the rate division, and the exceptional services necessary to reach the applicants' mills.

As concerns the division of the rate, the Montreal situation is not singular. The eastern arbitrators added to the rates from Fort William, Port McNicoll, or Goderich to Montreal, are for the purpose of striking the through rates; the allocation as between the C.P.R. to Ste. Rosalie Jet. and the Intercolonial is on a percentage basis, so that it is not unusual for the C.P.R. local to Montreal to be shrunk, as explained by Mr. Flintoft, Assistant General Solicitor, C.P.R. The figures are precisely the same whether the grain be milled at Montreal or at any milling point west of Montreal, and Ste. Rosalie Jet. is the common point of transfer to the government line. If, therefore, the line earnings are unremunerative, as

claimed, in connection with the Montreal mills, they must be unremunerative in connection with all the Ontario mills, but no such claim is advanced.

The only feature that differentiates Montreal is the additional service entailed in reaching the mills. These are located on the Lachine Canal north bank siding or branch, built and operated by the Grand Trunk for itself and the C.P.R. under lease from the Crown. The C.P.R. transfers to this siding at Atwater transfer, near its Highlands station. The distance from the transfer to the Ogilvie mill is given as 5.2 miles; the distance to the Dominion mill is somewhat less, but to the other Ogilvie plant at Mill St., where Mr. Black said the bulk of the business was done, it is greater. Mr. Flintoft predicated his distance on a movement of the grain to the Outremont yard, whence to Atwater transfer the distance is stated to be 6.7 miles, making 11.9 miles in all. But the grain, whether all rail or ex lake, moves over the Smiths Falls Division, and if, instead of going directly into Sortin yard, it is taken for operating purposes to Outremont, it does not appeal to me as a movement that should properly be debited to the traffic. The out of line haul between the transfer and the Ogilvie mill, grain in and flour out, is 10.4 miles. The plan gives the distance between the transfer and Sortin as 2 miles each way; but, on the other hand, more or less shunting has to be done at all milling points after the grain gets into the terminal. Mr. Flintoft gave the actual cost of handling cars on the Canal bank branch as \$1.30 a car paid the G.T.R. for the year ended Nov. 30, 1916, or \$2.60 for the double movement. This is no doubt the result of the basis of division of costs of operation and maintenance directed in order 9759, Feb. 17, 1910.

Mr. Flintoft's estimate that three cars are required to ship out the products of two carloads of inward grain has no particular bearing, since it must, if correct, apply everywhere. Undoubtedly, the millers in question necessarily require, from the C.P.R. at least, an unusual service, for which they should be prepared to pay an adequate compensation. The board did not, of course, intend its order 26642 to settle this complaint. By items 122 and 141 of its Special Tariff of Rules and Regulations C.R.C. 3280, the company makes in certain cases an out of line extra charge of 1c a ton per mile, with a minimum as for 20 miles. Applied to the present case, this would give a charge of 1c per 100 lb., in addition to the ordinary mill stop over toll of 1c paid by all trans-

sit millers, and it would not be more even if the Outremont mileage was used. In other words, the transit charge of 2c as desired, would be continued on grain ex lake, milled for domestic consumption, and the charge for export, also for all rail domestic, would be increased from 1c to 2c. This, in my opinion, ought to be satisfactory to all parties.

Mr. Flintoft complained that this traffic was thrown entirely on his company, and I consider there is justice in his complaint. The G.T.R. has no milling in transit arrangement in connection with the Intercolonial, although its local facilities are superior to those of the C.P.R. I mentioned in my memo of Feb. 23, 1917, that the Intercolonial and G.T.R. were negotiating an arrangement and that I expected it would be consummated, but it has not been.

## Quebec Public Utilities Act Amended.

The Quebec revised statutes, 1909, article 718, clause C, enacted as follows:—"The words 'public utility' mean every corporation other than a municipal corporation, firm, person or association of persons, the business and operations authority of this province, their lessees, trustees, liquidators or receivers appointed by any court, that now or hereafter own, operate, manage or control any system, works, plant or equipment for the conveyance of telegraph or telephone messages, or for the conveyance of travellers or goods over a railway, street railway or tramway, or for the production, transmission, delivery or furnishing of heat, light or power, either directly or indirectly, to the public."

In 1911, this clause was amended by substituting the word "passengers" for "travellers," and by the addition of "water." The clause was further amended at the legislature's recent session by the insertion, after the word "tramway," of the words "or across or along lakes, rivers or streams."

**Flagging Signals on Double Track.**—The Board of Railway Commissioners has under consideration the matter of more adequate flagging protection on double tracks and has sent to the railway companies the following draft order which it is proposed to issue in this connection: "On double track, where trains run to the left, a yellow flag on two staffs, or a yellow light 5 ft. above rail level placed to the left side of a track, as seen by an engineer of an approaching train, with a yellow flag, or a yellow light, as a marker, placed on the opposite side of the track to be protected, indicates that the track 3,000 ft. distant is in condition for a speed of but 6 miles an hour, unless otherwise instructed and the speed of trains will be controlled accordingly. A green flag, or a green light, placed beside the track, on the left hand side, as seen by an engineer of an approaching train, at a point beyond the slow track, indicates that full speed may be resumed." Railway companies are asked to file with the board by May 8 any comment they may wish to make thereon.

**Freight Train Crews on Electric Railways.**—The Board of Railway Commissioners has asked electric railways whether, in the operation of electric freight locomotives, either switching or in road service, the crew consists of two men, the same as one a steam locomotive, or only one man to a locomotive.

## Birthdays of Transportation Men in May.

Many happy returns of the day to:

Jas. Bain, General Superintendent, Halifax & South Western Ry., Bridgewater, N.S., born at Pictou, N.S., May 24, 1860.

W. R. Baker, C.V.O., ex-Secretary, C.P.R., Montreal, born at York, Eng., May 25, 1852.

B. A. Bourgeois, Assistant to Comptroller and Treasurer, Canadian Government Railways, Moncton, N.B., born there May 24, 1869.

G. S. Cantlie, ex-General Superintendent of Car Service, C.P.R., Montreal, now in military service with Canadian Expeditionary Force, born at Montreal, May 2, 1867.

B. T. Chappell, Superintendent, Pacific Division, Canadian Northern Ry., Vancouver, B.C., born at Charlottetown, P.E.I., May 1, 1878.

R. Crosby, Car Foreman, Canadian Northern Ry., Moose Jaw, Sask., born at Hawick, Scotland, May 2, 1886.

N. R. DesBrisay, District Passenger Agent, C.P.R., St. John, N.B., born at Minneapolis, Minn., May 18, 1888.

M. Donaldson, M.Can.Soc.C.E., ex-Vice President and General Manager, Grand Trunk Pacific Ry., now of Ottawa, Ont., born near Edinburgh, Scotland, May 1, 1851.

A. E. Duff, ex-District Passenger Agent, G.T.R., Toronto, now of Winnipeg, born at Sherbrooke, Que., May 1, 1872.

G. C. Dunn, Division Engineer, Grand Trunk Pacific Ry., Winnipeg, born at Quebec, May 13, 1862.

M. A. Fullington, A.M.Can.Soc.C.E., ex-Superintendent, Smiths Falls Division, Quebec District, C.P.R., now of R. W. Hunt & Co., Montreal, born at Johnson, Vt., May 12, 1880.

G. E. Graham, General Manager, Dominion Atlantic Ry., Kentville, N.S., born May, 1870.

G. H. Hedge, General Master Mechanic, Western Lines, Canadian Northern Ry., Winnipeg, born at Neath, Wales, May 26, 1865.

G. A. Hoag, Superintendent, Superior District, Ontario Division, Canadian Northern Ry., Hornepayne, born at Walters Falls, May 31, 1866.

J. Irwin, Superintendent, Division 3, Western District, Canadian Northern Ry., Edmonton, Alta., born at Clinton, Ont., May 28, 1866.

S. McElroy, Trainmaster, Canadian Northern Ry., Rainy River, Ont., born at Lindsay, Ont., May 1, 1875.

W. Marshall, Assistant Manager of Telegraphs, C.P.R., Winnipeg, born at Garden Island, Ont., May 18, 1859.

J. N. Murphy, Roadmaster, C.P.R., Brandon, Man., born at Mooretown, Ont., May 10, 1879.

A. V. Redmond, Division Engineer, Transcontinental Division, Canadian Government Railways, Cochrane, Ont., born at Kingston, Ont., May 16, 1879.

A. C. Shaw, Passenger Department, C.P.R., Montreal, born at Detroit, Mich., May 12, 1865.

W. H. Snell, General Passenger Agent, C.P.R., Montreal, born at Palmyra, Neb., May 23, 1872.

C. T. Stanger, District Freight Agent, C.P.R., Saskatoon, Sask., born in Rutland, Eng., May 11, 1887.

W. Stapleton, District Passenger Agent, Canadian Northern Ry., Saskatoon, Sask., born at Bristol, Eng., May 20, 1884.

E. Tiffin, General Western Agent, Canadian Government Railways, Toronto born at Hamilton, Ont., May 5, 1849.

J. H. Walsh, General Manager, Quebec Central Ry., Sherbrooke, Que., born at Quebec, May 12, 1860.

H. K. Wicksteed, B.A.Sc., M.Can.Soc. C.E., Consulting Engineer, Canadian Northern Ry., Toronto, born at Quebec, May 25, 1855.

C. L. Wilson, Assistant Manager, To-

ronto & York Radial Ry., Toronto, and President, Canadian Electric Railway Association, born at Boston, Mass., May 23, 1871.

A. O. Wolff, Resident Engineer, Brownville Division, New Brunswick District, C.P.R., Brownville Jct., Me., born at Copenhagen, Denmark, May 14, 1887.

James Yeo, ex-Roadmaster, Intercolonial Ry., Riviere du Loup, Que., born at Bideford, Devonshire, Eng., May 1, 1830.

## Canadian Pacific Railway's Honor Roll 33.

Acheson, Thos. Stewart	Gen. Agricultural Ag't	Winnipeg	Wounded
Allan, Adam	Billar	Vancouver	Wounded
Anderson, Albert A.	Junior clerk	Vancouver	Killed in action
Anderson, Alex.	Locomotive man	Souris	Wounded

Fraser, Philip Geo.	Locomotive fireman	Lambton	Wounded
Gilmour, Duncan J. McK.	Clerk	Calgary	Wounded
Grant, John G. G.	Boilermaker's helper	London	Wounded
Green, Albert	Helper	Angus	Wounded
Green, Albert	Machinist	Angus	Wounded
Green, Henry	Locomotive fireman	Minnedosa	Wounded
Green, Thomas	Brakeman	Moose Jaw	Wounded
Gunderson, Louis	Engineer	Souris	Dead, gas poisoning
Haddleton, William	Car repairer	North Transcona	Wounded
Hale, Jr., Thomas	Wiper	East Calgary	Wounded
Hardie, Joseph	Draftsman	Montreal	Died of wounds
Harland, Hugh Baxter	Trimmer	West Toronto	Killed in action
Harrison, Robert Hampton	Clerk	Montreal	Wounded
Healy, Patrick Joseph	Waiter	Montreal	Wounded
Hood, James	Brakeman	Minnedosa	Wounded
Hunter, Robert N.	Fitter	Nelson	Wounded
Kelly, John	Trainman	Winnipeg	Wounded
Kelly, Walter	Fireman	North Bay	Wounded
Lessard, Louis	Baggage man	Lacombe	Wounded and prisoner
Liggins, Russell T.	Clerk	Regina	Contusion
Longworth, John W.	Clerk	Saskatoon	Wounded
McCoy, John	Locomotive fireman	Moose Jaw	Wounded
McDonald, John	Foreman	Ogden	Wounded
McElroy, David S.	Laborer	Basswood	Wounded
MacGranachan, Wm.	Apprentice	Ogden Shops	Wounded
Malcolmson, George H.	Gripper	Lethbridge	Gassed
Marsh, John	Engineer	Weyburn West	Wounded
Michie, Victor	Wiper	Calgary	Wounded
Middleton, Ronald	Watchman	Imperial	Gassed
Mills, Clifford Waldon	Pipe fitter's helper	Winnipeg	Wounded
Mowbray, John	Car repairer	Ogden Shops	Wounded
Payne, Oliver	Brakeman	Minnedosa	Wounded
Pederson, Wm. Henry	Clerk	Emerson	Wounded
Peterson, Frank Victor	Stower	North Bay	Wounded
Polyblank, Thomas H.	Apprentice	Winnipeg	Killed in action
Purnell, Walter	Section man	Souris	Killed in action
Raynor, Bertram	Porter	Brandon	Killed in action
Sims, William	Clerk	Chapleau	Wounded
Smith, Robt. Kirby	Operator	Calgary	Gassed
Spencer, Gordon	Trainman	Brandon	Wounded
Stewart, Harry Raymond	Drill boy	Angus	Killed in action
Swinden, Frederick	Wiper	Cranbrook	Killed in action
Tennant, George Harvey	Trainman	Winnipeg	Gas poisoning
Vanalstyn, James Clifford	Assistant agent	Edmonton	Wounded
Vosper, Edward Agar	Clerk	Winnipeg	Wounded
Walton, George Cecil	Floorman	Calgary	Wounded
Ward, Frederick	Inspector	MacTier	Killed in action
Whitehouse, Walter	Fitter's helper	East Calgary	Killed in action
Wilson, Henry	Engineer	Medicine Hat	Wounded
Wright, Murray LeRoy	Locomotive fireman	Winnipeg	Wounded
Zakrinson, Anders	Laborer	Regina Yard	Killed in action

Shown on Honor Lists to Date: Killed 607; Wounded 1,403; Total 2,010.

# Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

**Alberta & Great Waterways Ry.**—The Alberta Legislature has extended for one year the time within which this railway is to be completed to McMurray.

The Alberta Railways Department report for 1917, shows that of the \$7,400,000 realized by the sale of the guaranteed bonds, \$6,353,658 had been paid over to the company in respect of work completed, and that the "fair original cost" of the line was \$6,121,164.

Replying to a question recently, the Premier informed the Alberta Legislature that, owing to difficulties with the grade on the last 14 miles into McMurray, a definite time could not be fixed for completing the line there. The contractors had promised to get the line into the town as speedily as possible.

**Alberta-Hudson Bay Ry.**—A deputation waited on the Alberta Government recently and asked a provincial guarantee of bonds towards the construction of this projected railway southwesterly from Calgary. The interests behind this charter are centered in what is known as the Grain Belt Co., of which F. Crandall, Calgary, is the representative, and the proposed route of the railway is northeasterly from Coutts, on the International Boundary between Alberta and Montana, via Medicine Hat, to Hilda, Alta., 175 miles. Mr. Crandall stated that some \$7,000 had been paid in on account of stock subscriptions, which had been expended upon preliminary expenses and surveys; that the farmers along the route of the proposed railway would subscribe \$5,000 a mile, and that they had already pledged themselves to the extent of \$1,000 a mile. The Premier told the deputation that there would be no subsidizing of railways this year; that in the future no subsidy would be granted any company that did not prove the possession of tangible assets, and that up to the present time the A.-H.B. Ry. had not shown the possession of such assets. It was asserted on behalf of the promoters that the construction of the line would not exceed \$12,000 a mile, but the Premier stated that the Alberta Railways Department put the minimum cost at \$20,000 a mile. (June, 1917, pg. 224.)

**Calgary & Southwestern Ry.**—A press report states that preliminary work for the construction of this newly incorporated company's railway from Calgary to the P. Burns coalfields on Sheep Creek, Alta., will be started June 1. The report also states that a supply of rails has been secured. (April, pg. 146.)

**Canada Central Ry.**—The Alberta Legislature has extended for a year the time within which the sections for which provincially guaranteed bonds have been issued, are to be completed.

The Alberta Railways Department report for 1917, shows that the proceeds of the guaranteed bonds were \$1,867,530, of which there had been paid over to the company \$1,350,347, while the "fair original cost" is placed at \$1,554,700.

The last pier of the substructure of the bridge across the river at Peace River Landing was reported to have been completed Mar. 26. (April, pg. 146.)

**Canadian Niagara Bridge Co.**—The provisional directors named in the application to the Dominion Parliament for the incorporation of a company with this title to build a bridge across the Niagara River, from a point between Chippewa and Fort Erie, Ont., to a point in the State of New York, are:—Lord Shaugh-

nessy, Montreal; J. N. Beckley, Rochester, N.Y.; E. S. Cahill, K.C., Hamilton, and W. P. Torrance, Toronto. It is apparent from these names that the bridge is proposed to be built for the Toronto, Hamilton & Buffalo Ry., the New York Central Rd., and the C.P.R. (April, pg. 146.)

**Edmonton & South Western Ry.**—The Hydro-Electric Power Co., which is developing a water power at the Blue Rapids of the Saskatchewan River, to supply power to Edmonton, Alta., has applied to the city council for an extension of time for the construction of the works. Under the agreement there was to have been expended by June 30, \$1,500,000 upon railway and other construction work; by June 30, 1920, a further sum of \$2,000,000, and the balance of the work was to have been completed by June 30, 1923. The length of line to be built is from 70 to 75 miles. In order to save its guarantee, the company is applying for the extension of time, stating that owing to the shortage of labor, the scarcity and high price of construction supplies, and the attitude of the Dominion Government as to bond issues, the works cannot be proceeded with at present. E. W. Bowers, Chief Engineer, reported that all the work possible to be done without the railway had been done, and that all preliminary work possible for the construction of the railway had been completed. The city council decided, April 10, that the utilities committee look into what had been done and report. (Mar., 1916, pg. 182.)

**Edmonton, Dunvegan & British Columbia Ry.**—The Alberta Legislature has extended for a year the period within which the sections of the line under construction, and for which provincially guaranteed bonds have been issued, may be completed.

The Alberta Railways Department report for 1917, shows that the proceeds of the guaranteed bonds for the main line were \$7,369,900, and for the Grand Prairie Branch, \$917,040, of which there had been paid over to the company, \$7,018,797 and \$544,806, respectively, the "fair original cost" of the lines being stated as \$8,715,562 and \$810,363.

Application has been made by J. D. McArthur, President, for a subsidy for 425 miles of line. The company has built a line from just outside Edmonton to the Spirit River, 370 miles, with a branch to the Grand Prairie country, 54.8 miles; while its subsidiary line, the Central Canada Ry., has built a line from McLennan to the Peace River, 49.8 miles. A Dominion subsidy was voted in 1910 in aid of the construction of 110 miles of railway from Edmonton towards the Peace River, in favor of the Pacific Northern & Omineca Ry., and it is stated that this subsidy was assigned by the P.N. & O. Ry. to the E.D. & B.C. Ry. Be that as it may, no contract has been entered into with the Dominion Government for the building of that line.

The Edmonton City Council has referred a communication from the company re the operation of gasoline cars on certain of the Edmonton Radial Ry. lines, to the public utilities committee for consideration. It was stated in the letter from W. R. Smith, Chief Engineer, that the company's terminals were situated five miles from First Ave., making passengers lose a good deal of time. The company proposed to make a connection from the Grand Trunk Pacific Ry. to connect its own line to the Edmonton Radial Ry., and to run cars to 100th St. These cars would

be run, not only to connect with trains on the E.D. & B.C. Ry., but would be run over that line to Westlock, mileage 52, to carry milk and other produce into the city. The company would pay either a fixed rental or a rate per passenger carried. As a result of the consideration by the committee, a press report of April 15 states that an arrangement has been made whereby the E.D. & B.C. Ry. trains will run over the Grand Trunk Pacific Ry. tracks to Nelson Ave. and 21st St., where a temporary shelter will be provided for passengers use, and for the transfer of freight. It is proposed to provide a short spur on 121st St. for the E.D. & B.C. Ry. (April, pg. 146.)

**Grand Trunk Ry.**—We are officially advised that while a proposal for the erection of a new locomotive house at either Brockville or Prescott, Ont., is under consideration, nothing definite has been decided upon. (April, pg. 146.)

**Grand Trunk Pacific Ry.**—The report of the late Sir Collingwood Schreiber, who was Chief Engineer for the Dominion Government in connection with the construction of this railway, for the year ended Mar. 31, 1917, as published by the Railways Department recently, shows that the total expenditure up to Dec. 31, 1916, on the prairie section, 915 miles, had been \$37,910,534.88, and on the mountain section, 833 miles, had been, \$93,160,195.76, a total of \$131,070,730.64. He estimated the value of the work remaining to be done to comply with the acts of Parliament, the contracts and the specifications, to be \$2,297,500 on the prairie section and \$2,334,385 on the mountain section. (April, pg. 146.)

**Hudson Bay Ry.**—A letter was read at a meeting of the Yorkton, Sask., Board of Trade, on April 3, from J. F. Reid, M.P., stating the Minister of Railways had made a definite promise that track would be laid this season on the final 90 miles of the line from Pas to Port Nelson, Man. We are, however, officially advised that nothing can be said definitely upon this matter, as it depends entirely upon what supply of steel rails may be available. (Mar., pg. 98.)

**Intercolonial Ry.**—A press report states that a contract has been let to P. G. Clarke, Summerside, P.E.I., for the erection of an express building at Sackville, N.B., at a cost of \$6,000.

The original station building at Moncton, N.B., used since 1896 as the train make-up office, was partially destroyed by fire April 15. (Mar., pg. 98.)

**Kettle Valley Ry.**—A press report states that a contract has been let to W. P. Tierney, Vancouver, for building a 14 mile branch from Princeton, to the Copper Mountain, in connection with the opening up of mining operations there by the Canada Copper Co., which is reported to have made a bond issue of \$2,500,000 for development purposes. (Mar., pg. 99.)

**Lacombe & Blindman Valley Electric Ry.**—The Alberta Legislature has extended to the end of this year the time within which this railway from Lacombe to Rimbey is to be completed. Though called an electric railway, it is not one.

The Alberta Railways Department report shows that the proceeds of the guaranteed issue of bonds for this line realized \$256,659, which was paid over to the company, and that the "fair original" cost of the line was \$408,958. The line is practically entirely graded, track is laid for some miles to beyond Bentley, and a train

service was being maintained up to Mar. 30, when a gasoline-electric car was put on, giving a daily passenger service, while a steam train is used for any additional service that may be required.

Reference was made to this report in the Alberta Legislature recently by the Premier, who is reported to have said that it might be necessary for the government to take over and operate the line, but it would not be a good example of government ownership, on account of the bad financial shape in which the company's affairs were.

W. D. Brown is Chief Engineer of the railway, and H. Warner is engineer in charge on behalf of the Alberta Government.

**Logging Ry. on Dean Inlet.**—A Vancouver press report states that a logging railway is to be built for the Pacific Mills, Ltd., from Ocean Falls, on Dean Inlet of Portland Canal, inland.

**Naas & Skeena River Ry.**—The British Columbia Minister of Railways, under the provisions of the B.C. Railway Act, has issued a certificate granting the company an extension of time for a year within which it may start the construction of its projected railway from Nasaga Gulf, or Naas Bay, or other point on Portland Inlet, along the Naas River to the Indian village of Ayance, thence to the Blackwater River Valley, to the outlet of Blackwater Lake by either of alternate routes, and thence to the Skeena River, and up the valley of that fork to its head. J. G. Scott and A. E. Doucet, Quebec, are among those interested. (June, 1917, pg. 225.)

**Pacific Great Eastern Ry.**—The entire length of the line from Squamish to Clinton, B.C., 167 miles, was reopened for traffic April 8, and a regular service is being maintained. Arrangements are being made by the British Columbia Government for resuming construction on the line, but, until the reports of the engineers who are looking over things have been made and considered, it is not possible to say what will be done.

Arrangements for resuming traffic on the section of the line out of North Vancouver, between Ambleside and Whytecliffe, were completed April 12, and it was reported that it was hoped to restart operations out of North Vancouver by May 10. In order to do this, it is necessary to restore the Capilano bridge, which has given a great deal of trouble since the line was built. Tenders for a temporary bridge were received to April 18, and the Premier stated, April 9, that a permanent bridge would be built as soon as possible. (April, pg. 156.)

**Prince Edward Island Ry.**—It is said that the Minister of Railways has not reached any definite conclusion upon the question of standardizing the P.E.I. Ry. gauge. While it is contended that the alteration of the present narrow gauge to standard would work out advantageously, particularly since the putting into operation of the car ferry between Port Borden, P.E.I., and Cape Tormentine, N. B., there are a number of other matters which have to be taken into consideration before a decision is reached. Since the possibility of standardization was definitely recognized, the department has authorized the carrying out of betterments which will make the work of standardization easier if it is decided to do it. During the 1916-17 fiscal year, 21,715 new ties were put in, and as has been the case in some previous years, a large proportion of these were of standard length, thus making a certain amount of provision for

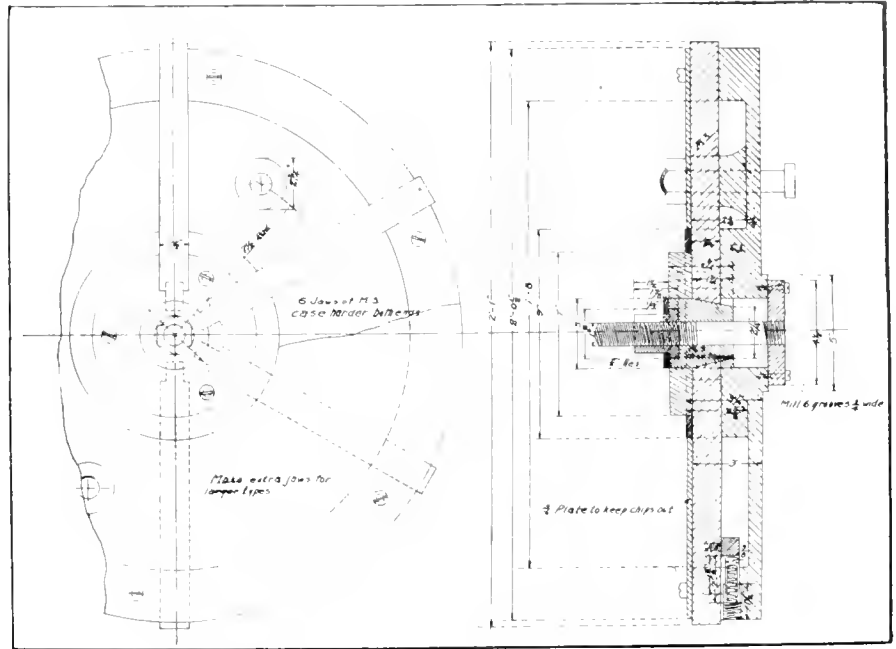

gauge widening; 5½ miles of ditching was done, and 9.2 miles of line were reballasted. The work done during the year also included the resurvey of 181 miles of the line. The work to be done during this year, for which a certain provision has been made in the estimates, covers further ditching, some widening of cuts, and other work, which is calculated to be of use in connection with the standardizing of the gauge. (April, pg. 146.)

**Quebec & Saguenay Ry.**—A press report stated on April 12 that it was expected that track would be laid to Baie St. Paul, Que., by May 31, and that by Aug. 31, track would be laid to Murray Bay, 56 miles from St. Joachim, the starting point. Work for the season has been opened up and quite a number of

made for it in the 1917 estimates. Owing to the scarcity of labor and the high cost of materials, the present is not an opportune time to undertake the work. Construction can be started as soon as a decision to build the branch is made. The votes for this year provide \$150,000 for the construction of this branch. (April, pg. 147.)

## Self Centring Chuck for Centring Tires.

The accompanying illustration shows a self centering chuck, which is used at the C.P.R. shops at Ogden, Alta., for centering tires after they have been bored out,

Self Centring Chuck for Centring Tires.

men are being employed. A contract for station end other buildings is reported to have been let. (Jan., pg. 12.)

**Timiskaming & Northern Ontario Ry.** S. B. Clement, Chief Engineer and Superintendent of Maintenance, in his annual report to the Commissioners, refers to the revision of the main line between North Bay and Liskeard. Progress was made on three sections, that between mileage 54 and 55 has been partially completed by the railway's road department forces. Tenders were asked for the revision of the two other sections, mileage 63 to 65.5 and mileage 80.8 to 81.2, and a contract was let to the Port Arthur Construction Co. for the work at a cost of \$58,973.25 on estimate quantities. The contractors experienced great difficulty in obtaining labor, but good progress was made on the first section, and half the grading was completed on the second section during the 1917 construction season. It was expected to have the new pieces of line ready for tracklaying by July 1.

Surveys have been made for a branch line from Swastika, on the main line, to serve the Kirkland Lake gold camp. The location gives a line of 6 miles, passing close to all the producing mines. The country through which it would run is comparatively rough, and as the traffic will probably never be heavy, gradients of 1.5% and curvature up to 12 degrees have been used. The estimated cost of construction at the time the survey was made was \$125,000, and provision was

and grooved on one side, for the mansell ring, so that the second operation of grooving for the mansell ring on the opposite side can be gone on with without loss of time by re-setting. Different length of jaws are used for the different sizes of tires.

## A Safety Lathe Dog.

The accompanying illustration shows a means of making the ordinary lathe dog a safety one. A piece of cold-rolled steel A is bent in circular form with its ends flattened. These flattened ends are pro-

vided with holes to receive screws for attachment to the lathe dog B as shown. This steel piece is of such size that the clamping screw C is permitted to clear the opening in the dog which receives the stock.—F. Fruhner in American Machinist.

# John G. Sullivan's Presidential Address to the American Railway Engineering Association.

At the opening of the American Railway Engineering Association's convention in Chicago recently, the President, J. G. Sullivan, M.Can.Soc.C.E., Chief Engineer, Western Lines, C.P.R., gave an address, from which the following are extracts:—

A study of the railway situation in the United States for the past 30 years indicates that the boom year for construction was in 1887, when nearly 13,000 miles of new railway were constructed. In the years 1894 to 1897 this rate of construction dropped to less than 2,000 miles a year. From 1900 to 1907 the average was about 5,000 miles per year. It gradually decreased from that time until 1917, when the construction was less than 1,000 miles. In Canada, the rate of construction from 1901 to 1904 averaged about 500 miles. This rate gradually increased until 1913, when it reached a maximum of 3,000 miles. It has dropped from that time until the present and the track mileage last year was actually decreased, on account of some lines being taken up; the steel being shipped to France.

During the past ten years we have not suffered in Canada through adverse railway legislation or regulation, but, on the contrary, the people and the country are suffering from the encouragement of legislation to unnatural rapid development, resulting in the expenditure of enormous sums of money and the building of unnecessary railways; railways that cannot for the present, or any time in the near future, pay operating expenses, to say nothing of paying interest on the investment.

The annual report of the Railways Department to Mar. 31, 1916, shows that for the nine years from 1917 to 1916, the government expended over \$22,000,000 a year on government railway construction. Their working expenses during that period have exceeded their revenue by \$2,000,000, and at present the working expenses are considerably over \$1,000,000 a year greater than the revenue. In addition to this expenditure made directly by the government, the federal and provincial governments have guaranteed the interest on bonds up to between three-quarters of a billion and one billion dollars. During the same period they also granted large sums of money in the way of subsidies to privately owned railways; some provincial governments going so far as to get rich contractors to organize railway companies (tempted no doubt by the bait of profits on construction) to build railways where the present railway companies of Canada could not be tempted to build, even though the bonds might be guaranteed by the government. Would it therefore be any great surprise, if assuming this great world war was not being carried on, public opinion regarding railways as represented by legislation would not show signs of modification in Canada and if we should hear threats of anti railway legislation of the most radical character? Nevertheless, as already explained, the railway troubles of Canada are not due any more to the efforts of railway promoters and builders than to an uninformed and over-sanguine public opinion. Is it not logical to assume that similar boom conditions existed in the United States prior to 1887? Then came the Interstate Commerce Commission; followed by numerous State Commissions. A study of the Interstate Commerce Commission reports shows that, for the past 30 years, probably only for two or three

years did the dividend paid on the stocks of the companies amount to over 5% on the total stock, while for 6 or 7 years, the interest was less than 2%, and that never in that time has over 68% of the stock paid any dividend; while there were years when less than 50% of the railway stock of the United States paid any dividend. These reports also show that the interest on the bonded indebtedness never amounted to 5% and there was always a considerable percentage of bonds which paid no interest. These reports also show that by either comparing the tons of freight handled, or more properly, the tons of freight carried one mile, the business of the country has increased nearly twice as fast as the capital invested.

J. G. Sullivan, M.Can.Soc.C.E.  
Chief Engineer, Western Lines, C.P.R., and  
ex-President, American Railway Engineering Association.

These reports also show that the number of cars and locomotives in service has not kept pace with the business. We must, of course, take into account, in considering this factor, the increased weight of the individual locomotives and the increased capacity of the cars. These reports also show that the miles of track have not increased anything like the rate of increase in business. More significant is the rate of increase of sidings and yards. The reports do not separate passing sidings from terminal yards and other business yards, but when one considers the necessarily large increase in the mileage of passing sidings required for an increase in business, it is almost self evident that the increase in terminals and business tracks has not kept pace with the business. It may seem strange to you that I should bring up this subject at this time when the "house is on fire" and when the government has stepped in and has asked all hands to lend a hand to put out the fire, making no reference to what has caused the trouble, it only being intimated by a very few discredited radicals that the

railwaymen were to blame for the setting of the fire. It is generally conceded that lack of capital has been the cause of the difficulty and that capital has been frightened away by anti railway legislation and regulation. A great many are apt to blame our governments for this condition, when as a matter of fact, it is you and I, citizens and voters of this country (the responsible parties), who are actually to blame, and it is for this reason that I have brought up the subject and wish to discuss politics. I wish to emphasize that we engineers, as a body, as more to blame than any other class of men, for the reason that we take less interest in politics than any other body.

Another reason why I wish to discuss this subject somewhat further is the fact that if we do not win this war, nothing much matters. If, however, as we all hope, democracy will come out victorious, our responsibilities will be the greater and we must meet those responsibilities with courage and do our duty as men. To make my meaning a little more clear, I will ask you to consider how you railway men would think the railways of the country would be managed if all the offices were filled by office seekers rather than by men chosen on account of their ability and fitness to fill the office. I venture to say that there are very few chief engineers in this room who did not protest at their first promotion to take charge of a location party or a party on construction. I further venture to say, that there is not a locating engineer in this room who at some time did not have the experience of having a rodman or stakeman mistaken for the chief of the party, and I will go further and say that if his party had been a political organization the chances are ten to one that the rodman or stakeman would have been in charge of the party. Only the other day I asked a prominent citizen of a town in Western Canada, how it happened that a certain party had not been elected a member of parliament. His reply was, "The other man had a larger acquaintance and was better known." Every railwayman should realize that his own welfare depends on the welfare of the country and the company for whom he is working, no matter whether he is a section laborer, chief engineer or president, and he should take the same interest in selecting representatives to the legislature who will make laws controlling the actions of the railways, as he would in selecting directors of a railway if he was a stockholder.

In conclusion, let me impress on you the necessity of taking an active interest in politics, not alone in going to the polls and voting for the least objectionable office seeker, but by taking an active interest in choosing the candidates, and, if necessary, sacrificing time and other interests to become officers if called upon to do so, remembering that when this war is over, the responsibility placed on the voters of democracies will be greatly increased and especially so in the United States, where you have gone one step further than democratic Canada, and other less radical democracies, by the fact that you not only elect your legislative bodies, but you also elect your judiciary and executive officers by popular vote. And realize further, that you need honest, intelligent and capable representatives more in times of prosperity than you do in times of adversity. In the meanwhile, let us join hands with the government,

put our shoulders to the wheel and do all in our power to win this war for freedom and democracy. Then after the victory, let us not shirk our duty, but assume the responsibility of self government, making sacrifices where necessary, and thereby making democracy a real success.

### The "Mackenzie-Mann" Bugaboo.

Sir Donald Mann has written as follows:—"My attention has been called to the press report of proceedings before the Power Controller, April 18, in which Sir Adam Beck refers to 'the London Electric Co., a Mackenzie-Mann concern,' to 'Toronto Electric Light Co. and other Mackenzie-Mann companies,' and again 'to the power given the Mackenzie-Mann Co. to go on using extra water at Niagara.'

"The use of the name Mackenzie & Mann in this connection is absolutely without justification. Mackenzie, Mann & Co. have no interest, and have never

## Unique Transportation of Fuel Oil Tanks in British Columbia.

The removal of three fuel oil tanks from Bamberton, Vancouver Island, to Powell River, on the B.C. mainland, about 120 miles, had some interesting features. At Bamberton the tanks were located on a bank 22 ft. above low water, the range of tide there being 12 ft. In order to get a tank on a scow, 2 trestles, about 100 ft. long and 34 ft. apart, had to be built out in the water, so that a scow 32 ft. wide could get in between the trestles, of which the last 60 ft. were so constructed that the top part, about 10 ft., could be quickly removed and give place on a lower level for the tank to rest on. The upper right hand view in the accompanying illustration shows a tank on posts, placed on the scow, at high tide, and the upper part of

latter place, about 650 ft. from the shore line and 75 ft. above water level, rails had to be put down from the end of the trestles up to the pit, where foundations were made to receive the tanks. Two trucks, about 60 ft. long, with 2 sets of wheels at each end, were placed under the tanks for going up the grade. On the bank, above the foundations, was placed a donkey engine which did the pulling. Two 3-sheaved steel blocks, with  $\frac{3}{4}$  in. cable, were used for tackle. At this end the trestles were built on a 10 per cent. grade, far enough out in the water to receive the tank at high tide without raising it on the scow.

The tanks are 60 ft. diameter and 30 ft. high; capacity 15,000 bbls. each;

Moving Oil Tanks in British Columbia.

Upper left view, oil tanks on foundations at Bamberton. Upper right view, tank on posts at high tide at Bamberton, with upper part of trestle removed. Lower left view, tank leaving Bamberton in tow. Lower right view, hauling tank up 10% grade at Powell River, over double track railway.

had an interest in the London Electric Light Co., in the Toronto Electric Light Co., in any of the companies developing power at Niagara Falls, or in any of their subsidiaries. Personally I have neither capital holdings nor official position in any of the Niagara companies or their subsidiaries. One would expect from a man occupying Sir Adam's responsible position something more than reliance upon street gossip; in fact, one would expect a careful adherence to facts, certainly in matters such as this where the facts are readily obtainable. I have not followed hydro power matters in Ontario closely enough to know the merits of the controversy, but if the rest of the information which Sir Adam has so freely given to the public is no more accurate, then heaven help the public."

the trestles removed, as mentioned above.

While the tide was high, a new foundation was made to receive the tank when the tide came down to nearly low water. When the tank was landed on this new level, and the scow released, this was taken out from under the tank, the posts removed and cribbing put instead, just so high that when placed under the tank it would lift the same clear of the trestles at the next high tide. This operation had to be repeated three times before a tank could be landed on the deck of the scow. The tanks were moved to the end of the trestle on iron rollers.

At the same time as this work was being performed at Bamberton, another crew built a double trestle and road at Powell River. On account of the long distance the tanks had to be moved at the

weight, with sills under, about 70 tons each. The scow used was 32 ft. wide x 100 ft. long x 9 ft. 8 in. deep. The work was started at Bamberton on Sept. 10, 1917, and the third tank was in place at Powell River on Nov. 5. The contractor was S. Doe, of Victoria, B.C.

**Observation and Private Cars.**—The Minister of Railways stated in the House of Commons, Apr. 4, in answer to a question by T. MacNutt, M.P. for Saltcoats, Sask., that no order had been issued to discontinue observation and private cars on transcontinental and other trains, and that the government was not aware that a heavy private car was attached to the rear end of Imperial Limited train 2, at Vancouver, recently, and hauled to some point in Ontario.

## Rolling Lift Bridge on Canadian Northern Railway at Victoria.

A single track, deck girder, rolling lift bridge across Selkirk Water, Victoria, B.C., for the Canadian Northern Pacific

Cook, Resident Engineer, C.N.P.R., Victoria. The cost, including interlocking, was about \$21,000.

Canadian Northern Ry., Rolling Lift Bridge over Selkirk Water, Victoria, showing bridge closed and also in full open position.

Ry., has been completed recently. The length, centre to centre of end bearings, is 77 ft. From base of rail to high tide, 13 ft., from base of rail to low tide, 23 ft. There is a clear channel of 70 ft., and at low tide 16 ft. headroom. The substructure is of concrete.

The counterweight is composed of concrete and steel punchings, averaging 271 lb. a cu. ft., aggregating 55 cu. yards. All is below the deck and as the bridge rises the counterweight descends slowly to the concrete pit provided. The bridge is operated by hand power and so ar-

Canadian Northern Ry., Rolling Lift Bridge at Victoria, in full open position.

anged that an electric motor for operation can be attached when desired. The machinery forms a small percentage of the weight and is considered highly satisfactory. One man can raise or lower the span in about three minutes.

The whole layout is arranged with a view to duplicate the span for second track when required. The bridge was designed in accordance with Dominion Government specification, class heavy loading, under the direction of W. P. Chapman, M.Can.Soc.C.E., Engineer of Bridges, C.N.R., Toronto, by the Scherzer Roller Lift Bridge Co., the erection being done under the supervision of E. F.

## Thermit Welding on Michigan Central Railroad.

We have made a great many Thermit welds on locomotive frames in the Michigan Central shops at St. Thomas, Ont., and in every case they have proved successful. While we have endeavored to obtain photographs, it has been difficult to obtain good ones. I would like to call attention, however, to the accompanying illustration of my last weld, made on Nov. 3, on locomotive 7540, which was electric welded on the lower rail, and after breaking again at that point finally caused the top rail to break also. Both these fractures were then welded by the Thermit process, using 125 lb. of Railroad Ther-

Thermit Weld on Locomotive Frame.

mit. This repair was accomplished without keeping the locomotive out of service more than four days.

Another difficult weld which we were called upon to make was on one of our largest freight locomotives, the break being 5 x 14 in., and located just back of the right cylinder. We removed 1 in. from the butt of the main cylinder in order to provide room for a riser. This weld was made six months ago, and has given satisfactory service ever since. We find our Thermit welds not only satisfactory, but money savers as well.

**Workmen's Compensation in Alberta.** In connection with the Workmen's Compensation Act passed by the Alberta Legislature, it is stated that by an arrangement with the railway labor unions, it has been decided that the act will not apply to railway employees, but that their case will be dealt with next year.

**Government Railway Employees.**—The Minister of Railways informed the House of Commons, Mar. 27, that 20,917 persons were on the Canadian Government Railways pay rolls on Dec. 31, 1917, of whom 1,901 were on steamships and car ferries, and 480 were on military service.

## Value of Different Sizes of Coal for Locomotives.

Until recently nearly all coal used on locomotives was mine run, i.e., the entire unscreened product of the mines. In the past few years, however, increasing quan-

ties of screened lump coal have been used in locomotive service. This increase in the consumption of lump coal has been due partly to the belief that lump coal, when burned on a locomotive, produces enough more steam than mine run coal to compensate for its greater cost. Special considerations, such as the desire to lessen the amount of smoke formed, have also led in some instances to the use of lump coal, which is generally believed to require less skill in firing than mine run coal. The introduction of mechanical stokers for locomotives has resulted in the use of increasing amounts of various sizes of screenings. Thus far there has been little use of such sizes as egg, egg run, and nut coal on locomotives, although traffic and market conditions occasionally make it feasible and desirable to use them.

The relative values of several sizes of coal for locomotive use have not been well understood, since most laboratory and road tests have been made with mine run, or occasionally with lump coal, and the data are inadequate and conflicting. A series of tests to determine the value of different sizes of coal has been conducted by the University of Illinois Engineering Experiment Station under a co-operative agreement with the International Railway Fuel Association and the U. S. Bureau of Mines. A mikado locomotive, weighing 142 tons, belonging to the B. & R.O. Rd., was used, the tests being made in the locomotive laboratory at Urbana. The results are published in bulletin 101, entitled, "Comparative tests of six sizes of Illinois coal on a mikado locomotive." Copies may be had without charge by addressing the Engineering Experiment Station, Urbana, Illinois.

**The Reid Criminal Libel Case.**—When this case, which was taken against Sir William D. Reid, formerly President, Reid Newfoundland Co., by a Newfoundland politician, came before the local magistrate at St. John's, Nfld., recently, it was dismissed, as no case was made out. Action was taken subsequently by indictment before the Supreme Court, and at the sittings in April, the grand jury threw out the bill. The Chief Justice, in instructing the grand jury, stated that, if they found that the letter sent by Sir William Reid to Lord Shaughnessy, did not mean what the indictment said it meant, they could not bring in a true bill, but if they found that the words of the letter were libellous in themselves, they could bring in another bill.

# Fuel, From a Transportation Standpoint.

By W. M. Neal, Secretary, Canadian Railway Association for National Defence.

No one needs to be reminded of the close and intimate connection between the humble coal pile in his cellar and the pride and comfort of the loftier apartments in his house. We may in the past have treated the coal bin as a mere poor relation or humble servant. We gave it the poorest room in the house. We even hired other people to attend to it, so as not to have to soil our fingers by contact with the fuel problem, but nowadays I think one can observe a much more kindly attitude toward this humble factor in our domestic arrangements. We have been forced as it were, to enter into diplomatic relations with the coal bin and to treat it with consideration and very great respect. The greatest coal bin in Canada is that of the railway companies. Many have seen some of the young mountains of coal which the transportation companies are forced to maintain at their terminal points. There are in Canada over 5,000 locomotives, whose appetites require an average ration of from 100 to 160 lb. of coal for every mile run. The locomotives which draw the passenger trains from Montreal to Toronto burn not less than 16½ tons of bituminous coal. If we allow that the average tender on the average locomotive holds 10 tons of coal, then the requirements of the railways for a single loading of their tenders amount to over 50,000 tons. The total coal consumption of the railways of Canada in the last year for which there are official figures (1916) was 8,995,123 tons, which cost \$27,961,186. This was almost as much as the total Canadian import of bituminous coal and slack in the same year.

But, of course, what the railways themselves consume is only the beginning of the coal problem for the railway managers. Although we imported only about 9,000,000 tons of bituminous coal and slack in 1916, the railways hauled that year 18,122,835 tons. In addition to this they hauled 7,057,628 tons of anthracite coal and 1,772,854 tons of coke. The hauling of fuel both for themselves and the public amounted to approximately 25,000,000 tons, or over one fifth of the total freight tonnage carried by all the railways of Canada that year. It was four times the weight of the ore carried, and twice the weight of the total products of manufacture which were carried by the railways. It required the service of 29,948 trains of 23 cars a train, or the exclusive service for one year of approximately 1,000 freight locomotives and 23,000 freight cars. The weight of bituminous coal carried by the railways runs, as a rule, just a trifle less than the weight of all the grain produced in the Dominion.

I give these figures to impress the extraordinarily intimate connection between the coal situation and the railways of Canada. I cannot refrain from remarking, just in passing, that although coal carrying represents such a great part of railway work, it does not represent a proportionate part of railway earnings. Coal is carried farther in Canada for less money than in any other country in the world. It costs the coal dealer less for the freight on a ton of coal transported 60 miles than to team than same ton one mile in Montreal or Toronto. The recent rail rate increases give the railway about 15c a ton more than before on an average anthracite shipment from the mines to Toronto. One hears a great deal about this increase, yet the general increase

of 66 2 3/4 in teaming costs due to increased price of oats, labor and horse-flesh has scarcely been mentioned in the public press. I intend first of all to outline roughly the machinery of coal distribution in Canada as it existed before the war. It is necessary to divide the country into five districts, according to the fuel situation in each. I will then try to show what each district used, where it obtained its supply and how.

Starting in the east, let us define district 1. It reached from Halifax to, say, Montreal. It was supplied with bituminous coal from the Nova Scotia mines. This coal was distributed partly by rail, by chiefly by boat. In 1913, the last normal year, the Dominion Coal Co. distributed 1,750,000 tons by boat in the St. Lawrence alone, and the Nova Scotia Steel Co. another 500,000 tons. The s.s. *Storstadt*, which sank the *Empress of Ireland*, was one of the fleet of vessels distributing this coal. Very little of it was consumed farther west than Montreal. Nova Scotia and New Brunswick consumed quantities in addition to the St. Lawrence requirements. Much of this, also, before the war, was carried by steamer or by the humbler but more picturesque schooners of this region.

District 2, overlapping district 1 to some extent, reached, say, from Quebec City and towns like Sherbrooke and St. Johns, Que., west to Windsor and Sarnia and north to Sudbury, North Bay and Cochrane, Ont. This was, and is, the great coal importing area of Canada. It is here that the major portion of our anthracite coal was consumed and the chief share of bituminous coal was converted into energy and manufactured goods. It came by three different means, by rail, by water, and by car ferry. The chief rail points from which coal passed directly into Ontario were Black Rock, Victoria Park, Suspension Bridge, Niagara Falls, and Bridgeburg. These are the points we call the Niagara frontier, where special precautions had to be taken this past winter, as I shall describe later on. Another direct rail connection from district 2 to the United States is, of course, at Sault Ste. Marie, but no coal of any account passes there.

Of the car ferry connections the largest are at Sarnia-Port Huron and Windsor-Detroit. A considerable amount of Illinois coal passes there. Much more crosses Lake Erie from Cleveland to Port Stanley; Ashtabula to Port Dover; Ashtabula to Port Burwell; and Lake Ontario from Ogdensburg to Prescott and Charlotte to Cobourg. Practically the only traffic from Port Burwell is empty coal cars south-bound and loaded coal cars north. This one little port accounts for 54 cars of coal a day in good weather.

So much for the direct rail connections in coal schooners and steamboats of a sort plying on Lake Ontario from Oswego to Kingston or Toronto, and on Lake Erie from the American coal ports to the Canadian ports just named. These are the coal-carrying connections between district 2 and the U.S. coal fields. The coal thus received is distributed chiefly from Toronto, Hamilton and London to the rest of the older parts of the province.

In district 3 let us place all the north share of Lake Superior west to the eastern boundary of Manitoba. In this region, Port Arthur and Fort William are the central points. Another port of which little is heard is Jackfish, a C.P.R. point

where this company obtains enough coal by water during the summer to supply the north shore divisions all the year round, without having to burden the line itself by hauling coal via Toronto and Sudbury. The centres of public distribution are the twin cities. Many of the vessels which go north for cargoes of east-bound grain take coal on the up voyage. This coal is scattered westward by the returning empty grain cars from Fort William to Winnipeg. How far west of Winnipeg this movement goes I cannot say definitely, as it depends upon the production and movement of Western coal. There the U.S. coal going up the lakes begins to come in competition with the coal from our western foothills. The greater the production of western coal the farther east it comes.

District 4 might be said to include Winnipeg and the eastern portion of British Columbia, overlapping district 3 to some extent. In its most westerly extension it is fed almost exclusively from the Alberta coal fields.

Of district 5 I need only say a word. It takes in the western slope of British Columbia. The railways there use coal and oil fuel. The supplies of coal were and are from Washington and Nanaimo. The consumption is not large and the problem of distribution is not great.

Such are the outlines of the fuel situation from a transportation viewpoint as it existed before the war. I will now explain the changes which war has brought about in each district.

In district 1, the steamships plying from Sydney to St. John, Halifax, Quebec and Montreal, have, so to speak, enlisted. The distribution of coal from these mines falls entirely, therefore, upon the railways. The 2,000,000 tons distributed by boat in the St. Lawrence are now carried by rail. The schooners on the coasts of Nova Scotia and New Brunswick continue to do their share, but even there the railways have had to assume an extra burden. Eastern Canadian bituminous coal is now moving into district 2 as far as Ottawa and Cornwall. The increased consumption of coal in district 1 has made necessary the use of U.S. coal there, too, which is hauled north via Montreal and then east.

In districts 2 and 3 there have been two changes: a falling off of water carriage of coal on the lakes, and the congestion of the U.S. roads, which made it impossible to send the proper number of coal cars south for coal, on account of the danger that they would be lost down there even before they could be loaded at the mines. The loss of the water carriers was perhaps the more serious of these two considerations. From these three districts a tremendous proportion of the water carriers have disappeared. Practically the entire burden—amounting to 2,000,000 tons or 50,000 carloads for St. Lawrence points alone—has been forced upon the railways. They met this condition by building more coal cars, by converting sand and gravel cars for coal use, by enforcing economy in their own use of coal, by pressing box cars into the coal carrying service, and by trying to move as much coal as possible in the summer when the traffic may take advantage of easier transportation conditions. By a campaign among the big shippers, asking them to accept coal deliveries last summer instead of in the autumn, much good was accomplished. With respect to the danger of

losing our coal cars in the U.S., thousands of tons of coal were worked through the U.S. tangle in returning Canadian "empty" box cars. The use of box cars for coal carrying can only be applied from mines and docks where there are devices for loading and unloading these cars with coal. Fortunately, these devices are already established in the west, i.e., districts 3 and 4, otherwise we should have had a lot of trouble sending to Winnipeg special coal cars instead of using the westbound empty box cars.

I must make special reference to the work done on the Niagara frontier this winter by the administrative committee of the Canadian Railway Association for National Defence. In this work all roads co-operated to the fullest extent. The incoming coal cars at Black Rock, Bridgeburg, Victoria Park, Niagara Falls and Suspension Bridge were forwarded rapidly to Hamilton, Toronto, London and other points, without respect to what road they were routed by. In spite of blizzards and exceptional weather conditions, about 5,000 cars (chiefly coal) were put through in a period of two months over and above what would have been regarded as a normal movement. This meant to the Canadian consumers about 150,000 tons of coal extra.

So much for districts 1, 2 and 3. In district 4, that is, from Winnipeg to the eastern half of British Columbia, the question is being discussed whether the western bituminous mines could not look after the bituminous requirements of that district, while the lignite, being compressed into briquettes, might replace the anthracite. This is a consummation devoutly to be desired and members of the Canadian Railway Association for National Defence have already taken up the question with a view to being ready, as far as transportation is concerned, to make Western Canada, by the winter of 1919-20, as nearly self-sufficient as possible. How far this is possible I cannot even guess, although I may mention some of the factors governing the situation. First, as to production of both bituminous and lignite coal, the mines have never been able to turn out maximum quantities because of labor troubles, as high rates of pay enable men to take time off with impunity, and because of lack of storage facilities for lignite coal. But even with these, much might be done, so far as the railways are concerned, by a concerted effort on the part of the mines, the railways and the public to persuade consumers to place their orders for delivery during the slack months.

Conditions in district 5 have not changed. There is some talk of having the California supply of oil fuel for railway locomotives cut off. This would be very serious for the railways, as the following figures show: Fuel oil consumed in British Columbia, 1917—C.P.R. received 48,763,554 gall. and consumed 46,608,660; Grand Trunk received 6,350,840 gall. and consumed 6,303,500; Esquimalt and Nanaimo used 2,646,400 gall.; Pacific Great Eastern used 1,638,000 gall.

I have described briefly the changed conditions of the Canadian fuel traffic and how the railways have met these changes. Just one word about the special means of internal economy which the railways have undertaken with a view to economizing in their own use of coal. In districts 1 and 2, the coal is poorer in quality, and higher in price, than ever before. This is due to the labor scarcity at the U.S. mines where the product is no longer picked over as it used to be.

First, regarding passenger trains, the Canadian Railway Association for Na-

tional Defence, and the individual railways before the association was formed, have cut off trains whose total yearly mileage would amount to 12,000,000 miles. Assuming an average of 100 lb. of coal per passenger train mile, this means 600,000 tons saved. Parlor and observation cars have been eliminated, except in cases where there are combinations of dining or sleeping cars. Fewer sleeping cars are attached to night trains, thus a greater use of upper berths is made and the wheel resistance of extra cars is done away with. The speed of all trains has been reduced to the point where a maximum of effort is obtained from a given amount of fuel. No train is allowed to run at excessive speed to make up time. This has always been a practice very hard on coal economy. Special trains and the hauling of private cars, except at the request of government officials, have been done away with.

Even more important economies have been made in connection with the freight services. A campaign for heavier loading resulted in a great improvement. For example, in the movement of freight to St. John during Jan., 1918, as compared with Jan., 1917, the average load per car rose from 26.4 tons to 32.3, an increase per car of 5.9 tons. The saving from this improvement on this traffic alone that month was 1,313 cars and over 7,300 tons of coal. There was also a saving of the time of 11 locomotives and 55 locomotive and train men for that month, besides a great many shopmen, yardmen, car checkers, repairmen, etc. The handling of less than carload lots of freight has been so rearranged as to load the cars more heavily. We are thus able to reduce the ratio between net weight and tare weight in any given train. The wheel resistance is lowered. The train is made shorter and can therefore be handled more promptly.

In the actual firing of the locomotives, further economies have been effected in spite of the lower grade of coal available in districts 2 and 3. Expert firemen are sent out to show the less experienced men the best way of dressing the fires.

The old practice of burning worn-out ties on the sides of the railways has been discontinued since the war. In some districts it does not pay to haul these ties to places where the railways can use them. In these cases the farmers alongside the track or the railway trackmen are being given the ties for firewood. The greater proportion of them, however, are taken to the shops and locomotive houses. It was found impossible to saw these ties, owing to the amount of gravel and dirt with which they were impregnated. A device has been made which breaks them into appropriate lengths and they are now used under the boilers.

As a railway man, I take great pride, along with my fellow railway men, in the record which Canadian railways have established, not merely in the handling of fuel, but in the handling of food, munitions and domestic traffic. We have had two exceptionally severe winters. We have had labor shortage. Fuel has been scarce and of low quality. The nature of traffic and the direction of traffic has shifted and changed overnight in a manner sufficient to strain the resourcefulness of even the most alert railroad men in the world. Changes which I have indicated with regard to the movement of coal in Canada apply even with greater force to the movement of other commodities. The Canadian railways have moved hundreds of thousands of soldiers, eastbound and westbound; they have handled 75,000 foreign laborers passing from Vancouver across the continent en route to France.

There have been some difficulties, but on the whole I think there have been fewer railway troubles in Canada since the war than in any other country in the world.

The foregoing paper was read in Toronto recently, at the Canadian Society of Civil Engineers' general professional meeting.

## Railway Department Estimates for 1918-1919.

The Railway Department estimates for the year ending Mar. 31, 1919, submitted to the House of Commons recently, contain, among others, the following items chargeable to capital account:—

Canadian Government Railways.	
Construction and betterments, including equipment .....	\$18,000,000.00
Parliament to Deans Branch .....	30,000.00
To provide car ferry—construction of terminals, etc. ....	65,000.00
Hudson Bay Ry.—Construction of railway terminals .....	1,000,000.00
National Transcontinental Ry.—To pay claims for right of way, etc. ....	250,000.00
Quebec & Saguenay Ry.—Construction .....	900,000.00
Quebec Bridge.—Construction .....	700,000.00

The following items are chargeable to income:—

Arbitration and awards .....	\$ 2,000.00
Board of Railway Commissioners for Canada—Maintenance and operation of, including \$800 for Clyde Leavitt as Chief Fire Inspector .....	183,850.00
Board of Railway Commissioners for Canada.—To pay expenses in connection with cases before .....	15,000.00
Contribution of Government Railways to McGill University towards the foundation of a school of railway engineering and transportation in general, in connection with Faculty of Applied Science .....	2,500.00
Contribution of Government Railways to Polytechnic School, Montreal, for advancement of learning in connection with railway engineering and transportation in general .....	2,500.00
Contribution to International Association of Railways' Congress .....	97.33
Costs of litigation .....	3,000.00
Governor General's car, attendance, repairs and alterations to .....	5,000.00
Miscellaneous works not provided for Surveys and inspections—canals, including salaries and expenses of experts employed temporarily .....	25,000.00
Surveys and Inspections—railways, including salaries and expenses of experts employed temporarily .....	40,000.00
Expenses in connection with consolidation of Railway Act .....	5,000.00
Inquiry and report on railway situation of Canada .....	40,000.00
To provide for audit on behalf of government of any railway company Loan not exceeding \$7,500,000, repayable on demand, with interest payable half yearly at 6%, to be used to meet expenditure made or indebtedness incurred in paying interest on securities of the Grand Trunk Pacific Ry. or Grand Trunk Pacific Branch Lines Co.; to meet deficit in operation of C.T.P.R. System and for betterments and purchase of equipment; loan to be secured by mortgage upon undertaking of G. T.P.R. Co. containing such terms and conditions as the Governor in council may approve. The disposition of the loan to be subject to the direction of the Governor in council. The company agrees to constitute its board of directors as may be required from time to time by the Governor in council .....	7,500,000.00
Loan not exceeding \$25,000,000 repayable on demand with interest half yearly at 6%, to be used to meet expenditures made or indebtedness incurred in paying interest on securities or paying maturing loans of Canadian Northern Ry. Co. or any company included in the Canadian Northern Ry. System, to meet deficit in operation of C.N.R. System and for construction, betterments and the purchase of equipment; said loan to be secured by mortgage upon the undertaking of Canadian Northern Ry. System, containing such terms and conditions as the Governor in council may approve .....	25,000,000.00
Salary of Board of Railway Commissioners and Secretary .....	55,000.00

# Railway Electrification.

By John Murphy, M.Can.Soc.C.E., Electrical Engineer, Railways and Canals Department, and Board of Railway Commissioners.

Still smarting from the sufferings of two successive winters' fuel shortages, caused by inadequate transportation facilities, we are foregathered to see what can and should be done to prevent, if possible, recurrences of such serious and trying experiences. No argument is required to support the contention that eliminating the need for coal at a considerable distance from the mine is a greater measure of relief, and of true conservation, than increasing mine production and thereby incidentally adding more load to the already overburdened railways. Reducing coal consumption automatically relieves or releases men and apparatus all along the route from the mine to the consumer; it also relieves the route itself from some of its congestion. So eminent an authority as E. W. Rice, President of the American Institute of Electrical Engineers, addressing that body in New York recently, made the following statement:—

"It is really terrifying to realize that 25% of the total amount of coal which we are digging from the earth is burned to operate our steam railways—and burned under such inefficient conditions that an average of at least 6 lb. of coal is required per horsepower hour of work performed. The same amount of coal, burned in a modern central power station, would produce an equivalent of three times that amount of power in the motors of an electric locomotive, even including all the losses of generation and transmission from the power station to the locomotive."

Mr. Rice went on to say that 150,000,000 tons of coal, nearly 25%, of all the coal mined in the U.S., were consumed in steam locomotives last year. Here, in Canada, steam locomotives also did their bit and consumed about 9,000,000 tons: 30% of the 30,000,000 tons of coal imported into and mined in this country. Our 9,000,000 tons cover, I believe, wood and oil consumed on steam locomotives; some 49,000,000 gall. of oil are covered by the Canadian record. But in the U.S. figures, 40,000,000 barrels of oil (15% of the total output) are not included.

The conservation of—the elimination of the necessity for mining—those great quantities of fuel would be secured if all the railways were operated electrically, and if the electrical energy were generated from water power. Modern steam central stations would save from 50 to 66% of the coal now used in steam locomotives if the latter were discarded and electric locomotives used instead. With such possibilities for fuel conservation in sight may we not soon expect to learn that the fuel controllers in both countries have asked the railways, and that the railways managers have asked their engineers: "How many of these millions of tons of coal can you save? When will the good work begin?"

It is said that our fuel shortages were due to a combination of bad weather and inadequate transportation. As we cannot control the weather, our attention and efforts must be directed to the transportation portion of the difficulty. Railway electrification will reduce coal consumption and haulage; it will also greatly improve traffic conditions. Electrification, therefore, seems to be the solution of the problem. Under these circumstances it may not be out of place to recite in general terms what electrification has actually accomplished on some notable railways. Railroad in the mountains is the most strenuous kind of railway work. The examples which I have chosen cover

mountain sections. The Butte, Anaconda and Pacific Ry., by electrification, increased its ton mileage 35%, and at the same time decreased the number of trains, and its incidental expenses, 25%. The time per trip was decreased 27%. It is said the savings in the first year's operation, after electrification, amounted to 20% of the total cost of electrification. It buys power from water power plants.

On the Norfolk & Western Ry., power is obtained from its own steam station. Twelve electric locomotives have replaced 33 Mallets of the most modern and powerful type. The tonnage has been increased 50%. Electrification obviated the necessity for double tracking. The salvage value of the released steam locomotives was 45% of the cost of electrification. Electric locomotives make eight times as many miles per train minute delay as the steam ones. Their terminal lay overs average 45 minutes and they are double crewed every 24 hours. Pusher locomotive crews have been reduced from 8 steam to 4 electric. Pusher locomotives have been reduced from 7 steam to 2 electric. Steam locomotives used to "fall down" in cold weather—the electrics always "stand up," and are really more efficient in cold weather. At the New York Railroad Club meeting last year the N. & W. electrical engineer stated that "coal wharves, spark pits, water tanks and pumps, as well as roundhouses and turntables, have all disappeared from the electric zone. The track capacity has been doubled. The operating costs have been reduced. From an engineering, an operating and a financial viewpoint the electrification has been a success." Speaking of the value of the regenerative electric braking of the system, he went on to say: "The use of the air brake is practically eliminated; it is only used to stop trains. It is regrettable we are unable to put a dollars and cents value on this great asset; to appreciate it properly, one must have had experience with the difficulties of handling 90-car trains with air." Another official, referring to the same subject, made the following statement:—the 2.4% grade, without ever touching the summit 12 to 20 times every day, down the 2.4% grade, without ever touching the air. We never broke a train in two or slid a wheel. It is done so nicely we wouldn't spill a drop of water out of a glass in the caboose."

The 440 route miles of the Chicago, Milwaukee & St. Paul Ry. which have been electrified will soon be augmented by 450 miles more. Nearly 900 route miles and about 33% in addition for passing tracks, yards, industrial tracks and sidings will soon represent the extent of this great railway electrification. Among the advantages secured by this railway on its electric sections are the following: The cruising radius of each electric locomotive is twice that of the steam locomotive. Subdivisional points, where freight crews and steam locomotives were formerly changed, have been abolished; the passenger crews' runs are now 220 miles, instead of 110. For railway purposes, these stations do not now exist; seven or eight miles of track have been taken up; through freights do not leave the main line track at all; shops and locomotive houses have disappeared along with their staffs, and one electrician replaces the whole old force. An electric locomotive

has made 9,052 miles in one month. Although schedules have been reduced, the electrics have made up more than two and a half times as many minutes as steam locomotives—time which had been lost on other divisions; 29% of electric passenger trains made up time in this manner. On a mileage basis alone, the operating costs of the electrics are less than one-half the steam locomotive costs. Freight traffic increased 40% shortly after electrification—double tracking would have been necessary to handle such increased business under steam operation. An average increase of 22% in freight tonnage per train has taken place. One electric handles about three and a half times as many tone-miles as a steam locomotive; the reduction in times in handling a ton-mile is 30%; faster and heavier trains have accomplished these results, the number of trains has not been increased. About 11½% of the energy used by the railway is returned to the line in the process of regenerative braking and this returned energy helps to haul other trains. While this is a very important item and reduces the power bills, it is only regarded by the management as of secondary importance in comparison with the more safe and easy operation of trains on the grades and the elimination of former delays for changing brake shoes and repairs to brake rigging, when operating with steam locomotives. The electrics maintain their schedules much better than steam locomotives. In three months the electrics only waited for the right of way 254 minutes, while the steam locomotives in a similar period waited 1,910 minutes, or seven and a half times as long. Extra cars on trains only delayed electrics one ninth of the time steam trains were delayed for a similar reason. Cold weather delayed steam trains 445 minutes in the three months under discussion, but the electrics were not delayed a minute; the latter are more efficient in cold weather. Many of the delayed steam trains were double headers—never more than one electric is hitched to a passenger train. An entire suspension of freight service, due to steam locomotives losing their steaming capacity and freezing up, was not an uncommon experience. Electrical energy for the operation of these trains costs considerably less than coal. This latter statement is one of the most interesting in connection with the operation of the C. M. & St. P. Ry. and it is especially interesting because it was made more than a year ago. The foregoing experiences of men who are actually operating large railway electrification projects, show what the electric locomotive is doing every day. As the Vice President of the last mentioned railway said, "Electrification has made us forget that there is a continental divide."

The limitations of the steam locomotive are due to the fact that it is a mobile steam power plant of very limited capacity, compelled to carry its own supply of coal and water, and unable to take advantage of many of the economical refinements of the large modern stationary steam plant. On the other hand, the electric locomotive has no such limitations. It merely acts as a connecting link between efficient gigantic stationary steam or water power plants and the train to which it is connected. A technical paper summed up the situation a short time ago when it

said: "Why continue to haul millions of tons of coal, for and by uneconomical steam locomotives, all over the country, and thus add more loads to the already overburdened railways, when the power which they need so badly can be much more economically and efficiently transmitted to electric locomotives over a wire the size of one's little finger?"

The continual increasing cost of coal and fuel oil will force railway managers to look more and more carefully into railway electrification. Estimates of a few years ago now need revision. Money may be hard to get, but if, at times, fuel cannot be obtained at all, some substitute must be obtained if normal life is to be continued in northern latitudes. A representative of the National City Bank of New York, writing of the period after the war, referred to the stagnation which may ensue in all the great industries now engaged in war work as soon as peace is declared; the multitude of people thus thrown out of work, in addition to the men of the returning armies, would create unbearable conditions unless suitable employment will have been arranged for them in advance. He referred to the economic advantages of railway electrification and was of opinion that this work might solve the whole question if soon taken up with vigor.

The Minister of Public Works, Hon. F. B. Carvell, addressing the Canadian Society of Civil Engineers, Ottawa branch, recently, spoke of the necessity of conserving the energy of our water powers, instead of letting them run to waste, so that this great store of energy might be employed in assisting to build up our own and rebuild other countries when peace comes. How nicely these two ideals, water power development and railway electrification, work together if properly carried out.

With the view of securing something really worthy of presentation to this important meeting, I wrote recently to an eminent engineer, a man of international fame, and recognized as an authority on railway electrification, requesting him to tell me his own views upon this subject. A specialist's opinion, in my opinion, is always very valuable. Here is a short extract from his interesting reply: "Generalization is always dangerous, especially in connection with electrification of railways, where so many factors, such as the physical location, character of loads, the power situation, etc., come in to affect the decision if applied locally." From his sober statement it may be seen that my correspondent is an engineer, not a politician. He proceeded, as follows: ". . . with present equipment prices, the cost is absolutely prohibitive." This opinion, let me point out, is in connection with the proposal to "electrify everything." Do not let it dampen our enthusiasm. Listen to this also and kindly keep it in mind; it is another extract from the address of E. W. Rice, above referred to. He said: "I think we can demonstrate that there is no other way known to us by which the railway problem facing the country can be as quickly and as cheaply solved as by electrification."

While the present fuel shortage questions have made us look to railway electrification for relief, I feel such a project on a large scale can only follow or go hand in hand with power plant development and co-operative operation of power plants. The location of a number of plants at different points—large water power plants and auxiliary steam plants—so situated and inter connected that a failure at one plant or the connections to it will not jeopardize the others or completely cut off and isolate an important railway district is, in my opinion, an essen-

tial feature in connection with any large railway electrification project.

The 99-year contract of the Chicago, Milwaukee & St. Paul Ry. is worthy of more than a moment's attention and consideration in this discussion. That railway has a contract with a power company which has a series of plants stretching across the country parallel to the railway. The railway owns its sub-stations and secondary lines, but is not concerned with the power company's high tension lines or power plants. A reasonable rate for power, arranged between a willing purchaser and a willing seller—a contract, in fact, which each party knows the other will respect—is the basis and the real reason for that great railway electrification. Neither party questions the other's integrity or financial soundness. One delivers the power it has undertaken to supply and the other uses it. The arrangement is ideal in its simplicity and entirely satisfactory to everybody concerned. It will, in my opinion, be necessary to have such attractive power supply situations as those outlined above, backed by abundant supplies of power, in order to foster and encourage early railway electrification work in this country. Railway electrification is, in my opinion, a very pressing financial, economic and engineering problem—a problem worthy of the best attention of the most highly trained and experienced specialists.

The writer wishes to acknowledge his indebtedness and to publicly return his thanks to officials of the railways mentioned, and of the manufacturers of the apparatus referred to, as well as to the technical press, from which much of the material has been gleaned.

The foregoing paper was read before the Canadian Society of Civil Engineer's general progressive meeting in Toronto recently.

## Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1914, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

General order 215-C. Apr. 2.—Approving standard freight mileage tariff of Oshawa Ry. C.R.C. 15, effective Apr. 15.

General order 223. Mar. 28.—Amending general order 204, Aug. 11, 1917, to read as follows, 1644 (b). Dangerous explosives, for which a certified and placarded car is prescribed (see paragraph 1661), must not be loaded higher than the car lining. (c). When the lading of a car consists of or includes explosives, the weight of the lading should be distributed so that it will be equalized on each side of the car and over the trucks.

General order 224. Mar. 27.—Amending general order 222, Mar. 19, re oleomargarine, by adding following words, "the said tariffs to become effective Apr. 15, 1918."

General order 225. Apr. 3.—Approving bill of lading issued by U. S. Government for use in respect of all shipments of munitions, war materials and supplies by or on its behalf, or any of its contractors. Notwithstanding provisions of general order 41, July 15, 1909, form approved may be used by all such railway companies, in respect of said shipments.

General order 226. Apr. 4.—Amending general order 199, July 24, 1917, re equipment of locomotives with electric headlights.

General order 227. Apr. 12.—Ordering all railway companies, including Government railways, to advance by one hour standard time used in different zones in which they operate; effective not before 12 o'clock Saturday night, Apr. 13, and not later than 2 a.m. Sunday, Apr. 14, to remain in effect until 2 a.m. Friday, Oct. 31.

27092. Mar. 22.—Recommending to Governor in council for sanction, St. Lawrence & Adirondack Ry. bylaws of Sept., 1915.

27093. Mar. 21.—Authorizing C.P.R. to build extension of siding for Brackman-Ker Milling Co., Calgary, Alta.

27094. Mar. 22.—Authorizing Esquimalt & Nanaimo Ry. to build spur for Acme Shingle Co., Port Alberni, B.C.

27095. Mar. 21.—Relieving Halifax & South Western Ry. from providing further protection at Tannery St., near Bridgewater, N.S.

27096. Mar. 22.—Disallowing express tariffs.—Dominion Supplement 11 to C.R.C. 4418, and Supplement 8 to C.R.C. 4437; Canadian, C.R.C. 1653, 1654, 1655 and 1656, and Supplement 1 to C.R.C. 1527, and Supplement 2 to C.R.C. 1622; Canadian Northern Supplement 1 to C.R.C. 835.

27097. Mar. 26.—Authorizing C.P.R. to divert road allowance on south boundary Sec. 2, Tp. 31, Range 4, west 2nd meridian, Sask.

27098. Mar. 28.—Ordering C.P.R. to rearrange train service at Smiths Falls, Ont., effective by Apr. 8.

27099. Mar. 30.—Relieving Canadian Northern Ry. from providing further protection at highway at St. Michel, Que., mileage 13.1 from Quebec.

27100. Apr. 2.—Approving British Yukon Ry. bylaw 12, authorizing W. H. Wheeler, General Manager, and A. E. Zipf, Traffic Manager, to prepare and issue tariffs.

27101. Apr. 2.—Ordering Canadian Northern Ry. to build farm crossing for R. Toye, Minotnas, Man.

27102. Mar. 30.—Approving Dominion Atlantic Ry. bylaw 14, authorizing F. G. J. Comeau, General Freight Agent, and R. U. Parker, General Passenger Agent, to issue tariffs for freight and passenger traffic.

27103. Mar. 30.—Approving Algoma Central & Hudson Bay Ry. bylaw, authorizing R. S. McCormick, General Superintendent and Chief Engineer, to prepare and issue tariffs of telephone tolls.

27104. Apr. 2.—Authorizing London & Port Stanley Ry. to increase freight and passenger rates. This order is given fully on another page.

27105. Apr. 4.—Authorizing Lake Erie & Northern Ry. to advance freight and passenger rates. This order is given fully on another page.

27106. Apr. 4.—Authorizing London & Lake Erie Ry. & Transportation Co. to advance its freight and passenger rates. This order is given fully on another page.

27107. Apr. 3.—Authorizing G.T.R. to rebuild bridge at Broadway St., Tillsonburg, Ont.

27108. Apr. 3.—Authorizing C.P.R. to build additional tracks across Runnymede Road, Toronto, and to extend existing subway, and divert Ethel Ave.

27109. Apr. 3.—Approving agreement, Mar. 15,

between Bell Telephone Co. and North Wellington Telephone Co.

27110. Apr. 4.—Ordering C.P.R., by Apr. 30, to do the work on Big Creek drain, Tilbury North Tp., Ont., within limits of its right of way, covered by the township engineer's report.

27111. Apr. 5.—Amending orders 24882, Apr. 8, 1916, and 26734, Nov. 12, 1917, re G.T.R. crossing protection at Coteau, Que.

27112. Apr. 4.—Dismissing complaint of R. W. Hannah, Toronto, that G.T.R. refuses to apply special mileage tariff rates on potatoes between its stations on shippers' circuitous routing.

27113. Apr. 5.—Establishing collection and delivery limits of express companies in Walkerville, Ont.

27114. Apr. 8.—Ordering Canadian Northern Ry. not to exceed 18 miles an hour on tangents and 12 miles an hour on curves with trains from Lobstick Jet. to Chip Lake, Alta.

27115. Apr. 9.—Authorizing Canadian Northern Ry. to build spur for Scranton Coal Co., Drumheller, Alta.

27116. Apr. 9.—Approving Western Canada Telephone Co.'s bylaw, Mar. 30, re issue of tariffs.

27117. Apr. 9.—Approving London & Port Stanley Ry. standard freight tariff of maximum mileage tolls, C.R.C. 176, and standard passenger tariff, C.R.C. 115, effective Apr. 15.

27118. Apr. 9.—Dismissing application of Canadian Consolidated Rubber Co., Montreal; Good-year Tire & Rubber Co.; Dunlop Tire & Rubber Co., and Gutta Percha & Rubber, Ltd., Toronto, for carload rating on rubber hoots, etc., and authorizing corrections in certain classifications.

27119. Apr. 9.—Authorizing C.P.R. to build spur for Canadian Ingersoll-Rand Co., Sherbrooke.

27120. Apr. 9.—Authorizing Canadian Collieries (Dunsmuir), Ltd., to build mining slope under Esquimalt & Nanaimo Ry., at South Wellington, B.C.

27121. Apr. 10.—Approving Lake Erie & Northern Ry. standard freight tariff of maximum mileage tolls C.R.C. 103, and standard passenger tariff C.R.C. 23, effective Apr. 15.

27122. Apr. 11.—Authorizing C.P.R. to build spur for Imperial Oil, Ltd., Calgary, Alta.

27123. Apr. 11.—Authorizing Vancouver, Victoria & Eastern Ry. & Navigation Co. (G.N.R.) to build bridge over Brunette River, New Westminster, B.C.

27124. Apr. 12.—Authorizing Vancouver Power Co. to cross with its tracks the Vancouver, Victoria & Eastern Ry. & Nav. Co.'s tracks in District Lots 2 and 3, Group 2, South Westminster, B.C.

27125. Apr. 11.—Rescinding orders 26865 and 27001, Dec. 26, 1917, and Feb. 18, 1918, re Canadian Northern Ry. train service, Toronto to Nanawau, Ont.

27126. Apr. 12.—Amending order 26972, Feb. 9, re Grand Trunk Pacific Ry. operation of trains between Lobstick Jet. and Chip Lake, Alta.

27127. Apr. 15.—Authorizing Grand Trunk Pacific Branch Lines Co. to build across and divert highway at mileage 107.3, Prince Albert rural municipality, 461, Sask.

27128. Apr. 17.—Ordering C.P.R. to build interchange track with G.T.R. at Guelph, Ont., plan to be submitted by C.P.R. within one week from date, and reserving question of apportionment of cost.

27129. Apr. 16.—Ordering Canadian Northern Ry. to build culvert 14 x 28 in. under spur serving Quaker Oats Co., Neepawa, Man.; to be completed by May 15.

27130. Apr. 19.—Approving clearances at siding for William Davies Co., Don, Toronto.

27131. Apr. 18.—Authorizing Canadian Northern Ry. to build spur for Pointe Anne Quarries, Ltd., Thurlow Tp., Ont., and rescinding order 25767, Dec. 28, 1916.

27132. Apr. 17.—Authorizing G.T.R. to use bridge carrying North Front St., Belleville, Ont., over its main line.

27133. Apr. 16.—Authorizing C.P.R. to divert road allowance on southern boundary of s.w. 1/4 sec. 26, Tp. 40, range 23, west 3rd meridian, Sask.

27134. Apr. 16.—Authorizing G.T.R. to take up portions of sidings on Toronto Harbor Commissioners' property, Ashbridges Bay, serving Canadian Stewart Co., and relay same on locations shown on plan 172, R.Y.E., Jan. 31, 1918.

27135. Apr. 16.—Approving agreement, Apr. 6, between Bell Telephone Co. and Allenford Rural Telephone Co., Bruce and Grey counties, Ont.

27136. Apr. 18.—Ordering Windsor, Essex & Lake Shore Rapid Ry. to move derrails at crossing of Pere Marquette Ry., at Pelton, Ont., so they will be 200 ft. from diamond; signals to points 50 ft. beyond derrails or 250 ft. from diamond; to be completed by June 30.

27137. Apr. 17.—Ordering Canadian Northern Ry. to erect 3rd class station at Sturgis, Sask., to be completed by Oct. 1.

General order 228, Apr. 16.—Amending general order 227, Apr. 12, re change of time (daylight saving) on railways, by substituting "Thursday," Oct. 31, for "Friday," Oct. 31.

## Daylight Saving on the Railways.

The United States Director General of Railroads issued the following general order, Mar. 25:—

The American Railway Association's Committee on Transportation, having at the request of the Director General, submitted to report in connection with the federal law to save daylight and to provide standard time for the U.S., which becomes effective on Mar. 31, at 2 a.m., the following instructions, based on such report, are issued:

On Mar. 31, all clocks and watches in train dispatchers' offices, and in all other offices open at that time, must be advanced one hour to indicate 3 a.m.

Employees in every open office must, as soon as the change has been made, compare time with the train dispatcher. Clocks and watches in all offices, at the first opening, at or after the time the change becomes effective, must be advanced to conform to the new standard time, and employees, before assuming duties in such offices, must, after the change is made, compare time with the train dispatcher.

Each railway will issue necessary instructions and arrange for such supervision and check of its employees' watches as to insure that they have been properly changed to conform to the new standard time.

Owing to the varying conditions which will prevail on railways, it is not advisable to issue a uniform rule or order to cover the details involved in the movement of trains at the period the change in standard time becomes effective. Therefore, each railway must adopt such measures as may be necessary to properly

safeguard the movement of its trains on the road at the time of the change.

## Canada's Daylight Saving Act.

The following act was passed by the Dominion Parliament early in April and was assented to immediately:

"1. This act may be cited as The Daylight Saving Act, 1918.

"2. During the prescribed period in each year in which this act is in force, the time, for general purposes in Canada, in each province, shall be one hour in advance of the time which under the law of the province is the time prescribed for such province, and, if there is no time so prescribed, of the accepted standard time.

"3. This act shall be in force during the present year for such time as may be prescribed by the Governor in council.

"4. Wherever any expression of time occurs in any statute, order in council, order, regulation, rule or bylaw, or in any deed, time table, notice, advertisement or other document, the fixing of the time with respect to which is within the legislative jurisdiction of the Parliament of Canada, the time mentioned or referred to shall be held during the prescribed period, to be the time as fixed by this act. Provided, that where, in consequence of this act, it is expedient that any time fixed by any bylaw, regulation or other instrument should be adjusted, and such adjustment cannot be effected except after the lapse of a certain interval or on compliance with certain conditions, the Governor in council may, on the application of the body or person by whom the bylaw, regulation or other instrument was made or is administered, make such adjustment from the time so fixed as in the circumstances may seem to the Governor in council proper.

"5. The Board of Railway Commissioners for Canada shall have power to advance by one hour the standard time used by railway companies, including Government railways, in Canada, for such period as may be prescribed by the said board, and to make such orders as may be necessary for the convenient carrying out of the provisions of this act in so far as railway companies may be affected thereby."

An order in council was passed at Ottawa April 12, providing that the act quoted above shall be in force from April 14, at 2 a.m., to Oct. 31, 1918, at 2 a.m.

The Board of Railway Commissioners passed general order 227, April 12, ordering all railway companies in Canada, including Government railways, to advance by one hour the standard time now observed and used by them in the different zones in which they operate; the said change to become effective on the respective railways and in the said different zones not before 12 o'clock Saturday evening, April 13, and not later than 2 o'clock Sunday morning, April 14, and to remain in force and effect until 2 o'clock on Thursday morning, Oct. 31, 1918.

## Parliamentary Railway Committees.—

Jos. E. Armstrong, M.P. for East Lambton, Ont., has been elected chairman of the House of Commons Railway Committee, and Senator Blain, chairman of the Senate Railway Committee for the current session. Senator Blain was chairman of the Railway Committee of the House of Commons for several years prior to being called to the Senate in 1917.

The Great North Western Telegraph Co. has opened offices at Little Metis Lighthouse, Thamesville, Ont., and Sylvan Lake, Alta., and has closed its offices at St. Genevieve de Batiscan, Que., and Madoc, Ont.

## Closing of United States Railway Freight and Passenger Offices.

The U.S. Director General of Railroads issued the following instructions to the regional directors early in April:—

"Discontinue the separate city freight or passenger offices where the public may be adequately served at the depot. This applies particularly. Consolidate or group all city ticket offices, placing the union office in convenient location, where rental is reasonable, providing sufficient space to properly accommodate the public. Cancel all arrangements with tourists or other similar agencies for solicitation of passengers or sale of tickets. Discontinue all off-line traffic offices.

"Employees released as result of above to be assigned to other duties to the extent possible. Some now employed in off-line offices will be needed by local line to strengthen its traffic forces, in order to properly care for the additional work which will result from the above changes.

"The functions and services formerly performed by the off-line offices in protecting the needs of the public will be incorporated in the offices of the initial lines.

"Separate off-line traffic offices were created by the various transportation interests on account of existing keen competition for passenger and freight traffic, and were practically headquarters for soliciting agents, who were stationed in all commercial districts for the purpose of protecting the interests of the carriers by whom they are employed. Now there is no competition, which eliminates need for solicitation by the individual carriers. The policy is one of efficiency, with all possible retrenchment and economy consistent with protecting the best interests of the public.

"The employees released from their present duties, as a result of this, are to be assigned to other duties as far as possible with the same road. Some now employed in off-line offices will be needed by the local lines to strengthen other traffic forces to properly take care of the additional work entailed upon the initial lines on account of this change. In making this readjustment it is intended to work as little hardship as possible upon the employees concerned. Many of these men have been in the service of their respective lines for long periods and their railroad insurance and pension rights will be protected.

"No community will be deprived of adequate sources of information and advice as to matters connected with passenger and freight service. It will be a necessity for the lines directly serving each locality to see that their offices are manned and equipped to furnish the needed information and advice. This to include the issuance of through bills of lading, quotation of rates, passing reports of cars en route, advice to prospective passengers, and all other necessary information heretofore furnished by the off-line offices."

In accordance with the foregoing instructions, Canadian offices maintained by U.S. railways and the solicitation of business in Canada will be discontinued. At the time of writing, Apr. 26, the situation regarding the closing of all the offices, and the disposition of the various staffs, is not sufficiently clear to enable definite information to be obtained. It was at first thought that U.S. railways, which own, or control, lines in Canada, would be permitted to continue to maintain their offices, but it developed later that the order is intended to apply to all railways.

These offices will therefore be closed on or about Apr. 30, but it is possible that in one or two cases, there will be some little extension of time, to enable some outstanding business matters to be cleared up. It is felt in some quarters that the execution of the order will work considerable hardship on staffs in some cases, and, in many cases will leave the railways with unexpired office leases on their hands, which, under present conditions, are not easy to dispose of.

### Canadian Northern Railway Construction, Betterments, Etc.

A Montreal report states that the excavation work yet to be done on the company's tunnel at Montreal can be finished by May 31, and that the remaining track work can be completed within a month thereafter. It is thought likely that things will be ready for running trains through the tunnel into the temporary station on Lagacheiere St. during July.

The Alberta Railways Department's report, presented to the legislature recently, shows that of the \$11,022,000 of bonds authorized to be issued, with the guarantee of the province, for the construction of branch lines, the bonds marketed produced \$8,800,000, of which \$7,658,256 had been paid over to the C.N.R. The provincially guaranteed bonds authorized to be issued in respect of lines to be built by the Canadian Northern Western Ry. amounted to \$11,222,250. The securities marketed realized \$5,437,434, of which \$4,095,046 had been paid over to the company.

A spur line is reported to have been built to the Brule Lake coal fields in Northern Alberta, and a freight and passenger traffic is said to be in operation over it. The coal mines at this point expect, a press report says, to be able to ship 1,000 tons a day by the autumn.

After having been under discussion on several occasions from its first introduction Mar. 19, the British Columbia Legislature, on April 2, passed a resolution stating that the Canadian Northern Pacific Ry. had entered into contracts with the B.C. Government for the construction of certain railways; that the C.N. Ry. owned the entire share capital of the C.N.P. Ry., and that the latter company had made default in carrying out its contracts, and expressed the view that before any payment to the owners of the C.N. Ry. shares be made, the obligations to the province should be fulfilled.

The company's freight sheds on False Creek flats at Vancouver are reported completed, and the local freight staff have taken possession of their offices. The freight yards are connected by inter-switching arrangements with the C.P.R. and the Great Northern Ry. It is expected that the passenger station on the same site will be ready for occupation during July. (April, pg. 143.)

The Board of Railway Commissioners has suspended the Dominion Ex. Co.'s supplementary tariff respecting cartage delivery to customers' premises, of fish, in carloads, from Western Canada. The company contended that the rate from Western Canada was an extremely low one, and that it was never intended to include cartage of carload lots. The previous tariff, including free cartage, is maintained, and it was pointed out that though specific reference was made to the Dominion Ex. Co., all express companies are bound by the judgment.

## Traffic Orders by Board of Railway Commissioners.

### Increases in Electric Railway Freight and Passenger Rates.

Orders passed by the board, authorizing increases in freight and passenger rates on several electric railways, are given in the electric railway department of this issue on pages 205 and 206.

### Transportation of Explosives.

General order 223. Mar. 28. Re general order 204, Aug. 11, 1917, authorizing for the observance of railway companies which accept explosives for carriage, the Revised Regulations for the Transportation of Explosives, as amended and filed by letter dated Dec. 16, from the Chairman of the Canadian Freight Association. Upon reading what is filed on behalf of the Canadian Freight Association, it is ordered that paragraph 1644, (b) and (c), of the said regulations be amended to read as follows:

"1644 (b). Dangerous explosives for which a certified and placarded car is prescribed (see paragraph 1661), must not be loaded higher than the car lining.

"(c) When the lading of a car consists of or includes explosives, the weight of the lading should be distributed so that it will be equalized on each side of the car and over the trucks."

### Classification of Oleomargarine.

General order 224. Mar. 27. Re general order 222, Mar. 19, 1918, requiring that tariffs of Pere Marquette Ry. and Canadian Pacific, Grand Trunk, and Canadian Northern Railways, providing for transportation of packing house products, fresh meats, and other articles in pedlar cars, be revised so as to include oleomargarine as a packing house product. Upon reading what is filed on behalf of the Canadian Manufacturers' Association, it is ordered that the said general order be amended by adding the following words thereto, namely: "the said tariffs to become effective April 15, 1918."

### Bill of Lading for Munitions.

General order 225. April 3. Re application of Canadian Freight Association, on behalf of all railway companies subject to legislative authority of the Dominion Parliament, Canada, under sec. 340 of the Railway Act, and such other sections as may be applicable thereto, for an order approving the form of bill of lading issued by the United States Government, for use in respect of all shipments of munitions, war materials, and supplies by or on behalf of the said government, or any of its contractors; and providing that, notwithstanding the provisions of general order 41, July 15, 1909, the form herein referred to may be used by all such railway companies in respect of such shipments. Upon reading what is filed in support of the application, and its appearing that the said bill of lading is made subject to the conditions of the bill of lading approved by general order 41, it is ordered that the said form of bill of lading issued by the United States Government be approved, and that, notwithstanding the provisions of general order 41, the form herein approved may be used by all such railway companies in respect of the said shipments of munitions, war materials, and supplies.

### Potatoes Circuitously Routed.

27112. Re complaint of R. W. Hannah of Toronto, that the G.T.R. refuses to apply its special mileage tariff rates on potatoes between its stations on shippers' circuitous routing. Upon hearing the complaint at Toronto, Feb. 15, 1918, the complainant and the railway company he-

ing represented at the hearing, the complainant also appearing in person, and what was alleged, it is ordered that the complaint be dismissed.

### Classification of Rubber Goods.

27118. April 9. Re application of Canadian Consolidated Rubber Co., Montreal; Goodyear Tire & Rubber Co. of Canada, Toronto; Dunlop Tire & Rubber Goods Co., Toronto; and Gutta Percha & Rubber, Limited, Toronto, for revision of ratings of rubber and rubber articles as they appear in Canadian Freight Classification 16. Upon hearing the application at Ottawa, Nov. 20, 1917, the applicants, Canadian Manufacturers' Association, Canadian Freight Association, Toronto Board of Trade, and the Grand Trunk, Canadian Pacific, and Canadian Northern Railways, being represented; and upon the report and recommendation of the board's Chief Traffic Officer, it is ordered:

That the application for a carload rating on rubber boots, shoes, and socks be refused.

That item 32, page 122, of Canadian Classification 16, be corrected to read as follows:

	L.C.L.	C.L.
"Tires, solid, on reels or spools, burlapped .....	1	3"

That item 16, page 21, and item 30, page 35, of Supplement 10 to Canadian Freight Classification 16, be corrected to read as follows:

	L.C.L.	C.L.
"Tires, pneumatic, including inner tubes:		
"In bales or bundles, burlapped..	1½	
"In boxes or crates.....	1	
"Loose or in packages named c.l. minimum weight 16,000 lb. (see note) .....		2
"Note: When shipped loose, must be loaded and unloaded by owners."		

And it is further ordered that the changes herein mentioned be made effective in Supplement 11 to Classification 16, now before the board for approval.

### Railway Finance, Meetings, Etc.

**Algoma Central & Hudson Bay Ry.**—The London, Eng., Stock Exchange Committee has ordered the following securities to be quoted in the official list:—A.C. & H.B.R. 1st mortgage 5% 50 year gold bonds, stamped under the scheme of arrangement, in lieu of deposit receipts now quoted; Algoma Central Terminals 5% 1st mortgage 50 year gold bonds, stamped under the scheme of arrangement.

**Timiskaming & Northern Ontario Ry.** Revenue from passenger traffic for February, \$38,859.36; from freight traffic, \$109,393.20; total revenue, \$148,252.56, against \$37,928.31 passenger traffic; \$99,715.42 freight traffic; \$137,643.73 total revenue for Feb., 1917. Aggregate total revenue for two months ended Feb. 28, \$308,894.28, against \$284,320.04 for same period 1917.

**White Pass and Yukon Route.**—Gross earnings from Jan. 1 to Jan. 21, \$8,626, against \$15,740 for same period 1917.

**Railway Lands Patented.**—Letters patent were issued in March for Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:

	Acres
Alberta & Great Waterways Ry.....	123.97
Calgary & Edmonton Ry.....	2,874.83
Canadian Northern Ry.....	804.00
Canadian Pacific Ry.....	9,015
Grand Trunk Pacific Branch Lines Co....	5.57
Qu'Appelle, Long Lake & Saskatchewan Rd. & Steamboat Co.....	7,607.66
Total .....	11,425.045

# Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

**Canada Atlantic Transit Co. of United States.**—C. A. GORMALY, Commercial Agent, G.T.R., Chicago, Ill., has had his duties extended to include traffic, except bulk grain, via C.A.T. Co., and reports to General Agent, Boston, Mass., on westbound, and to Freight Traffic Manager, Montreal, on eastbound traffic.

H. W. PLOSS, Commercial Agent, G. F. R., Milwaukee, Wis., has had his duties extended to include traffic, except bulk grain, via C.A.T. Co., and reports to General Agent, Boston, Mass., on westbound and to Freight Traffic Manager, Montreal, on eastbound traffic.

**Canada Steamship Lines, Ltd.**—N. VAN WYCK, heretofore Freight Claims Agent, Montreal, has been appointed Purchasing Agent, vice Peter Paton, resigned to enter private business. Office, Montreal.

R. V. ROBINSON, heretofore General Freight Agent, Northern Navigation Co., Sarnia, Ont., has been appointed Freight Claims Agent, C. S., Ltd., vice N. Van Wyck. Office, Montreal.

**Canadian Government Railways.**—M. McLEARN, heretofore Chief Dispatcher, Truro, N.S., has been appointed acting Assistant Superintendent, District 2, Intercolonial Division, vice S. B. Wass, assigned to other duties in engineering department at Moncton, N.B.

S. B. WASS, A.M.Can.Soc.C.E., heretofore Assistant Superintendent, District 2, Intercolonial Division, South Devon, N.B., has been assigned to duties in engineering department, Moncton, N.B.

E. B. ROBB, heretofore Travelling Freight Agent, Montreal, has been appointed Division Freight and Passenger Agent, Transcontinental Division, with territory from O'Brien, Que., to Graham, Ont. Office, Cochrane, Ont.

W. PRIEST has been appointed foreman of passenger car yard, Transcona, Man., vice J. Hughes, who has left the service.

M. IRWIN has been appointed foreman of paint shop, Transcona, Man., vice M. Morrow, who has left the service.

**Canadian Northern Ry.**—V. DAVIES has been appointed Supervisor, Boarding Car Department, which has been organized for boarding extra gangs on Eastern Lines. Office, Toronto.

P. COTTON has been appointed Inspector, Western Lines, Sleeping, Dining and Parlor Car, Hotel and News Department, with headquarters at Winnipeg.

B. GRIERSON, chief clerk to General Agent, Minneapolis, St. Paul & Sault Ste. Marie Ry., Winnipeg, is reported to have been appointed chief clerk to District Freight Agent, C.N.R., Winnipeg, vice A. Sinclair, transferred to general freight department.

P. McLELLAN has been appointed Trainmaster, Kamloops Jct., B.C., vice P. K. Manahan, assigned to other duties.

**Canadian Pacific Ry.**—W. WELLS, heretofore Master Mechanic, Schreiber Division, Algoma District, Schreiber, Ont., has been appointed Master Mechanic, Farnham Division, Quebec District, vice L. L. Craig, transferred. Office, Farnham, Que.

H. J. HUMPHREY, heretofore Superintendent, Brownville Division, New Brunswick District, Brownville Jct., Me.,

has been appointed Superintendent, Laurentian Division, Quebec District, vice W. Tansley, transferred. Office, Montreal.

W. E. MCGILL, heretofore Assistant

C. G. Bowker,  
General Superintendent, Ontario Lines, Grand  
Trunk Railway.

W. R. Davidson,  
General Superintendent, Eastern Lines, Grand  
Trunk Railway.

Superintendent, Sudbury Division, Algoma District, Sudbury, Ont., has been appointed Assistant Superintendent, Montreal Terminals Division, Quebec District,

vice J. B. Blair, transferred. Office, Montreal.

J. B. BLAIR, heretofore Assistant Superintendent, Montreal Terminals Division, Quebec District, Montreal, has been appointed Superintendent, Farnham Division, Quebec District, vice J. H. Boyle, transferred. Office, Farnham.

E. J. WORTH, heretofore Chief Dispatcher, Laurentian Division, Quebec District, Montreal, has been appointed Night Chief Dispatcher, Smiths Falls Division, Quebec District, Smiths Falls, Ont.

J. FLYNN has been appointed Car Foreman, Smiths Falls, Ont., vice J. A. Leaman, resigned.

K. K. DONNELLY has been appointed Purchasing Agent, Vancouver, B.C., vice J. T. H. Ferguson, deceased.

H. M. S. SPEDDING has been appointed ticket agent, Vancouver wharf, vice J. A. Brown, transferred.

H. M. BEYERS has been appointed City Passenger Agent, Spokane, Wash., vice J. F. Speakman, resigned.

**Erie Rd.**—In accordance with the recent order of the U.S. Director General of Railroads, the company's Canadian offices were closed Apr. 27. M. MacGREGOR, heretofore General Canadian Agent, Toronto, has been attached temporarily, to the Assistant General Freight Agent's staff at Buffalo, N.Y. G. S. FORSTER, heretofore Contracting Agent, Toronto, has left the service to enter private business in Toronto.

**Grand Trunk Ry.**—W. R. DAVIDSON, heretofore General Superintendent, Western Lines, Chicago, Ill., has been appointed General Superintendent, Eastern Lines, vice C. G. Bowker, transferred. Office, Montreal.

J. W. FARRELL, heretofore Trainmaster, Districts 1, 2 and 3, Montreal Division, Eastern Lines, Richmond, Que., has been appointed Trainmaster, District 1, Montreal Division, Eastern Lines. Office, Island Pond, Vt. The position of Assistant Trainmaster, Districts 1 and 2, has been abolished.

N. P. NORTH has been appointed Trainmaster, Districts 2 and 3, Montreal Division, Eastern Lines. Office, Richmond, Que.

C. G. BOWKER, heretofore General Superintendent, Eastern Lines, Montreal, has been appointed General Superintendent, Ontario Lines, vice H. E. Whittenberger, transferred. Office, Toronto.

H. E. WHITTENBERGER, heretofore General Superintendent, Ontario Lines, Toronto, has been appointed General Superintendent, Western Lines, vice W. R. Davidson, transferred. Office, Chicago, Ill.

**Grand Trunk Pacific Ry.**—A. D. CAREY, heretofore Assistant Superintendent, Biggar, Sask., has been appointed Assistant Superintendent between Prince George and Prince Rupert, B.C. Office, Smithers.

**Northern Pacific Ry.**—J. M. RAPELJE, heretofore General Manager, has been appointed acting Vice President in charge of operation, vice G. T. SLADE, now Major in the U.S. Railway Transportation Corps, who has received indefinite leave of absence.

A. M. BURT, heretofore Chief Engineer, Maintenance of Way, has been appointed acting General Manager, east of Paradise, vice J. M. Rapelje, and his former duties are for the present consolidated with those of the Chief Engineer, H. E. Stevens.

# Railway Rolling Stock Orders and Deliveries.

## Dominion Government Rolling Stock Orders.

In the House of Commons, on April 9, the Minister of Railways moved: "That it is expedient to provide that during the present war and for one year thereafter, the Minister of Railways and Canals, with the approval of the Governor in council, may acquire engines, cars, rails and other railway equipment and materials, and may sell, lease or otherwise dispose of any such equipment to any Canadian railway company, or companies, upon such terms and conditions as may be approved by the Governor in council, and may defray all expenditure made hereunder out of any unappropriated moneys in the Consolidated Revenue Fund of Canada; and that for the payment in whole or in part of any such equipment the Minister of Finance, with the approval of the Governor in council, may issue equipment notes or other obligations or securities, or may guarantee the principal and interest of any securities issued by any company approved by the Governor in council; and the times and manner of the issue of such securities, and the forms and terms thereof or of any trust deed, lease or other instrument incidental thereto, and the trustees shall be approved by the Governor in council, and the provisions of section 4 of chap. 38 of the statutes of 1907 shall apply to any instrument relating to such equipment executed under the terms hereof, and such securities shall be made payable by instalments, the last instalment to be made payable on or before the expiry of 10 years from the issue thereof and further, to provide that the Minister may transfer to the Canadian Government Railways any equipment so acquired, and in such event there shall be charged to the accounts of the said railways such amounts as may properly be chargeable therefor, and the provisions of the Consolidated Revenue and Audit Act shall, as far as applicable, extend to the accounts and charges incurred hereunder."

In moving the resolution, the Minister said:—"Owing to the government taking over the Canadian Northern Ry. and requiring more equipment for the government railway, and on account of the war, owing to other railways requiring equipment, it is necessary for the government to purchase and finance this equipment. In doing so, we wish to have the power, after purchasing it, to lease or sell it to railways, other than the government railways, that may require further equipment. In purchasing this equipment, we wish to be in the same position as other railways are at present in making such purchases. For instance, other railways, such as the Canadian Pacific, the Canadian Northern and the Grand Trunk, are in a position to issue equipment bonds and in that way not pay the full purchase price of the equipment at the time delivery is made. By issuing equipment bonds they can spread the payment over a term of years. It certainly makes it very difficult for the government to finance the purchase of equipment when it is called upon to pay a very large amount in one year at the present time. For instance, last year the Railways Department ordered 150 locomotives and 6,000 or 7,000 cars. We put the amount in the estimates, and of course we were compelled to pay the amount of the equipment delivered last year. We received the equipment, and we leased portions of it to the Grand Trunk and Canadian Northern

Railways. The C.P.R. got four or five of our large locomotives, and the others went to the Canadian Government Railways. If we had not purchased that equipment, we would have been in a very serious position during last winter, on account of not having sufficient motive power. The other day we had, in order to protect the transportation situation during the coming winter, and for the future, on account of the heavy movement of troops and so on, to give orders for a very large quantity of locomotives, cars and other railway equipment. We had to order 100,000 tons of rails that will cost \$5,000,000 or \$6,000,000. We want to be in a position to pay for the equipment and then transfer it to other railways by sale or lease. The purchase of the items that come under the bill to be based on this resolution will be all done in the regular way by tender and order in council, and any lease or sale will be done by order in council in the usual way."

After considerable discussion, during which several members, most of them opponents of the government, objected to giving the power asked, for more than one year, or for a greater expenditure than \$50,000,000, the Minister agreed to strike out of the third line of the resolution as printed above, the words "war and for one year thereafter" and to substitute the words "fiscal year"; also to add in the seventh line of the resolution as printed above, after the word "materials," the words "to an amount not exceeding fifty million dollars." The effect of the change is that the authorization for the purchase of locomotives, cars, rails, and other railway equipment and material, is limited to the current fiscal year, and to an amount not exceeding \$50,000,000. The resolution, as amended, was carried, and the Minister immediately introduced a bill based thereon, which was read a first time and was passed by the House of Commons on April 12.

In the course of the discussion above referred to, the Minister gave particulars of orders he had placed for rolling stock this year, which confirmed the information in regard to the same as published in Canadian Railway and Marine World for March and April, and which is recapitulated further on with some additional information with which we have since been supplied officially. The Minister, in speaking of the distribution of the rolling stock ordered, said:—"There will be a small amount for the Canadian Government Railways, which, of course, include the National Transcontinental between Moncton and Winnipeg, as well as the Intercolonial and Prince Edward Island Railways. The largest portion of it, however, is for the Canadian Northern and Grand Trunk. Seventy five of the locomotives ordered are for the Grand Trunk. Last year we purchased 100 or 150 locomotives, and the Grand Trunk got 45 or 47 of them. So that we are really providing equipment for the Grand Trunk."

In answer to a question as to further purchases of rolling stock, the Minister said:—"Outside of what I have read, the only equipment that I contemplate purchasing is as follows: A requisition has been made on me for 10 or 15 snow ploughs, which might probably cost \$100,000. I have been urged by the Canadian Railway Association for National Defence, the organization representing all the railways in Canada, to purchase 100 tourist cars. At present, speaking from memory, there are probably 600 or 700

cars owned by all the railways in Canada that are available for the transport of troops to and from the seaboard, and I have been discussing the proposed purchase of 100 additional cars with Sir George Bury, of the Canadian Pacific, with a view to ascertaining if we cannot get along without any more equipment of the kind. We have also been asked to purchase 19 baggage cars to be used in connection with the movement of troop trains to and fro, and it may be requisite to acquire a few more things of that kind."

## Details of Dominion Government Orders.

Following is a complete list of the rolling stock ordered by the government this year, as originally published in Canadian Railway and Marine World in March and April, with additional information of further orders placed, dates for delivery and as to its distribution between the Canadian Government Railways, Canadian Northern Ry. and Grand Trunk Ry. These are the first complete details of these orders published and may be relied on, as the greatest care has been exercised in their compilation, and the figures have been checked by the Railways Department officials.

Canadian Car & Foundry Co., Montreal. 5,000, forty-ton, standard, steel frame, single sheathed, box cars, \$2,750 each, \$13,750,000. For Canadian Northern Ry. Delivery to begin three months from date of order and to be completed by Sept. 30.

Canadian Car & Foundry Co., Montreal. 300 thirty-ton stock cars, with steel draft arms, \$2,271 each, \$681,300. Air brakes and couplers to be supplied by the government. For Canadian Northern Ry. Delivery to be completed by Aug. 1.

The Canadian Car & Foundry Co., 250 standard, all wood, refrigerator cars, with metal draft arms, \$4,097 each, \$1,024,250. Of these 100 are for Canadian Government Railways and 150 for Canadian Northern.

Eastern Car Co., New Glasgow, N.S., 750 steel, underframe, 41-ft., 40-ton, flat cars, \$2,370.40 each, \$1,777,800. Of these 250 are for Canadian Government Railways and 500 for Canadian Northern. Delivery to start by June 15 and to be made at rate of 10 cars a day.

Eastern Car Co., 650, fifty-ton, enterprise composite coal cars, \$3,179.50 each, \$2,066,675. Of these 400 are for Canadian Government Railways and 250 for Canadian Northern. Delivery to start by June 15 and to be made at rate of 10 cars a day.

Hart-Otis Car Co., 200 all wood ballast cars, with side and centre dump, \$3,125 each, \$625,000. For Canadian Government Railways. The Hart-Otis Car Co. to commence delivery during June and complete it before July 31.

Hart-Otis Car Co., Montreal, 250 all wood ballast cars, with side dump only, \$3,040 each, \$760,000. For Canadian Northern Ry.

National Steel Car Co., Hamilton, Ont., 1,000, forty-ton steel frame box cars, \$2,750 each, \$2,750,000. For Canadian Northern Ry. Delivery to be completed by Sept. 15.

Pressed Steel Car Co., New York, 25 tank cars, 8,000 imp. gal., with 50-ton trucks, etc., for general service, \$3,926 each, f.o.b. Pittsburg District, \$98,150. For Canadian Government Railways.

Pressed Steel Car Co., New York, 25 tank cars, 8,000 imp. gal., with 50-ton trucks, for water service, \$3,770 each.

f.o.b. Pittsburg District, \$94,250. For Canadian Northern Ry.

The Pressed Steel Car Co. is to begin delivery within 150 working days of settlement of all terms, and to continue at average rate of three cars per working day thereafter.

Pullman Co., Chicago, 14 sleeping cars, \$35,890 each, f.o.b. Chicago, \$502,460. For Canadian Government Railways. Delivery in June and July.

Pullman Co., Chicago, 7 dining cars, \$34,100 each, f.o.b. Chicago, \$238,700. For Canadian Government Railways. Delivery in June and July.

Pullman Co., Chicago, 15 second hand parlor cars, \$3,000 each, \$45,000. Of these 11 are to be delivered f.o.b. tracks, Buffalo, N.Y., and 4 f.o.b. tracks, Chicago. Ten of them are to be converted into express refrigerator cars for carrying fruit and fish on Canadian Government Railways, and 5 are to be converted into baggage cars for Canadian Northern Ry.

Canadian Locomotive Co., Kingston, Ont., 6 six-wheel 0-6-0 switching locomotives, equipped with Schmidt superheater, 251,000 lb. in working order, \$41,000 each, \$246,000. For Intercolonial Division, Canadian Government Railways. Delivery f. o. b. C.G.R. tracks, Montreal.

Canadian Locomotive Co., Kingston, Ont., 4 ten-wheel 4-6-0 locomotives, equipped with Schmidt superheater, 162,000 lb. in working order, with tender, 3½ ft. gauge, \$34,020 each, \$136,080. For Prince Edward Island Division, Canadian Government Railways. Delivery in June, f.o.b. C.G.R. tracks, Montreal.

Canadian Locomotive Co., Kingston, Ont., 60 Mikado freight locomotives, \$62,000 each, \$3,720,000. Of these, 10 are for Canadian Government Railways, 40 for the Grand Trunk and 10 for the Grand Trunk Pacific.

Canadian Locomotive Co., Kingston, Ont., 10 switching locomotives, \$40,500 each, \$405,000. For Canadian Northern Ry.

Delivery of the Canadian Locomotive Co.'s order for Mikados and switchers is to commence July 1 and be completed not later than Dec. 31.

Montreal Locomotive Works, Montreal, 50 consolidation freight locomotives, \$58,000 each, \$2,900,000. For Canadian Northern Ry.

Montreal Locomotive Works, Montreal, 30 Pacific passenger locomotives, \$60,000 each, \$1,800,000. For Canadian Government Railways.

Delivery of the Montreal Locomotive Works orders is to be made at the rate of 30 locomotives a month, beginning Sept. 1, and to be completed by Dec. 31.

Summary of Orders Placed by Dominion Government.

Co.	Price each.	Total.
Canadian Car & Foundry Co.		
5,000 box cars	\$2,750.00	\$13,750,000
300 stock cars	2,271.00	681,300
250 refrigerator cars	4,097.00	1,024,250
Eastern Car Co.		
750 flat cars	2,370.40	1,777,800
650 coal cars	3,179.50	2,066,675
Hart-Oris Car Co.		
200 ballast cars	3,125.00	625,000
250 ballast cars	3,010.00	760,000
National Steel Car Co.		
1,000 box cars	2,750.00	2,750,000
Pressed Steel Car Co.		
25 tank cars	3,926.00	98,150
25 tank cars	3,770.00	94,250
Pullman Co.		
14 sleeping cars	35,890.00	502,460
7 dining cars	34,100.00	238,700
15 parlor cars (second hand)	3,000.00	45,000
Canadian Locomotive Co.		
6 switching locomotives	41,000.00	246,000
4 narrow gauge locomotives	34,020.00	136,080
60 mikado locomotives	62,000.00	3,720,000
10 switching locomotives	40,500.00	405,000

Montreal Locomotive Works.

50 consolidation loco-		
motives	58,000.00	2,900,000
50 Pacific locomotives	60,000.00	3,000,000
		\$33,620,665

It is probable that tenders will be asked for at once for from 20 to 30 snow ploughs for the Canadian Government and Canadian Northern Railways. Nothing is being done at present about the 100 tourist cars and 19 baggage cars which the Minister of Railways spoke of in the House of Commons on April 9.

General Railway Rolling Stock Notes.

Canadian Government Railways have received 13 mikado type locomotives from Canadian Locomotive Co.

The C.P.R. has received 4 decapod locomotives from its Angus shops, Montreal.

The C.P.R. has ordered 100 steel under-frame box cars from its Angus shops, Montreal.

The Canadian Northern Ry. has received 373 steel frame box cars from National Steel Car Co. These are a portion of an order placed with the company by the Dominion Government for 1,000 cars, 500 of which have been assigned to the C.N.R.

The Canadian Northern Ry.'s wooden stock cars, of which 300 have been ordered by the Dominion Government, as mentioned in our last issue, will have cast steel draft arms, and will be the same as those now under construction by the Canadian Car & Foundry Co., details of which have been given in a previous issue.

The G.T.R. has already received 37 mikado locomotives and is to get 5 more out of the order given by the Dominion Government last year to Canadian Locomotive Co. The G.T.R. will also get 40 more and the G.T.P.R. will get 10 out of the order for 60 given the Canadian Locomotive Co. recently. It is not yet announced whether they will be leased or sold to the G.T.R.

The 250 refrigerator cars which the Dominion Government has ordered from Canadian Car & Foundry Co., as mentioned in our last issue, will have the following general dimensions:—

Length over end sills	36 ft.
Trucks, centre to centre	26 ft.
Width over sheathing	9 ft. 13 in.
Top of rail to top of running board	13 ft.
Length inside	35 ft. 2 in.
Width inside	8 ft. 2½ in.
Capacity	30 tons
Meat racks and brine tanks	4 at each end
Bolsters, brake beams and couplers	Simplex
Draft Springs	Class E

The Canadian Car & Foundry Co.'s annual report, dated April 15, says: "The combined order books of your company and its subsidiaries, at the date of writing, show a total value of unfilled orders aggregating \$36,500,000. For the first time in several years your directors are able to state that over 75% of this value represents orders for the regular and normal products of the car equipment industry. If unforeseen conditions and contingencies beyond your management's control do not arise, your present order book assures continuous and profitable operations during 1918."

The Canadian Northern Ry.'s 5,000 box cars, 40 tons capacity, which the Dominion Government has ordered from Canadian Car & Foundry Co., will be of the steel frame type, inside sheathed, and similar to the 5,000 now being built by the company for the government, details of which were given in July, 1917, issue, except that the centre sills will be reinforced with a ¼ in. cover plate running from end sill to end sill, and they will also be equipped with a cast steel buffing block, instead of deadwood as previously used.

Some further refinements in construction will also be made with a view to facilitating better maintenance. A new type of brake is to be applied to the cars of this order, providing for the adjustment of cylinder travel at floating lever fulcrum. This system having proved satisfactory, has been adopted as standard by the government. McCord journal boxes, twin spring draft rigging, Simplex brake beams, couplers and truck bolsters, are amongst the specialties to be applied.

The Canadian Northern Ry.'s 1,000 steel frame box cars, which the Dominion Government has ordered from National Steel Car Co., as mentioned in our last issue, will have the following general dimensions:—

Capacity .....	80,000 lb.
Length inside .....	8 ft. 6½ in.
Height, floor to bottom of earline, at side .....	7 ft. 11½ in.

Width of side door opening .....	7 ft. 8 7/16 in.
Length between end sills .....	36 ft. 11½ in.
Width over side sills .....	8 ft. 9½ in.
Height, rail to top of brake mast .....	13 ft. 10½ in.
Height, rail to top of running board .....	13 ft. 4¾ in.
Height, rail to centre of coupler .....	2 ft. 10½ in.
Height, sill to bottom of side plate .....	7 ft. 10 3/16 in.
Height, top of rail to eaves .....	12 ft. 7 11/16 in.
Width over eaves .....	9 ft. 3½ in.
Centre to centre of body bolster .....	26 ft. 10 in.
Couplers .....	Steel, 5 x 7 shank, 8½ butt
Draft springs .....	M.C.B. class G
Journal boxes .....	McCord
Journal bearings .....	M.C.B. brass, 5 x 9
Journal bearing wedges .....	Cast steel
Truck bolsters .....	Simplex
Wheels .....	Cast iron, 33 in.

The G.T.R., as stated in Canadian Railway and Marine World for March, is having twenty-five 060 type switching locomotives built at its Point St. Charles shops, Montreal. They will have a total weight, including the tender, of 298,060 lb., and a tractive power of 34,398 lb. The

diameter of the boiler at the front end will be 68 9/16 in. and at the dome course 76 in. The boilers will give the following heating surfaces:—Firebox 168 sq. ft., tubes and flues 1,836.5 sq. ft., total 2,004.5 sq. ft., the grate area being 50.62 sq. ft. They will be fitted with Schmidt superheaters, having 28 units. Power reverse gear will be applied, the driving and total wheel base will be 11 ft. 6 in., total wheel base of locomotive and tender coupled 45 ft. 11½ in., and total length of locomotive and tender overall 62 ft. 5½ in. The cylinders will have a diameter of 21 and 26 in. stroke, with 51 in. driving wheels, and the working pressure will be 180 lb. per sq. in. The total weight on the driving wheels of engine will be 170,000 lb., and the tender, with a water capacity of 6,000 gall. and 10 tons of coal, will weigh 128,060 lb.

## Canadian Transportation Men, Engineers, Etc. in the War.

Canadian Railway and Marine World is desirous of publishing all the information possible about the war work of Canadian transportation men, engineers, etc., and invites its readers to send in information for use in this connection. No doubt a large number of our readers receive many letters from the front, etc., extracts from which would prove of interest in these columns. We should be glad to be favored in this respect.

**Canadian Railway Troops in Action.**—Sir Robert Borden read in the House of Commons, April 2, the following dispatch from the war correspondents' headquarters in France, dated Mar. 28:—"Fighting, digging, blowing up roads and bridges, Canadian railway troops have been worthily keeping up the traditions of Ypres and Vimy. A majority of the battalions were in the battle area and close to that heroic British line that gave but never broke. They fought at Gouzeaucourt and a good majority of them are old soldiers. One company of an Ontario battalion whirled into the fight at Ham with a veteran British division and stayed with them two days, fighting every inch of ground. Another railway battalion rescued three heavy howitzers, repairing their broken line and loading the big guns on trucks when the British infantry were holding back the Huns only a few hundred yards away. In Peronne sector, another battalion, after getting all its equipment and rolling stock away, organized ambulance trains on what tracks were left, carrying out wounded. When the last locomotive and night cars came through, the track had to be mended seven times in less than an hour. One company of Canadian railway troops of a battalion that fought with the U.S. troops at Court put up a wonderful fight to rescue a big railway howitzer. They patched up the shell shattered line with any material at hand, got it over a quarter of a mile when broken rails spread and the task seemed hopeless. They bumped the 20-ton truck over ties for another hundred yards and found themselves alongside an old engineers' dump. The line ahead was torn and twisted and there were no rails to be had. Canadian railway builders started to construct line with heavy dugout timbers from the dump. The big gun was hauled another 150 yards towards safety when the Huns were sighted almost upon them. The battery commander reluctantly decided to blow up the great howitzer. He gave the railway men ten minutes to construct some kind of line to take the locomotive

out and then destroyed his big pet. As the retiring infantry came up the gun crew and Canadians piled on the locomotive and steamed away through a hail of German bullets to safety. In no place where we had to retire were railway lines and bridges left intact. All the first day from Arras to Ham the battalion was running back rolling stock and blowing up the line. In many places they were doing their work of destruction with U.S. engineers and more than once little companies of both found themselves alongside each other in the fighting line. When their own part of the work was cleared the majority of companies were gathered in under command of their own Canadian brigadier and day and night they continued to give effective assistance in other directions. 'And when they are wanted,' declares one Canadian colonel who has

Operating Companies at this point and large yards with immense quantities of both standard and narrow gauge rolling stock. Of the latter all the Huns obtained were two derelict light railway locomotives and about a dozen trucks. Bridges over the Nord Canal were all destroyed. Miles of sidings in the valley at Ypres were mined and rendered completely useless. Repair shops, after lathes and other machinery had been taken away on the last trains, were burned and even the dugouts destroyed. A delicate compliment is paid to the Canadian railway destruction troops in German communiqué on Thursday. It says: 'Our railway troops are now coping with traffic behind the front and are working ceaselessly, on the reconstruction of destroyed railways.' That means to make the lines fairly effective."

On the Western Battle Front.

A large water tank being filled within shell range. The tank is pulled up the line by the armored tractor, and is a great improvement on the old time water wagon drawn by horses. The Canadian corps front is a mass of light railways. They have done away with the slow horse transports. From Canadian official photograph loaned by C.P.R.

commanded troops in the line, 'they will be there, also ready to do their bit with rifle and machine gun.'"

The second dispatch was from London, dated April 1:—"Canadian officers who were acting as town majors in places like Ypres, Royalcourt and Bus had exciting experiences before they retired. Their duty was to see that all stores which could not be moved were destroyed, and they spent their last evening in their respective centres blowing up what little ammunition was left, and obliterating canteens that might yield supplies for advancing Huns. They came out with the last of the British troops and gave a graphic story of how complete was the destruction of roads, bridges and railways which might have been of use to the enemy. Ypres was one of the largest railway centres in the sector. In addition to the Canadian Railway Construction Battalion, there were Canadian Railway

**Decorations for Railway Troops.**—On March 18 an interesting ceremony took place at the 13th Canadian Light Railway Operating Co.'s camp in France, when the officer commanding, Capt. R. McKillop, formerly Division Superintendent, C.P.R., Montreal, presented a number of men with ribbons for decorations awarded recently. The men receiving the ribbons were:—Regimental Sergeant-Major W. R. Spencer, formerly Chief Dispatcher, Canadian Government Railways, Cochrane, Ont., and son of Geo. Spencer, Chief Operating Officer, Board of Railway Commissioners, Ottawa, who was awarded the meritorious service medal for strict devotion to duty in the field. The military medal for saving government railway equipment, under shell fire, while on duty, was awarded to Company Sergeant-Major John Bloomfield, formerly conductor, G.T.R., Belleville, Ont.; Sapper J. M. Valley, formerly fireman, Canadian Northern Ry.,

Trenton, Ont.; and Sapper Jas. McK. Baker, formerly fireman, G.T.R., Sarnia, Ont. Corporal Angus Probert, formerly baggage man, Canadian Government Railways, Truro, N.S., was complimented for being mentioned by Sir Douglas Haig in dispatches Nov. 7, 1917, for conspicuous work in the field.

The G.T.R. Employees' Patriotic Association, up to Dec. 31, 1917, contributed \$15,000 to the Toronto Patriotic Fund; \$3,093 for motor ambulances; \$2,226 for Christmas boxes for enlisted employees; \$1,750 to the Tobacco Fund; \$2,500 to the British Red Cross, and several other smaller amounts for various objects. The fund has a balance in hand of \$1,197.

The Timiskaming & Northern Ontario Railwaymen's Patriotic Association, up to Dec. 31, 1917, had contributed \$20,133.00 to the Canadian Red Cross; \$25,133.39 to the Canadian Patriotic Fund, and \$13,765.16 direct to enlisted employees.

#### PERSONAL NOTES.

Lieut. H. L. Atto, 5th Canadian Mounted Rifles, who received the Military Cross recently, and was mentioned in dispatches, was formerly chief clerk in the Superintendent's office, Dominion Express Co., Montreal.

F. L. C. Bond, formerly Division Engineer, G.T.R., Montreal, is now a Major in Company C, 10th Battalion, Canadian Railway Troops, on overseas service.

Lieut. A. O. L. Cameron, Aurora, Ont., of the Canadian Railway Troops, was awarded the Military Cross recently for work in maintaining light railway lines under shell fire. He relaid the tracks continually under heavy shell fire, and kept them repaired and in working order throughout the operations, setting an example of devotion to duty to his men.

Capt. A. H. Cowie, M.C., who was awarded a bar to the Military Cross recently, is a son of H. J. Cowie, European Agent, Canada Steamship Lines, Ltd., Liverpool, Eng. He joined the Canadian Expeditionary Force in the early stages of the war, prior to which he was engaged in engineering in Montreal.

Bruce W. Erh, for eight years Advertising Manager for T. McAvity & Sons, St. John, N.B., has enlisted in the Canadian Engineers, as a sapper, and is now training at St. Johns, Que.

Lieut. Andrew S. Fraser, of the Royal Field Artillery, who was reported about the middle of April as having been wounded and in a hospital at Rouen, France, is a son of Mrs. H. J. Fraser, of Ottawa, and a nephew of Jas. D. Fraser, director and Secretary-Treasurer, Ottawa Electric Ry. Having taken the first year's engineering course at McGill University, Montreal, he took a course at the Royal Military College, Kingston, Ont., and was gazetted as a lieutenant in the Royal Field Artillery, July 17, 1917. He went to England Sept. 1, 1917, and crossed to the European continent at the end of Dec., 1917. He has been removed to England to convalesce.

C. E. Goodman, who has been on Canadian Railway and Marine World's staff, as a business representative, for some time, during which he travelled over the entire Dominion, from Nova Scotia to British Columbia, has enlisted in the 1st Tank Battalion, and is now training at Ottawa, preparatory to going overseas.

Corporal Geo. K. Hudson, 13th Canadian Light Railway Operating Co., who was killed in action in France, Mar. 28, was the eldest son of T. C. Hudson, Master Mechanic, Canadian Northern Ry.,

Joliette, Que. He was born at Carleton Place, Ont., Sept. 10, 1897, and at the time of his enlistment, Feb. 28, 1917, was in the Canadian Northern Ry. mechanical department at Quebec. He left Canada in April, 1917, with the Skilled Railway Corps under Capt. McKillop.

Col. C. W. McLean, D.S.O., son of Major-General H. H. McLean, K.C., M.P., formerly President, St. John Ry., St. John, N.B., has been awarded two bars to his Distinguished Service Order, for services while in command of the 9th Scottish Division. He was specially mentioned in dispatches by Field Marshal Sir Douglas Haig.

Major C. V. McLean, of the Royal Artillery, son of Brig. Gen. H. H. McLean, K.C., M.P. for Royal, N.B., and formerly President, St. John Ry., is reported as wounded.

Lieut. J. D. McMurray, Vancouver, B. C., of the Canadian Railway Troops, was awarded the Military Cross recently for his conduct during very heavy enemy shell fire, when he accomplished the laying of 800 ft. of light railway. He personally took a train through a heavy barrage and enabled material to reach the work, and by his inspiring example and fearless devotion to duty he held his men together and finished most important work.

Engineer-Commander C. H. Oxlade, R.N.R., who was lost recently, when his armed trawler was sunk, was formerly chief officer of the C.P.R. s.s. Empress of India, and was well known in Vancouver, B.C.

W. J. D. Reed-Lewis, while on light railway construction, during the operations round Cambrai last autumn, as a lieutenant in the 6th Canadian Railway Troops, did work that brought special mention from headquarters, and he has been promoted to captain. He was employed as a civil engineer on the Hudson Bay Ry., and having taken his wife and young family to Barrie, Ont., where Mrs. Lewis came from, he went overseas, his efficient work in France resulting in his being seconded to the Imperial headquarters staff.

Lieut. W. R. Spencer, formerly Chief Dispatcher, Canadian Government Railways, Cochrane, Ont., son of George Spencer, Chief Operating Officer, Board of Railway Commissioners, Ottawa, who is Regimental Sergeant-Major, 13th Canadian Light Railway Operating Co., which has been operating a unit of light railways in France, has been awarded the meritorious service medal, in recognition of valuable service rendered in the field.

American Railway Engineering Association.—Following is a list of officials elected for the current year, at the association's recent annual meeting:—President, C. A. Morse, Chief Engineer, Chicago, Rock Island & Pacific Ry., Chicago; Vice President, H. R. Safford, Chief Engineer, G.T.R., Montreal; Treasurer, G. H. Bremner, Interstate Commerce Commission; Secretary, E. H. Fritch, Chicago; directors—J. L. Campbell, Chief Engineer, El Paso & Southwestern Ry.; E. A. Frink, Principal Assistant Engineer, Seaboard Air Line Ry.; E. H. Lee, Chief Engineer, Chicago & Western Indiana Rd.; nominating committee—J. E. Crawford, Chief Engineer, Norfolk & Western Ry.; H. T. Douglas, Jr., Chief Engineer, Chicago & Alton Ry.; J. V. Hanna, Chief Engineer, Kansas City Terminal Ry.; J. B. Jenkins, now on military service; J. E. Willoughby, Chief Engineer, Atlantic Coast Line Rd.

### Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1916, from July 1, 1917:

	Gross Earnings	Expenses	Net Earnings	Decrease
July	\$3,844,900	\$2,940,000	\$ 904,900	\$ 232,500
Aug.	3,405,200	2,812,000	593,200	478,800
Sept.	3,341,700	2,915,800	1,924,000	306,700
Oct.	3,941,600	3,350,500	591,100	622,300
Nov.	4,050,200	3,295,500	754,700	495,300
Dec.	3,273,200	3,207,900	65,300	755,500
Jan.	2,715,300	3,290,300	x575,000	1,057,100
Feb.	2,691,000	3,171,400	x480,400	588,600
	\$27,263,100	\$24,983,400	\$2,279,700	\$4,606,700
Incr	\$ 440,400	\$5,047,100		
Decr			\$4,606,700	
x Deficit.				

Approximate earnings for March, \$3,436,300, and for three weeks ended Apr. 21, \$2,766,700, against \$3,273,200 and \$2,381,400 for same periods 1917.

### Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, and increases or decreases, compared with those of 1917, from Jan. 1, 1918:

	Gross Earnings	Expenses	Net Earnings	Decrease
Jan.	\$10,789,818	\$9,621,824	\$1,167,993	\$1,263,485
Feb.	9,574,302	8,983,404	590,898	1,396,151
	\$20,364,120	\$18,605,228	\$1,758,891	\$2,659,636
Incr	\$1,121,535	\$3,770,171		
Decr			\$ 2,658,636	

Approximate earnings for March, \$12,265,000, and for three weeks ended Apr. 21, \$8,935,000, against \$11,692,000 and \$8,371,000 for same periods 1917.

### Grand Trunk Railway Earnings.

Subject to audit, the accounts for 1917 show the following results, compared with those for 1916:

	1917.	1916.
Gross receipts	\$10,725,500	\$9,819,790
Working expenses	9,002,900	7,228,000
Net receipts	\$1,722,600	\$2,591,790
Balance of income from rentals and hire of equipment	65,000	62,460
Total net revenue	\$1,790,600	\$2,654,160
Net revenue charges, less credits	1,496,760	*1,914,600
Balance	\$293,900	\$739,560
Grand Trunk Western Ry.	Dr.95,200	Cr.119,200
Detroit, Grand Haven & Milwaukee Ry.	Dr.142,600	Dr.40,200
Toledo, Saginaw & Muskegon Ry.	Dr.28,800	Dr.16,200
Surplus	\$26,300	\$802,300

\*Including special allocation of \$400,000 for contingencies.

#### TRAFFIC RECEIPTS OF THE SYSTEM.

	Aggregate from Jan. 1 to Mar. 31:—	1918.	1917.	Decrease
G.T.R.	\$10,304,506	\$10,836,188	\$531,682	
G.T.W.R.	1,921,750	1,989,536	67,786	
D.G.H. & M.R.	666,567	716,177	49,610	

Totals \$12,892,853 \$13,541,901 \$649,048

Approximate earnings for three weeks ended Apr. 21, \$4,132,801, against \$3,403,918 for same period 1917.

### Grand Trunk Pacific Ry. Earnings.

Approximate receipts for March, \$800,430, against \$405,695 for March, 1917; aggregate receipts from Jan. 1 to Mar. 31, \$1,505,025, against \$1,031,315 for same period 1917.

Quebec Bridge Commission.—An Ottawa press report of April 26 stated that C. N. Monsarrat, Chairman of the commission, was there arranging for the transfer of the commission's office from Montreal to Ottawa, where the commission's work will be wound up, which will probably take about a year. It also stated that in addition to working on the commission, Mr. Monsarrat had been appointed a consulting engineer to the Railways Department.

# Mainly About Railway People Throughout Canada.

**Jno. Gray**, Freight Agent, G.T.R., Toronto, who died there recently, left an estate of \$11,550, to his widow.

**Joseph H. Meglemry**, Assistant General Freight Agent, Michigan Central Rd., Buffalo, N.Y., died there, Apr. 2.

**R. Home Smith**, Toronto, who is President, Mexico North Western Ry., has also been elected President, Buffalo, Lockport & Rochester Ry.

**Hayter Reed**, formerly Manager in Chief of Hotels, C.P.R., who has been in England since Nov., 1917, is expected in Canada shortly. Mrs. Reed is at Dinard, France.

**Jas. Flintoff**, for years Sheriff of Lambton County, who died at Sarnia, Ont., April 5, aged 76, was the father of E. P. Flintoff, Assistant General Solicitor, C. P.R., Montreal.

**Geo. McLaren Brown**, European Manager, C.P.R., London, Eng., has, according to a press dispatch, been appointed Assistant Director General of Movements and Railways, at the War Office, with the rank of colonel.

**Mrs. A. E. Stevens**, wife of the General Superintendent, C.P.R., Moose Jaw, Sask., died at Los Angeles, Calif., April 17, of pneumonia, while on a trip with her husband. Their eldest son, Flight Lieut. Alex. Stevens, is at the front.

**C. W. Mitchell**, who is spoken of in a press dispatch as "one of the few surviving engineers who were engaged on the first survey for the C.P.R. along the Fraser River Valley and in the mountains," died at Vancouver, B.C., Apr. 15, aged 64. He was born at Newcastle, N.B.

**S. P. Howard**, formerly General Freight Agent, Eastern Lines, C.P.R., Montreal, has been awarded \$40,000, as damages against J. Findlay, for wrongful dissolution of a partnership. He retired from C.P.R. service May 31, 1910, after 28 years' service, and entered the real estate business with Mr. Findlay.

**H. Rindal**, who has been elected a member of the Canadian Society of Civil Engineers, was born at Tyvold, Norway, Nov. 1, 1879. He was for some time in service with the Norwegian Government Railways, and the Pennsylvania Rd., and entered C.P.R. service in 1903, since when he has been, to 1905, Resident Engineer; 1905 to 1907, Assistant Division Engineer; since 1910, Engineer, British Columbia District, Vancouver.

**Frederick A. Rutherford**, whose appointment as Inspector of Transportation, G.T.R., Montreal, was announced in our last issue, was born at Parkhill, Ont., Sept. 16, 1877, and entered G.T.R. service, Jan. 18, 1894, since when he has been, to July, 1894, assistant to agent, Aylmer, Ont.; July, 1894, to July, 1900, telegraph operator, various points; July, 1900, to Jan., 1908, dispatcher, London, Ont.; Jan., 1908, to Mar., 1914, Chief Dispatcher, London, and Stratford, Ont.; Mar., 1914, to June, 1917, Trainmaster, Battle Creek, Mich.; June, 1917, to Feb. 1, 1918, Trainmaster, Durand, Mich.

**Sir Collingwood Schreiber**, K.C.M.G., General Consulting Engineer to Dominion Government, whose death was announced in our last issue, left an estate valued at \$144,331, made up as follows: Household goods and furniture, \$3,000; life insurance, \$16,443.21; stocks, \$10,313.75; bonds, \$104,565.12; cash on hand, \$800; cash in bank, \$1,209.11; real estate, \$8,000. The

widow is left the furniture, etc., \$70,000 is left a trust company to be invested, the interest to be paid half yearly to the widow until her death or second marriage. The rest of the estate is to be divided among his four married daughters, who were also made residuary legatees.

**John Flynn**, who has been appointed Car Foreman, C.P.R., Smiths Falls, Ont., was born Dec. 5, 1867, and entered railway service in June, 1887, since when he has been, to 1900, Car Foreman, G.T.R., Little York, Ont.; 1900 to June, 1910, Car Foreman, Brock St. Shops, G.T.R., Toronto; June to Dec. 31, 1910, Car Foreman, Grand Trunk Pacific Ry., Transcona, Man.; Dec. 31, 1910, to Oct., 1913, Car Foreman, G.T.P.R., Edson, Alta.; Dec., 1913, to Feb., 1914, Car Foreman, Cana-

**H. E. Whittenberger.**  
General Superintendent, Western Lines, Grand Trunk Railway.

dian Northern Ry., Rosedale, Toronto; Apr. to Aug., 1914, carpenter, C.P.R., London, Ont.; Aug., 1914, to Apr., 1917, Car Foreman, C.P.R., White River, Ont.; Apr., 1917, to Mar. 30, 1918, carpenter, G.T.R., Windsor, Ont.

**W. R. Davidson**, who has been appointed General Superintendent, Eastern Lines, G.T.R., Montreal, was born at Everton, Mo., Nov. 8, 1871, and entered railway service in Jan., 1890, since when he has been, to July, 1901, operator, Missouri Pacific Ry., at various points; July, 1901, to Mar., 1904, dispatcher, same road, Wichita, Kan.; Mar. to Oct., 1901, Chief Dispatcher, same road, Wichita, Kan.; Oct., 1904, to Mar., 1911, Trainmaster, same road, Wichita, Kan.; Mar., 1911, to Feb., 1913, Trainmaster, G.T.R., London, Ont.; Feb., 1913, to Mar., 1916, Superintendent, G.T.R., London, Ont.; Mar., 1916, to Sept., 1917, Superintendent, G.T.R., Detroit, Mich.; Sept., 1917, to May 1, 1918, General Superintendent, Western Lines, G.T.R., Chicago, Ill.

**John Lambert Abell**, whose appointment as Chief Dispatcher, Sudbury Division, Algoma District, C.P.R., was an-

nounced in our last issue, was born at Morganfield, Ky., Oct. 3, 1884, and entered railway service in Apr., 1902, since when he has been, to Oct., 1904, agent and operator, Illinois Central Rd., Louisville, Ky.; Nov., 1904, to Dec., 1908, agent, operator and dispatcher, Northern Pacific Ry., Jamestown, N.D.; Jan., 1909, to Aug., 1911, dispatcher, Wabash Rd., Moberly, Mo.; Aug., 1911, to Apr., 1916, dispatcher, C.P.R., Medicine Hat, Calgary, and Edmonton, Alta.; Apr., 1916, to June, 1917, Chief Dispatcher, C.P.R., Medicine Hat, Alta.; June to Sept., 1917, Chief Dispatcher, C.P.R., Winnipeg; Dec., 1917, to Mar. 12, 1918, Night Chief Dispatcher, C.P.R., Smiths Falls, Ont.

**H. E. Whittenberger**, who has been appointed General Superintendent, Western Lines, G.T.R., Chicago, Ill., was born at Peru, Ind., Nov. 9, 1869, and entered transportation service in 1885, since when he has been, 1885 to Feb., 1887, various positions, Wabash Rd.; Feb., 1897, to May, 1902, Trainmaster, Middle Division, G.T.R.; May, 1902, to Sept., 1904, Superintendent, Denver & Rio Grande Ry.; Sept., 1904, to Jan., 1906, Superintendent, Cincinnati, Hamilton & Dayton Rd., Indianapolis, Ind.; Jan., 1906, to Sept. 30, 1907, Superintendent, Kansas City & Southern Rd.; Sept. 30, 1907, to Oct. 17, 1912, Superintendent, Eastern Division, G.T.R., Montreal; Oct. 17, 1912, to Jan. 14, 1913, Superintendent, Middle Division, G.T.R., Toronto; Jan. 14, 1913, to May 1, 1918, General Superintendent, Ontario Lines, G.T.R., Toronto.

**Andrew Meade Adams**, whose appointment as Local Freight Agent, G.T.R., Toronto, was announced in a recent issue, was born at London, Ont., Dec. 31, 1870, and entered G.T.R. service June 7, 1886, since when he has been, to Mar., 1898, in various positions in the local freight office, London, Ont.; Apr., 1898, to Aug., 1900, assistant accountant, Superintendent's office, Toronto; Aug., 1900, to Mar., 1904, chief clerk, General Roadmaster's office, Toronto; Mar. to Aug., 1904, Freight and Passenger Agent, Central Vermont Ry., Norwich, Conn.; Aug. to Nov., 1904, Freight and Passenger Agent, C.V.R., Montpelier, Vt.; Nov., 1904, to Apr., 1905, Freight Agent, C.V.R., St. Albans, Vt.; Apr., 1905, to Apr., 1908, chief clerk, General Roadmaster's office, G.T.R., Toronto; Apr., 1908, to Feb., 1912, chief clerk, local freight office, Toronto; Feb., 1912, to Feb., 1913, chief accountant, local freight office, Toronto; Feb., 1913, to Feb., 1918, Local Freight Agent, Hamilton, Ont.

**C. G. Bowker**, who has been appointed General Superintendent, Ontario Lines, G.T.R., Toronto, was born at Medford, N.J., Apr. 21, 1871, and entered railway service in May, 1888, since when he has been, to Oct., 1890, operator, Philadelphia & Reading Rd.; Oct., 1890, to 1893, operator, New England Division, same road; 1893 to 1897, in charge of telegraph lines and electrical service, Buffalo Division, Lehigh Valley Rd., Buffalo, N.Y.; May, 1900, to Feb., 1902, train dispatcher, G.T.R., London, Ont.; Feb., 1902, to Nov., 1905, train dispatcher, G.T.R., Durand, Mich.; Nov., 1905, to May, 1907, Chief Train Dispatcher, G.T.R., Stratford, Ont.; May, 1907, to Sept., 1909, Trainmaster, G.T.R., Stratford, Ont.; Sept., 1909, to May 13, 1911, Assistant Superintendent, Middle Division, G.T.R., London, Ont.; May 12, 1911, to Jan., 1913, Joint Superintendent, G.T.R. and Wabash Rd., St. Thomas, Ont.; Jan., 1913, to May 1, 1918, General Super-

intendent, Eastern Lines; G.T.R., Montreal.

**Andrew Aitken**, who is acting as Traffic Manager, Reconstruction Committee, Halifax, N.S., was born at Decewsville, Ont., Oct. 12, 1872, and entered railway service in July, 1890, since when he has been, to July, 1896, freight checker, baggage master, switch tender and drawbridge tender, G.T.R., Merrittton, Ont.; July, 1896, to Aug., 1897, brakeman, G.T.R., London, Ont.; Aug., 1897, to Jan., 1898, brakeman, G.T.R., Niagara Falls, Ont.; Jan. to Mar. 8, 1898, yard helper, yard foreman and yardmaster, C.P.R., Vancouver, B.C.; Mar. 8, 1898, to Nov. 13, 1912, General Yardmaster, C.P.R., Vancouver, B.C.; July 22, 1913, to July 1, 1914, Yardmaster, C.P.R., North Toronto, Ont.; July 1, 1914, to May 1, 1917, General Yardmaster, C.P.R., Toronto; May 1 to Oct. 15, 1917, Traffic Manager during construction of aviation camps at Armour Heights and Leaside, Toronto; Oct. 15 to Nov. 29, 1917, General Yardmaster, C.P.R., Toronto; Nov. 29 to Dec. 13, 1917, Assistant Superintendent, Toronto Terminal Division, Ontario District, C.P.R., Toronto.

**W. H. Winterrowd**, A.M.Can.Soc.C.E., whose appointment as Chief Mechanical Engineer, C.P.R., Montreal, was announced in our last issue, was born at Hope, Ind., Apr. 2, 1884, and educated at Shelbyville, Ind., and Purdue University, whence he graduated with the degree of B.S. in 1907. He entered railway service in 1905, since when he has been, to 1906, blacksmith's helper, Lake Erie & Western Ry., Lima, Ohio; 1906 to 1907, air brake and car repair man, Western Lines, Pennsylvania Rd., Dennison, Ohio; 1907 to 1908, special apprentice, Lake Shore & Michigan Southern Ry., Elkhart, Ind.; 1908 to 1909, Roundhouse Foreman, Lake Erie, Alliance & Wheeling Ry., Alliance, Ohio; 1909 to 1910, Night Roundhouse Foreman, Lake Shore & Michigan Southern Ry., Youngstown, Ohio; 1910, Roundhouse Foreman, same road, Cleveland, Ohio; 1910 to Sept., 1912, Assistant to Mechanical Engineer, same road, Cleveland, Ohio; Sept., 1912, to May, 1915, Mechanical Engineer, Angus locomotive shops, C.P.R., Montreal; May, 1915, to Apr. 1, 1918, Assistant to Chief Mechanical Engineer, C.P.R., Montreal.

**John McMartin**, M.P. for Glengarry, Ont., who died at Montreal, April 12, aged 48, after being in poor health for a year, was born in Charlottetown Tp., Ont., and went to the western states at an early age. He began by working for two years in a lumber camp; next he went with the Ontonaga & Brylie River Rd., and became foreman of the construction gang. In 1883 he entered C.P.R. employ as Superintendent of Construction on the Lake Superior section, and remained until 1885 when he went to the Rocky Mountain division, and from there to Leadville, Col. He had a subcontract on Hell Gate division of the Colorado Midland Ry., and remained there until 1887. In 1889 he had a contract on the Denver & Rio Grande Rd. through Price Canon, and in 1891 took a contract on the Great Northern Rd. in Montana; in 1892, in Washington; in 1893, on Nakusp & Slocan Ry. in British Columbia; in 1895, on Parry Sound Ry., also on the Tillsonburg & Pacific Ry. In 1897 he went into mining business, and had a contract on the Crow's Nest Ry. in 1898, and contracts in order on the Columbia & Western Ry., the Kootenay Valley Ry., the Algoma Central, the Lindsay & Port Burwell Ry., the C.P.R. Sudbury branch. In 1904 he became interested in the La Rose mine, and shortly after

in the Hollinger and other mining interests in Cobalt. He was Vice President of the Hollinger Mines, Vice President and director of Canadian Mining Finance Co., President of Princess Realty Co., President of Labrador Pulp & Lumber Co., President of Motherlode Sheep Creek Mining Co. of British Columbia, and was connected with many other Canadian corporations.

**Charles F. Sise**, Chairman of the board of directors, Bell Telephone Co. of Canada, who died at Montreal, Apr. 9, was born at Portsmouth, N.H., Sept. 27, 1834. On the completion of his school life, he took to sea, his father being a merchant and shipowner, and he qualified as a master before reaching 21. He subsequently commanded several vessels in the Atlantic, Pacific and Australian trades, and later took charge of his father's shipping and cotton business at New Orleans and Mobile. During the civil war, he acted as secretary to Jefferson Davis, and also

W. H. Winterrowd, A.M.Can.Soc.C.E.,  
Chief Mechanical Engineer, Canadian Pacific  
Railway.

engaged in blockade running. After the war, he took charge of his father's business in Liverpool, Eng., and later returned to the U.S. and engaged in the insurance business at Boston, Mass. While there, he became associated with others who were financially interested in A. Graham Bell's telephone patents, and after the formation of the telephone company in the U.S., he came to Canada in 1879 to amalgamate the various telephone companies, which eventually led to the formation of the Bell Telephone Co. of Canada, which was incorporated in 1880, with head office at Toronto, and which was later moved to Montreal. He was appointed Managing Director, and in May, 1890, was elected President, holding that position until Feb. 1915, when he retired on account of age, but remained as Chairman of the Board. In addition to the Bell Telephone Co., he was associated with numerous other concerns, industrial, manufacturing and financial, among them being, the Wire & Cable Co., Northern Electric Co., North American Telegraph Co., Canadian Westinghouse Co., Sincennes-McNaghton Line, Nova Scotia Telephone Co., New Brunswick Telephone Co., etc. He is sur-

vived by three sons, E. F. Sise, Managing Director, Wire & Cable Co.; C. F. Sise, General Manager, Bell Telephone Co., and Paul F. Sise, Vice President and General Manager, Northern Electric Co.

## Telegraph, Telephone and Cable Matters.

**H. Hulatt**, Manager of Telegraphs, G.T.R. and Grand Trunk Pacific Ry., returned to Montreal recently, after a trip of inspection over the western lines. While in Winnipeg, a meeting of G.T.R. telegraph officials was held, when a number of subjects concerning the efficiency of the service, co-operation, etc., were discussed.

**D. Adams**, local manager, Great North Western Telegraph Co., London, Ont., has retired from active service. He entered telegraph service in 1869, with the Montreal Telegraph Co., at Montreal, and was afterwards transferred to Sackville, N.B., where all Canadian cables were handled. He moved to London in the seventies, and subsequently, was for five years with the Western Union Telegraph Co., in New York; for one year with the American Union Telegraph Co. in Cleveland, Ohio, and one year with the Western Union Telegraph Co. in Chicago, Ill., returning to London with the Great North Western Telegraph Co.

## Among the Express Companies.

**R. J. Hardy**, heretofore agent, American Ex. Co., Chrysler, Ont., has been appointed agent at Russell, Ont.

**J. H. Greig** has been appointed acting route agent, Dominion Ex. Co., St. John, N.B., vice W. M. Johnston, transferred.

**W. M. Johnston**, heretofore route agent, Dominion Ex. Co., St. John, N.B., has been appointed route agent at Montreal.

**G. Laroux**, heretofore at Santa Clara, N.Y., has been appointed agent, American Ex. Co., Chrysler, Ont., vice R. J. Hardy, transferred.

**Mrs. Boswell**, widow of the late J. A. Boswell, at one time Superintendent of the Dominion Ex. Co. at Montreal, died at Hamilton, Ont., April 5, aged 75. The funeral took place from the house of her son in law, W. H. Burr, Traffic Manager, Dominion Ex. Co., Toronto.

The Interstate Commerce Commission has ordered American Ex. Co. and Great Northern Ex. Co. to refund \$162.58, and American Ex. Co. and Northern Ex. Co. to refund \$469.42, with interest, to Bright Emery Co., Winnipeg; and American Ex. Co. and Great Northern Ex. Co. to refund \$77 with interest to Pioneer Fruit Co., Brandon, Man., in connection with overcharges on fruit shipped from Hood River, Ore., to Winnipeg and Brandon respectively, in 1914.

The Canadian Express Co.'s annual meeting was held at Montreal, April 19. H. G. Kelley, Chairman of the Board, presiding. The company's experience has been similar to that of all other transportation companies in recent years, viz., rapidly rising expenses due to higher wages and cost of supplies and materials. Mr. Kelley therefore intimated that if the high character of the service is to be maintained, it may be necessary to ask the Board of Railway Commissioners to approve some increases in rates. The directors for the current year are:—H. G. Kelley, Chairman of Board; John Pullen, President; Frank Scott, Secretary-Treasurer; W. H. Biggar, K.C., J. E. Dalrymple, U. E. Gillen, Hugh Paton.

# Electric Railway Department

## Increases in Electric Railway Freight and Passenger Rates Authorized by Board of Railway Commissioners.

The Chief Railway Commissioner, Sir Henry Drayton, gave the following judgment, Mar. 28, on the London & Port Stanley Ry.'s application for authority to increase its standard passenger tariff from 2½c a mile to 3c a mile, and its standard freight mileage tariff by 15%.

The application in this case really involves the extension of the advances allowed by the board on the application of railways operated by steam for a general advance in rates to the electric lines. No electric railway was party to that application, and the board's judgment did not deal with rates on electric lines as such. And this for very good reasons; not only was no application made for an increase, but one of the greatest items of increased cost, viz., the item of coal, is entirely lacking in electric railways operated with hydraulic power. The present applicant operates with hydro power. Some of the electric railway companies have, since the recent advance was allowed the steam lines, filed tariffs making similar advances in their rates. These tariffs have been disallowed by the board, until the necessities of the electric lines were established.

The London & Port Stanley Ry. has since filed its application, and has submitted data reflecting its increased costs and the effect that the increased cost schedule has had upon its operations. No other electric railway line in eastern territory has, as yet, submitted to the board evidence on which an increase of rates could be justified. While the London & Port Stanley Ry. does not apply on behalf of itself and all other electric railway companies, that company, operating, as it does, in a densely populated part of the province, and being without unprofitable mileage, confining its operations between terminals already developed, could well be taken as an electric line which should show, in the highest degree, having regard to the character of its equipment, the economies of electric railway operation.

The Manager and Treasurer of the company, which is operated for the City of London by a commission, has filed statements showing the increase in the rate of wages of conductors, motormen, and train men, as between July 1, 1915, and Jan. 1, 1918, amounting to an average increase of 32.421%. Increases approximating a similar percentage advance are shown to be typical and applicable to most of the employees. Comparative prices of supplies as filed by the L. & P.S.R. show a state of affairs practically the same as the exhibits filed by the steam railway companies in their case, the percentage increase being very heavy, in some instances, for example, rails, running as high as 166.363%.

The London Commission, however, shows that it has in the past earned its fixed charges on the old rates, but it is insisted by it that the city is entitled to a greater return than ¼ of 1% dividend on the monies invested in the electrification scheme. On the face of it, as it occurs to me, the monies that are invested in the electrification scheme are already earning interest at the rate of 5½%, that interest being charged on the bonds issued for the change to electricity. It is, of course, true that the city, as a city, nets

nothing out of the 5½% thus paid, and that, as far as its revenue is concerned, in view of the liabilities it has assumed, the point taken by Treasurer Richards, may perhaps be well taken. The cost of the change, however, from steam to electrification, cannot well be looked upon as the whole cost of the road. The London Commission's statement, submitted in support of this phase of the application, says:—"The cost of the road previous to electrification is placed by the city at \$1,169,118.52 on Dec. 31, 1914, and the rental received by the city is the return it receives on this old investment. The agreement between the city and the London Commission fixed this rental at \$20,000 for the first 10 years, \$25,000 for the next 20 years, \$30,000 for the next 20 years, \$40,000 for the next 20 years, and \$50,000 for the next 29 years."

The rental reserved for the first ten years gives a return of less than 2% on the original cost. In considering what a fair return on the line's operations would be, it would certainly not be unfair to the public to place the amount of capital on which the commission operating for the city ought to earn a return, at \$1,759,507. I arrive at this amount by accepting the cost returned by the commission of electrification, and which amounts to \$1,174,948, and by cutting the cost of the road to the city, previous to electrification, in two, although I have no doubt that as a matter of fact the cost returned by the city is perfectly correct. Making, however, this large and arbitrary reduction in capital account, there is still no doubt that on the evidence submitted by the applicant, it is entitled to the same measure of relief the steam roads have obtained. In order to properly carry an investment of this amount, the railway ought to earn approximately \$130,000 over and above operating expenses and taxes. Not only have rents and capital charges to be carried, but the plant has to be, in part, from time to time renewed, and the increased demands of traffic met. This ought to be done without the undue inflation of capital charges, by the exclusive use of new capital.

It is true that so far as the passenger equipment of the road is concerned, and its electrification, the standard is high, but it is also true that the company is able to carry on, by reason of its peculiar position, a relatively large freight business, having regard to its total operations, with the use of but four freight cars. It is obvious that such a condition as this may at any time change, and the company be compelled to acquire more freight equipment. The company's whole earnings for the year ended Dec., 1916, are returned as \$316,886.68. These figures do not include any revenue from Stanley Park, that being a matter entirely unconnected with either the direct revenue or the expenses of the railway function. The company's total operating expenses for the same period were \$186,554, leaving a balance, available for capital account and replacement fund, of \$130,332. The taxes paid by the company for the year were \$6,647, leaving the company with \$123,685. As a result, it is perfectly clear that the rates charged by the L. & P.S.R. in 1916 were not excessive. The year's

operations left the road, under the basis that I think to be fair, merely in a proper position. The rates, of course, in 1917 were the same as in 1916; but, in 1917, as a result of increased expenses, the net result was materially decreased. In 1917, the gross receipts were \$318,034, an amount slightly in excess of the gross of 1916. The expenses, however, increased from \$186,554 to \$220,227, leaving a net balance of \$97,807, to cover capital charges and taxes, as against \$130,332 in 1916. The net result of the year's operations, had the company continued to pay taxes to the different municipalities in which it operates, and assuming that the rate of taxation and amount of assessment had not been increased, would have resulted in a balance available for capital charges and replacement fund of \$91,160, against \$123,685 for 1916, involving a loss from the previous year's operation of \$32,525. The London Commission states that as a public utility it does not now pay taxes.

The London Commission's figures, dealing with capital charges and surpluses, call for an annual capital charge made up of 5.5% for interest on the cost of electrification, 1.8% for sinking fund, and the \$20,000 rental payable to the city for the first 10 years. While the basis of a changeable rent, or any rent, as such, is not a basis which can be adopted for the purpose of rate computation, the London Commission's figures quite closely approximate the above results. These figures show a reduction in the company's surplus, which is obtained after deducting capital charges (5.5% interest, 1.8% sinking fund, and rent) and operating costs, in the following manner, the figures being given for half-year periods, so as to aid in making comparisons:—

The surplus for Jan.-June, 1916, is reported as .....	\$18,934
The surplus for July-Dec., 1916, is reported as .....	28,497

Making a total surplus for 1916 of..	\$47,431
For Jan.-June, 1917, a deficit is reported of .....	\$ 4,450
For July-Dec., 1917, a surplus is reported of .....	20,865

Making a net surplus for 1917 of.. \$16,415

As a result, as computed by the London Commission, the company's net fell off \$31,016, a reduction of 66%. The surplus of 1917 was arrived at without the deduction of any taxes. These taxes should be deducted, in order to arrive at a proper comparison of the earnings of the two years. Amounting as the taxes did, for the year previous, to \$6,647, had taxes been paid, the surplus in 1917 would have been but \$9,768, resulting in a reduction in surplus of \$37,663, or over 75%. The London Commission also advises that its operations, including fixed charges, resulted in a deficit for Jan., 1918, of \$6,941, and for Feb., 1918, of \$6,066, making a total deficit for the two months of \$13,007. The statements filed in support of the application show that Mar., April, May, and June, 1917, gave a surplus of \$3,469, while a total deficit of \$4,450 was returned for the six months period. As a result the deficit for Jan. and Feb., 1917, was \$7,919. The increased cost schedule is again indicated in the fact, that for the two poor months of this year the de-

ficit of \$7,919 for 1917 is increased by \$5,088 in 1918.

Accepting, as I do, the submissions made by the London Commission, it is clear that the company's rates are insufficient to properly cover the costs of operation under the conditions of today. Although the London Commission is not under the heavy burden of increased coal costs, but enjoys the full benefit of electrification, the results of operation under today's conditions are such that relief must be afforded, and it requires relief to the full extent that relief has been accorded the steam roads. The London Commission, however, in some instances applies for greater advances than those allowed the steam roads. In passenger rates, the application asks for an increase in the standard passenger tariff from 2½ to 3c a mile. The steam roads have been allowed to increase their passenger rates by 15%, while the London Commission's request is for 20%. Rightly or wrongly, it has always been considered that the carriage of passengers on electric railways, just so soon as a proper density of traffic can be maintained, is much cheaper than on steam roads. The L. & P.S.R. enjoys large gross earnings, greater per mile than those of any similar railway in Ontario. While the standard passenger tariffs in eastern territory were, before the recent advance, 3c a mile, as a rule the electric rate was lower. Besides the London & Port Stanley, the Montreal & Southern Counties, the Montreal Park & Island, the Montreal Terminal, the London & Lake Erie, the Brantford Municipal, and the Chatham, Wallaceburg & Lake Erie Railways may be instanced as companies operating under standard passenger tariffs of 2½c. The Hamilton Radial operates under a standard tariff of but 2c a mile. It may also be noted that, if the applicants were now operating under the Ontario statute, their rates under that act, instead of being increased, would have to be reduced from 2½c to 2c a mile. Under the circumstances, and in the absence of any special hearings, I would maintain the present spread between the standard passenger tariffs on steam and electric roads and only allow an increase of 15% in the companies' tariffs.

The London Commission also asks for a special increase of coal rates. The application on this point reads:—"We make application for permission to increase the rates on coal, bituminous and cannel, from Port Stanley to all points on the L. & P.S.R. (London, Somerset, Westminster, Glanworth, Yarmouth, Whites and St. Thomas) from 50c, a net ton to 75c, a net ton. Our reasons for making this request are the same as those given in our application for permission to increase our standard passenger and freight tariffs. Without repeating same, we wish to have this application supported by the statements attached to the above application. The 75c rate is slightly under the rate that would have been effective to these points, had various rates and increases allowed to steam roads been maintained. That is, the old rate of 58c plus Sept., 1916, increase of 15%, plus Mar., 1918, increase of 15c, 79c. The tonnage affected on the basis of 1917 business is 8,773 tons to St. Thomas, and 11,995 tons to London."

The board allowed a flat increase of 15c a ton in the steam roads' coal tariffs. The claim made by the London Commission as to the rate charged for the carriage of coal before the electrification of the L. & P.S.R. is correct, but the general basis of coal rates was changed by the board in the eastern rates case of 1916. In so far as the operation of the L. & P.S.R.

by the Pere Marquette Rd. is concerned, the tariffs of that railway provided for the payment of 58c a ton from Port Stanley, both to London and St. Thomas. After the electrification of the road, the London Commission made a large cut in the coal rate from Port Stanley to St. Thomas, taking 23c off the rate. It also made a cut in the rate to London, reducing it by 8c. As a result, coal was then carried to St. Thomas for 35c and to London for 50c a ton.

The question which the board had before it in 1916, was, of course, the rates charged on coal by the large systems which carried the very great bulk of the traffic. The rates were regrouped, and coal ex Black Rock, consigned to points west of group 1 (which consisted of points on the Niagara River) carried a blanket rate of 44c a ton. The longest haul under this blanket is 20 miles. The mileage from Port Stanley to St. Thomas is 11 miles, and the reduced rate of 35c put in by the London Commission for that haul would fall within the distance covered by the 44c blanket rate. The next group, ex Black Rock, covers movements up to 50 miles, and these rates were fixed by the board at 55c a ton. Both these rates included the 10% increase which the board allowed. As a result, on distances up to 20 miles, and past the Niagara River, steam roads now obtain on their coal haul from Black Rock, adding the 15c a ton allowed recently, a return of 59c a ton; and for hauls up to 50 miles, 70c a ton.

The eastern rates case judgment was issued in June, 1916, and on Aug. 1, 1916, the London Commission raised the rate to St. Thomas to 50c a ton, or 6c over the Black Rock 20 mile blanket rate. As a result of the adjustment made by the London Commission, after the judgment in the eastern rates case, a rate was left which certainly could not be described as unduly low, having regard to the rates fixed by the board in the eastern rates case, on the movement of coal from Black Rock. Similarly, the rate on coal from Black Rock to London was fixed in the eastern rates case at 99c a ton for a haul of 127 miles. The rate on coal allowed by the board from Detroit to London, under the same judgment, was 72c a ton, the haul here being 112 miles, resulting in a charge of 0.643c per ton mile. The longer the haul, of course, the lower the per ton mile ought to be. Bearing this qualification in mind, the London Commission's rate to St. Thomas secures a gross of 4.54c a ton per mile, and to London 1.23c a ton per mile.

The coal increases asked by the London Commission amount to 50% increase on the present rates. If the London Commission is held down to the increase allowed to steam lines, of 15c a net ton, that increase would amount to 30% on the short hauls that are here involved; and, in view of the London Commission's short mileage, this percentage increase is not weighted down by long hauls involving rates of \$1 and upwards, as in the case of the large systems. It is inevitable that a flat increase benefits the company with the short mileage, such as the L. & P.S.R., much more than the larger systems, while conversely percentage increases produce greater results to the large systems with long hauls. Taking everything into consideration, I am of the opinion that the L. & P.S.R. is entitled to a flat increase of 15c a ton. An increase in rate of 25c, would create rates entirely out of line with other rates. A 75c rate for the 11 mile haul to St. Thomas, or for the 29 mile haul to London, would certainly be excessive, as compared with the G.

T.R. rate, as increased, of 87c for the 112 mile haul from Detroit to London, after making every allowance for the fact that the movement to London on the G.T.R. is one of the longest hauls under a blanket rate.

It is usual to hold hearings before taking any action on an application such as this. In the present instance, however, I am convinced that none need be held. The absolute necessity of greater railway earnings, although seriously challenged at the time the board took action in the case of the steam roads, is now practically generally admitted. The whole question was most exhaustively argued and considered in the main case. Increased costs are common, of course, in the United States as well as in Canada. While having no bearing on the propriety of the board's action, in the main case, in the appeal from the board's judgment to the Governor in council, allegations were made that the Interstate Commerce Commission had taken no such action on similar applications which had been made by United States carriers prior to the application to this board. It may be noted that similar increases have since been allowed in U.S. territory. Many of the cost factors now alleged by the applicant have been already passed upon in the former case. As a matter of fact, the only matter of advanced costs not on common ground is the question of coal and the fact that the applicant, by the use of hydraulic electricity, has escaped the added cost of coal. The figures and statements of the L. & P.S.R., however, make absolutely clear its necessity for more revenue, assuming always that the railway is to be treated as a commercial venture, and to be maintained without loss to the London ratepayers, either in connection with its operations, or what, in the long run, is much worse, depletion of the property assets, owing to undue economies and scamped maintenance. On the case they have made out, as I see it, the London commissioners would have been derelict in their duty as trustees had the application not been made.

The increases awarded are but temporary—they only apply while the present abnormal and excessive costs prevail. I would, therefore, act upon the application without the delays that are incident to hearings. Similar relief will be extended to any other electric line that satisfies the board that its operation and financial condition are such as to require relief.

#### Orders Passed by the Board.

The Board of Railway Commissioners has passed the following orders affecting electric railway rates:—

**Lake Erie & Northern Ry.** 27,105, April 4. Authorizing L.E. & N.R. to advance its freight rates 15%, and its passenger rates from 2½c a mile to 2¾c, advances not to become effective before April 15.

**Lake Erie & Northern Ry.**—27,121, April 10. Approving L.E. & N.R. Standard Freight Tariff of Maximum Mileage Tolls C.R.C. 103, and Standard Passenger Tariff C.R.C. 23, filed on basis permitted by board in order 27,105, April 4, to become effective April 15.

**London & Lake Erie Ry. & Transportation Co.** 27,106, April 4. Authorizing L. & L.E.R. & T. Co. to advance its freight rates 15%, its passenger rates from 2½c a mile to 2¾c; and its bituminous and cannel coal rates by 15c a ton, increases to become effective April 15.

**London & Port Stanley Ry.** 27,104, April 2. Authorizing L. & P.S.R. to in-

crease its standard freight mileage tariff by 15%, its standard passenger tariff basis from 2½¢ a mile to 2%; its bituminous and cannel coal rates by 15¢ a ton, increases to become effective April 15.

**London & Port Stanley Ry.**—27,117. Approving L. & P.S.R. Standard Freight Tariff of Maximum Mileage Tolls C.R.C. 176, and Standard Passenger Tariff C.R.C. 115, naming maximum fare per mile, filed on basis permitted by board in order 21,704, April 2, to become effective April 15.

4. **Oshawa Ry.** General order 215C, April 4. Approving Oshawa Ry.'s standard freight mileage tariff, C.R.C. 15, to become effective Apr. 15, it having been filed on the basis permitted by the board in general order 213, Dec. 26, 1917.

Applications for authority to increase freight and passenger rates have also been made to the board, by the Hamilton Radial Ry., Montreal & Southern Counties Ry., Quebec Ry., Light & Power Co., Chatham, Wallaceburg & Lake Erie Ry., and Hull Electric Co. The British Columbia Electric Ry. has applied for authority to advance freight rates on two of its subsidiaries, the Vancouver & Lulu Island Ry. and Vancouver, Fraser Valley & Southern Ry. The Windsor, Essex & Lake Shore Rapid Ry. has applied for authority to increase its freight rates.

### The Winnipeg Electric Railway's New Street Car.

The new type of street car which the company is placing in service in Winnipeg, we are officially advised, embodies several new features and modifications of the older types which experience has demonstrated are advantageous for the city's lines. The first of the new cars has been delivered and has been given a trial, which has proved satisfactory. The first and most noticeable feature is that the car has a lower body than the older type, thus making only one step necessary to enter. In order to effect this improvement, a new style of truck had to be planned which, it is claimed, will admit of smoother and more economical operation. The single step is hinged, and is operated in connection with the door, so that when the door is closed the step is folded against the side of the truck, and when the doors are opened the step drops down ready for the use of passengers. The step is covered with a lead anti-slip tread as an additional factor of safety for passengers. A signal lamp is fitted before the motorman, which comes into operation when the doors of the car are closed, so that until this operation is completed the motorman is without orders to go ahead. A signal bell for emergency use is also provided. Passengers can make their exit by the front, as well as by the rear—the car being of the p.a.y.e. type—the front exit door being in charge of the motorman. The passenger passes through a door separating the body of the car from the front vestibule, and then out by the exit door. The vestibule is divided by a glass partition, thus providing protection from the weather for the motorman and permitting him a free view for operating the exit door. The car is heated by electricity, the heating duct running under the seats, and a fan provides for the proper circulation of heat. The floor is double, and the general fittings and upholstery of the car are thoroughly modern. The conductors' and motormen's compartments are also heated. The car

is provided with adequate brake power and ~~C.R.C.~~ <sup>new</sup> devices which have been asked for by the employees.

### The Toronto Railway Co's Dividend Reduction.

The following circular has been issued to shareholders:—Regretfully the directors have to announce that the company's best interests make it necessary that the rate of dividend be reduced from 8 to 4%. This action will be to you, as it is to the directors, a matter of deep regret, and therefore it has been deemed advisable to place the situation briefly but completely before the shareholders.

The street railway, like every other business, has been subjected to an abnormal increase in cost of producing its service—as a result of war conditions. During the coming year, the company is required to make payments in excess of last year, as follows: Municipal and provincial taxes, \$40,000; business profits tax (Dominion Government), \$40,000; increase in cost of material based upon last year's operation, about \$200,000, a total of \$280,000. These items, as will be seen, are charges over which the company has no control. No human foresight, no superior ability, on the part of the management, could have prevented or mitigated these charges.

Further, under the terms of an arbitration held under the Dominion Act, in reference to industrial disputes, the company is obliged to pay out additional wages to the amount of about \$600,000 a year. Needless to say, your management protested with all its might against the unwarranted payment of this increase in wages, which, according to the evidence the company produced, was unjustifiable—but without avail. Unfortunately for the shareholders, these are war times.

Adding to the total contained in the above table, the amount represented by increased wages, it will be seen that the company is required to face an expenditure of possibly \$880,000 in excess of normal charges. While it is confidently expected that a portion of this extra burden will be made up out of increased revenues (fortunately our revenues are increasing in substantial amounts), it is not expected that the whole amount will be cared for in this way, and a reduction in dividends thus becomes the only way in which the company's resources could be husbanded.

While the street railway is like other businesses in being compelled to face extra war costs, it is unlike other businesses in being unable to pass the burden, or a part of it, upon the consumer. We are compelled to fulfill the terms of our contract (under which rates of fares are definitely fixed) with the city—in spite of the abnormal conditions to which the country and its economic interests are subjected, while we are economizing wherever economy is possible, we are providing the best service within our power, a service which the candid opinion of American experts says is one of the best given, under war conditions, on the North American continent.

There is admittedly little consolation to be derived from the fact that others are equally suffering from the war, and yet the fact that many companies engaged in producing public and quasi-public services have been compelled to reduce their dividends, and in some cases cut them off entirely, is not without significance. Naturally these reductions have affected stock values, the Toronto Ry.'s stock as well as others. Deploable as is

the decline in the selling price of the company's stock, it must not be forgotten that it is not out of sympathy with the general share market which does not today adequately represent intrinsic worth.

It is with pleasure that we announce that last year, after paying all expenses, the Toronto Power Co. had a surplus of \$900,000 and the Toronto Electric Light Co. a surplus of \$75,000, both companies being subsidiaries of the Toronto Ry. Co. Of the moneys so derived, about \$700,000 was devoted in reduction of the bonded indebtedness of the Toronto Power Co. (under the trust agreements) and the balance is being expended from time to time in increasing the facilities of these companies, and providing for their greater earning powers in the future.

### Edmonton Radial Railway Fares.

The proposed amendment to City of Edmonton's charter, authorizing it to collect fares on the straight zone principle, was not authorized by the Alberta Legislature, but after considerable discussion the following section was adopted: "Notwithstanding anything to the contrary whatsoever, the city is hereby declared to have and it shall have the power and authority to charge such tolls and fares on its tramway lines as shall from time to time be fixed by its council, provided that such fares are uniform throughout the city."

Among the reasons given for the necessity of having the proposal amended as has been done, was the fact that the E.R. Ry. operates also in Strathcona, and that the agreements between the original cities of Strathcona and Edmonton provided that the fare at Strathcona should not be more than 5¢.

Acting on the new powers, the city's street railway committee made the following recommendations, which were considered at a meeting of the city council, April 9:—"Transfers to be issued only between 6 and 9 a.m. and 5 and 8 p.m. A 10¢ fare between 11:15 p.m. and the time when cars cease running at night. Six tickets for 25¢, good between 5 and 8 a.m. School children, 10 tickets for 25¢. Street railway to be supplied with electric energy at cost. Otherwise the 5¢ fare to remain in force as before."

In the course of the discussion, Superintendent Moir stated that 186,000 more passengers were carried during the first three months of this year than during the same period of 1917, and that about 3,000 children's fares were collected daily.

The following alternative proposal was submitted by Alderman Martin:—"Children 2½¢, but such tickets not to be used between 9:30 and 11:15 a.m., and after 5 p.m. Labor tickets 4 1/6¢, or 6 for 25¢. Ordinary tickets, 6¼¢—that is, 4 for 25¢, or cash fares 7¢. Ten cent fares after 11:15 p.m." Further discussion of the matter was adjourned until the new legislation becomes operative.

**Snow Removal at Toronto.**—The City of Toronto obtained judgment against the Toronto Ry., Apr. 13, on a claim of \$14,391.47 for the removal of snow from the streets where it had been cleared from the company's tracks. The claim was made in Nov., 1915, and the judgment carries costs, and interest, from the date of the original writ, with a stay of 15 days. The company contends that under its agreement with the city, it is not called upon to remove the snow from the streets; but merely to remove it from the track allowance. The company has appealed against the judgment.

## Motor Busses for Winnipeg Electric Railway.

The Winnipeg Electric Ry. has arranged for the operation of motor busses on certain streets supplementary to its electric car lines. The proposed route for the busses is from Sherbrook St., along Westminister Ave. to Lipton St., along Lipton St. to Portatge Ave., and return to starting point. Transfers will be given on the busses which will carry the passengers east or west on the Portage Ave. cars, or north and south on the Sherbrook

## New Brunswick Power Co. Asks Increased Rates.

The New Brunswick Power Co., operating the St. John Railway, has petitioned the N. B. Legislature for authority to increase its electric railway fares, gas and electric current rates, and has had the following bill introduced in the legislature:—

"Whereas, owing to the increased cost of operating the plant of the New Brunswick Power Co., owing to the price of coal and other supplies and materials used

on the investment in the company's property. Be it therefore enacted by the Lieutenant-Governor and Legislative Assembly as follows:

"The obligation of the company to sell 25 tickets good over its lines of street railway for \$1, and 6 tickets for 25c, and to charge a cash fare of 5c is hereby abolished, and instead the company is hereby permitted to charge a cash fare of 6c per passenger. The obligation of the company to grant free transfers is hereby abolished and the company is hereby permitted to charge 1c for each transfer.

"The maximum price the company may charge for gas for heating and illuminating purposes is hereby increased to \$2 per 1,000 ft.

"The maximum rate for electric current for power and light supplied by the company is hereby abolished and instead the company may charge not exceeding the rates heretofore charged by the Saint John Ry. Co. for power and light.

"Said rates hereby permitted may be charged by the company during the continuance of the present high prices, consequent on the present war and the consequent relative depreciation of the value of the money received by the company for its services.

"The Lieutenant-Governor in council, on the application of the directors of the company, may, if satisfied that the cost of coal or other operating expenses has increased to such an extent as to render a further increase in fare or rate necessary may grant such further increase in fare or rate and permit the same to con-

Motor Omnibus, Winnipeg Electric Railway.

St. cars, and passengers on the street cars will be given transfers to the busses. It is probable that other routes will be selected and developed at a later period. No announcement has been made as to the number of busses to be put in service, but a Winnipeg press report states that four motor busses were delivered to the company April 4, and that the service on the route indicated will be started May 1.

The busses are being built at Walkerville, Ont., and are described as being 16 passenger capacity. The entrance is by the right front door only, the door being controlled by the driver through the operation of a lever directly in front of his seat. The door has no handle, thus passengers cannot open it to enter or leave the car. The fare box is placed just inside the entrance. The seats run along the sides of the car and are broad with leather upholstered spring cushion seats and curved back rests, and there is ample space between the two seats. The windows being sliding, provide for ample ventilation; electric push buttons for signalling are provided and two dome lights provide for lighting the bus at nights.

**Street Railway Fares in Moncton.**—The Moncton Tramways, Electricity & Gas Co. has applied to the Moncton, N.B., City Council for permission to increase the fares charged on the electric railway. The line is being operated at a loss, and the management states that until the revenues meet operating expenses it will be impossible to do anything to improve the system. The company asks power to charge a straight 5c fare, and to be placed under the Public Utilities Commission's control. The council decided to ask the company to set out in detail it reasons for asking for the increase.

The Lethbridge Municipal Ry. is reported to be arranging to employ women conductors in order to release men for agricultural work.

Motor Omnibus, Winnipeg Electric Railway.

by the company being more than double, the company has petitioned the legislature praying that the rates fixed by legislation that such company may charge be increased during the period of the war and the present high prices; and whereas, it appears that in many cases the rate the company is by law permitted to charge is less than the company's actual cost of operating, and it is desirable that a temporary increase be granted to the company to enable it to receive the actual cost of operating and a reasonable return

tinue whilst such increased operating cost obtains.

"The Lieutenant-Governor in council may appoint an experienced person qualified to pass upon such matters, to report as to the advisability of granting such increase in rate as in the last section provided, and may act upon the report so made. The expenses of such report shall be paid by the company."

A deputation of St. John citizens waited on the legislature's committee, April 16, and objected to the increases proposed.

## Snow Fighting on Levis County Railway.

Levis, Que., is one of the worst, if not the worst, snow districts in Canada, and this winter the fall has been 20 in. heavier than usual, being 120 in., against an average of 100 in. The first snow fall came on Nov. 22, 1917, and the storms were

One block of houses had their chimneys swept off.

The Levis County Ry.'s 300 h.p. rotary plough started out during the afternoon of Feb. 15 to open up the company's lines. By evening, the St. Joseph Division, which

with the crew on top. It also shows the snow cutting blades in front and the delivery paddles behind the blades. These paddles deliver the snow some 15 ft. through a funnel in the side of the plough, and it can be delivered on either side. The

Snow fighting on Levis County Railway.

Snow fighting on Levis County Railway. Fig. 5, left, fig. 6 right.

continuous through December, accompanied by extreme cold. There were no thaws during the whole period, so that the snow accumulated to a great height. The worst storm of the season started on the evening of Feb. 14, and continued for 24 hours, accompanied by high winds. The drifts ran as high as 18 ft. on the railway track. Snow slides occurred from the top of the cliff, along the Quebec Bridge Division, which completely buried several houses and moved some of them.

serves the dry docks, was opened and cars were running as usual. The upper town, Levis Division, was opened during the night, and on the morning of Feb. 16, the plough started on its long trip to the Quebec Bridge, 7 miles. It had to face some very heavy drifts and snow slides, and it was on this division that the accompanying views were taken. Half the line was open by evening and the remainder by noon on Feb. 17.

Fig. 1 shows plough in 10 ft. of snow,

block of houses on the right were buried and moved by the slide.

Fig. 2 shows plough in a snow slide about 9 ft. deep. The snow in these slides was packed very hard and was more difficult for the plough to get through than the drifts. The crew is shown shovelling down the height of snow to help the plough.

Fig. 3 shows the plough working in a 10 ft. drift, the snow being delivered on the right hand side.

Fig. 4 shows the plough backed up out of a cut, to enable the photographer to obtain a view of the cut, which is 18 ft. high.

Fig. 5 shows the same cut after the plough had got through. The road for teams is on the right hand side of the picture.

Fig. 6 shows a car in one of the cuts. A team can be seen driving along on the right.

We are indebted to H. E. Weyman, Manager Levis County Ry., for the foregoing information and photographs.

### Detroit United Railway Report.

Following is a comparative statement of earnings and income for the calendar years 1917 and 1916, as presented at the annual meeting recently:—

Gross earnings—	1917.	1916.
Passenger .....	\$16,370,239.64	\$15,069,980.64
Express .....	1,000,869.16	907,771.90
Mail .....	11,748.16	11,828.08
Special car .....	45,083.03	47,088.59
Gross earnings from operation .....	\$17,427,939.99	\$16,936,669.21
Operating expenses .....	13,259,790.85	11,215,802.20
Net earnings from operation .....	\$ 4,168,149.14	\$ 4,820,867.01
Other income .....	411,737.29	351,334.79
Gross income less operating expenses .....	\$ 4,579,886.43	\$ 5,172,201.80
Interest on funded and floating debts and taxes .....	2,404,355.68	2,291,409.67
Net income before providing for depreciation or contingencies .....	\$ 2,175,530.75	\$ 2,880,792.13
Deduct credited to depreciation reserve .....	\$ 800,000.00	\$ 800,000.00
Deduct credited to reserve for taxes .....	150,000.00	
Dividends paid .....	1,118,750.00	\$43,750.00
Together .....	\$ 2,068,750.00	\$ 1,843,750.00
Balance transferred to surplus account .....	\$ 106,780.75	\$ 1,237,042.13

The company owns and operates the Sandwich, Windsor & Amherstburg Ry. in Canada, 41.37 miles, the figures for which are included in the above and are not given separately.

### T. H. McCauley on the Street Railway Outlook.

T. H. McCauley, Superintendent, Calgary Municipal Ry., in Vancouver recently, after an extended trip in the United States, where he examined a number of street railway systems, is reported to have said:—"All street car systems are up against the impossible situation of running cars according to established customs, charging a fare which is the same now as years ago, while maintenance and supplies have increased 100%. With the obstacles of the present, the street railway lines which try to maintain service under old fares are bound to find it impossible to keep on as a business proposition unless some changes are made. All through the U. S. traction companies are being forced to ask and are asking that fares be increased to 6c. This is due largely to the fact that the privately owned automobile competition is becoming such a strong factor that ultimately street cars will be unable to exist because increasing fares will encourage people to buy still more automobiles. In Calgary our records show that in good weather the private automobiles represent a loss to us of \$300 a day. This does not refer to jitney competition, but to the fact that an increasing proportion of the people are driving their own cars."

### Answers and Questions on Electric Railway Topics.

Following are answers to a number of questions on electric railway topics, sent to the American Electric Railway Association's question box, by Canadian electric railway officials:—

**Saving Oil and Waste.**—What methods do member companies employ to extract the oil in waste removed from axle bearings, and clean and renovate for further use the waste after the oil has been extracted?

W. R. McRae, Master Mechanic, Toronto Ry., Toronto.—Both cotton and wool waste are cleaned in a steam driven centrifugal cleaner, manufactured by the Canadian Oil & Waste Saving Machine Co., Brockville, Ont. Lubricant removed from wool waste is reclaimed by filtration and used in car journals only. Waste is reclaimed by filtration and used in car journals only. Waste is dried by spreading on wire frames over dry heaters (sun dried during summer season), and teased before being put in soaking tanks.

**Oil allowances.**—Have any member companies established standards governing the amount of oil used in axle bearings, i.e., the quantity measured, and if so what amounts are allowed for the different sizes of axles?

W. R. McRae, Master Mechanic, Toronto Ry., Toronto.—Axle journal bearings are lubricated on a time basis; all journal bearings one size; oilers instructed as to quantity of oil used.

**Clearance at Milk Platforms.**—What clearance do member companies maintain between milk stands and the centre of high speed main tracks, if these stands are located 8 ft. or more from centre of track? Do any members use any device to make it more convenient for the train crew to handle cans from stand to car, and if so, what?

C. L. Wilson, Assistant Manager, Toronto & York Radial Ry., Toronto.—A clearance of 8 ft. from centre line is maintained. Express cars are provided with steel gangway laid from floor of car to platform of milk stand.

**Car Construction.**—Is it possible to construct and operate economically a combination car that will be as attractive to the riding public as the well known open car?

F. L. Hubbard, Assistant to the General Manager, Toronto Ry., Toronto.—This cannot be answered intelligently in the space available, but if the people making the enquiry would write to our Master Car Builder, they could perhaps ascertain something to their advantage, as we have operated convertible cars for years, which possessed the advantages of open cars in the summer and closed cars in the winter.

**Checking of Freight.**—What plan does your company follow to ensure proper receipt of freight shipments at destination; are original shipments checked on station platform, or are all shipments checked into freight cars, or do you have a different plan?

C. L. Wilson, Assistant Manager, Toronto & York Radial Ry.—Shipments are checked into car, either from freight trucks or station platforms, and re-checked when unloading at destination by train crews.

**Wear of Trolley Wire.**—Will a trolley shoe, with 24 lbs. tension on an electric car, operated at high speed, wear the wire more than a 6 in. trolley wheel, with 45 lb. tension, used on the same car? We

have tried shoes on this system and they gave the best results, but the line department claimed that they wore the wire unduly; there was certainly less trouble with poles.

W. R. McRae, Master Mechanic, Toronto Ry.—From observations, I am convinced that a hard polished steel contact shoe operated at the lighter pressure will give better results, trolley wire wear included, than will the wheel at a greater pressure, especially when operated in districts that have a great deal of rain, or moisture on the wire.

**Flange Wear on Steam and Trolley Cars.**—Although it is not the case with wheels on steam road cars, fully 40% of wheels on trolley cars are worn with a thin flange on one wheel and a full flange on one wheel; what is the cause?

W. R. McRae, Master Mechanic, Toronto Ry.—Car wheels used on steam roads are not driver wheels, as is the case of wheels on traction cars. For that reason the flange condition does not exist to any extent.

### Nova Scotia Tramways & Power Co.

Following are extracts from the company's first annual report for the calendar year 1917:—

The organization of the company was effected on Jan. 7, 1917, for the purpose of taking over and operating the Halifax Electric Tramway Co., Ltd., and also of acquiring the Gaspereaux properties with the object of developing an hydro-electric plant thereon. The Halifax Electric Tramway Co. and the Gaspereaux properties were duly transferred to this company, in conformity with the agreements entered into; but owing to the unprecedented increase in the cost of labor and materials, and the extreme difficulty of securing same, the directors deemed it prudent to temporarily defer the carrying out of the project in reference to the proposed hydro-electric development until such time as conditions became more normal.

The general conditions that have prevailed during the first year of the company's history are unlike any ever before encountered, and the abnormal advance in the cost of labor and materials has had its effect upon the operating expenses; and the difficulty of obtaining an adequate number of efficient employees has also tended to retard the progress which would be expected under ordinary conditions. The appalling disaster which befell the city of Halifax on Dec. 6 proved to be a severe blow to the company. The general upsetting of conditions in the city interfered to a great extent with the company's business, and had the effect of very materially curtailing the revenue during December, as well as increasing operating expenses. Very extensive damage was done to the company's property, and while the actual cost of repairing all the damage sustained cannot be ascertained at this time, it is estimated by the officials that it will be in the vicinity of \$60,000. A number of the employees sustained injuries as a result of the disaster, and one inspector, one conductor and two motormen lost their lives, three of these being on duty at the time. Great difficulty has been experienced in obtaining the requisite number of competent employees to carry on operations, and in an effort to overcome this difficulty women conductors have been employed on the cars with reasonable success.
